NO.	DESCRIPTION	PAGE
Ballman-5	Excel Spreadsheet	118
Ballman-6	Expert Report	154
	Of Dr. Madigan	
	7/7/21	

<p style="text-align: right;">Page 10</p> <p>1 reporting, please pause briefly 2 before speaking, to ensure all 3 parties are heard completely. 4 All counsel will be noted on 5 the stenographic record. 6 The court reporter is 7 Michelle Gray, and she will now 8 swear in the witness. 9 - - - 10 ... KARLA V. BALLMAN, Ph.D., 11 having been first duly sworn, was 12 examined and testified as follows: 13 - - - 14 EXAMINATION 15 - - - 16 BY MR. NIGH: 17 Q. Good morning, Doctor. Can 18 you please state and spell your last 19 name? 20 A. Good morning. My name is 21 Karla Ballman. Last name is 22 B-A-L-L-M-A-N. 23 Q. Good morning. My name is 24 Daniel Nigh, and I represent the</p>	<p style="text-align: right;">Page 12</p> <p>1 reviewed the expert reports of 2 Drs. Panigrahy and Madigan, as well as my 3 own expert report, and then I met with 4 defense counsel. 5 Q. Okay. And how many -- 6 when -- how many times did you meet with 7 defense counsel in preparation for your 8 deposition? 9 A. I think once or twice via 10 phone, and in person one -- yesterday. 11 Q. And which attorneys did you 12 meet with? 13 A. With Dr. Frank Stoy and -- 14 I'm terrible at names. So perhaps he can 15 help me out. Jason -- Mr. Jason -- 16 Q. Reefer? 17 A. Yes. 18 Q. Okay. Now, I will tell you 19 that during the deposition, just one of 20 the ground rules is obviously your 21 attorney can't help you answer questions 22 during the deposition. 23 So he did a very good job. 24 As you were staring him down, he didn't</p>
<p style="text-align: right;">Page 11</p> <p>1 plaintiffs in the valsartan MDL 2 litigation. 3 Where are you currently 4 located? 5 A. We currently are in the 6 offices of Duane Morris in New York City. 7 Q. Okay. And do you have 8 anybody else in the room with you? 9 A. Yes, I do. I have counsel 10 for the defense, Mr. Frank Stoy. 11 Q. Okay. Anyone else? 12 A. No. 13 Q. Other than laptops, do you 14 have any other electronics in the room 15 with you? 16 A. I have a calculator. 17 Q. Okay. And other than the 18 calculator and laptops, any other 19 electronics? 20 A. I do not. 21 Q. Okay. Could you please tell 22 me what you did to prepare for your 23 deposition today? 24 A. To prepare for today, I</p>	<p style="text-align: right;">Page 13</p> <p>1 give you any indication on the answer. 2 That was good. 3 A couple other ground rules 4 is, this is not an endurance test. If 5 you feel like you need a break at any 6 time, just let me know. And then also if 7 you don't understand one of my questions, 8 you know, just let me know. 9 If you answer the question, 10 I'm going to assume that you understood 11 the question. Is that fair? 12 A. Yes. 13 Q. Okay. And you said you met 14 with Frank Stoy and Jason Reefer. 15 Are there any other 16 attorneys that you met with or spoke with 17 over the phone? 18 A. There have been others on 19 the phone. But I cannot recall their 20 names at this time. 21 Q. Okay. What documents do you 22 have with you in the room today? 23 A. I have a clean copy of my 24 expert report, and that is the only</p>

Page 14

1 document that I have with me.
2 Q. And you said clean copy. I
3 think that means that there's no
4 highlights, tabs, or handwriting on that
5 document, correct?
6 A. That is correct.
7 Q. And Dr. Ballman, just a
8 couple quick questions about your
9 qualifications. You're not a
10 toxicologist, correct?
11 A. Correct.
12 Q. And before you started
13 looking at this litigation, you've never
14 published on nitrosamines previously,
15 correct?
16 A. As much as I'm aware, I have
17 not.
18 Q. And you don't ever recall
19 giving any lectures, presentations,
20 things of that nature in regards to
21 nitrosamines before you started looking
22 at this in this litigation, correct?
23 A. That is correct.
24 MR. NIGH: Okay. Let's pull

Page 15

1 up LP 1769. This is the
2 deposition notice. We'll mark
3 this as Exhibit 1.
4 (Document marked for
5 identification as Exhibit
6 Ballman-1.)
7 BY MR. NIGH:
8 Q. And I want to make sure that
9 you're able to see that document, both as
10 it comes up on the screen live, plus I
11 believe that you should also be receiving
12 a document to where if you want to, you
13 know, navigate through the pages
14 independently, you can do that as well.
15 So I believe that -- let's
16 see if I have this right. It looks like
17 you're looking at a laptop that we can
18 see on the screen. Is that where you can
19 navigate through the document, as you
20 want to navigate it?
21 A. You know, I think in theory.
22 Right now, it just says there's no files
23 in here. Do I need to download?
24 MR. STOY: If you hit

Page 16

1 refresh, it should show up and
2 you'll be able to download it.
3 THE WITNESS: Okay. Thank
4 you.
5 Yes, I have it on the laptop
6 as well as seeing it on the
7 screen.
8 BY MR. NIGH:
9 Q. Okay. And the one that
10 you're seeing on the screen is -- you
11 know, I'll direct the trial tech to move
12 through it to kind of orient you on where
13 I'm asking you questions in the document.
14 So first, if we can
15 highlight the notice to take videotaped
16 oral deposition.
17 Doctor, do you see this?
18 This is a notice for deposition?
19 A. Yes, I see that.
20 Q. And you can see your name,
21 the third line where it says, of
22 Dr. Karla Ballman, on February 22nd, '22.
23 Do you see that?
24 A. Yes.

Page 17

1 Q. Now, before today, have you
2 seen this deposition notice?
3 A. I believe I have.
4 Q. Okay. Let's take a look at
5 the third page. It's titled Exhibit A
6 and document requests.
7 Do you see this here?
8 A. I do.
9 Q. And it asks for a list of
10 documents. Do you believe that you
11 provided all responsive documents to us?
12 A. Yes, I believe I have.
13 MR. NIGH: Okay. Let's
14 take -- let's pull that down.
15 Let's take a look at LP 1797.
16 (Document marked for
17 identification as Exhibit
18 Ballman-2.)
19 BY MR. NIGH:
20 Q. I'll represent to you this
21 is the defendant's responses and
22 objections to your notice. It will
23 probably take a few seconds after I call
24 it up to land in your folder.

Page 18

1 TRIAL TECH: You may need to
2 refresh.
3 THE WITNESS: Okay.
4 BY MR. NIGH:
5 Q. Okay. And this is -- do you
6 see where it's titled "Defendant's
7 Responses and Objections to Plaintiffs'
8 Notice of Videotaped Deposition of Karla
9 Ballman"?
10 A. Yes.
11 Q. Okay. And let's turn to
12 Page 2. Sorry, Page 3, Request 2.
13 Now, Request 2 ask for any
14 notes, written or electronic, reflecting
15 consulting or litigation work that has
16 not been documented in invoices.
17 Doctor, as you were
18 reviewing -- as you were reviewing
19 studies or other documents or the master
20 complaint, did you take notes anywhere in
21 terms of, you know, jotting down your
22 thoughts in regards to those studies or
23 the complaint or the response that you
24 reviewed?

Page 19

1 MR. STOY: Object to the
2 form.
3 THE WITNESS: I only took
4 notes that were part of my
5 ultimate report. So I put notes
6 in the report.
7 BY MR. NIGH:
8 Q. Okay. Let's take a look at
9 Page 4. At the bottom you can see it
10 says, copy -- well, let me ask you
11 something.
12 When you would review the
13 scientific studies, would you make
14 highlights or underline certain things in
15 the studies themselves?
16 A. No, I did not.
17 Q. Okay. Number 4 -- Page 4,
18 Number 5 says, "Copies of any documents
19 or articles relied upon for the opinions
20 set forth in the report served, if not
21 listed."
22 And we will see that
23 Appendix B attached to your report, you
24 have a list of materials relied upon.

Page 20

1 I believe that you've
2 produced us all of those documents,
3 correct?
4 A. Yes. That was my
5 understanding.
6 Q. And now Number 6 says,
7 "Copies of any documents or articles
8 reviewed in connection with reports
9 served, whether or not listed in the
10 report or attachments thereto."
11 We don't have any additional
12 documents that were produced to us. So
13 were there no additional documents that
14 you considered as you were undertaking
15 your expert opinion in this work?
16 A. So can I ask for
17 clarification?
18 Q. Yes.
19 A. May I ask -- so if I
20 reviewed some of the articles that were
21 in the expert reports, were those not
22 supplied?
23 Q. I don't have any additional
24 articles that were supplied. So which

Page 21

1 articles do you believe that you reviewed
2 that were part of the expert reports?
3 A. Well, I thought they were
4 given under things considered. But...
5 Q. Are there additional
6 documents that you're thinking that you
7 reviewed?
8 A. Not that I relied on --
9 well, yes. It was my understanding that
10 there's also a list of materials
11 considered that concluded all the things
12 cited in the expert reports, because I
13 did look at those studies.
14 Q. Well, which of those studies
15 did you look at?
16 A. Off of the top of my head,
17 I -- I couldn't list them all with
18 complete accuracy.
19 Q. I appreciate that because,
20 you know, Dr. Panigrahy's report has
21 almost 600 cites in it, as you'll
22 probably recall.
23 A. It was more Dr. Madigan's
24 report, not Dr. Panigrahy's.

<p>Page 22</p> <p>1 Q. So you don't recall 2 reviewing any additional cited documents 3 from Dr. Panigrahy's report, correct? 4 A. Correct, not other than 5 what's listed in my Exhibit B and what 6 were in Dr. Madigan's report. 7 Q. I see. 8 MR. NIGH: Okay. We can go 9 ahead and take this down. 10 Actually, let's go ahead and 11 put that back up. We're going to 12 go back to LP 1797. 13 BY MR. NIGH: 14 Q. Doctor, I'm going to turn to 15 Page 6. Just ask you about some of your 16 prior testimony. 17 You'll see it at the top of 18 Page 6. It says, "By way of further 19 response, Dr. Ballman has testified to 20 the following matters in the past four 21 years." And it gives three bullet 22 points. 23 Do you see that? 24 A. I do.</p>	<p>Page 24</p> <p>1 mean a trial? 2 A. I mean a trial. 3 Q. And did you also testify at 4 trial in the U.S. case? 5 A. I did. 6 Q. Okay. And then you gave a 7 deposition a total of one time in that 8 case as well, correct? 9 A. That's correct. 10 Q. Okay. And for the Johnson & 11 Johnson, did you give deposition in the 12 talc case? 13 A. I did. 14 Q. Okay. Did you ever provide 15 any live testimony in any hearing or 16 trial? 17 A. I did not, no. 18 Q. For Viagra and Cialis, did 19 you provide a deposition in that case? 20 A. Yes. 21 Q. And did you ever give any 22 live testimony, either in a hearing or a 23 trial? 24 A. No.</p>
<p>Page 23</p> <p>1 Q. Okay. So you've testified 2 in Viagra and Cialis case, the talc 3 powder case, and BTG International 4 Limited cases? 5 A. Yes. 6 Q. And in each of those, did 7 you provide deposition testimony? 8 A. Yes. I testified twice in 9 the patent case, which is the third 10 bullet, I believe. And for the Canadian 11 courts, I was not deposed. So I was 12 deposed a total of three times. 13 Q. I'm sorry. When you said 14 the Canadian courts, what do you mean by 15 that? 16 A. So there was -- the case was 17 held in the U.S. courts, and then there 18 was an analogous case in the Canadian 19 courts. 20 Q. I see. So you testified in 21 the Canadian courts -- the Canadian case? 22 A. I did. 23 Q. Okay. When you said 24 testified in the Canadian case, do you</p>	<p>Page 25</p> <p>1 Q. No? Okay. 2 A. Sorry, I didn't mean to 3 interrupt you. 4 Q. Every now and then, I have a 5 little bit of a longer pause, so it's 6 okay. 7 Other than these three 8 cases, have you provided testimony in any 9 other cases in the last four years? 10 A. No. 11 Q. Okay. Now, other than the 12 last four years, have you given any 13 depositions or trial testimony in any 14 other cases before the last four years? 15 MR. STOY: Object -- 16 THE WITNESS: No. 17 MR. STOY: -- to the form. 18 Go ahead. 19 THE WITNESS: No. 20 BY MR. NIGH: 21 Q. Were you ever an expert in 22 any case other than these three cases? 23 MR. STOY: Object to the 24 form.</p>

Page 26

1 And Dr. Ballman, let me just
2 caution you with respect to your
3 response and ask you to limit it
4 to a disclosed testifying expert
5 and to not disclose any matters
6 where you may be consulting but
7 are not disclosed to testify.
8 THE WITNESS: These are the
9 only three matters in which I have
10 been a disclosed expert witness.
11 BY MR. NIGH:
12 Q. Okay. For the Viagra/Cialis
13 case, were you retained on behalf of the
14 defendants?
15 A. Yes.
16 Q. For the Johnson & Johnson
17 talc case, were you retained on behalf of
18 the defendants?
19 A. Yes.
20 Q. And for the BTG
21 International Limited case, who retained
22 you?
23 A. The manufacturers of
24 abiraterone, and I cannot remember off

Page 27

1 the top of my head. It might have been
2 Janssen Oncology.
3 Q. Okay. So in all of these
4 cases you have been retained and provided
5 testimony on behalf of pharmaceutical
6 companies; is that correct?
7 A. Yes. Yes.
8 Q. And are there any other
9 litigations where you've been retained on
10 behalf of pharmaceutical companies? I'm
11 not asking you for which litigations, but
12 are there any others in which you've been
13 retained?
14 A. No.
15 Q. Other than those three
16 litigations and this valsartan
17 litigation, have you provided an expert
18 report in any other litigation?
19 A. No.
20 MR. NIGH: Okay. We can go
21 ahead and take this down. Let
22 take a look at LP 1796.
23 (Document marked for
24 identification as Exhibit

Page 28

1 Ballman-3.)
2 MR. NIGH: We'll mark this
3 as Exhibit 3.
4 BY MR. NIGH:
5 Q. And Doctor, is this your
6 invoice for work that you billed on
7 behalf of the valsartan litigation?
8 A. Yes.
9 Q. Okay. And did you initially
10 meet with the legal team on November 29,
11 2021?
12 A. For this particular expert
13 report, yes.
14 Q. When did you first meet with
15 any of the lawyers for the valsartan
16 litigation?
17 A. Off of the top of my head, I
18 do not remember an exact date. But I
19 think I was contacted maybe late 2020 or
20 early 2021 and retained at that point in
21 terms of signing a letter of agreement.
22 Q. Did you do any work from the
23 date that you signed that retainer
24 agreement until November 29th, 2021?

Page 29

1 A. I did not.
2 Q. Okay. So no other work on
3 valsartan in any capacity before
4 November 29th, 2021?
5 A. That's correct.
6 Q. Okay. And if you turn the
7 page, we can see that you spent a total
8 of 41 and a half hours; is that correct?
9 A. Yes.
10 Q. And your total charge as of
11 January 12th, 2021, would be \$16,600?
12 A. Yes.
13 Q. Now, how many hours have you
14 spent on valsartan after January 12,
15 2021, approximately?
16 A. I'd say approximately
17 between 15 to 20 hours.
18 Q. And that would be -- part of
19 that time would be preparing for the
20 deposition?
21 A. That is correct.
22 MR. NIGH: Okay. Let's go
23 ahead and take that down.
24 Let's mark your expert

Page 30

1 report as Exhibit 4.
2 (Document marked for
3 identification as Exhibit
4 Ballman-4.)
5 MR. NIGH: That's LP 1768.
6 BY MR. NIGH:
7 Q. Doctor, when you were
8 initially contacted -- strike that.
9 Start over.
10 Doctor, when you were asked
11 to do -- to write an expert report, what
12 was the task that you were asked to do?
13 A. So I was asked to determine
14 whether there is evidence that supports
15 the use of proposed thresholds that were
16 based upon the expert reports of
17 Drs. Panigrahy and Madigan, and then also
18 to try to try to determine how the
19 thresholds were derived.
20 Q. And did you have difficulty
21 determining how the thresholds were
22 derived?
23 MR. STOY: Object to the
24 form of the question.

Page 31

1 You can answer.
2 THE WITNESS: I am not sure
3 what you mean by difficulty.
4 I mean, I tried various
5 different things to try to
6 determine how the thresholds were
7 derived. But there was no
8 explanation as to how the
9 thresholds were derived.
10 So that's why I had to try
11 many different ways of trying to
12 come up with those thresholds.
13 BY MR. NIGH:
14 Q. Now, when you said the
15 thresholds, do you mean the LCEs
16 calculated by Madigan and Panigrahy, or
17 do you mean the thresholds as described
18 in the medical monitoring complaint?
19 A. I mean the thresholds as
20 described in the medical monitoring
21 complaint.
22 Q. When you looked at the LCEs
23 as calculated by Dr. Madigan, did you
24 understand how he was calculating those

Page 32

1 LCEs?
2 A. Yes. I was able to
3 reproduce the numbers that he calculated
4 and, yes.
5 Q. And you didn't -- your
6 report doesn't list any criticisms of how
7 he calculated those LCEs, correct?
8 A. I did not find any problems
9 with the math that he did, no.
10 Q. Okay. And were you able to
11 see how Dr. Panigrahy calculated the
12 LCEs?
13 A. Again, given his explanation
14 of the formula he used and the values
15 that he used in the formulas, I too was
16 able to match the numbers that he
17 ultimately produced.
18 Q. Now, both Panigrahy and
19 Madigan had some different approaches as
20 to how they calculated LCE -- their LCEs,
21 correct?
22 MR. STOY: Object to the
23 form.
24 You can answer.

Page 33

1 THE WITNESS: I'm not sure
2 if their approach is different. I
3 think they used different values.
4 BY MR. NIGH:
5 Q. Okay. So for example, in
6 calculating LCEs for Hidajat, Dr. Madigan
7 didn't give any adjustment for the amount
8 that would actually be inhaled versus
9 exhaled, correct?
10 A. That is correct. He did not
11 make an adjustment for the amount that
12 might be exhaled.
13 Q. And Dr. Panigrahy did make
14 an adjustment for that, correct?
15 A. Yes, he did make an
16 adjustment for that.
17 Q. And the ages that they used
18 in terms of the amount of years that they
19 would be ingesting NDMA, the ages they
20 used were different between the two,
21 correct?
22 A. I -- so I'm not able to
23 answer that without looking at their
24 reports. I know they both used some

Page 34	Page 36
<p>1 ages, and they described how they used 2 those ages. So this may be one of those 3 values that I mentioned differed between 4 the two experts. 5 Q. Have you ever calculated 6 lifetime cumulative exposures in your 7 work? 8 A. My work has never called for 9 a calculation of lifetime cumulative 10 exposures because that number in the 11 research I do in cancer research is not 12 really a meaningful number. So no. 13 Q. Now, have you ever reviewed 14 toxicologists' opinions where they 15 calculate LCEs, or lifetime cumulative 16 exposures? 17 A. I have not. 18 Q. So this would be the first 19 time that you're looking at lifetime 20 cumulative exposures? 21 MR. STOY: Object to the 22 form of the question. 23 THE WITNESS: It is the 24 first time that I was doing a</p>	<p>1 undertook your task of looking at LCEs, 2 did you ever look at anything in terms of 3 how much NDMA infants, children, and 4 adolescents are being exposed to compared 5 to adults? 6 MR. STOY: Object to the 7 form. Scope. 8 THE WITNESS: Again, that is 9 outside the scope of what I was 10 asked to do. 11 I was asked to review the 12 lifetime cumulative thresholds 13 that were in the medical 14 monitoring plan and then determine 15 whether or not there is evidence 16 to support the use of those 17 thresholds, and then to determine 18 how those thresholds might have 19 been derived given the information 20 in the two expert reports of 21 Dr. Panigrahy and Madigan. 22 BY MR. NIGH: 23 Q. So you wouldn't have any 24 understanding that the lifetime</p>
Page 35	Page 37
<p>1 calculation of lifetime cumulative 2 exposures. I am not sure if it's 3 the first time I've ever seen the 4 concept or read a paper with them. 5 BY MR. NIGH: 6 Q. Are you aware that, in 7 calculating lifetime cumulative 8 exposures, it's common -- lifetime 9 cumulative exposures in diet that it's 10 common not to include the adolescent 11 years or childhood years in calculating 12 LCEs? 13 MR. STOY: Object to the 14 form. 15 THE WITNESS: That is 16 outside the scope of my charge. 17 But to my knowledge, I do not know 18 whether or not the childhood years 19 are included or not within those 20 exposures. I would think it would 21 depend upon what the individual is 22 being exposed to. 23 BY MR. NIGH: 24 Q. Do you have -- when you</p>	<p>1 cumulative exposures that Madigan and 2 Panigrahy calculated are conservative 3 because they include the years for their 4 adolescent years and childhood years, 5 correct? You have no opinion on that? 6 MR. STOY: Object to the 7 form. 8 THE WITNESS: Again, that 9 was outside my scope. I just took 10 the numbers, because it was 11 referenced in the medical 12 monitoring report that it was 13 based upon the information in 14 those two expert reports. 15 Within those two expert 16 reports, I do not recall a 17 discussion as to whether or not it 18 was a conservative approach to 19 include the infant and adolescent 20 years. 21 BY MR. NIGH: 22 Q. So you would have no opinion 23 on that, correct? 24 A. Again, I -- outside the</p>

<p>Page 38</p> <p>1 scope of what I was asked to do. So at 2 this point I would have to do some 3 research as to when those should be or 4 should not be included, so I cannot 5 render an opinion right now. 6 Q. Doctor, your opinions of the 7 program are based on your review of 8 Madigan and Panigrahy's LCEs, correct? 9 A. They are based upon the 10 expert reports in which both expert 11 reports did have a component that 12 calculated LCEs. 13 Q. So in reaching your 14 opinions, it would be important for you 15 to understand Madigan and Panigrahy's 16 opinions in order to form your opinions 17 that criticize the plaintiffs' proposed 18 medical monitoring program, correct? 19 MR. STOY: Object to the 20 form. 21 THE WITNESS: I'm sorry. 22 I'm trying to digest that 23 question. I'm not sure what I'm 24 being asked.</p> <p>Page 39</p> <p>1 Nowhere in their report did 2 I see them calculate lifetime 3 cumulative thresholds or a 4 discussion of that. 5 The only place that I did 6 see that was in the medical 7 monitoring document. 8 BY MR. NIGH: 9 Q. I'm trying to understand -- 10 I'm simply asking you that in order to 11 form your opinions that criticize the 12 plaintiffs' proposed medical monitoring 13 program, it would be important for you to 14 understand Madigan and Panigrahy's 15 opinions, correct? 16 MR. STOY: Object to the 17 form. Asked and answered. 18 THE WITNESS: I'm not sure. 19 Opinions to what? 20 I think it's important to 21 understand, you know, what they 22 stated and their conclusions, 23 which I believe I do, to some 24 extent, as well as how they</p>	<p>Page 40</p> <p>1 generated their lifetime 2 cumulative exposures, which I 3 mentioned I was able to replicate. 4 BY MR. NIGH: 5 Q. On the task that you were 6 set out, when you just said that you were 7 asked to determine whether there's 8 evidence that supports the use of the 9 proposed thresholds based upon the expert 10 reports of Dr. Panigrahy and Madigan. 11 So your task was to see if 12 there's support and the basis of it is 13 the expert reports of Dr. Panigrahy and 14 Madigan, correct? 15 MR. STOY: Object to the 16 form. 17 THE WITNESS: I did use 18 those expert reports, because they 19 were cited by the medical 20 monitoring plan as the basis for 21 trying to see if there's evidence 22 to be able to propose lifetime 23 cumulative thresholds. 24 BY MR. NIGH:</p> <p>Page 41</p> <p>1 Q. So it would be important for 2 you, as you formulate your opinions, to 3 understand the opinions of Dr. Panigrahy 4 and Madigan, correct? 5 MR. STOY: Objection to 6 form. Asked and answered. 7 THE WITNESS: Again, I'm not 8 sure -- I do understand their 9 conclusion. But I don't think it 10 necessitates me to agree 11 necessarily with their 12 conclusions. 13 BY MR. NIGH: 14 Q. And if you misunderstood the 15 opinions of Dr. Panigrahy and Madigan, 16 then that could be problematic for your 17 criticisms, correct? 18 MR. STOY: Objection to 19 form. Incomplete hypothetical. 20 THE WITNESS: I do not 21 believe I misunderstood their 22 conclusions. 23 BY MR. NIGH: 24 Q. I didn't ask you if --</p>
---	---

<p style="text-align: right;">Page 42</p> <p>1 whether or not you believe you 2 misunderstood their conclusions. 3 I asked you, if you 4 misunderstood the opinions of Dr. Madigan 5 and Panigrahy, then that could be 6 problematic for your criticisms, correct? 7 MR. STOY: Same objection. 8 THE WITNESS: I believe it 9 depends. So how might I miss -- 10 I'm not sure how I might 11 misunderstand in a way that might 12 affect what I had done. 13 I think there could be 14 different -- different types of 15 misunderstanding that might lead 16 to different things. So I'm just 17 not sure how to answer that. 18 BY MR. NIGH: 19 Q. I used the word "could" 20 intentionally in my question. And I want 21 to focus on that again. 22 I asked you if you 23 misunderstood the opinions of Dr. Madigan 24 and Panigrahy, then that could be</p>	<p style="text-align: right;">Page 44</p> <p>1 Dr. Panigrahy and Dr. Madigan, and your 2 conclusions and criticisms would still be 3 accurate? 4 A. Again, I -- I would need to 5 know what completely misunderstands 6 means. 7 As I stated, I do not 8 believe I misunderstood their 9 conclusions. As to their opinions, they 10 may have had opinions that throughout 11 that weren't in their conclusions. 12 I just -- that's just too 13 broad for me to answer. I'm sorry. 14 Q. But we can agree that 15 Dr. Panigrahy and Dr. Madigan's opinions 16 form the basis -- or form a basis of your 17 opinions, correct? 18 MR. STOY: Object to the 19 form. 20 Go ahead. 21 THE WITNESS: No, I don't 22 think that's true. I don't think 23 it's based on their opinions. 24 I think it's based on their</p>
<p style="text-align: right;">Page 43</p> <p>1 problematic for your criticisms, correct? 2 MR. STOY: Same objection. 3 THE WITNESS: Again, it's 4 very hard to answer that 5 hypothetical without understanding 6 in what manner I may have 7 misunderstood their conclusions. 8 I think that the answer 9 depends on the type of 10 misunderstanding. 11 BY MR. NIGH: 12 Q. Do you believe that you 13 could completely misunderstand their 14 opinions and your conclusions and 15 criticisms would still be accurate? 16 MR. STOY: Objection to 17 form. Incomplete hypothetical. 18 THE WITNESS: I'm sorry. 19 Can you repeat that question 20 again? I just want to make sure I 21 heard it. 22 BY MR. NIGH: 23 Q. Do you believe that you can 24 completely misunderstand the opinions by</p>	<p style="text-align: right;">Page 45</p> <p>1 complete reports and the 2 information that is in the 3 reports, that -- because the 4 medical monitoring plan just cited 5 that that was the basis. 6 It did not state that their 7 opinions was the basis for 8 deriving the stated lifetime 9 cumulative thresholds. 10 BY MR. NIGH: 11 Q. So you believe that 12 Dr. Panigrahy and Dr. Madigan's complete 13 reports and the information in those 14 reports would form part of the basis of 15 your opinions and criticisms? 16 A. Within the scope of what I 17 was asked to do, was to determine whether 18 there is evidence that supports the use 19 of the proposed thresholds based upon the 20 expert reports. So I did use those 21 expert reports to look to see if I felt 22 there was evidence to support a proposed 23 lifetime cumulative threshold. 24 Q. So in order to examine</p>

<p>Page 46</p> <p>1 whether or not there is evidence to 2 support a proposed lifetime cumulative 3 threshold, it would have been necessary 4 for you to review and understand 5 Dr. Panigrahy and Dr. Madigan's reports, 6 correct? 7 MR. STOY: Object to the 8 form. 9 THE WITNESS: Yes, it 10 would -- it would require me -- 11 and I did review their reports, 12 and I believe I did understand 13 what they were saying. 14 BY MR. NIGH: 15 Q. Now, some of the work that 16 you undertook were calculations, correct? 17 A. Correct. 18 Q. And if you are missing 19 certain steps in a calculation, then your 20 ultimate answer would be incorrect, or 21 could be incorrect, correct? 22 MR. STOY: Objection. 23 Incomplete hypothetical. 24 Go ahead.</p> <p>Page 47</p> <p>1 THE WITNESS: The 2 calculations I undertook was to 3 try to replicate the proposed 4 thresholds in the medical 5 monitoring plan. 6 And there was no information 7 really provided within those 8 plans, other than that they relied 9 upon the expert reports. 10 So I had no steps to follow. 11 BY MR. NIGH: 12 Q. Now, let's take a look at 13 Page 14 of your report. 14 MR. NIGH: And that first 15 full paragraph, if we can put that 16 up on the screen, that first full 17 paragraph. 18 BY MR. NIGH: 19 Q. It says, "In the absence of 20 clearly specified" -- 21 MR. NIGH: We can go down. 22 It's not on the screen here. 23 BY MR. NIGH: 24 Q. "In the absence of clearly</p>	<p>Page 48</p> <p>1 specified values, I tried to determine 2 the impurity amounts for NDMA and NDEA in 3 320-milligram of valsartan using the LCEs 4 in Dr. Madigan's report and the time 5 thresholds proposed for each manufacturer 6 proposed by the plaintiffs." 7 Do you see that? 8 A. Yes. 9 Q. And you believe that this 10 was part of the task that you were asked 11 to perform by defense counsel, correct? 12 A. Yes. I was asked to try to 13 determine how the proposed thresholds in 14 the medical monitoring plan were derived. 15 Q. And next you said, "I would 16 note at the outset that any statistical 17 methodology requiring a reviewer to back 18 into the data in this manner -- that is, 19 to use the outcomes to try to determine 20 the inputs -- is at best incomplete and 21 likely invalid." 22 What do you mean by that 23 sentence? 24 A. I mean that's not a</p> <p>Page 49</p> <p>1 scientifically sound method to do 2 something. What would be scientifically 3 sound is if a threshold is proposed, that 4 it's very clear what was used in order to 5 come up with the threshold so someone 6 else could replicate the work easily in 7 terms of what formula was used, in terms 8 of what inputs were used, and so forth. 9 And so what I mean is within 10 the medical monitoring report, there are 11 just thresholds proposed with a citation 12 that says, "This is based upon the expert 13 reports of Dr. Panigrahy and Dr. 14 Madigan," in whom's reports did not 15 propose a lifetime cumulative threshold. 16 And so there were many 17 assumptions missing in the derivation of 18 those thresholds. And so if there's 19 missing assumptions, one has to try to 20 make guesses, and that's not a very 21 scientific method. 22 Q. So the task that you were 23 asked to carry out would not have been a 24 very scientific method because you're</p>
---	--

Page 50

1 having to back into the data?
2 MR. STOY: Object to the
3 form. Misstates testimony.
4 THE WITNESS: No. What I
5 was saying was that the medical
6 monitoring report that proposed
7 the thresholds did not provide a
8 scientific basis for how those
9 thresholds were proposed, other
10 than saying that they relied upon
11 the expert reports of
12 Dr. Panigrahy and Dr. Madigan.
13 And within those reports,
14 there are no lifetime cumulative
15 thresholds proposed, nor is there
16 a discussion of how those might be
17 derived.
18 BY MR. NIGH:
19 Q. Yeah, but you were asked to
20 try and recreate or to do the math as to
21 how those lifetime cumulative thresholds
22 were proposed, correct?
23 A. I was asked in the sense
24 that perhaps, you know, their -- I don't

Page 51

1 believe -- I was asked as an expert to
2 review those expert reports to see if
3 there was some methodology proposed on
4 how those were derived.
5 Q. So you were a reviewer,
6 correct?
7 MR. STOY: Object to the
8 form.
9 THE WITNESS: No. I'm an
10 expert.
11 I, you know, I -- this is
12 basically a classification
13 problem.
14 It's classifying people as
15 to those at an increased risk for
16 cancer and those not at increased
17 risk for cancer. And I have done
18 several classification studies
19 within cancer.
20 And so I took the approach
21 of, you know, what I would expect
22 to see in order to have scientific
23 evidence in support of the
24 lifetime cumulative thresholds.

Page 52

1 BY MR. NIGH:
2 Q. When you attempted to
3 calculate these thresholds, did you also
4 find that it was difficult for you to do
5 so because you were having to back into
6 the data in that manner?
7 A. I found it was difficult to
8 do so, because it was essentially one
9 equation and two unknowns. And that is
10 just something that cannot be solved.
11 Q. Now, when you said one
12 equation and two unknowns, did you come
13 up with two unknowns because you couldn't
14 figure out how to reach those LCEs from
15 valsartan -- from the valsartan pills
16 in -- the NDMA and/or NDEA in the
17 valsartan pills?
18 MR. STOY: Object to the
19 form.
20 THE WITNESS: So I -- as I
21 mentioned, I was able to reproduce
22 the LCEs that are proposed or that
23 are mentioned in both the expert
24 reports, because those are clearly

Page 53

1 stated as to, you know, the length
2 of exposure, the amount of
3 impurity within the valsartan, and
4 you know, the necessary things in
5 order to come up with the lifetime
6 cumulative exposure.
7 I did do that.
8 BY MR. NIGH:
9 Q. So you didn't have any
10 criticisms of how Madigan or Panigrahy
11 calculated their LCEs, correct?
12 MR. STOY: Objection. Asked
13 and answered.
14 Go ahead.
15 THE WITNESS: I believe I
16 did answer that before. And I
17 said that, given what they said
18 they used and the equation they
19 used, I was able to match the
20 numbers that they produced.
21 BY MR. NIGH:
22 Q. I see.
23 Now, in terms of trying to
24 understand how three months of ZHP -- or

Page 54

1 products -- or valsartan pills that used
2 ZHP API, were you able to understand how
3 that could reach increased risk of
4 gastric cancer?
5 MR. STOY: Object to the
6 form.
7 THE WITNESS: So I do not
8 believe that -- there's an
9 assumption in there that I'm
10 having a hard time with, in that I
11 don't believe there's been
12 evidence that any sort of exposure
13 to any level of impurity within
14 valsartan leads to an increased
15 risk of gastric cancer.
16 So beyond that, then it's
17 hard to answer the rest of it.
18 BY MR. NIGH:
19 Q. I'm sorry. You don't
20 believe there's been evidence that any
21 sort of exposure to any level of impurity
22 within valsartan leads to an increased
23 risk of gastric cancer?
24 A. I believe that there has

Page 55

1 been associations observed in
2 observational studies of an association
3 between levels of impurities within
4 valsartan and increased gastric cancer,
5 but that's not causal. And so all I can
6 say is there have been published
7 associations.
8 Q. Did you review
9 Dr. Panigrahy's report where he gives the
10 opinion that ingestion of NDMA in
11 valsartan pills causes or is capable of
12 causing gastric cancer?
13 MR. STOY: Objection.
14 Scope.
15 THE WITNESS: Yeah, I was
16 not asked to opine upon the
17 causation question. So that is
18 outside my scope.
19 BY MR. NIGH:
20 Q. Okay. You gave the answer
21 in terms of an assumption. You don't
22 believe there's been any evidence that
23 any sort of exposure to any level of
24 impurity within valsartan leads to an

Page 56

1 increased risk of gastric cancer.
2 And you reviewed
3 Dr. Panigrahy's report, correct?
4 A. Yes.
5 Q. So Dr. Panigrahy provides
6 that evidence, or at least that opinion,
7 expert opinion, correct?
8 MR. STOY: Object to the
9 form.
10 THE WITNESS: You know, I
11 don't have Dr. Panigrahy's report
12 in front of me.
13 You know, he may have opined
14 that the trace impurities within
15 valsartan caused gastric cancer.
16 And if he did so, I do not
17 agree with that conclusion.
18 BY MR. NIGH:
19 Q. Where did you see the word
20 "trace impurities" anywhere?
21 A. I did not see it anywhere.
22 But that -- I mean, there are impurities
23 within valsartan, and that's not the bulk
24 of what's in valsartan. So that's why I

Page 57

1 called it a trace.
2 Q. Do you believe that having
3 NDMA that's over 200 times the acceptable
4 levels set by the FDA are trace?
5 MR. STOY: Objection to
6 form. Objection. Beyond the
7 scope of her report.
8 THE WITNESS: So I'm not a
9 regulator. And so -- and it's
10 beyond -- again, I didn't look at
11 sort of causation.
12 But having said that, I know
13 that the level set by the FDA is a
14 theoretical level, and it's based
15 upon a level under which they
16 believe it is safe.
17 That does not imply that
18 anything -- you know, that levels
19 above that number are unsafe. And
20 they did not set a threshold for
21 what they believe to be an unsafe
22 level.
23 They've only set a threshold
24 for what they believe to be a safe

<p>Page 58</p> <p>1 level, not necessarily based on 2 scientific evidence -- there is no 3 evidence in humans -- but based 4 upon sort of assumptions they made 5 in doing their calculation, which 6 is in their right to do as a 7 regulator. 8 BY MR. NIGH: 9 Q. Have you reviewed FDA 10 documents where they state that there 11 should be no NDMA in medications? 12 MR. STOY: Objection. 13 Beyond the scope. 14 THE WITNESS: Again, that's 15 beyond the scope of what I was 16 asked to do. So I did not review 17 those -- any FDA documents that -- 18 with that statement in it, as far 19 as I'm aware. 20 BY MR. NIGH: 21 Q. When you said they did not 22 set a threshold for what they believed to 23 be an unsafe level, why do you believe 24 that the FDA then asked all the</p> <p>Page 59</p> <p>1 medication that's over 96 nanograms of 2 NDMA to be recalled? 3 MR. STOY: Objection. Form. 4 Calls for speculation. Beyond the 5 scope. 6 THE WITNESS: Yeah, again 7 I'm not a regulator. And I don't 8 know what fed into FDA's decisions 9 to do or not to do something. 10 All I know is that the level 11 they decided to set is a level 12 that they felt that anything below 13 that would be safe. 14 BY MR. NIGH: 15 Q. Now, you said that they 16 didn't say anything about levels above it 17 being unsafe. 18 But they did ask for all 19 that medication to be recalled. So you 20 don't equate a recall with unsafe? 21 MR. STOY: Objection. Form. 22 Scope. 23 THE WITNESS: Again, I'm not 24 a regulator. All I can say is</p>	<p>Page 60</p> <p>1 that, you know, they made the 2 decision. They set the level. 3 And they set a level that under 4 which they knew it would be safe. 5 And they did not set a level 6 above which it would be unsafe. 7 And I believe that as 8 regulators, they just want to make 9 sure that, you know, there's clear 10 evidence that it is safe, but it 11 doesn't mean that anything above 12 it is unsafe. 13 BY MR. NIGH: 14 Q. What do you mean by trace? 15 You said trace levels of NDMA. What do 16 you mean by trace? What's your 17 definition? 18 A. My definition is, if it 19 makes up a very, very small amount of 20 what the bulk is of the object. 21 I know that's very 22 imprecise, and so -- and I know lawyers 23 like precise language. And so that's 24 just the way that I was using trace. No</p> <p>Page 61</p> <p>1 technical definition. 2 Q. Okay. Did you review any 3 documents that discussed how NDMA and 4 NDEA are carcinogenic at very low levels? 5 MR. STOY: Object to the 6 form. Misstates the record. 7 Beyond the scope. 8 THE WITNESS: The only 9 documents that I think discuss 10 that may have been the expert 11 reports, and it was levels within 12 animals. 13 I don't think there's been 14 any data within humans as to what 15 the impact is of low levels of 16 NDMA. 17 BY MR. NIGH: 18 Q. Did you review the WHO 2002 19 document on NDMA? 20 A. I did not. 21 Q. But you did review dietary 22 studies that discuss increased risk of 23 cancer at higher levels of NDMA 24 ingestion, correct?</p>
---	---

<p style="text-align: right;">Page 62</p> <p>1 MR. STOY: Object to the</p> <p>2 form.</p> <p>3 THE WITNESS: I did review</p> <p>4 some dietary studies that showed</p> <p>5 an association with -- some</p> <p>6 studies showed an association with</p> <p>7 increasing levels of NDMA and</p> <p>8 increased cancer risk. They just</p> <p>9 showed an association.</p> <p>10 BY MR. NIGH:</p> <p>11 Q. And they showed an</p> <p>12 association at trace levels, correct?</p> <p>13 MR. STOY: Object to the</p> <p>14 form.</p> <p>15 THE WITNESS: Again, I don't</p> <p>16 have a technical definition of</p> <p>17 trace levels.</p> <p>18 So -- and it was in diet.</p> <p>19 I just don't know.</p> <p>20 BY MR. NIGH:</p> <p>21 Q. Now, using your definition</p> <p>22 for trace levels in valsartan, a very</p> <p>23 small amount of the product, the amount</p> <p>24 of NDMA that was in food, the nanograms</p>	<p style="text-align: right;">Page 64</p> <p>1 There is an association, but</p> <p>2 that's all I can say.</p> <p>3 BY MR. NIGH:</p> <p>4 Q. Before we start going down</p> <p>5 that rabbit tunnel, you didn't do</p> <p>6 anything to review the epidemiology in</p> <p>7 this case and make any causation</p> <p>8 opinions, correct?</p> <p>9 A. Reviewing the epidemiology</p> <p>10 as a whole in terms of coming up with a</p> <p>11 causation opinion, I did not do.</p> <p>12 That would require me to do</p> <p>13 a full literature search.</p> <p>14 All I did was looked at the</p> <p>15 studies that were cited by Dr. Panigrahy</p> <p>16 and Dr. Madigan that had to do with human</p> <p>17 studies.</p> <p>18 Q. And it's rare that an</p> <p>19 individual study will say that one thing</p> <p>20 causes another, correct?</p> <p>21 MR. STOY: Object to the</p> <p>22 form.</p> <p>23 THE WITNESS: I think it</p> <p>24 depends. You know, it depends.</p>
<p style="text-align: right;">Page 63</p> <p>1 would be a very small percentage of the</p> <p>2 food, correct? So they would be trace?</p> <p>3 MR. STOY: Objection to form</p> <p>4 and scope.</p> <p>5 THE WITNESS: Yeah, again,</p> <p>6 that -- it's outside the scope of</p> <p>7 what I was asked to do.</p> <p>8 But as I said, there was an</p> <p>9 association. And the amounts, as</p> <p>10 you stated, are probably, you</p> <p>11 know, quite small compared to the</p> <p>12 bulk of the foodstuffs that people</p> <p>13 have ingested.</p> <p>14 However, none of these</p> <p>15 studies establish causation. So</p> <p>16 the increased risk with higher</p> <p>17 levels of NDMA in these studies</p> <p>18 well could be because maybe</p> <p>19 obesity, that people that are more</p> <p>20 obese, eat more. And we know that</p> <p>21 obesity is associated with many</p> <p>22 cancers.</p> <p>23 So there's many confounding</p> <p>24 factors.</p>	<p style="text-align: right;">Page 65</p> <p>1 If you're doing it in</p> <p>2 animals, because you can do a</p> <p>3 randomized trial, you can say that</p> <p>4 yes, in this study, the animals</p> <p>5 that were randomized to agent X</p> <p>6 had a higher level of tumor</p> <p>7 formation than the animals</p> <p>8 randomized to control.</p> <p>9 So in that situation I think</p> <p>10 they would say that the agent X</p> <p>11 causes cancer in animals.</p> <p>12 BY MR. NIGH:</p> <p>13 Q. It's rare that an individual</p> <p>14 human epidemiology study will say that</p> <p>15 one thing causes another, correct?</p> <p>16 A. Again, I think it just</p> <p>17 depends upon what is being addressed.</p> <p>18 And again, if you -- I live</p> <p>19 in the world of clinical trials. And I</p> <p>20 believe that, you know, we do make</p> <p>21 conclusions based on one study as to</p> <p>22 whether or not a drug benefits a patient</p> <p>23 or not.</p> <p>24 Q. In all of your studies that</p>

<p>Page 66</p> <p>1 you've published -- how many studies have</p> <p>2 you published? Can you give an estimate?</p> <p>3 A. Oh, I don't know. Somewhere</p> <p>4 over 225.</p> <p>5 Q. In all of your studies that</p> <p>6 you published, are there any human</p> <p>7 studies where you -- where you or the</p> <p>8 study gave the opinion that one substance</p> <p>9 causes an increased -- one substance</p> <p>10 causes an adverse event?</p> <p>11 MR. STOY: Object to the</p> <p>12 form.</p> <p>13 THE WITNESS: Again, I do</p> <p>14 many clinical trials. But I have</p> <p>15 to say -- and we've actually</p> <p>16 studied this -- that adverse</p> <p>17 events are quite tricky.</p> <p>18 And so we would say that, in</p> <p>19 a clinical trial, that, you know,</p> <p>20 one arm had a higher adverse event</p> <p>21 rate than the other arm. And if</p> <p>22 it was a randomized trial and</p> <p>23 blinded -- because if it's not</p> <p>24 blinded, there are biases in there</p> <p>Page 67</p> <p>1 because physicians know what drugs</p> <p>2 the people are getting, and so</p> <p>3 they might be more inclined to</p> <p>4 call an adverse event something</p> <p>5 that they think is more toxic than</p> <p>6 something else.</p> <p>7 So, you know, we do make the</p> <p>8 observation that in the control</p> <p>9 arm, if it were placebo</p> <p>10 controlled, compared to the</p> <p>11 treatment arm, if the treatment</p> <p>12 arm has a higher adverse event</p> <p>13 rate, we would say that higher</p> <p>14 rate is due to the treatment.</p> <p>15 But again, that would have</p> <p>16 to be a double-blind</p> <p>17 placebo-controlled trial.</p> <p>18 BY MR. NIGH:</p> <p>19 Q. So for you to make that</p> <p>20 opinion in an individual study, that</p> <p>21 treatment causes an adverse event, you</p> <p>22 would want it to be a clinical trial and</p> <p>23 a double-blinded clinical trial, correct?</p> <p>24 A. That is one instance in</p>	<p>Page 68</p> <p>1 which one would be able to make such a</p> <p>2 conclusion.</p> <p>3 Q. In all of the human</p> <p>4 epidemiology studies, not the clinical</p> <p>5 trial studies, that you published -- you</p> <p>6 have published some epidemiology studies</p> <p>7 that are not clinical trials, correct?</p> <p>8 A. Correct.</p> <p>9 Q. In all of the epidemiology</p> <p>10 studies that you've published, was there</p> <p>11 ever an opinion that one agent or</p> <p>12 treatment causes an adverse event?</p> <p>13 MR. STOY: Object to the</p> <p>14 form.</p> <p>15 THE WITNESS: I'm sorry.</p> <p>16 What I'm trying to think of is --</p> <p>17 I'm trying to think if I've ever</p> <p>18 done a study where the primary</p> <p>19 endpoint was an adverse event.</p> <p>20 I found many studies that</p> <p>21 establish associations, and some</p> <p>22 of them could be an association</p> <p>23 with an adverse event.</p> <p>24 BY MR. NIGH:</p> <p>Page 69</p> <p>1 Q. Can you think of a single</p> <p>2 epidemiology study that you reviewed</p> <p>3 where there was opinion that one agent or</p> <p>4 treatment caused an adverse event, not</p> <p>5 just association, but caused?</p> <p>6 MR. STOY: Object to the</p> <p>7 form.</p> <p>8 THE WITNESS: So in my work,</p> <p>9 and why I'm pausing to some</p> <p>10 extent, is I had been an associate</p> <p>11 editor and then an deputy editor</p> <p>12 for the Journal of Clinical</p> <p>13 Oncology.</p> <p>14 In that role, over the years</p> <p>15 I probably have reviewed and</p> <p>16 evaluated thousands of studies.</p> <p>17 I cannot say with certainty</p> <p>18 that I have not seen such a study</p> <p>19 that has made that conclusion.</p> <p>20 BY MR. NIGH:</p> <p>21 Q. But you can't think of a</p> <p>22 single study that has made that</p> <p>23 conclusion, correct?</p> <p>24 A. Sitting right here, right</p>
---	--

<p>Page 70</p> <p>1 now in front of you, I can't come up with 2 much of anything. But no, I cannot come 3 up with a -- I cannot point to study X 4 right now. 5 Q. And that's because causal 6 opinions in a single epidemiology study 7 are rarely reached, correct? 8 MR. STOY: Object to the 9 form. 10 THE WITNESS: Again, this is 11 going outside the scope of what I 12 was asked to do. 13 I was not asked to speak on 14 causation. But when one tries to 15 establish causation based on 16 observational studies -- and I'm 17 not sure if you mean that. Again, 18 clinical trials, yes, you can make 19 such a conclusion, as I've said. 20 And I don't know if those 21 fall under epidemiology studies or 22 not, in -- I don't know. 23 BY MR. NIGH: 24 Q. Let me rephrase my question.</p> <p>Page 71</p> <p>1 And that's because causal 2 opinions in a single observational study 3 are rarely reached, correct? 4 A. Again, I was not asked to 5 speak on causation. But if I did a 6 causal analyses, yes, I would not base my 7 opinion, one way or the other, on the 8 conclusion of a single study, whether the 9 study concluded X causes Y or not. 10 Q. That's not my question. 11 I'm asking you about a 12 single observational study, not you 13 looking at a single observational study, 14 okay. 15 So my question is: In a 16 single observational study, the study 17 authors rarely reach causal opinions, 18 correct? 19 MR. STOY: Object to the 20 form. 21 Objection. Asked and 22 answered. 23 THE WITNESS: Again, I don't 24 know what you mean by rarely.</p>	<p>Page 72</p> <p>1 You know, I think many 2 studies at the end, the editors 3 would not allow, if just an 4 association were established -- 5 well, if it were an observe -- 6 depends upon the study design and 7 how well it was done. 8 If it was not a very good 9 study, meaning there was lots of 10 confounding in it, then yes, one 11 would not be able to conclude at 12 the end of the study that X causes 13 Y, just due to the residual 14 confounding in the study design. 15 BY MR. NIGH: 16 Q. Can you think of a single 17 observational study where the study 18 authors reached a causal opinion in the 19 study? 20 MR. STOY: Objection to 21 form. Asked and answered. 22 THE WITNESS: You know, 23 again, sitting here right now, I 24 cannot say yes, it was a study</p> <p>Page 73</p> <p>1 done by, you know, Dr. X and Dr. Y 2 on such as topic. No, I cannot. 3 MR. STOY: Daniel, we've 4 been going a little over an hour, 5 let me know whenever there's a 6 good time to take a short break. 7 MR. NIGH: I think we can 8 take a break now. Ten minutes. 9 THE VIDEOGRAPHER: Off the 10 record. 10:15. 11 (Short break.) 12 THE VIDEOGRAPHER: We are 13 back on the record at 10:27 a.m. 14 BY MR. NIGH: 15 Q. Doctor, let's go ahead and 16 take a look at appendix B, your materials 17 relied upon list. This is part of your 18 expert report. I think that's Exhibit 4. 19 MR. NIGH: We don't need to 20 put it up on the screen. 21 BY MR. NIGH: 22 Q. And so as I run through 23 this, I want to make sure that I have 24 this accurate.</p>
--	--

<p style="text-align: right;">Page 74</p> <p>1 You reviewed the medical 2 monitoring class action complaint, 3 correct? 4 A. Yes. 5 Q. And then you reviewed the 6 plaintiffs' memorandum of law in support 7 of the medical monitoring, correct? 8 A. Yes. 9 Q. And then you reviewed the 10 expert reports of Dr. Panigrahy and Dr. 11 Madigan, correct? 12 A. Yes. 13 Q. And did you review 14 Dr. Panigrahy's entire report or just 15 parts of his report? 16 A. I reviewed his entire 17 report. 18 Q. And did you review 19 Dr. Panigrahy's deposition testimony? 20 A. Yes. 21 Q. Did you review his whole 22 deposition transcript? 23 A. I believe I did read through 24 it, scan through it.</p>	<p style="text-align: right;">Page 76</p> <p>1 valsartan products. 2 That would be where the FDA 3 listed their testing results of valsartan 4 finished product, correct? 5 A. I believe so. I don't 6 remember offhand exactly what was there, 7 but since it says the FDA, I presume it 8 is the FDA testing results. 9 Q. And then you also reviewed 10 some studies, correct? 11 A. Yes. 12 Q. Those would have included 13 the Goodman study, correct? 14 A. Yes. 15 Q. And the Hidajat study? 16 A. Yes. 17 Q. And the Loh study? 18 A. Yes. 19 Q. And the Song study? 20 A. Yes. 21 Q. And the Snodin study? 22 A. Yes. 23 Q. And the Zheng study, 24 correct?</p>
<p style="text-align: right;">Page 75</p> <p>1 Q. And how about Dr. Madigan's 2 deposition testimony? Did you review 3 that? 4 A. Yes. 5 Q. Did you review his whole 6 transcript? 7 A. Yes, I scanned through it at 8 least. 9 Q. And then it also looks here 10 as if you have data. And you can see a 11 bunch of Bates numbers, APL-MDL2875, on 12 down, and TEVA. 13 Would those be valsartan 14 testing results by defendants? 15 A. Yes. 16 Q. So those would be in 17 spreadsheets or other documents that 18 demonstrate the amount of NDMA or NDEA in 19 API or finished products that the 20 defendants tested, correct? 21 A. Yes. 22 Q. And then on the next page, 23 you have this link to U.S. Food and Drug 24 Administration laboratory analysis of</p>	<p style="text-align: right;">Page 77</p> <p>1 A. Yes. 2 Q. And that Zheng study, that's 3 the Zheng study in regards to pancreatic 4 cancer, and in there they listed results 5 related to NDMA, correct? 6 A. Yes. 7 Q. Did you look for any 8 additional studies that have been 9 published since the time that Madigan and 10 Panigrahy gave their opinions? 11 A. I did not. That was beyond 12 the scope of what I was asked to do. 13 Q. Okay. So you wouldn't be 14 aware of whether or not there's any other 15 studies that show increased risk of liver 16 cancer in terms of additional amounts of 17 NDEA in a person's diet, correct? 18 MR. STOY: Objection. Form. 19 Scope. 20 THE WITNESS: So again, I 21 did not do a literature review. 22 And did you say NDEA -- 23 BY MR. NIGH: 24 Q. Yes.</p>

<p style="text-align: right;">Page 78</p> <p>1 A. -- or ND --</p> <p>2 Okay. So, yeah, that was</p> <p>3 beyond the scope of what I was asked to</p> <p>4 do.</p> <p>5 And so I am not aware of any</p> <p>6 other studies that were performed looking</p> <p>7 at any association between NDEA and</p> <p>8 increased cancer risk.</p> <p>9 Q. And other than the studies</p> <p>10 listed here and any other studies that</p> <p>11 may have been listed in Dr. Madigan's</p> <p>12 expert report, you did not rely upon any</p> <p>13 other studies or consider other documents</p> <p>14 in forming your opinions, correct?</p> <p>15 MR. STOY: Object to the</p> <p>16 form.</p> <p>17 THE WITNESS: Yeah, I</p> <p>18 believe I did not consider any</p> <p>19 other documents beyond those that</p> <p>20 are in the list of documents</p> <p>21 considered as well as in Appendix</p> <p>22 B here.</p> <p>23 BY MR. NIGH:</p> <p>24 Q. You just said other than</p>	<p style="text-align: right;">Page 80</p> <p>1 your knowledge, it would be this list of</p> <p>2 materials relied upon and the additional</p> <p>3 studies cited in Madigan's report that</p> <p>4 you would have considered, correct?</p> <p>5 A. To the best of my knowledge,</p> <p>6 I believe that is correct.</p> <p>7 Q. Now, Dr. Ballman, do you</p> <p>8 have any experience setting up a medical</p> <p>9 monitoring program?</p> <p>10 MR. STOY: Objection.</p> <p>11 Scope.</p> <p>12 THE WITNESS: I was not</p> <p>13 asked to have set -- to evaluate</p> <p>14 that, but I do not have any</p> <p>15 experience setting up a medical</p> <p>16 monitoring program.</p> <p>17 BY MR. NIGH:</p> <p>18 Q. Do you have any experience</p> <p>19 administering a medical monitoring</p> <p>20 program?</p> <p>21 A. I do not have any experience</p> <p>22 administering a medical monitoring</p> <p>23 program.</p> <p>24 Q. Before you offered your</p>
<p style="text-align: right;">Page 79</p> <p>1 those in the list of documents</p> <p>2 considered. What are you referring to?</p> <p>3 A. Yeah, I may have</p> <p>4 misremembered.</p> <p>5 I thought that there was</p> <p>6 also a list of documents considered,</p> <p>7 which included things like, you know, all</p> <p>8 the studies in the Madigan report.</p> <p>9 And maybe I'm</p> <p>10 mis-remembering from what counsel had</p> <p>11 told me.</p> <p>12 Q. Okay. So other than the</p> <p>13 studies listed in Madigan's report, and</p> <p>14 the studies that you relied upon here in</p> <p>15 Appendix B, there wouldn't be any</p> <p>16 other -- anything else in a list of</p> <p>17 materials considered, correct?</p> <p>18 MR. STOY: Object to the</p> <p>19 form.</p> <p>20 THE WITNESS: To the best of</p> <p>21 my knowledge, from what I can</p> <p>22 remember, I think that is correct.</p> <p>23 BY MR. NIGH:</p> <p>24 Q. Okay. And to the best of</p>	<p style="text-align: right;">Page 81</p> <p>1 opinion here today, have you had any</p> <p>2 litigation experience with medical</p> <p>3 monitoring?</p> <p>4 A. I have not, no.</p> <p>5 Q. Do you know of any medical</p> <p>6 monitoring programs that have been</p> <p>7 approved by courts?</p> <p>8 A. That's outside of my</p> <p>9 expertise. I am not aware of any</p> <p>10 monitoring programs that have been</p> <p>11 approved by courts, so no.</p> <p>12 Q. Are you aware of any medical</p> <p>13 monitoring programs in the United States?</p> <p>14 MR. STOY: Object to the</p> <p>15 form.</p> <p>16 Is your question ever?</p> <p>17 MR. NIGH: Yeah.</p> <p>18 THE WITNESS: And now I'm</p> <p>19 struggling a bit, because I'm not</p> <p>20 exactly sure if there is a</p> <p>21 technical definition of a medical</p> <p>22 monitoring program.</p> <p>23 I am aware of screening</p> <p>24 programs that are endorsed by</p>

<p style="text-align: right;">Page 82</p> <p>1 various medical associations, such 2 as the recommendation for one to 3 undergo lung cancer screening and 4 things like that. 5 BY MR. NIGH: 6 Q. When you say screening 7 programs, what do you mean by that? 8 A. What I mean is that these 9 are programs that are meant to screen 10 individuals who are considered to be at 11 high risk for developing cancer. 12 Q. Are you aware of any 13 programs where -- for screening, where 14 people were exposed to substances? 15 MR. STOY: Object to the 16 form. 17 THE WITNESS: The lung 18 cancer screening program is based 19 upon people being exposed to 20 cigarette smoke, which I believe 21 is a substance. 22 BY MR. NIGH: 23 Q. Okay. Other than the -- 24 other than for smoking, are you aware of</p>	<p style="text-align: right;">Page 84</p> <p>1 or what I do. 2 BY MR. NIGH: 3 Q. Okay. Doctor, I want to 4 turn your attention to Page 7 of your 5 expert report. Actually, the bottom of 6 Page 6. 7 You write, "Even assuming, 8 however, that plaintiffs" -- that's where 9 I'm reading from. 10 "Even assuming however the 11 plaintiffs can obtain and utilize 12 pharmacy records in the manner described, 13 what they cannot do from the information 14 provided is identify whether the proposed 15 class members in fact consumed the 16 prescribed valsartan, and if so, whether 17 the consumed valsartan contained NDMA 18 and/or NDEA." 19 Do you see that? 20 A. Yes. 21 Q. And I'm going to start with 22 the "whether the proposed class members 23 in fact consumed their prescribed 24 valsartan."</p>
<p style="text-align: right;">Page 83</p> <p>1 any programs where people -- for 2 screening where people were exposed to 3 substances or carcinogens? 4 A. So again, this is outside of 5 my area of expertise. So off the top of 6 my head, I can't -- I can't name one, 7 because this is beyond what I do. 8 Q. I understand. So other than 9 smoking, it's your answer that you're not 10 aware of any other programs where people 11 are being screened that were exposed to 12 substances or carcinogens? 13 MR. STOY: Object to the 14 form. 15 THE WITNESS: Again, I -- I 16 mean, another thing that comes to 17 mind is I believe that people that 18 were exposed to radiation, there 19 were screening programs set up for 20 them at the end of World War II. 21 There may be other 22 substances, I just am not 23 personally aware of them. It's 24 outside of my realm of expertise</p>	<p style="text-align: right;">Page 85</p> <p>1 Is it your opinion that 2 there is no sufficient way for plaintiffs 3 to establish that proposed class members 4 consumed their prescribed valsartan? 5 A. So that statement is based 6 upon my experience in clinical trials 7 where we monitor patients quite closely 8 for adherence. And even in those 9 situations, it's pretty hard to ensure 10 that people took the medications that 11 they were prescribed to take. So that's 12 the basis of that comment. 13 Q. Well, in your experience in 14 clinical trials where you're monitoring 15 patients, how are you able to even 16 determine adherence? 17 A. So in those situations, 18 patients oftentimes are asked to give -- 19 to keep a drug log where they log in when 20 they have taken something. 21 But again, we have to take 22 it on faith that if they logged it in 23 that they truly did take it. 24 In some instances, we also</p>

<p style="text-align: right;">Page 86</p> <p>1 monitor pill counts where they are asked 2 to bring in their pill bottles at each 3 visit, and the pills are counted to make 4 sure that, you know, they -- the correct 5 amount is -- had been consumed. 6 And then we just ask 7 patients and assume that they would be 8 truthful in telling us if they actually 9 adhered to the regimen. 10 Q. Now, when you ask patients, 11 why would you assume that they would be 12 truthful in telling you that they 13 actually adhered to the regimen? 14 A. We don't know for sure, but 15 I mean, as you said it's very hard to 16 determine if someone has taken medication 17 or is adherent. But that's the best we 18 can do is to assume that people are going 19 to be truthful, like they are when they 20 go to the doctor and ask how much alcohol 21 they've consumed, that they will just 22 give us the right -- the truthful answer. 23 Q. Do you know how plaintiffs 24 could establish the proposed class</p>	<p style="text-align: right;">Page 88</p> <p>1 identify the lot number of the 2 prescription, and not all lots of 3 valsartan were recalled. 4 We'll deal with the 5 variation of the manufacturer later. 6 Okay? 7 A. Okay. 8 Q. Is it your opinion that for 9 valsartan pills made with ZHP API, that 10 not all the lots of valsartan were 11 recalled? 12 MR. STOY: Objection. 13 Beyond the scope. 14 THE WITNESS: That is beyond 15 the scope of what I was asked to 16 do. 17 I do not know, nor can I 18 form an opinion, as to whether or 19 not all the lots were recalled. 20 BY MR. NIGH: 21 Q. Well, your statement 22 actually says, "Not all lots of valsartan 23 were recalled." 24 So now I'm asking you for</p>
<p style="text-align: right;">Page 87</p> <p>1 members consumed their prescribed 2 valsartan? 3 A. That's beyond the scope of 4 what I was asked to do. So I -- off the 5 top of my head, I have no opinion or 6 thoughts as to how they might determine 7 that. 8 Q. The next part of your 9 statement says, "Whether the consumed 10 valsartan contained NDMA and/or NDEA." 11 Do you see that? 12 A. Yes. 13 Q. And then you go on to state, 14 "The NDC code does not identify the lot 15 number of the prescription. Not all lots 16 of valsartan were recalled, and not all 17 tested lots from the same manufacturer 18 contain the same levels of detected NDMA 19 or NDEA." 20 I'm going to focus your 21 attention to the first parts of this 22 statement, that whether the consumed 23 valsartan contained NDMA and/or NDEA and 24 your concerns that the NDC does not</p>	<p style="text-align: right;">Page 89</p> <p>1 valsartan made with ZHP API, do you have 2 no opinion for valsartan made with ZHP 3 API? 4 A. I have no opinion with 5 respect to that. It's beyond the scope 6 of what I was asked to do. 7 Q. Is that your opinion for 8 valsartan pills made with Mylan API? 9 A. Again, I cannot sort of 10 point to any manufacturer and say that, 11 you know, their particular lots were not 12 recalled. 13 However, I am aware that 14 lots were recalled in a staggered manner. 15 And so at some time -- 16 Q. How are you aware that lots 17 were recalled in a staggered manner? 18 A. I think probably through 19 discussion with -- 20 MR. STOY: I do want to just 21 caution you, Doctor, not to reveal 22 the content of any discussions 23 that you had with counsel for the 24 defendants.</p>

<p style="text-align: right;">Page 90</p> <p>1 But keeping that in mind, 2 you can continue answering the 3 question. 4 BY MR. NIGH: 5 Q. How are you aware that lots 6 were recalled in a staggered manner? 7 A. I believe it was in -- I 8 don't know what I can say and not say 9 that doesn't violate privilege 10 information. 11 Q. Let me ask you this way. 12 Other than through discussions with 13 counsel, are you aware that lots were 14 recalled in a staggered manner any 15 other -- from any other independent 16 source? 17 A. No. 18 Q. Is it your opinion that not 19 all lots of valsartan were recalled for 20 Hetero, for valsartan that was made with 21 Hetero API? 22 A. Again, I cannot answer that 23 with certainty. 24 As I mentioned I do not know</p>	<p style="text-align: right;">Page 92</p> <p>1 well as what the agents are that are in 2 the product, as well as what the size is 3 in terms of how the product was 4 distributed. And there are no lot 5 numbers in that information. 6 Q. Do you know how many lot 7 numbers make up an NDC code? 8 A. That's beyond my area of 9 expertise. 10 Q. Do you know how many batches 11 make up an NDC code? 12 A. Again, that is beyond the 13 area of my expertise, no. 14 Q. Which finished dose 15 manufacturers use Mylan API for valsartan 16 finished pills? 17 A. Again, that's beyond the 18 area of my expertise. 19 I do not know. 20 Q. Which finished dose 21 manufacturer use Hetero valsartan API for 22 valsartan finished pills? 23 A. I do not know. Beyond the 24 area of my expertise.</p>
<p style="text-align: right;">Page 91</p> <p>1 which manufacturers' lots were completely 2 recalled and which were not. 3 Q. Which finished dose 4 manufacturers used ZHP API for their 5 valsartan finished pills? 6 MR. STOY: Objection. 7 Beyond the scope. 8 THE WITNESS: That is beyond 9 the scope of my expertise, and I 10 cannot answer that because I just 11 do not know. 12 BY MR. NIGH: 13 Q. So to be clear, when you're 14 mentioning that not all lots of valsartan 15 were recalled and the NDC does not 16 identify the lot number of the 17 prescription and your criticism as to 18 whether the consumed valsartan contained 19 NDMA and/or NDEA impurity, you don't know 20 which finished dose manufacturers used 21 ZHP API for valsartan finished pills? 22 A. I personally do not know. 23 It's my understanding that 24 the NDC codes list the manufacturer as</p>	<p style="text-align: right;">Page 93</p> <p>1 Q. Which finished dose 2 manufacturer used Aurobindo API for 3 valsartan finished pills? 4 A. I do not know. It's beyond 5 the area of my expertise. 6 Q. For valsartan pills made 7 with ZHP API, have you seen any testing 8 demonstrating that no NDMA was found in 9 any lots? 10 MR. STOY: Objection. 11 Scope. 12 THE WITNESS: And again, can 13 you repeat the question? Because 14 there were a lot of, like, 15 qualifications or -- just please 16 repeat the question. 17 BY MR. NIGH: 18 Q. Sure. Sure for valsartan 19 pills made with ZHP API, have you seen 20 any testing demonstrating that no NDMA 21 was found in those pills? 22 MR. STOY: Same objection. 23 THE WITNESS: Again, that 24 was beyond the scope of what I was</p>

<p style="text-align: right;">Page 94</p> <p>1 asked to do.</p> <p>2 I was given a bunch of</p> <p>3 testing information, but I did not</p> <p>4 pour over it carefully.</p> <p>5 We could look at the</p> <p>6 spreadsheet to see if that indeed</p> <p>7 is the case. But off of the top</p> <p>8 of my head, I'm unable to answer</p> <p>9 that question.</p> <p>10 BY MR. NIGH:</p> <p>11 Q. For valsartan pills made</p> <p>12 with ZHP API, have you seen any testing</p> <p>13 demonstrating that no NDMA could be</p> <p>14 detected in those pills?</p> <p>15 MR. STOY: Objection. Asked</p> <p>16 and answered.</p> <p>17 MR. NIGH: It's a different</p> <p>18 question.</p> <p>19 THE WITNESS: Was the</p> <p>20 question -- did you say NDMA or</p> <p>21 NDEA?</p> <p>22 BY MR. NIGH:</p> <p>23 Q. NDMA each time. Let me ask</p> <p>24 it again.</p>	<p style="text-align: right;">Page 96</p> <p>1 answer as to which manufacturer.</p> <p>2 Q. Well, for valsartan pills</p> <p>3 made with ZHP API, have you seen any</p> <p>4 testing demonstrating that any pills had</p> <p>5 less than 96 nanograms of NDMA?</p> <p>6 A. Again, since I cannot answer</p> <p>7 the previous questions because I cannot</p> <p>8 remember what was in those spreadsheets,</p> <p>9 I cannot answer that question.</p> <p>10 Q. For valsartan pills made</p> <p>11 with ZHP API, have you seen any testing</p> <p>12 demonstrating that any pills did not have</p> <p>13 at least thousands or tens of thousands</p> <p>14 of nanograms of NDMA?</p> <p>15 MR. STOY: Objection to</p> <p>16 form. Scope.</p> <p>17 THE WITNESS: You know,</p> <p>18 again, this is beyond the scope of</p> <p>19 what I was asked to do.</p> <p>20 I did look at spreadsheets.</p> <p>21 I do not recall the levels that</p> <p>22 were reported in there.</p> <p>23 And so I cannot answer that</p> <p>24 question.</p>
<p style="text-align: right;">Page 95</p> <p>1 For valsartan pills made</p> <p>2 with ZHP API, have you seen any testing</p> <p>3 demonstrating that no NDMA could be</p> <p>4 detected in those pills?</p> <p>5 A. Yeah, I'm sorry. I thought</p> <p>6 that was the previous question, so I</p> <p>7 guess I'm confused.</p> <p>8 But, again, you know, I</p> <p>9 cannot say with certainty unless I look</p> <p>10 at the testing material that was provided</p> <p>11 to me, and assuming that the testing</p> <p>12 material provided to me is all the</p> <p>13 testing information that's available.</p> <p>14 Q. But as you sit here, you</p> <p>15 have -- you did review some testing,</p> <p>16 correct?</p> <p>17 A. Yes. I looked at those</p> <p>18 documents. But I do not recall which</p> <p>19 manufacturer, which API, which whatever,</p> <p>20 had levels, did not have levels, and so</p> <p>21 forth.</p> <p>22 I know there are some that</p> <p>23 did not have detectable levels. But</p> <p>24 again, off the top of my head, I cannot</p>	<p style="text-align: right;">Page 97</p> <p>1 BY MR. NIGH:</p> <p>2 Q. For valsartan pills made</p> <p>3 with ZHP API, have you reviewed any</p> <p>4 information that demonstrates that there</p> <p>5 were some lots that were not recalled?</p> <p>6 A. Again, that's beyond the</p> <p>7 scope of my expertise and what I was</p> <p>8 asked to do. So I do not know for that</p> <p>9 particular manufacturer whether there</p> <p>10 were some lots that were not recalled.</p> <p>11 Q. So when you give the opinion</p> <p>12 that not all lots of valsartan were</p> <p>13 recalled, you wouldn't know if that's</p> <p>14 true for specifically for ZHP, correct?</p> <p>15 MR. STOY: Object to the</p> <p>16 form.</p> <p>17 THE WITNESS: Right now,</p> <p>18 sitting here without looking at</p> <p>19 the information provided and not</p> <p>20 understanding whether I was</p> <p>21 provided all the information, I</p> <p>22 could not answer that question.</p> <p>23 Yes.</p> <p>24 BY MR. NIGH:</p>

Page 98

1 Q. For valsartan pills made
2 with Mylan API, have you seen any testing
3 demonstrating that no NDEA was found in
4 those pills?
5 MR. STOY: Objection. Form.
6 Scope.
7 THE WITNESS: Again, this is
8 a similar answer to as before.
9 I do not recall, sitting
10 here without looking at the
11 information, as to whether or not
12 I saw any lots that did not --
13 that were recalled or not recalled
14 or what the level of impurity was
15 measured with respect to NDEA for
16 Mylan. I just -- I just can't
17 answer that.
18 BY MR. NIGH:
19 Q. For valsartan pills made
20 with Mylan API, have you seen any testing
21 demonstrating that any pills had less
22 than 26.5 nanograms of NDEA?
23 A. Again --
24 MR. STOY: Same objection as

Page 99

1 before.
2 Sorry.
3 THE WITNESS: Sorry.
4 Again, this is beyond my
5 scope.
6 And as I have been saying, I
7 cannot say with certainty whether
8 or not there were any lots of the
9 tested information provided to me
10 that were under the stated level.
11 I do not even know if I was
12 provided all the testing
13 information.
14 BY MR. NIGH:
15 Q. For valsartan pills made
16 with Mylan API, have you reviewed any
17 information that demonstrates that there
18 were some lots of unexpired medication
19 that were not recalled?
20 A. Beyond my area of expertise.
21 And I cannot answer that.
22 Q. So when you give the opinion
23 that not all lots of valsartan were
24 recalled, what are you referring to?

Page 100

1 A. Again, it's my
2 understanding -- and you went through a
3 list of some, that there were cases that
4 some lots of valsartan were not recalled
5 for certain manufacturers.
6 I cannot say which
7 manufacturers at this time. I don't know
8 that.
9 Q. So when you say not all lots
10 of valsartan were recalled, you don't
11 know for which manufacturers that
12 statement would be true?
13 A. Sitting here right now, no,
14 I do not.
15 Q. When you make the opinion
16 that whether the consumed valsartan
17 contained NDMA and/or NDEA impurity, you
18 wouldn't know as to which manufacturers
19 that opinion would apply to, correct?
20 MR. STOY: Object to the
21 form.
22 THE WITNESS: Again, this is
23 outside my area of expertise. And
24 I did not review all the testing

Page 101

1 literature, nor the recall
2 information on these agents.
3 And so I could not tell you
4 at this point which lots may have
5 or may not have contained the
6 impurities.
7 BY MR. NIGH:
8 Q. Now, if every lot from a
9 manufacturer that they tested has NDMA
10 and/or NDEA, then your statement that the
11 NDC does not identify the lot number of
12 the prescription would not matter,
13 correct?
14 MR. STOY: Object to the
15 form. Incomplete hypothetical.
16 Beyond the scope.
17 THE WITNESS: So I'm trying
18 to see if I get the assumption
19 right.
20 So if I assume there is a
21 manufacturer for which all the
22 lots were recalled for that
23 particular manufacturer, and over
24 a given time period and so forth,

Page 102

1 then I guess the lot number would
2 not matter for that particular
3 manufacturer, assuming that it has
4 been shown that all the lots were
5 contaminated.
6 BY MR. NIGH:
7 Q. Now, I want to draw your
8 attention to the next part of your
9 statement where it says, "Not all tested
10 lots from the same manufacturer contain
11 the same levels of detected NDMA or
12 NDEA."
13 Do you see that?
14 A. Yes.
15 Q. Now, are you aware that
16 approved medical monitoring programs
17 commonly have potential varying levels of
18 individual exposure?
19 MR. STOY: Object to the
20 form.
21 THE WITNESS: Medical
22 monitoring plans are outside the
23 scope of my expertise. And I do
24 not know necessarily how medical

Page 103

1 monitoring plans are formed. And
2 that was outside of what I was
3 looked at to do.
4 BY MR. NIGH:
5 Q. Can you think of any
6 approved medical monitoring programs
7 where class members have potential --
8 where class members exposed to substances
9 did not have potential varying levels of
10 individual exposure?
11 MR. STOY: Objection to
12 form. Scope. Calls for a legal
13 conclusion.
14 THE WITNESS: Again, that's
15 outside the area of my expertise.
16 And I do not know the
17 medical monitoring literature. So
18 I, off the top of my head, cannot
19 give you a specific instance.
20 BY MR. NIGH:
21 Q. In your report, you never
22 undertook any attempt to calculate means,
23 medians, midpoints, or ranges of the
24 amounts of NDMA or NDEA found for each

Page 104

1 manufacturer, correct?
2 A. That was beyond the scope of
3 what I was asked to do. And so I -- I
4 didn't see any reason to calculate those.
5 I did review some ranges
6 that were provided. I did see some
7 median values sometimes that were
8 provided.
9 Did I calculate those? I
10 did not, because I did not have the
11 necessary data in order to do that.
12 Q. In your expert report, you
13 did not attempt to assess what the means,
14 medians, midpoints, or ranges of NDMA
15 and/or NDEA exposure were for each NDC
16 code, correct?
17 A. I do not have the necessary
18 data in order to do such calculations.
19 So I did not do such calculations.
20 Q. And when you say that you
21 did not have the necessary data, you mean
22 that you were not provided with the
23 documents that could have allowed you to
24 do that calculation?

Page 105

1 A. Could you repeat what the
2 actual calculation was again?
3 Q. No, I'll strike that
4 question.
5 I next want to draw your
6 attention to Page 8 where you state,
7 "Plaintiffs assumed similar levels of
8 impurities in API products and finished
9 dose product."
10 Do you see that?
11 A. I'm sorry. Could you direct
12 my attention more where on the page?
13 Q. Page 8, Number 5. We put it
14 on the screen here too.
15 A. Okay.
16 Q. Your opinion was that --
17 A. Yes.
18 Q. -- "Plaintiffs assume
19 similar levels of impurities in API
20 product and finished dose product."
21 Do you see that?
22 A. Yes, I do.
23 Q. Now, how do you -- how did
24 you come up with the assumption that

<p style="text-align: right;">Page 106</p> <p>1 plaintiffs are assuming that?</p> <p>2 A. So that assumption came</p> <p>3 because I, again, looked at the lifetime</p> <p>4 cumulative thresholds that were proposed</p> <p>5 in the medical monitoring plan. And the</p> <p>6 information provided in that plan as to</p> <p>7 what provided the scientific basis for</p> <p>8 coming up with those thresholds would be</p> <p>9 found in the Panigrahy and -- I'll strike</p> <p>10 that.</p> <p>11 Q. I'm sorry. I don't know</p> <p>12 what you were striking. The whole</p> <p>13 answer?</p> <p>14 A. I'm starting my answer over.</p> <p>15 So yes, if I could strike the whole</p> <p>16 thing, that would be great.</p> <p>17 Q. Let me ask my question</p> <p>18 again. And then if you need some time to</p> <p>19 think about it, that's fine.</p> <p>20 Now, how did you come up</p> <p>21 with the assumption that plaintiffs are</p> <p>22 assuming similar levels of impurities in</p> <p>23 API product and finished dose product?</p> <p>24 A. I would have to look at the</p>	<p style="text-align: right;">Page 108</p> <p>1 that plaintiffs would have to assume</p> <p>2 values from the valsartan API as opposed</p> <p>3 to just relying on the FDA's finished</p> <p>4 dose testing levels?</p> <p>5 A. I don't think I assumed that</p> <p>6 they would have to use the API.</p> <p>7 As I said, I would need to</p> <p>8 look at the medical monitoring proposal</p> <p>9 to see what they actually used.</p> <p>10 I do not think that I</p> <p>11 assumed that they needed to use the API</p> <p>12 versus needed to use the FDA levels in a</p> <p>13 finished product.</p> <p>14 Q. Well, if plaintiffs used the</p> <p>15 FDA's finished testing -- the FDA's</p> <p>16 finished product testing levels, then</p> <p>17 this statement about the plaintiffs</p> <p>18 assuming similar levels of impurities in</p> <p>19 API product as finished dose product</p> <p>20 would be irrelevant, correct?</p> <p>21 MR. STOY: Objection to</p> <p>22 form. Argumentative.</p> <p>23 THE WITNESS: Again, I'm</p> <p>24 saying I don't know off the top of</p>
<p style="text-align: right;">Page 107</p> <p>1 medical monitoring report, because in</p> <p>2 Table 1, I -- I assumed that -- on the</p> <p>3 basis of what was in the APIs. And I'm</p> <p>4 not sure if that came from the actual</p> <p>5 medical monitoring proposal or not.</p> <p>6 Q. Did you review the</p> <p>7 deposition transcripts where Madigan</p> <p>8 and/or Panigrahy were presented with the</p> <p>9 finished product testing levels and</p> <p>10 answered questions in regards to finish</p> <p>11 product testing levels as demonstrated by</p> <p>12 the FDA?</p> <p>13 A. I've stated that I have read</p> <p>14 their depositions, but I do not, off the</p> <p>15 top of my head, recall instances of</p> <p>16 questions and answers regarding the</p> <p>17 finished products.</p> <p>18 Q. Why is it that you feel that</p> <p>19 plaintiffs would have to assume values</p> <p>20 from the valsartan API as opposed to just</p> <p>21 the FDA's finished testing levels?</p> <p>22 A. Could you please ask the</p> <p>23 question again?</p> <p>24 Q. Why is it that you believe</p>	<p style="text-align: right;">Page 109</p> <p>1 my head what the plaintiffs</p> <p>2 assumed without checking what is</p> <p>3 in the medical monitoring plan,</p> <p>4 which off of the top of my head</p> <p>5 right now, I cannot recall what</p> <p>6 they proposed.</p> <p>7 BY MR. NIGH:</p> <p>8 Q. When you make the statement</p> <p>9 that plaintiffs assume no variability of</p> <p>10 NDMA and/or NDEA impurity levels for the</p> <p>11 same manufacturer, what is the basis for</p> <p>12 that statement?</p> <p>13 A. When I looked at the testing</p> <p>14 data that was provided to me, I saw</p> <p>15 variability between the different lots.</p> <p>16 So that means that there was variability</p> <p>17 within the manufacturer.</p> <p>18 Q. Okay. So if there's</p> <p>19 variability within a manufacturer, why is</p> <p>20 it your -- why is it your opinion that</p> <p>21 the plaintiffs assume no variability in</p> <p>22 NDMA and/or NDEA impurity levels for the</p> <p>23 same manufacturer?</p> <p>24 A. Because when I looked at the</p>

Page 110

1 medical monitoring report proposal and
2 looked at the lifetime cumulative
3 thresholds that were proposed, they were
4 only proposed on the basis of a
5 manufacturer, and they were not on the
6 basis of a manufacturer and lot number.
7 Q. Did you consider any other
8 assumptions that the plaintiffs may have
9 made in terms of assessing variability as
10 opposed to plaintiffs assuming no
11 variability in NDMA and/or NDEA impurity
12 levels for the same manufacturer?
13 MR. STOY: Object to the
14 form.
15 THE WITNESS: That was
16 beyond the scope of what I was
17 asked to do.
18 I was just trying to, the
19 second part of my charge was to
20 try to -- well, the first part in
21 general is to understand if there
22 is evidence to support the use of
23 the proposed thresholds. And
24 there was only one threshold given

Page 111

1 per each manufacturer.
2 And so the simplest
3 assumption to make, Occam's Razor,
4 is that -- to assume that within a
5 manufacturer, there is no
6 variability; otherwise, there
7 would be thresholds on the basis
8 of the lot numbers.
9 BY MR. NIGH:
10 Q. You just said that would be
11 the simplest assumption. But you didn't
12 make any other potential assumptions as
13 to what the plaintiffs may have assumed
14 in terms of variability with NDMA and/or
15 NDEA impurity levels for the same
16 manufacturer, correct?
17 MR. STOY: Object to the
18 form.
19 THE WITNESS: So again, you
20 know, in science, if one proposes
21 a threshold, and to be
22 scientifically rigorous, it should
23 be pretty clear as to what the
24 basis is of that threshold.

Page 112

1 And so I don't think it's my
2 responsibility to make other
3 assumptions that are necessary in
4 order to explain why the
5 plaintiffs decided to use one
6 threshold per manufacturer.
7 And I did say what
8 assumption I assumed in order for
9 those thresholds to be valid.
10 BY MR. NIGH:
11 Q. So when you give the
12 statement, "Plaintiffs assume no
13 variability in NDMA and/or NDEA impurity
14 levels for the same manufacturer, you
15 actually mean that you assumed that
16 plaintiffs assumed no variability in NDMA
17 and/or NDEA impurity levels for the same
18 manufacturer, correct?
19 MR. STOY: Object to the
20 form.
21 THE WITNESS: So on the
22 basis that there was one threshold
23 per manufacturer, the assumption
24 is that there would be no

Page 113

1 variability within the
2 manufacturer.
3 BY MR. NIGH:
4 Q. That's the assumption that
5 you made, correct?
6 A. I don't know what other
7 assumption to make for those thresholds
8 to make sense, because if someone took a
9 lot that had no NDMA in it, let's say
10 from one of the manufacturers for the
11 given length of time that's stated as
12 part of the threshold, that threshold
13 wouldn't make sense versus someone that
14 took a lot, that had an immense amount.
15 So I just don't know what
16 other assumption could have been made.
17 And I welcome -- yeah.
18 Q. Now, you say that because if
19 someone took a lot that had no NDMA in
20 it.
21 But my understanding is you
22 don't have any knowledge, as you sit here
23 today, as to which manufacturers that
24 would be true for, correct?

Page 114

1 A. I have no --
2 Q. Or impossible?
3 MR. STOY: Object to the
4 form.
5 THE WITNESS: As I sit here
6 today, that is correct. I cannot
7 name manufacturers for which that
8 might be the case.
9 But I believe there are
10 manufacturers for which there was
11 no NDMA detected in the -- in
12 their product.
13 BY MR. NIGH:
14 Q. Okay. I want to turn your
15 attention -- we're going to stay on
16 Page 8.
17 And in reading your opinion,
18 you state for Number 5, you state, "The
19 thresholds in Table 1 further implicitly
20 assume the levels of impurity and effects
21 of valsartan API are the same as what
22 would be found in the finished dose
23 products, which is the valsartan tablet
24 that is consumed by an individual."

Page 115

1 You later put, "Reviewing
2 the manufacturers' testing data, it is
3 clear this is not the case. For example,
4 for Aurobindo valsartan 320-milligram
5 lot, packing batch number" -- and you
6 give a batch number -- "the amount of
7 NDEA detected in the API batch was 0.96
8 micrograms, and the amount detected in
9 the corresponding finished product batch
10 was .048 micrograms, which is a twofold
11 reduction in the level of impurity."
12 Do you see that?
13 A. Yes.
14 Q. And then you say, "This is
15 not an isolated case, but in general,
16 there appear to be lower levels of
17 impurity in the finished product tablet
18 that would be consumed compared to the
19 API."
20 Do you see that?
21 A. Yes.
22 Q. And then below, you list
23 testing documents.
24 Do you see that?

Page 116

1 A. Yes.
2 Q. Now, other than --
3 A. Sorry. Clarification,
4 please.
5 Do you mean the footnote?
6 Q. Yes.
7 A. Yes.
8 Q. It's actually Footnote 9,
9 not Footnote 8.
10 Right? Is it Footnote 9?
11 A. Yes, I believe so.
12 Q. And so other than for
13 Aurobindo, do you know if there are any
14 other manufacturers where you're seeing a
15 lower amount of NDEA that's generally
16 detected in the finished dose batch
17 compared to the API batch?
18 A. Without being able to look
19 at those documents at this time, I cannot
20 state with certainty what any other
21 manufacturer might be.
22 Q. So you only hold this
23 opinion for Aurobindo at this time?
24 MR. STOY: Object to the

Page 117

1 form. Misstates testimony.
2 THE WITNESS: That's not
3 what I said.
4 I said without being able to
5 review the documents that are
6 cited, off the top of my head I
7 cannot, with certainty, give you
8 another example.
9 BY MR. NIGH:
10 Q. Your wording says, "This is
11 not an isolated case, but in general
12 there appear to be lower levels of
13 impurity in the finished product tablet
14 that will be consumed compared to the
15 API."
16 Do you see that?
17 A. Yes.
18 Q. Other than Aurobindo, which
19 other manufacturers do you believe this
20 statement to be true for?
21 A. As I stated, that without
22 being able to -- and I'm happy to review
23 all of those spreadsheets, if you want.
24 I'm not able to name if

Page 118

1 there's another case where this is true.
2 MR. NIGH: Okay. Let's take
3 a look at LP 1779.
4 (Document marked for
5 identification as Exhibit
6 Ballman-5.)
7 BY MR. NIGH:
8 Q. I'm going to show you some
9 testing numbers for Mylan.
10 MR. NIGH: This will be
11 marked Exhibit 5.
12 BY MR. NIGH:
13 Q. And you have cited here
14 testing levels for Mylan in your expert
15 report, correct?
16 A. Yes, that's part of the
17 Footnote 9.
18 Q. And that Footnote 9 --
19 MR. NIGH: Hold on. If we
20 can go back to that first
21 paragraph, that first -- you just
22 had it on the screen.
23 BY MR. NIGH:
24 Q. This is the slip sheet for

Page 119

1 this document. Do you see it says
2 MYLAN-MDL2875-00895544?
3 A. Yeah, I'm waiting for it to
4 come into my documents here. Sorry.
5 Q. No problem. Let me know
6 when you have that.
7 A. Okay. It just came up.
8 Q. Do you see that Bates number
9 at the bottom right corner?
10 A. Yes, I see that.
11 Q. And then if we take a look
12 at the spreadsheet, turning to the next
13 page. Now, it's pretty small here, but
14 if you can take a look at -- hold on one
15 second.
16 MR. NIGH: There should be
17 an Excel version of this that you
18 can use, not this PDF. It looks
19 like it's cutting off some of the
20 columns we need.
21 TRIAL TECH: Okay. One
22 second, I'll check it.
23 MR. NIGH: I want to make
24 sure that the witness has the

Page 120

1 Excel spreadsheet as well.
2 TRIAL TECH: Spreadsheet is
3 in the shared file.
4 THE WITNESS: I see it.
5 MR. STOY: Just for the
6 record, are we replacing the PDF
7 with the Excel version as
8 Exhibit 5?
9 TRIAL TECH: I did, yes.
10 MR. STOY: Okay.
11 TRIAL TECH: Waiting for it
12 to load. One second.
13 BY MR. NIGH:
14 Q. Let's go, again, if you can,
15 NDMA content ppm finished dosage. You
16 can see it's Column I.
17 Do you see that?
18 A. Yes.
19 Q. And do you see Column K,
20 which is NDEA content ppm API?
21 A. Yes.
22 Q. Now, that would be -- those
23 two are referring to the parts per
24 million of NDEA in Mylan either in the

Page 121

1 API product or in the finished dose
2 product.
3 Do you see that?
4 MR. STOY: Object to the
5 form.
6 THE WITNESS: Yes, I believe
7 that's the case. I'm comparing I,
8 which is the finished dosage, to
9 K, which is the API.
10 BY MR. NIGH:
11 Q. Right. And the opinion that
12 you gave and cited to this document, was
13 that this is not an isolated case, but in
14 general, there appears to be lower levels
15 of impurity in the finished products,
16 compared to the API, right?
17 A. In general, there appears to
18 be lower levels of the impurity in the
19 finished -- in general, yes, that's what
20 I see there.
21 Q. Okay. Well, let's take a
22 look at this spreadsheet.
23 You see Row 28, we can see
24 the first test result on this spreadsheet

Page 122

1 in terms of order of rows.
2 The first one, .35 in Column
3 I.
4 Do you see that?
5 A. Yes.
6 Q. Now, Column K, it says, "Yet
7 to be analyzed."
8 Do you see that?
9 A. Yes.
10 Q. So we wouldn't be able to
11 make that comparison for this row,
12 correct?
13 A. Yes.
14 Q. Now, let's scroll down to
15 the next test result for -- in Column I
16 for NDEA content in the finished dose.
17 Do you see it shows
18 .46 parts per million?
19 A. Yes.
20 Q. And then in Column K, in the
21 API, it says .28, correct?
22 A. Yes, I see that.
23 Q. So for this result, it's
24 actually the reverse of what you had in

Page 123

1 your report. It's actually that the
2 amount of NDEA in the finished product is
3 actually higher than the amount of NDEA
4 in the API, correct?
5 A. I do not think my statement
6 as stated precludes this from happening.
7 It says in general. It does not say for
8 every case.
9 Q. Okay. Well, this first one
10 it didn't happen, right? There's more
11 NDEA in the finished product than in the
12 API, correct?
13 A. Yes.
14 Q. In Line 48, the second row
15 that we can see a comparison, there is
16 more -- .41, that's higher than .29,
17 correct?
18 A. Yes.
19 Q. So this is a second instance
20 of where there's actually more NDEA in
21 the finished products than the API,
22 correct?
23 A. Yes, that's correct.
24 Are we going to go through

Page 124

1 all the testing to make sure that the "in
2 general" statement -- because this is
3 just one spreadsheet. I mean, I know
4 like, on Line 60 --
5 Q. We're going to go through a
6 lot of them. We'll see the cumulative.
7 A. Okay.
8 Q. So the second one, more in
9 the --
10 MR. NIGH: Let's go ahead
11 and highlight each of those, the
12 .41 versus the .29. Highlight
13 yellow. Highlight yellow. Yep.
14 Row 46, yellow and yellow.
15 BY MR. NIGH:
16 Q. Again, those highlights
17 demonstrate thus far that the amount of
18 NDEA in the finished product is actually
19 higher than the amount of NDEA in the
20 API, correct?
21 A. Yes, that is correct. But
22 why are we skipping over the NDMA?
23 Q. Because for right now -- for
24 Mylan, is Mylan more of an NDEA

Page 125

1 contamination problem or more of an NDMA
2 contamination problem?
3 A. That's beyond -- I couldn't
4 say with certainty what more of a problem
5 is.
6 But for that statement, I
7 did not say that I was focusing on what
8 was more of a problem for an individual.
9 And if we look at NDMA,
10 there are instances where that statement
11 I provided is true.
12 Q. Do you think Number 46, that
13 even for NDMA, that BQL is lower than
14 .01?
15 A. I am not sure what BQL is.
16 Q. Okay. So for all of the --
17 so far that we can see on the screen, all
18 of the NDMA's suggest BQL for finished
19 product. So you don't actually know how
20 much NDMA is in the finished product,
21 correct?
22 A. Again, I'm not sure what BQL
23 is.
24 There is a BDL which may

Page 126

1 mean below detection level on Line 56.
2 And we can see that it's below -- 57 --
3 below detection in the finished product,
4 but there is some detected in the API.
5 Q. Is that --
6 A. So I mean, we can go
7 through --
8 Q. Is that how -- we will go
9 through this.
10 Is that how you -- what you
11 just explained to me, is that how --
12 would that formulate part of the basis of
13 your statement that there appear to be
14 lower levels of impurity in the finished
15 product compared to the API, because you
16 see a BDL in one line and you see a .01
17 in the other?
18 MR. STOY: Object to the
19 form.
20 THE WITNESS: So again, I'm
21 not sure exactly what BDL is, but
22 usually it means below detection
23 level.
24 So that means that it cannot

Page 127

1 be detected, whereas if a number
2 was given, it was detected.
3 So a number that's given
4 that was detected would be higher
5 than something that could not be
6 detected.
7 BY MR. NIGH:
8 Q. Okay. So that's your
9 opinion, is that if a number that was
10 given is detected, then that number would
11 be higher than something that could not
12 be detected, according to this
13 spreadsheet, right?
14 A. Again, that's outside of my
15 expertise. And I'm not saying with
16 certainty that that could be correct.
17 Q. I'm trying to understand the
18 basis of your opinion, that there appear
19 to be lower levels of impurity in the
20 finished product compared to the API.
21 Would this be one of the
22 bases of your opinions? If it says BDL
23 in one column, and the other column it
24 says .01, then you would say that the BDL

Page 128

1 is lower than the .01?
2 A. So when I read this, I
3 may -- I'm not sure if I was sloppy or
4 not. And I was referring to the
5 manufacturer for the specific example I
6 gave, or if really I meant everything.
7 I could have meant
8 everything, but then we'll have to go
9 through and look at all the documents
10 that I was provided to debate as to
11 whether or not it holds in general.
12 I agree that there are
13 instances where the finished product has
14 a higher level than does the API. I
15 agree that there are instances of that.
16 Q. My question was, would this
17 be one of the bases of your opinion where
18 it says -- of your opinion that there are
19 lower levels of API -- or lower levels of
20 impurity in the finished product compared
21 to the API? Would this be one of the
22 bases of your opinion where it says BDL
23 in one column, and in the other column
24 .01, and so that you would confer that to

Page 129

1 mean that the BDL is lower than the .01?
2 A. Again, without being able to
3 review exactly what BDL means and what
4 that lower level -- if it is below
5 detection level, what that threshold is,
6 I cannot say with certainty at this
7 point, without doing a bit more looking
8 at these documents.
9 Q. This is the spreadsheet that
10 you reviewed. This is what is attached.
11 Are you able to look at this
12 spreadsheet and give any indication as to
13 whether or not BDL is actually lower than
14 .01?
15 A. Again, you know, right now,
16 it was a while since I looked at this.
17 And as you are aware, there are many,
18 many spreadsheets with many, many
19 different numbers. And in fact, it takes
20 a while to even understand what each
21 column is without careful reading.
22 And, therefore, at this
23 time, I cannot state -- I cannot answer
24 that question.

Page 130

1 Q. Now, you did say below --
2 BDL stands for below detection level,
3 correct?
4 A. Again, I said that was --
5 that's what I'm assuming right now. But
6 I would have to check to make sure that
7 assumption is correct.
8 Q. Do you know what the
9 detection level is for this spreadsheet?
10 A. I believe I also stated that
11 I would have to take some time to look
12 and see what the threshold is for the
13 lower level of detection. So I do not --
14 with certainty, at this time, can state
15 what it is.
16 Q. Do you see that anywhere on
17 this spreadsheet where it says what the
18 detection level is?
19 A. Again, I was given more than
20 just this one spreadsheet.
21 You know, I just -- on this
22 spreadsheet right here, this page, I do
23 not see a definition of BDL.
24 Q. Okay. Let's go back to NDEA

Page 131

1 again. And let's keep going down. I
2 think you probably looked at more
3 columns.
4 Can you see that 49, do you
5 see it's .41 compared to .29? Again,
6 there's more NDEA in the finished product
7 than in the API?
8 A. Which line?
9 Q. Line 49.
10 MR. NIGH: Let's go ahead
11 and highlight this too.
12 THE WITNESS: Yes. For
13 those, that is correct.
14 BY MR. NIGH:
15 Q. And the next one, 53, line
16 53. Do you see it says .16 compared to
17 .16.
18 MR. NIGH: Let's highlight
19 that.
20 BY MR. NIGH:
21 Q. That also does not support
22 that there's more NDEA in the API than in
23 the finished product, correct?
24 A. You're correct for that one,

Page 132

1 yes.
2 Q. 54. Do you see .29, there's
3 more NDEA in the finished product than in
4 the API?
5 A. Yes.
6 Q. 55. Do you see there's more
7 NDEA in the finished product than in the
8 API?
9 A. Yes.
10 Q. 56, do you see there's more
11 NDEA in the finished product than in the
12 API?
13 A. Yes.
14 Q. 57, do you see there's more
15 NDEA in the finished product than in the
16 API?
17 A. Yes.
18 Q. 58, do you see there's more
19 NDEA in the finished product than in the
20 API?
21 A. Yes.
22 Q. 59, do you see there's more
23 NDEA in the finished product than in the
24 API?

Page 133

1 A. Yes.
2 Q. Now, can you look at this
3 spreadsheet as a whole and see that it's
4 actually the inverse for this
5 spreadsheet, that most of the products
6 tested here for Mylan had more NDEA in
7 the finished product than in the API?
8 MR. STOY: Object to the
9 form.
10 THE WITNESS: You know,
11 again, this is a very small
12 snippet that you had selected.
13 And I would like to look at all
14 the testing for the other NDMA of
15 all the spreadsheets that I looked
16 at.
17 I did not say this was
18 Mylan-specific.
19 In addition, I need to
20 understand what BQL -- I need to
21 refresh my memory -- and BDL is
22 for NDMA, because it may not apply
23 to NDMA.
24 BY MR. NIGH:

Page 134

1 Q. My question is, this is --
2 my question is, can you look at this
3 spreadsheet as a whole and see that it's
4 the actually the inverse for this
5 spreadsheet, that most of the products
6 tested here for Mylan had more NDEA in
7 the finished product than in the API?
8 I'm not asking about other
9 spreadsheets right now. I'll go to them
10 later. But do you see that for this
11 spreadsheet?
12 MR. STOY: Object to form.
13 Asked and answered.
14 THE WITNESS: Yeah, I
15 think -- you know, again, I'm just
16 going to say the same thing.
17 I mean, you know, as I
18 said -- and I haven't gone
19 through -- we haven't gone through
20 every single number. We haven't
21 tabulated it up.
22 And this is just one small
23 snippet of all the data that were
24 provided in terms of testing.

Page 135

1 We're not analyzing what's going
2 on with NDMA.
3 But yes, for the small cases
4 that you have pointed out in this
5 spreadsheet -- we didn't even go
6 through the whole thing -- I do
7 agree that in this case for that
8 small snippet, it appears that
9 in -- the finished product, has a
10 higher NDM -- no, NDEA than does
11 the API.
12 BY MR. NIGH:
13 Q. I asked you for this
14 spreadsheet. You can look at the whole
15 spreadsheet. Not just what I've
16 highlighted. There's not that many rows.
17 So you can actually look at it, I think,
18 as a statistician and see that for most
19 of the rows, more of the rows, there's
20 higher amounts of NDEA in the finished
21 products than in the API, correct?
22 MR. STOY: Objection to the
23 form.
24 THE WITNESS: I guess where

Page 136

1 I'm struggling is, you are
2 challenging my "in general."
3 And we're just looking at a
4 small snippet of data where it
5 appears not to hold for the in
6 general.
7 And I'm saying that I need
8 to look at everything, including
9 the NDMA, since I did not call out
10 NDEA just in, you know, specific.
11 I mean, I did for the
12 example, but that wasn't my
13 intent. That was true for NDMA --
14 sorry.
15 I would have to look at all
16 the testing data and -- yes. I
17 would have to look at all the
18 testing data, and I'd have to
19 understand what BQL means and BDL
20 means in order -- you know, in
21 order to answer that in general.
22 But the snippet you showed
23 me right here on this spreadsheet,
24 I do agree that the NDEA in the

Page 137

1 finished product is higher than in
2 the API.
3 BY MR. NIGH:
4 Q. Okay. Let me ask my
5 question again. My question does not ask
6 anything about your general statement
7 right now. I'm just asking about this
8 spreadsheet. You can review this
9 spreadsheet. It's not many rows.
10 MR. NIGH: Let's scroll
11 down. Scroll down. Let's keep
12 scrolling.
13 BY MR. NIGH:
14 Q. There's only 122 rows. And
15 most of the rows don't even have testing
16 for NDEA in the finished product,
17 correct?
18 A. I'm not sure what blanks
19 mean.
20 Q. What do you think they meant
21 when you reviewed these testing data?
22 A. Again, I would have to go
23 through and review all the documents that
24 I was given in general to understand what

Page 138

1 exactly they meant.
2 You're right. They could
3 mean that they weren't tested.
4 Q. For those rows where you see
5 testing levels for finished product
6 versus testing levels for API on this
7 Mylan spreadsheet, most of the rows
8 actually demonstrate that there's higher
9 amounts of NDEA in the finished products
10 than there is in the API, correct?
11 MR. STOY: Objection. Asked
12 and answered.
13 Go ahead.
14 MR. NIGH: It's not
15 answered.
16 THE WITNESS: For the small
17 preselected thing that I did not
18 select, I agree with what you are
19 showing me here are instances
20 where more of the finished
21 product -- I'm sorry -- the
22 finished product contains higher
23 levels of NDEA than does the API.
24 BY MR. NIGH:

Page 139

1 Q. Let's go back to your expert
2 report.
3 MR. STOY: Daniel, before we
4 move on, would this be a decent
5 time to take a five-minute break?
6 MR. NIGH: Give me about
7 five minutes, and I think we'll be
8 at a good breaking spot.
9 MR. STOY: Okay.
10 BY MR. NIGH:
11 Q. Let's look at Page 9 of your
12 expert report.
13 MR. NIGH: If we can put
14 that up on the screen again. It's
15 Exhibit 5.
16 THE WITNESS: Yes, I'm
17 there. I'm sorry.
18 MR. NIGH: I just wanted to
19 put it up on the screen.
20 THE WITNESS: Oh.
21 MR. NIGH: If we can blow up
22 Footnote 9. And also from the
23 expert report, if we can blow up
24 that sentence that says, "This is

Page 140

1 not an isolated case, but in
2 general there appear to be lower
3 levels of impurity in the finished
4 product tablet that will be
5 consumed compared to the API."
6 Can you blow that up as
7 well.
8 TRIAL TECH: Yeah, if you
9 can just guide me to --
10 MR. NIGH: It's at the top
11 of Page 9. And then you see the
12 Footnote 9. Yep.
13 BY MR. NIGH:
14 Q. And so your footnote says,
15 "See example." And that's your examples
16 for supporting this statement, correct?
17 A. Yes, I believe I'm just
18 listing all the testing data.
19 Q. Now, for Mylan, do you see
20 any other documents other than
21 MYLAN-MDL2875-00895544?
22 A. I don't see any other
23 document that has Mylan in the title. So
24 I'm not sure if some of the other -- I

Page 141

1 don't know these titles intimately so as
2 to what manufacturer they are referring
3 to.
4 But if you say that's the
5 only Mylan, I will take that.
6 Q. Well, I'm asking you.
7 And let's go to Appendix B.
8 And you can see under data of Appendix B
9 for materials that you relied upon, it
10 again only has that same Mylan Bates
11 number, correct?
12 A. Yes. That's the only --
13 only thing with Mylan in the title.
14 Q. Well, as far as you recall,
15 you are not aware of any other -- for
16 Mylan, any other documents that you would
17 have reviewed upon that you can base the
18 statement that this is not an isolated
19 case, but in general there appear to be
20 lower levels of impurity in the finished
21 products compared to the API?
22 MR. STOY: Object to the
23 form.
24 THE WITNESS: So I don't

Page 142

1 believe my statement said that
2 this is true for one particular
3 manufacturer.
4 I think the footnote is
5 referring to everything.
6 And we haven't gone through,
7 like, the one where I pulled the
8 actual example from, to look the
9 at the differences there. We
10 haven't looked at the NDMA
11 differences.
12 But I believe that may be
13 the only Mylan testing document
14 that I have.
15 BY MR. NIGH:
16 Q. So for Mylan, it would not
17 be true that there appear to be lower
18 levels of impurity in the finished
19 product compared to the API, correct?
20 MR. STOY: Object to the
21 form.
22 THE WITNESS: Again, I
23 cannot state that with certainty
24 because there are other tabs in

Page 143

1 that spreadsheet that we should go
2 through. We haven't gone through
3 the NDMA.
4 So I cannot state that with
5 certainty.
6 The only thing that I can
7 state is the numbers we went
8 through together for NDMA -- or
9 NDEA, that statement does not
10 hold.
11 BY MR. NIGH:
12 Q. When you say the numbers
13 that we went through together, do you
14 mean that whole spreadsheet we looked at?
15 Because I scrolled all the way down to
16 Row 120. And I asked you about that
17 whole spreadsheet.
18 Isn't it generally true that
19 the levels of NDEA were higher in the
20 finished products than in the API? Do
21 you remember that?
22 A. Yes, for that spreadsheet.
23 But there are other spreadsheets in that
24 document as well.

Page 144

1 Q. Did you see that for those
2 other spreadsheets, that they actually
3 don't give you the comparison between
4 those two except for a couple of rows?
5 A. But there are ND -- yes, for
6 NDEA.
7 Q. NDEA. Right.
8 If you look at Tab 2,
9 let's -- do you have that document,
10 Tab 2 --
11 A. Yeah, I have -- yes.
12 Q. -- of what's been marked as
13 Exhibit 5?
14 A. Yes.
15 Q. You can see Tab 2, that's
16 titled valsartan HCTZ, right?
17 A. Yes.
18 Q. And you can see that for
19 Tab 2, there is not a single test result
20 for NDEA content, correct, in Column I?
21 MR. NIGH: Can we scroll all
22 the way down.
23 THE WITNESS: Wait. I'm
24 sorry, say your statement again.

Page 145

1 BY MR. NIGH:
2 Q. In Tab 2, which is the --
3 you said there are different tabs. So
4 we're going through them now. You can
5 see for valsartan HCTZ there is not a
6 single test result in Column I, so we
7 can't make the comparison, correct?
8 A. Are we talking about NDMA?
9 Because that's Column I.
10 Q. My apologies. Column J.
11 A. Yeah, there are no numbers
12 in that column.
13 Q. And for the third
14 spreadsheet, we can scroll through and we
15 can see that there are very few where the
16 comparison can actually be made, where
17 there are test results for Column I -- I
18 mean, test results for Column I and test
19 results for Column K, correct?
20 A. Okay. So I am scrolling
21 down.
22 My understanding, and I'm
23 sorry I'm not able to freeze the titles
24 of the columns. But Column I is the

Page 146

1 finished product. Column K is the API.
2 And when there are instances, there are
3 many instances in which there are no
4 numbers to compare.
5 But when there are, like on
6 220, it appears that the finished product
7 has a lower amount than the API.
8 Q. This comparison can only be
9 made in two spots in this entire
10 spreadsheet, correct, where you have
11 testing for NDEA in the finished product
12 and testing for NDEA in the API?
13 A. Yeah, I found one.
14 Q. Okay. A few rows down.
15 A. Yeah, I'm sorry. I believe
16 you said that there are two. I only
17 found one.
18 Q. Okay. Whether it's one or
19 two, it's the same statement, is that
20 there's really not much evidence in all
21 of these spreadsheets from Mylan that
22 there's more NDEA in the finished -- in
23 the API than there is in the finished
24 product, correct?

Page 147

1 MR. STOY: Object to the
2 form.
3 THE WITNESS: So again, you
4 know, I agree that the numbers
5 being reviewed right now for the
6 comparison for just on these
7 spreadsheets, which are Mylan for
8 NDEA, more often the finished
9 product had a higher dose than did
10 the API.
11 BY MR. NIGH:
12 Q. Okay. Now we've talked
13 about Mylan having higher amounts of NDEA
14 in the finished products than in the API.
15 And you gave some examples
16 of Aurobindo having higher amounts of
17 NDEA in the API than in the finished
18 products.
19 But other than Mylan and
20 Aurobindo, do you have an opinion
21 specific to manufacturer as to which
22 manufacturers had higher amounts of NDEA
23 and/or NDMA in their finished products
24 versus their API, or vice versa, higher

Page 148

1 amounts in their API versus their
2 finished products?
3 A. Without --
4 MR. STOY: Object to the
5 form.
6 I'm sorry. Go ahead.
7 THE WITNESS: Without going
8 through this exercise, which I
9 thought we were going to do, for
10 all the spreadsheets, at this time
11 I cannot call out, like, which
12 particular manufacturers this may
13 or may not be true for, as well as
14 for NDMA in getting definitions of
15 those quantities, which right now
16 I do not know what they are, off
17 of the top of my head.
18 So if we want to -- let's
19 continue and go through, we can
20 answer that, because I thought you
21 said that we were going to go
22 through more spreadsheets.
23 BY MR. NIGH:
24 Q. When we -- or when you made

Page 149

1 the statement -- tried to analyze that
2 there's more NDMA and/or NDEA in the API
3 than in the finished products, did you
4 tabulate and take a count as to looking
5 at all the spreadsheets collectively and
6 seeing if that statement were true?
7 A. I did not, like, do a
8 precise count. It was just looking at
9 the values, from what I remember.
10 And I don't think it changes
11 my conclusion that the implicit
12 assumption that the level of impurity in
13 the valsartan API formulation is the same
14 as the finished product.
15 And we also did not get into
16 the fact that there is one lifetime
17 cumulative threshold per manufacturer,
18 and it doesn't say if it's for NDMA or
19 NDEA.
20 Q. My question was very -- much
21 more limited. I didn't talk about the
22 things that we didn't ask.
23 I'm only asking, when you
24 made the statement, that statement that

Page 150

1 this is not an isolated case, but in
2 general there appear to be lower levels
3 of impurity in the finished product
4 compared to the API, and you cited some
5 examples for Aurobindo, did you actually
6 compare the other finished dose product
7 testing results for the other
8 manufacturers compared to their API
9 levels?
10 A. I cannot recall at this time
11 which ones I compared.
12 I did not do -- I do -- can
13 say that I did not do an explicit
14 enumeration of the -- which -- how many
15 times it was greater or how many times it
16 was less. It was more just looking at
17 them and seeing that, you know, more
18 often than not, it appeared to be the
19 case.
20 Q. Specifically for Mylan, is
21 it your opinion that there appear to be
22 lower levels of impurity in the finished
23 product compared to the API?
24 A. I cannot answer that for

Page 151

1 Mylan, because we have not gone through
2 the NDMA data.
3 Q. Specifically for ZHP, is it
4 your opinion that there appear to be
5 lower levels of impurity in the finished
6 product compared to the API?
7 A. If we can go through those
8 spreadsheets right now, I can answer that
9 definitively. Right now, I cannot
10 remember off the top of my head if that
11 is true or not.
12 Q. I'm trying to understand
13 what your opinion is.
14 Is it your opinion that you
15 don't have an opinion specifically for
16 ZHP?
17 MR. STOY: Object to the
18 form. Misstates her testimony.
19 THE WITNESS: Again, I'm
20 saying I cannot state with
21 certainty what I feel for a
22 particular manufacturer. And I
23 would have to go through and look
24 at the data to be able to say with

Page 152

1 certainty for a particular
2 manufacturer, because I looked at
3 many, many spreadsheets as to
4 whether or not that's the case.
5 BY MR. NIGH:
6 Q. Okay. Well, we don't have
7 to go through every spreadsheet right
8 now.
9 I can assume that you've
10 reviewed those spreadsheets.
11 I'm asking you, in terms of
12 your opinion, is it your opinion that for
13 ZHP, there appear to be lower levels of
14 impurity in the finished product compared
15 to the API?
16 A. And I'm saying that my
17 opinion was based on all the testing data
18 that I looked at, and I cannot make -- I
19 cannot tell you with certainty for a
20 particular manufacturer if that is true.
21 Q. So you don't have that
22 opinion for ZHP, correct?
23 A. My opinion is based upon
24 looking across all the testing data of

Page 153

1 all the manufacturers. And so I cannot
2 say -- I cannot say without looking at
3 the individual manufacturers what my
4 opinion is for an individual.
5 Q. For Hetero, is it your
6 opinion that for Hetero, there appear to
7 be lower levels of impurity in the
8 finished product compared to the API?
9 A. As I stated, my opinion was
10 based upon looking at all the testing
11 data across all the manufacturers, so I
12 cannot at this time without reviewing the
13 data tell you with certainty what I would
14 say for Hetero in isolation.
15 MR. NIGH: Let's go ahead
16 and take a break.
17 THE VIDEOGRAPHER: Off the
18 record at 11:53 a.m.
19 (Short break.)
20 THE VIDEOGRAPHER: We are
21 back on the record at 12:10 p.m.
22 BY MR. NIGH:
23 Q. Doctor, I want to turn you
24 to Page 10 of your expert report.

Page 154

1 I want to direct you to the
2 attention -- to the following statement:
3 It says, "If one employs the LCE
4 definition proposed by Dr. Madigan to the
5 occupational exposure studies, the LCE
6 would use the lower bound of NDMA daily
7 level in the highest group."
8 Do you see that?
9 A. Yes.
10 Q. Is it your understanding
11 that Dr. Madigan -- Dr. Madigan's
12 definition of LCE for the dietary studies
13 was that he would use the lower bound of
14 NDMA daily level in the highest group?
15 A. From what I remember, that
16 is the case. We can go ahead and look at
17 his report, and I can point out where I
18 think I took that from.
19 MR. NIGH: Let's go ahead
20 and attach that as an exhibit.
21 (Document marked for
22 identification as Exhibit
23 Ballman-6.)
24 MR. NIGH: We can pull this

Page 155

1 document down. This will be LP
2 1558. It will be marked as
3 Exhibit 6.
4 BY MR. NIGH:
5 Q. This is Dr. Madigan's expert
6 report.
7 Do you have this document as
8 well, Doctor?
9 A. Yeah, I just see it now.
10 Q. Okay. Where in
11 Dr. Madigan's report do you believe that
12 he gives the definition for LCE for
13 dietary studies to mean that he would use
14 the lower bound of NDMA daily level in
15 the highest group?
16 A. So if you go to Page 3,
17 Paragraph Number 8, on the -- I believe
18 it's the second-to-last sentence. "For
19 each study I compute the mean lifetime
20 cumulative exposure as the average number
21 of days from birth to study end
22 multiplied by the lower bound of the NDMA
23 or NDEA daily level in the highest
24 group."

Page 156

1 Q. Did Dr. Madigan compute any
2 other LCEs that you can see in this?
3 A. Can you say that again,
4 please?
5 Q. Did Dr. Madigan compute any
6 other LCEs for dietary studies other than
7 the lower bound of NDMA daily or NDEA
8 daily level in the highest group?
9 A. So I believe if we go to his
10 table, Number 1, there are instances
11 where he notes that it's also significant
12 for the second quintile, first quintile,
13 and gives LCEs for those. But that's an
14 exception from his original rule, is how
15 I took it.
16 Q. Okay. If we -- when you see
17 at the bottom, Page 7, you can see all
18 these asterisks.
19 Do you see that?
20 A. Yes.
21 MR. NIGH: Let's blow those
22 up.
23 BY MR. NIGH:
24 Q. Those are other LCE that

Page 157

1 he's calculated, right?
2 A. Yes. I believe that's what
3 I said.
4 Q. What do you think he's
5 referring to when he puts for the first
6 asterisk here, "LCE equals
7 3,506 micrograms"? What do you think --
8 A. So that --
9 Q. -- that LCE is? What does
10 that mean?
11 MR. STOY: Object to the
12 form.
13 THE WITNESS: So I'm pretty
14 sure I matched it.
15 What he did is he deviated
16 from his general rule of using the
17 highest group, and he did it for
18 the second quintile, because he
19 observed that that was
20 statistically significant even at
21 that level.
22 So he computed an LCE in
23 that case using the lower bound of
24 the second quintile.

Page 158

1 BY MR. NIGH:
2 Q. So it's your belief that his
3 definitions fully encompassed -- his
4 definition of LCE is simply the average
5 number of days from birth to study end
6 multiplied by lower bound of NDMA or NDEA
7 daily level in the highest group, as seen
8 on Page 3?
9 A. That's what he states for
10 each study, that's how he computed a mean
11 lifetime cumulative exposure.
12 I would take that as a
13 definition. That's how statisticians
14 sort of define what they do.
15 Q. Do you see Page 7, that for
16 every single one of the dietary studies,
17 he gives a base dose microgram and then
18 an LCE microgram?
19 Do you see that?
20 A. Yes.
21 Q. And it says base high dose
22 microgram and then LCE microgram.
23 Do you see that?
24 A. Yes. Yes.

Page 159

1 Q. So for each study, he did
2 calculate the LCE for the base high dose
3 microgram for each study, correct?
4 A. Yes, he calculated an LCE,
5 as we see in that column. Every column
6 has a number.
7 Q. But then, in addition -- so
8 he followed his instruction on Page 8,
9 where he says, "For each study I compute
10 the mean lifetime cumulative exposure as
11 the average number of days from birth to
12 study."
13 So he did that for each
14 study. He followed that instruction,
15 correct?
16 A. Yes.
17 Q. But he also calculated LCEs
18 for lower quintiles, quartiles, or
19 tertiles, correct?
20 A. Yes. But that wasn't his
21 definition of how he was going to
22 calculate an LCE. This is a deviation
23 from that. And he doesn't note that.
24 Q. Can't you see that in his

Page 160

1 statement in eight that it's not actually
2 a definition of LCE, but rather what he's
3 doing, the steps he's taking?
4 MR. STOY: Object to the
5 form. Mischaracterization.
6 THE WITNESS: So again, as a
7 statistician reading this, knowing
8 that it's written by another
9 statistician, he -- to me, he is
10 defining what he -- what an LCE
11 is.
12 And that was his definition
13 on Page 3.
14 However, in some instances,
15 when a lower quintile comparison
16 had a statistically significant
17 result, and usually only in those
18 instances does he deviate from
19 that general definition.
20 BY MR. NIGH:
21 Q. Okay. Do you not see how
22 that could be read that -- as not just a
23 general definition, but rather a step
24 that he took?

Page 161

1 MR. STOY: Object to the
2 form.
3 BY MR. NIGH:
4 Q. In Number 8?
5 A. That's not how I would read
6 it, is all I'm saying.
7 In my opinion, that is what
8 he meant by a definition, and then he
9 made some deviations from it.
10 Q. Yeah, but I'm asking you,
11 can't you see, as you read it now that
12 I'm pointing it out, that that could be
13 just him explaining a step, not actually
14 defining what LCE means?
15 MR. STOY: Objection. Form.
16 Asked and answered.
17 THE WITNESS: Again, it
18 says, "For each study I compute
19 the mean lifetime cumulative
20 exposure as."
21 To me, for each study, this
22 was the definition that he was
23 going to apply for what the LCE
24 is.

Page 162

1 Having said that, he did
2 make some deviations, and in
3 instances where he found a
4 statistically -- or the report had
5 a statistically significant
6 association at lower levels, he
7 then deviated from this
8 definition.
9 BY MR. NIGH:
10 Q. Did you review his testimony
11 when he discussed what an LCE is and
12 defined it in deposition?
13 A. I did review his testimony.
14 I do not know how he defined LCE in his
15 deposition, offhand. I don't know.
16 Q. So you wouldn't know that he
17 actually didn't define LCE as only -- as
18 being for the highest group?
19 MR. STOY: Object to the
20 form.
21 THE WITNESS: Again, I was
22 asked to review his expert report
23 as the basis for the computed
24 lifetime cumulative thresholds.

Page 163

1 And it referred to his expert
2 report.
3 It did not refer to his
4 testimony. So if he changed the
5 definition, I used the definition
6 in the expert report as what I was
7 asked to do.
8 MR. NIGH: Let's pull up
9 Page 3 again where you've got
10 this -- where you believe there is
11 a definition of LCE. Let's pull
12 that up.
13 BY MR. NIGH:
14 Q. When you see, "For each
15 study I compute the mean lifetime
16 cumulative exposure" --
17 MR. NIGH: And let's
18 underline the word "as." No,
19 don't highlight that please. Just
20 underline the word "as."
21 And underline the word "in,"
22 the highest group, the word "in."
23 Right before "the highest group,"
24 the word "in."

Page 164

1 BY MR. NIGH:
2 Q. Okay. Do you see those two
3 words, "as" and the word "in"?
4 A. Yes.
5 Q. How do you know that the
6 definition doesn't end before the word
7 "in"?
8 A. Because that would be very
9 strange, because this is how one makes
10 the definition.
11 It's the entire thing. It
12 says "in the highest group."
13 So one would read that as a
14 statistician that he's taking what the
15 bound is, the lower bound for the highest
16 group, as that's what he's going to use
17 in his computation for the LCE.
18 Q. So when you see that there's
19 the words LCE for all these other
20 quartiles, how does that fit in with this
21 definition?
22 A. Say that again, please.
23 Q. When you see the words LCE,
24 like we saw all the asterisks and all the

Page 165

1 other LCEs, how does that fit in with
2 this definition?
3 A. A deviation from this
4 definition, as I stated.
5 Q. So that's the way in which
6 you would interpret it, is a deviation,
7 as opposed to the definition of LCE
8 simply being the average number of days
9 from birth to study end multiplied by the
10 lower bound of NDMA or NDEA, hard stop?
11 A. Yeah, because it would have
12 to be in what.
13 Because that would be
14 ambiguous.
15 Q. Okay.
16 A. There are many lower bounds.
17 Q. Well, nonetheless, you can
18 see that for each of the lower bounds --
19 there are many lower bounds, and that's
20 where we're going to go to Page 7.
21 MR. STOY: Is there a
22 question pending?
23 MR. NIGH: No, I'm going to
24 go to Page 7 here.

Page 166

1 BY MR. NIGH:
2 Q. So there are -- as you say,
3 there are many lower bounds, correct?
4 A. Well, what I meant is when
5 one chunks the data into groups such as
6 tertiles, quartiles, or quintiles as was
7 done in the underlying studies, what
8 Dr. Madigan was doing was to be clear as
9 to which lower bound he was using of
10 which group, because there are numerous
11 groups. And he says the highest group in
12 that definition.
13 Q. Okay. That's how you've
14 chosen to define it. I think we looked
15 at that on the screen. That's how you
16 chose to define it, as the "in," correct?
17 A. As a -- yes.
18 MR. STOY: Object to the
19 form.
20 Hang on. Object to the
21 form.
22 Go ahead.
23 THE WITNESS: As a
24 statistician, who -- who reads,

Page 167

1 you know, stuff from other
2 statisticians, I don't believe
3 it's just how I would interpret
4 that.
5 I believe any other
6 statistical expert would also
7 interpret it that way.
8 BY MR. NIGH:
9 Q. But you didn't review his
10 testimony to see how he actually
11 interpreted LCEs, correct?
12 A. Again, it --
13 MR. STOY: Object to the
14 form.
15 I'm sorry. Go ahead.
16 THE WITNESS: Again, I was
17 asked to look at -- again, in the
18 medical monitoring plan, the
19 definition or the basis for the
20 stated lifetime cumulative
21 thresholds refers to the expert
22 report of Dr. Madigan. It does
23 not refer to his deposition
24 transcription.

Page 168

1 Therefore, that is what I
2 used, because I was asked to see
3 how those lifetime cumulative
4 thresholds, what evidence there is
5 for those by looking at the expert
6 reports -- by -- I'm sorry.
7 I was asked to -- evidence
8 for those, and the medical
9 monitoring plan referred to those
10 expert reports.
11 BY MR. NIGH:
12 Q. Okay. Nonetheless, he uses
13 the letters "LCE" for lower quartiles,
14 quintiles, or tertiles, not just the
15 highest tertile, for both the dietary
16 studies and the occupational exposure
17 studies, correct?
18 A. So he uses the highest
19 group, not highest tertiles. So if the
20 groups were in tertiles, then it would be
21 the highest tertiles. If the groups were
22 in quintiles, it would be the highest
23 quintiles, so the highest group.
24 Q. No, he actually puts the

Page 169

1 letters "LCE" when referring to lower
2 groups both in dietary studies and the
3 Hidajat study, correct?
4 A. He uses that -- those
5 letters, that is correct. And I'm saying
6 he's deviating from his general
7 definition of how he computed the LCE.
8 Q. Okay. You've decided to
9 make that determination blind to anything
10 that he had clarified in his deposition
11 testimony, correct?
12 MR. STOY: Objection.
13 Argumentative.
14 THE WITNESS: So again, I
15 was asked to look at the medical
16 monitoring plan and the proposed
17 LCTs. And when I looked at that,
18 the -- for evidence to support
19 those LCTs, and when I looked at
20 the medical monitoring part, it
21 says based on the expert reports.
22 It did not say based on a
23 deposition transcription.
24 BY MR. NIGH:

Page 170

1 Q. So you -- even though you
2 reviewed Dr. Madigan's testimony, you
3 didn't feel it was important to see how
4 he defined LCEs in his deposition
5 testimony because of that, right?
6 MR. STOY: Object to form.
7 Misstates her testimony.
8 THE WITNESS: Again, I was
9 charged with looking at the
10 medical monitoring plan, looking
11 at what the proposed LCTs were and
12 determining whether or not there
13 was evidence to support those.
14 What was referred to with
15 how those LCTs were derived, the
16 only things that were cited were
17 the expert reports of
18 Dr. Panigrahy, as well as Dr.
19 Madigan.
20 It did not say as well as
21 their testimony.
22 BY MR. NIGH:
23 Q. I understand that statement.
24 So you took that statement to believe,

Page 171

1 then, that you did not have to consider
2 Dr. Madigan's clarifications in his
3 deposition testimony; is that accurate?
4 MR. STOY: Form objection.
5 THE WITNESS: So I would
6 have to see if there were
7 clarifications, because off of the
8 top of my head, I don't remember
9 his testimony.
10 And again, that -- his
11 testimony was not cited in what
12 the basis were for coming up with
13 the LCTs.
14 BY MR. NIGH:
15 Q. You keep coming up -- coming
16 back to his testimony not cited for the
17 basis for his coming up with the LCTs. I
18 keep asking you about the deposition
19 testimony.
20 It sounds to me like you're
21 saying because it's not cited in Kaplan's
22 report -- is that what you're referring
23 to?
24 MR. STOY: Object to the

Page 172

1 form of the question.
2 Go ahead.
3 THE WITNESS: What I was
4 saying was, it was not cited in
5 the medical monitoring plan for
6 the basis of forming the LCTs.
7 BY MR. NIGH:
8 Q. Okay. Since it's not cited
9 in the medical monitoring plan for the
10 basis of forming LCTs, is that the reason
11 you would not look at the deposition
12 testimony?
13 MR. STOY: Object to the
14 form.
15 THE WITNESS: So I believe I
16 stated that I had looked at the
17 deposition testimony.
18 And I think I've also stated
19 that I don't recall him changing
20 the definition of the LCE or
21 clarifying it. He could may well
22 have.
23 But again, I didn't think it
24 was relevant because that was not

Page 173

1 cited as the basis for determining
2 the LCTs in the medical monitoring
3 report.
4 BY MR. NIGH:
5 Q. I want to see if I have your
6 testimony accurate.
7 So if he -- you reviewed the
8 Madigan deposition testimony, correct?
9 A. Yes.
10 Q. So if he clarified his
11 definition of LCEs in that testimony, is
12 it your testimony that you would think
13 that's not relevant because that was not
14 cited as the basis for determining the
15 LCTs in the medical monitoring report?
16 A. Again, I don't know how he
17 clarified or if he clarified in the
18 deposition. I cannot remember in his
19 testimony whether he clarified or changed
20 the definition of an LCE.
21 And secondly, I'm not sure
22 when the medical monitoring report was
23 derived or created in respect to whether
24 or not there was a clarification made as

Page 174

1 to what an LCE is.
2 Q. That doesn't answer my
3 question.
4 You raised multiple times
5 that Madigan's deposition testimony was
6 not cited in the medical monitoring
7 report. You raised that multiple times,
8 right?
9 A. Yes, that's correct.
10 Q. I'm trying to understand why
11 that's -- why that's important to you.
12 If he didn't -- if -- so
13 here's my question.
14 If he clarified his
15 definition of LCEs in his deposition
16 testimony, is it your testimony that you
17 would think that's not relevant because
18 that was not cited as the basis for
19 determining the LCTs in the medical
20 monitoring report?
21 MR. STOY: Object to the
22 form.
23 THE WITNESS: So my response
24 is, is that I was asked to look at

Page 175

1 what evidence there is for the
2 LCTs.
3 So when I looked at the
4 medical monitoring report to see
5 how the LCTs were derived, the
6 only statement in there that was
7 relevant was that it's on the
8 basis of Dr. Madigan's and
9 Dr. Panigrahy's expert reports.
10 I do not know when the
11 medical monitoring plan was
12 devised, if it was devised after,
13 and I don't even know if Dr.
14 Madigan changed his definition of
15 LCE in his -- because I'm
16 surprised that it's not changed in
17 the actual expert -- expert
18 report.
19 So I just don't know the
20 timing of that. So again, that's
21 why I went off of what was cited
22 as the basis for the LCT, which
23 was the actual expert report.
24 BY MR. NIGH:

Page 176

1 Q. So you didn't consider
2 Dr. Madigan's testimony at all when
3 look -- deposition testimony at all when
4 looking to see what the definition of LCE
5 is in his expert report?
6 A. You know, not that I can
7 remember. I went off of what was cited
8 as the basis for coming up with the LCTs
9 within the medical monitoring report,
10 because I was told to look for evidence
11 for the basis of that.
12 The only evidence given was
13 that this was based upon his expert
14 report, and it did not say that it was
15 based upon that and his testimony.
16 Q. Okay. I want to draw your
17 attention to Page 10 of your report.
18 The very last sentence you
19 put, "It cannot be assumed that studies
20 relating to NDMA can be used to assess
21 hazard or risk with respect to NDEA.
22 Indeed, genotoxicity and carcinogenicity
23 vary greatly within the class of
24 impurities known as nitrosamines, with

Page 177

1 some, such as those found in cigarette
2 smoke, designated by IARC as Class I and
3 others falling in lower classifications."
4 Do you see that?
5 A. Yes.
6 Q. When you're making the
7 statement that it cannot be assumed that
8 studies related to NDMA can be used to
9 assess hazard or risk with respect to
10 NDEA, what documents are you relying upon
11 for that statement?
12 A. I am not relying on any
13 specific document.
14 Q. What expertise do you have
15 in terms of understanding the
16 similarities between NDMA and NDEA?
17 A. That is outside my level of
18 expertise. All I note is that I do know
19 that there are nitrosamines found in
20 cigarette smoke that are in a different
21 class from nitro -- from other agents in
22 that class. That's the extent of my
23 knowledge.
24 Q. Why would other agents in

Page 178

1 that class play upon your understanding
2 as to whether or not NDMA and NDEA are
3 similar?
4 A. Because they're agents
5 within that class.
6 Q. Did you look at the
7 similarities between NDMA and NDEA at
8 all?
9 MR. STOY: Object to the
10 form.
11 THE WITNESS: Similarities
12 with respect to what? Other than
13 being in the same class, that's
14 about the extent of it.
15 BY MR. NIGH:
16 Q. So the only statement that
17 you have for suggesting that ND -- you
18 cannot assume that studies relating to
19 NDMA can be used to assess hazard or risk
20 with respect to NDEA is simply because
21 they're in the same class?
22 MR. STOY: Object to the
23 form.
24 Go ahead.

Page 179

1 THE WITNESS: No. My -- my
2 point there is, is nitrosamines
3 include many different agents.
4 And we know that one is that
5 found in cigarette smoke, which is
6 designated by IARC as a Class I.
7 We know that NDMA and NDEA
8 are not classified as Class I; so,
9 therefore, you cannot just assume
10 blanketly that anything in the
11 class of nitrosamines are
12 identical and can be treated the
13 same way with respect to their
14 hazard.
15 BY MR. NIGH:
16 Q. Is it your belief that any
17 expert that's treating NDMA and/or -- or
18 NDMA and NDEA similarly, simply because
19 they are in the same class of
20 nitrosamines?
21 A. I'm sorry. Could you
22 rephrase that? I thought you were going
23 on. Sorry.
24 Q. Is it your belief that any

Page 180

1 expert is treating NDMA and NDEA
2 similarly, simply because they're in the
3 same class of nitrosamines?
4 A. I do not know.
5 Q. What is this criticism
6 referring to? I mean, who's giving
7 testimony that NDMA and NDEA are similar
8 or that the studies related to NDMA can
9 be used to assess hazard or risk with
10 respect to NDEA simply because they're in
11 the same class of nitrosamines? Who
12 gives that testimony?
13 A. So if you look at the entire
14 paragraph, that wasn't my intent.
15 My intent is that there is
16 only a single study on NDEA. And
17 therefore, one cannot make any sort of
18 statement of causality on the basis of
19 one study.
20 And the only other
21 implication might be that one would say,
22 well, we have all these studies on NDMA
23 where we have shown -- or have observed
24 some associations across studies;

Page 181

1 therefore, the same would hold for NDEA.
2 That was my point, that one
3 cannot do that.
4 Q. And you're saying --
5 A. There was one study on NDEA.
6 Q. And the only criticism that
7 you can come up with as to why you can't
8 look at those similarities is because
9 NDMA and NDEA are in the same class, and
10 simply being in the same class, you can't
11 look at similarities between those
12 because they're in the same class?
13 MR. STOY: Object to the
14 form.
15 THE WITNESS: Again, I'm
16 saying that with respect to the
17 associations, and if one is
18 looking at a causality-type
19 question, one cannot infer from
20 the multiple NDMA studies that one
21 would see similar -- similar
22 results if there were more than
23 one NDEA, just because they're in
24 the same class.

Page 182

1 BY MR. NIGH:
2 Q. Okay. Well, I'm going to --
3 other than just because they're in the
4 same class, I'm going to ask you, with
5 respect to the associations, and if one
6 is looking at a causality-type question,
7 one can infer from the multiple NDMA
8 studies that one would see similar
9 results if there were more than one NDEA
10 study, correct?
11 A. No, I disagree with that.
12 That was my point.
13 Q. But the only thing that
14 you're disagreeing with is because they
15 are in the same class.
16 Are there other reasons that
17 you might be able to infer studies on one
18 carcinogen that's very similar to another
19 carcinogen, other than it being in the
20 same class?
21 MR. STOY: Objection to the
22 form.
23 Also objection to the extent
24 that it's beyond the scope.

Page 183

1 THE WITNESS: Yeah, this is
2 beyond the scope of my expertise.
3 All I'm pointing out is I
4 know -- and I know from other
5 agents in other classes of drugs
6 that get tested in cancer, that
7 one, just because they're in the
8 same class, one cannot treat one
9 agent as acting the same as
10 another agent until there is
11 evidence to support that.
12 And I -- there may be
13 evidence to support that, but I
14 just said you need -- I mean, you
15 just can't assume it. That's all
16 I said.
17 BY MR. NIGH:
18 Q. What do you believe that the
19 evidence is to support it? Have you
20 looked for it or looked at it in any way?
21 MR. STOY: Objection.
22 Beyond the scope.
23 THE WITNESS: It's just
24 beyond the -- because, again, that

Page 184

1 is beyond my scope, because I was
2 not asked to look at the
3 similarities or dissimilarities.
4 All I'm saying is that there
5 is only one study done in NDEA,
6 and one cannot infer from what one
7 might infer from the multiple
8 studies in NDMA, that the same
9 would hold for NDEA just because
10 they're in the same class. That's
11 what I stated.
12 BY MR. NIGH:
13 Q. Are you aware that there are
14 entire sections dedicated to multiple of
15 plaintiffs' expert reports that are
16 dedicated to showing the similarities
17 between NDMA and NDEA? Are you aware of
18 that at all?
19 MR. STOY: Object to the
20 form.
21 THE WITNESS: I am not aware
22 of this. And again, this is
23 beyond my scope.
24 All I observed is you just

Page 185

1 can't make that inference from
2 what you found in NDMA to what
3 might happen in NDEA, just because
4 they're in the same class.
5 And it's good that there are
6 other experts that can weigh in on
7 that.
8 BY MR. NIGH:
9 Q. So since you are unaware
10 that there are entire sections dedicated
11 in multiple plaintiffs' expert reports to
12 showing the similarities between NDMA and
13 NDEA, you did not look at those
14 underlying data at all or those
15 underlying studies demonstrating those
16 similarities, correct?
17 MR. STOY: Objection.
18 Scope.
19 THE WITNESS: That's beyond
20 the scope of what I was asked to
21 do. And I did not look at those.
22 BY MR. NIGH:
23 Q. You next state, "Even
24 assuming studies concerning NDMA have

Page 186

1 some bearing on the risk associated with
2 NDEA, given the variability in the
3 reported NDMA LCE values in the dietary
4 studies found to be statistically
5 significant, it is likely that there
6 would be similar variability in the NDEA
7 levels, had more studies measured NDEA."
8 Do you see that?
9 A. Yes, I do.
10 Q. So you believe that if
11 another study were to come out and look
12 at increased risk of various types of
13 cancers versus the NDEA that they're
14 getting in their diet, that it would be
15 likely there would be similar variability
16 in the NDEA levels, had more studies
17 measured NDEA; is that accurate?
18 A. I believe so. What I was
19 saying there is that the NDMA studies
20 have a lot of variability. And that
21 variability is due to the fact that
22 they're observational studies and there's
23 all sorts of confounding, which makes the
24 values very variable.

Page 187

1 And the NDEA study that was
2 done was also an observational dietary
3 study. And if similar studies of the
4 same design came out, it's very likely,
5 just due to that residual confounding in
6 the study design of the observational
7 nature, that there would be similar
8 variability in the NDEA observed
9 associations.
10 It has to do with study
11 design.
12 Q. I want to draw your
13 attention to Page 14 in the expert
14 report.
15 And here you put at the
16 bottom of the page, "To illustrate how
17 calculations were performed, I step
18 through it for ZHP API and gastric
19 cancer."
20 And then you give two steps.
21 "To get the daily amount, divide
22 1,962 micrograms by 91.3 days. To get
23 the ppm, multiply the daily amount by
24 1,000 nanogram per microgram and divide

Page 188

1 by 320."
2 Do you see that?
3 A. Yes.
4 Q. Did you perform any other
5 steps for that calculation?
6 A. Not for the number that's in
7 Table 3 that is the number of 21.5 and
8 then the number beneath it, which is 67.2
9 parts per million. That's how I got that
10 number.
11 Q. Now, that number, the 21.5,
12 that's coming from the gastric cancer
13 dietary study, correct?
14 A. Sorry. Say that -- it's
15 coming from the LCE computed by
16 Dr. Madigan for the gastric -- for
17 gastric.
18 MR. NIGH: Can we actually
19 blow up the footnotes right below
20 the star, the one and the two with
21 the chart.
22 BY MR. NIGH:
23 Q. You footnote it. You say
24 gastric, Footnote 1, and it says from

Page 189

1 dietary exposure studies.
2 Do you see that?
3 A. Yes.
4 Q. So as you were --
5 A. And then there's an
6 asterisk -- sorry. Go ahead.
7 Q. So as you were looking at
8 the --
9 MR. NIGH: Well, keep that
10 up there, please.
11 BY MR. NIGH:
12 Q. As you were looking at
13 these, you would see that, first off, the
14 gastric LCE is coming from the dietary
15 exposure studies, correct?
16 A. From Dr. Madigan's
17 calculation of the LCE based upon the
18 dietary gastric studies.
19 Q. Okay. And so that would be
20 true for gastric, lung, esophageal and
21 rectal, correct?
22 A. Yes.
23 Q. And then for all, you're
24 getting that from Hidajat, correct?

<p>Page 190</p> <p>1 A. From the occupational 2 exposure studies, yes. And also the 3 LCE -- sorry, the LCE as computed by 4 Dr. Madigan based upon the occupational 5 study. 6 Q. So when you see gastric, 7 lung, esophageal, and rectal, those would 8 all be from dietary studies, correct? 9 A. They're the LCEs computed 10 from dietary studies, correct, as 11 computed by Dr. Madigan. 12 Q. Now, you also looked at some 13 of those underlying dietary studies, 14 correct? 15 A. I looked at them, yes. 16 Q. Did you recognize that 17 what's occurring in the dietary study is 18 you're measuring, first, people's NDMA in 19 the highest quartile, versus NDMA in the 20 lower quartile -- the lowest quartile and 21 seeing whether or not there are increased 22 risk of cancer as there are increased 23 consumptions of NDMA? 24 MR. STOY: Object to the</p> <p>Page 191</p> <p>1 form. 2 THE WITNESS: There's a lot 3 of studies there. And I cannot 4 say with any sort of certainty 5 that the studies all use the same 6 methodology. 7 So, you know, in some cases 8 that may be true. But I'd have to 9 look again at each of the studies 10 to see sort of exactly what they 11 were reporting. 12 BY MR. NIGH: 13 Q. So as you sit here today, 14 you're not sure as to whether or not 15 those studies are measuring the highest 16 group versus the lowest group or the 17 second highest group versus the lowest 18 group or the third highest group versus 19 the lowest group? 20 MR. STOY: Form objection. 21 THE WITNESS: That is 22 correct, because it doesn't matter 23 for this table, because I took the 24 LCE as computed from Dr. -- by</p>	<p>Page 192</p> <p>1 Dr. Madigan, who stated in his 2 general definition, he took the 3 lower bound of the highest group, 4 multiplied by whatever the median 5 age was, and so forth, to come up 6 with the 1,962. 7 All I'm noting there is they 8 were based on dietary studies, 9 because -- that's it. 10 So I did not go in and look 11 at each sort of gastric and see 12 exactly what they were comparing. 13 Dr. Madigan had done that. 14 BY MR. NIGH: 15 Q. I understand. But each of 16 the dietary studies, they're measuring 17 higher amounts of -- people with higher 18 amounts of NDMA compared to people with 19 lower amounts of NDMA in the diet, 20 correct? 21 A. Again, I'd have to look at 22 each study to confirm that that is the 23 case. 24 Off the top of my head, I</p> <p>Page 193</p> <p>1 just can't tell you what methodology was 2 used in each of the studies. 3 Q. At any point in your 4 calculations, did you ever consider the 5 background NDMA for the lowest quartile 6 amount of NDMA that people would be 7 getting in their diets? 8 A. I used the LCE as computed 9 by Dr. Madigan. And if he did not 10 consider that or if that was not 11 considered in the studies upon which he 12 based his LCE, then the answer would be 13 no. It's whatever was considered in 14 those studies. 15 Q. Now, you're saying -- 16 A. And I did not do -- sorry. 17 Go ahead. 18 Q. You've given me an if. If 19 it's not considered in those studies, 20 then the answer would be no. 21 My question is not an if, 22 then. 23 My question is, at any point 24 in your calculations did you ever</p>
--	---

Page 194

1 consider the background NDMA for the low
2 quartile amount of people -- or the low
3 quartile amount of NDMA that people would
4 be getting in their diet?
5 MR. STOY: Objection. Asked
6 and answered.
7 THE WITNESS: So I'm not
8 sure why I would do that. Because
9 again, for the LCTs, I was asked
10 to determine if there was evidence
11 to support the proposed LCTs in
12 the medical monitoring report.
13 And the only evidence that
14 was cited in that report for the
15 basis of those were referring to
16 the expert reports of Dr. Madigan
17 and Panigrahy.
18 So I took what Dr. Madigan
19 did, as you see there, his LCEs.
20 And again, as I stated, if
21 he did not consider the
22 background, I certainly did not,
23 because that would have gone above
24 and beyond what I was asked to do.

Page 195

1 BY MR. NIGH:
2 Q. Did you see that this is
3 explicitly mentioned in Dr. Panigrahy's
4 expert report, the same issue that I'm
5 discussing with you right now, that
6 people will have a background amount of
7 NDMA, and that this needs to be -- in
8 their diet, and that this needs to be
9 considered, as to whether or not people
10 are reaching LCEs or lifetime cumulative
11 exposures?
12 MR. STOY: Form objection.
13 THE WITNESS: I do recall
14 that he mentioned background
15 levels.
16 But in his LCE calculations,
17 he also did not provide any sort
18 of how -- he did not incorporate
19 that in his calculation as well.
20 BY MR. NIGH:
21 Q. So because he didn't
22 actually spell out the amount of NDMA
23 that would be considered for background
24 amount of NDMA, you didn't include that

Page 196

1 in your calculations as you were trying
2 to arrive to how do we reach these
3 thresholds?
4 MR. STOY: Objection.
5 Misstates her testimony.
6 THE WITNESS: So again, let
7 me go through.
8 So again, I was asked if
9 there is evidence for the basis of
10 the LCTs that are stated in the
11 medical monitoring plan.
12 And the plan says that the
13 basis for the LCTs are what is
14 reported in Dr. Panigrahy's and
15 Dr. Madigan's reports.
16 In those reports, I do
17 not -- I just use the numbers that
18 they used. So I was not -- I was
19 not developing the LCTs.
20 And therefore, I don't think
21 it would be upon me to account for
22 any background exposure levels
23 because, again, that was not
24 accounted for in the expert

Page 197

1 reports.
2 BY MR. NIGH:
3 Q. So to be clear, in all your
4 calculations that you did, you never
5 included background amount of NDMA or
6 NDEA in your calculations whatsoever,
7 correct?
8 A. Again, that is correct,
9 because in the expert reports, which was
10 the basis for the stated LCT levels in
11 the medical monitoring report, they did
12 not correct for that background
13 information.
14 So I would have been going
15 beyond what was in those expert reports
16 and adding my own to come up with the
17 LCTs, which were not my LCTs. I was not
18 asked to compute an LCT, a new one or
19 derive one.
20 Q. So even though Panigrahy
21 mentions that the LCE that he has
22 calculated also doesn't take into account
23 the threshold exposure to NDMA that a
24 valsartan patient has because of diet,

<p>Page 198</p> <p>1 you also would not have included that in 2 your calculation?</p> <p>3 A. Again, I was not asked to 4 come up with LCTs. I was asked to say, 5 is there evidence for the actual LCTs 6 that were proposed in the medical 7 monitoring plan. The only basis and 8 information given that I could find in 9 that plan for the basis of how those LCTs 10 were derived was a citation to the expert 11 reports of Dr. Panigrahy and Dr. Madigan.</p> <p>12 And in those expert reports, 13 I did not -- even though it may have been 14 mentioned that there may be background 15 NDMA or NDEA exposure, nowhere in those 16 reports was there a calculation done that 17 adjusted for those.</p> <p>18 I was not deriving the LCTs 19 de novo. That was not what I was asked 20 to do. So I did not incorporate 21 background -- or the background levels 22 because the experts had not done that.</p> <p>23 Q. Now, I want to see if I have 24 this accurate. Even though the experts</p>	<p>Page 200</p> <p>1 include that in his calculated LCE 2 levels.</p> <p>3 And I should also state that 4 in those expert reports, nowhere is there 5 a calculation of an LCT.</p> <p>6 So there -- it's just not 7 transparent as to how those LCTs were 8 calculated.</p> <p>9 So I don't think it's upon 10 me to come up with a new definition of 11 LCT that goes beyond what the experts 12 provided, which was just LCEs.</p> <p>13 Q. Did you consider 14 Dr. Madigan's testimony at all when he 15 mentioned that you would also have to 16 consider the background amount of NDMA 17 that people were getting in their diet 18 when looking at whether or not people are 19 reaching LCEs?</p> <p>20 MR. STOY: Form objection.</p> <p>21 THE WITNESS: So this goes 22 back to the similar response as 23 before, that, again, all I had to 24 go on was what was cited in the</p>
<p>Page 199</p> <p>1 specifically state how much NDMA -- or 2 even though -- sorry, strike that.</p> <p>3 I want to see if I have this 4 accurate. Even though Dr. Panigrahy 5 specifically states how much NDMA people 6 would have as a background amount, and 7 his LCEs also demonstrate for what age he 8 would have calculated, you didn't do that 9 calculation yourself in trying to see how 10 these LCTs were calculated because you 11 didn't see that specific calculation in 12 Dr. Panigrahy's report?</p> <p>13 MR. STOY: Objection. Asked 14 and answered at least ten times.</p> <p>15 You can answer it again.</p> <p>16 MR. NIGH: It's actually 17 not.</p> <p>18 THE WITNESS: That is --</p> <p>19 BY MR. NIGH:</p> <p>20 Q. So you can answer.</p> <p>21 A. That is correct. That is 22 correct. Dr. Panigrahy notes that there 23 would be some background NDEA -- NDMA 24 and/or NDEA exposure. But he did not</p>	<p>Page 201</p> <p>1 medical monitoring plan for how 2 the LCTs were derived because it 3 wasn't transparently stated in 4 there, like, here's the formula, 5 this is what we did, here's the 6 evidence, other than citing the 7 expert reports.</p> <p>8 So I went to the expert 9 reports to try to figure out how 10 to -- you know, if it was clear 11 from there, in an easy transparent 12 way of coming up with those LCT 13 levels.</p> <p>14 So I don't know if 15 Dr. Madigan in his expert report 16 even mentioned background NDMA or 17 NDEA exposures with respect to his 18 LCEs.</p> <p>19 MR. NIGH: I think now is a 20 good time to take a lunch break.</p> <p>21 MR. STOY: Okay, great.</p> <p>22 THE VIDEOGRAPHER: Off the 23 record. 12:59.</p> <p>24 - - -</p>

Page 202

4 THE VIDEOGRAPHER: We are
5 back on the record at 1:44 p.m.
6 - - -
7 EXAMINATION
8 - - -
9 BY MR. NIGH:
10 Q. Doctor, I'm looking at Page
11 15 of your expert report. I'm going to
12 ask you some questions here.
13 A. Okay.
14 Q. So specifically, you give
15 the statement, "Comparing these values to
16 the level of impurity cited in
17 Dr. Panigrahy's report, there is no match
18 except for ZHP API, but only for gastric
19 cancer if we take the average of the
20 midpoints for ZHP, which is approximately
21 66.4 ppm."
22 How do you -- how did you
23 figure that the midpoint -- if you take
24 the average of the midpoints for ZHP that

Page 203

1 you would reach those levels for gastric
2 cancer?
3 A. So, you know, I was trying
4 to see if I could come up with the
5 numbers in any way. So I was trying
6 various other sort of combinations that
7 were suggested in the past as to whether
8 I looked at sort of midpoints or averages
9 or things like that.
10 So that was just the thing
11 that came sort of closest to the number
12 in the table above.
13 Q. So you looked at the levels
14 reported in Dr. Panigrahy's report to
15 make this statement?
16 A. At this time, I'm not sure
17 if I did the midpoints from that report
18 or some other report. And I see that I
19 do not cite it there.
20 But it looks like I took it
21 from his report.
22 Q. Did you also look at the
23 underlying document to confirm that that
24 document indeed showed those ranges for

Page 204

1 ZHP API?
2 A. I'm sorry. Could you
3 specify which document?
4 Q. Whichever document that
5 Dr. Panigrahy was citing for that --
6 those values?
7 A. I don't remember at this
8 point if I actually looked at the
9 document from where he took those values
10 or not.
11 Q. On the table above, it shows
12 cancers, and it shows gastric cancer,
13 lung, esophageal, rectal, and all.
14 Do you see that?
15 A. In Table 3?
16 Q. Table 3, correct.
17 A. Yep. Yes.
18 Q. And in fact, actually the
19 two, that refers to -- under all, that
20 refers to occupational exposure studies,
21 correct?
22 A. That is correct.
23 Q. Now, when you put the words
24 "all" there in this chart, are you

Page 205

1 referring to all the cancers other than
2 gastric, lung, esophageal, and rectal?
3 A. I'd have to look at the
4 occupational exposure study or
5 Dr. Madigan's report.
6 So I got that from Number
7 34 -- or Paragraph 34 in Dr. Madigan's
8 report, per Hidajat. I'm not sure if I'm
9 pronouncing the name right.
10 Cumulative exposure greater
11 than 75 -- that number, 7,514
12 statistically significant increases one's
13 risk of developing the following cancers.
14 So what I meant by all are
15 bladder, lung, stomach, multiple myeloma,
16 esophageal, prostate. Even though it
17 says prostate twice, I presume he meant
18 one of those times to be pancreas.
19 Q. Okay. And so when you're
20 looking at all, you're referring to each
21 of those individual cancers increased
22 risk seen in the Hidajat study, correct?
23 A. Yes. That's my
24 understanding of what Dr. Madigan is

<p>Page 206</p> <p>1 saying there, that at that level, each of 2 those individual cancers had an 3 association with the corresponding cancer 4 at that level. 5 Q. In your -- in terms of 6 looking at whether or not there is an 7 increased risk of all cancer, did you see 8 any studies that actually looked -- 9 lumped all cancers together to see if 10 there was an increase in the risk of all 11 cancer, you know, for people taking NDMA 12 versus -- or for people having higher 13 amounts of NDMA versus people having 14 exposure to lower amounts of NDMA? 15 A. Off of the top of my head, I 16 cannot say with certainty whether any of 17 those manuscripts just did a calculation 18 for any type of cancer and then broke it 19 into the individual cancers, but that's 20 not what I meant by "all" there. 21 MR. NIGH: All right. I 22 don't have any further questions. 23 Thank you, Doctor. 24 MR. STOY: Okay. Daniel,</p> <p>Page 207</p> <p>1 let's take five minutes and we'll 2 come back on. 3 MR. NIGH: Sounds good. 4 THE VIDEOGRAPHER: Off the 5 record. 1:52. 6 (Short break.) 7 THE VIDEOGRAPHER: We are 8 back on the record at 1:57 p.m. 9 MR. STOY: Okay. 10 Dr. Ballman, I don't have any 11 questions for you. 12 We will read and sign. 13 And I believe that concludes 14 the deposition. 15 MR. NIGH: Thank you for 16 your time, Dr. Ballman. 17 Appreciate it. 18 THE WITNESS: Nice to meet 19 you, Mr. Nigh. 20 MR. NIGH: You too. 21 THE VIDEOGRAPHER: That 22 concludes today's deposition. The 23 time is 1:57 p.m. 24</p>	<p>Page 208</p> <p>1 ***** 2 (Excused.) 3 (Deposition concluded at 4 approximately 1:59 p.m.) 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24</p> <p>Page 209</p> <p>1 2 CERTIFICATE 3 4 5 I HEREBY CERTIFY that the 6 witness was duly sworn by me and that the 7 deposition is a true record of the 8 testimony given by the witness. 9 10 It was requested before 11 completion of the deposition that the 12 witness, KARLA V. BALLMAN, Ph.D., have 13 the opportunity to read and sign the 14 deposition transcript. 15 16 MICHELLE L. GRAY, 17 A Registered Professional 18 Reporter, Certified Shorthand 19 Reporter, Certified Realtime 20 Reporter and Notary Public 21 Dated: February 24, 2022 22 23 (The foregoing certification 24 of this transcript does not apply to any reproduction of the same by any means, unless under the direct control and/or supervision of the certifying reporter.)</p>

Page 210

INSTRUCTIONS TO WITNESS

Please read your deposition over carefully and make any necessary corrections. You should state the reason in the appropriate space on the errata sheet for any corrections that are made.

After doing so, please sign the errata sheet and date it.

You are signing same subject to the changes you have noted on the errata sheet, which will be attached to your deposition.

It is imperative that you return the original errata sheet to the deposing attorney within thirty (30) days of receipt of the deposition transcript by you. If you fail to do so, the deposition transcript may be deemed to be accurate and may be used in court.

<p>Page 6</p> <p>1 The videotaped deposition of</p> <p>2 MICHAEL BOTTORFF, PHARM.D., was taken by</p> <p>3 counsel for the Plaintiffs, on March 25,</p> <p>4 2022, commencing at 9:39 a.m. Eastern,</p> <p>5 via remote proceedings, for all purposes</p> <p>6 under the Tennessee Rules of Civil</p> <p>7 Procedure.</p> <p>8 The formalities as to notice,</p> <p>9 caption, certificate, et cetera, are not</p> <p>10 waived. All objections, except as to</p> <p>11 the form of the questions, are reserved</p> <p>12 to the hearing.</p> <p>13 It is agreed that Carissa L.</p> <p>14 Boone, being a Notary Public and Court</p> <p>15 Reporter, may swear the witness, and</p> <p>16 that the reading and signing of the</p> <p>17 completed deposition by the witness are</p> <p>18 not waived.</p> <p>19</p> <p>20</p> <p>21 * * *</p> <p>22</p> <p>23</p> <p>24</p> <p>25</p>	<p>Page 8</p> <p>1 MICHAEL BOTTORFF, PHARM.D.</p> <p>2 having been first duly sworn, was examined and</p> <p>3 testified as follows:</p> <p>4 THE VIDEOGRAPHER: I'm sorry, I</p> <p>5 did not hear anything from the witness.</p> <p>6 I'm sorry, I did not hear</p> <p>7 anything from the witness.</p> <p>8 THE WITNESS: I said "I do."</p> <p>9 EXAMINATION</p> <p>10 BY MR. VAUGHN:</p> <p>11 Q. All right, Dr. Bottorff. My name</p> <p>12 is Brett Vaughn. You remember I took your</p> <p>13 deposition about six months ago in the general</p> <p>14 causation stage of the personal injury cases,</p> <p>15 correct?</p> <p>16 A. I do remember you, yes.</p> <p>17 Q. And you've now submitted an</p> <p>18 expert report for the class action side of this</p> <p>19 litigation?</p> <p>20 A. Correct.</p> <p>21 Q. And did you use your general</p> <p>22 causation expert report as the base of your class</p> <p>23 action expert report?</p> <p>24 A. There was some overlap in what</p> <p>25 seemed to be some of the issues between the class</p>
<p>Page 7</p> <p>1 THE VIDEOGRAPHER: Good morning.</p> <p>2 We are now on the record. My name is</p> <p>3 Phillip Todd. I am the videographer for</p> <p>4 Golkow Litigation Services.</p> <p>5 Today's date is March 25th, 2022,</p> <p>6 and the time is 9:39 a.m. Eastern.</p> <p>7 This remote video deposition is</p> <p>8 being held in the matter of Valsartan,</p> <p>9 Losartan and Irbesartan Products</p> <p>10 Liability Litigation in the United</p> <p>11 States District Court, District of New</p> <p>12 Jersey.</p> <p>13 The deponent is Dr. Michael</p> <p>14 Bottorff.</p> <p>15 All parties in this deposition</p> <p>16 are appearing remotely and have agreed</p> <p>17 to the witness being sworn in remotely.</p> <p>18 Due to the nature of remote</p> <p>19 reporting, please pause briefly before</p> <p>20 speaking to ensure all parties are heard</p> <p>21 completely.</p> <p>22 Counsel will be noted on the</p> <p>23 stenographic record.</p> <p>24 The court reporter, Carissa</p> <p>25 Boone, will now swear in the witness.</p>	<p>Page 9</p> <p>1 action and the general causation, so there were</p> <p>2 some elements that are similar in both.</p> <p>3 Q. And is this meant to supercede</p> <p>4 your general causation expert report?</p> <p>5 MR. FOWLER: Objection, form.</p> <p>6 THE WITNESS: Not to supercede.</p> <p>7 As -- as part of my academic career,</p> <p>8 whenever there's a -- a literature</p> <p>9 search and evaluation, a -- a process</p> <p>10 that you go through, you review and add</p> <p>11 information to what you already know.</p> <p>12 So it's not meant to replace previous</p> <p>13 information, if that's what the question</p> <p>14 was.</p> <p>15 BY MR. VAUGHN:</p> <p>16 Q. And so what content did you add</p> <p>17 to this expert report?</p> <p>18 A. I think the biggest addition is</p> <p>19 the bioequivalence description assessment and</p> <p>20 analysis and a section on the process of</p> <p>21 pharmacokinetic accumulation. And then a -- a</p> <p>22 third area was a -- a section where I comment on</p> <p>23 the -- the need for medical monitoring.</p> <p>24 Q. And you said that the purpose of</p> <p>25 this was not to replace previous information.</p>

<p style="text-align: right;">Page 10</p> <p>1 Were there changes actually made, though, to your 2 general causation opinions in here? 3 MR. FOWLER: Objection, form. 4 THE WITNESS: I don't recall 5 making any changes to my previous report 6 in this report. 7 MR. VAUGHN: Melisha, can we go 8 ahead and pull up the class action 9 expert report he submitted? 10 And that will be Exhibit 1. 11 (Exhibit 1 was marked.) 12 BY MR. VAUGHN: 13 Q. And, Mr. Bottorff, is this 14 your -- the expert report you submitted for the 15 class action in this litigation? 16 A. Yes, it is. 17 MR. VAUGHN: And, Melisha, can we 18 split-screen that with his general 19 causation report? 20 And let's mark that as Exhibit 2. 21 (Exhibit 2 was marked.) 22 BY MR. VAUGHN: 23 Q. Now, turning -- 24 MR. VAUGHN: On the class action 25 expert report, can we please go to page</p>	<p style="text-align: right;">Page 12</p> <p>1 highlighting in blue. Or now yellow. 2 BY MR. VAUGHN: 3 Q. Do you have your class action 4 expert report with you? 5 A. Yes. 6 Q. Can you find anywhere in your 7 class action expert report where -- where it still 8 discusses ZHP's internal nitrosamine testing on 9 their API? 10 A. Yeah, I don't -- I don't see it. 11 Q. Are you the one that removed that 12 from your expert report? 13 A. I probably was, since I wrote 14 this myself. 15 Q. Why did you remove that from your 16 expert report? 17 MR. FOWLER: Objection to form, 18 "remove." 19 Go ahead, Doctor. 20 THE WITNESS: I can't tell you 21 right now why I did not include the same 22 wording. The -- the following 23 information, which is the -- the FDA 24 values, I believe they are identical. 25 BY MR. VAUGHN:</p>
<p style="text-align: right;">Page 11</p> <p>1 7, Melisha? And on the general 2 causation report, can we go to page 6. 3 BY MR. VAUGHN: 4 Q. Okay. So on the right-hand side, 5 you see on your general causation report, 6 you -- line 114, that entire paragraph, you note: 7 "When ZHP became aware of the nitrosamine 8 impurities, ZHP tested certain of its inactive 9 ingredient -- active pharmaceutical ingredient 10 batches and determined that the levels of NDMA 11 range from 3.4 parts per million to 120 parts per 12 million"? 13 Do you see that, Dr. Bottorff? 14 A. Yes. Is that what you 15 highlighted in yellow? 16 Q. Correct. 17 And then it -- looking at your 18 class action expert report page 7, line 140, you 19 see that it's now been changed to the FDA testing 20 and any mention of ZHP's testing has been dropped 21 from your expert report? 22 MR. FOWLER: Objection to form, 23 "changed." 24 Go ahead, Doctor. 25 THE WITNESS: I see where you're</p>	<p style="text-align: right;">Page 13</p> <p>1 Q. But ZHP's values are higher than 2 the FDA's values, aren't they? 3 MR. FOWLER: Objection. 4 THE WITNESS: If I went back and 5 calculated. (Technical interference) 6 probably do that. But I think -- 7 BY MR. VAUGHN: 8 Q. But -- 9 A. -- they are higher. 10 MR. VAUGHN: All right. Melisha, 11 can we go to page 22 on the class action 12 report now? And let's compare that to 13 page 21 of the general causation report. 14 All right. And I'm looking at 15 line 364 where it says: "Presence of 16 trace amounts of NDMA/NDEA on the 17 general causation report," Melisha. The 18 one on the right. Line 364. Yeah. 19 BY MR. VAUGHN: 20 Q. And then -- you see that, Doctor, 21 line 364, where you note the -- the amounts being 22 trace amounts? 23 A. Yes. 24 Q. Okay. And can we compare that, 25 then, to your class action expert report on page</p>

<p style="text-align: right;">Page 14</p> <p>1 22, line 374? It now says: "Presence of NDMA and 2 NDEA," the words "trace amounts" have been dropped 3 from your expert report, correct? 4 A. They're not there. 5 Q. Are you the one that removed 6 those words? 7 A. I wrote this, so I must have. 8 Q. Why did you remove those words 9 from your expert report? 10 A. I have no particular reason. 11 MR. VAUGHN: All right. Melisha, 12 let's go to page 45 of this class action 13 expert report. And let's compare that 14 to page 25 of his general causation 15 expert report. 16 BY MR. VAUGHN: 17 Q. In the general causation expert 18 report on that line 439, the sentence that reads: 19 "The concern over the detection of these 20 impurities is that the international agency for 21 research on cancer, IARC, has categorized 22 nitrosamines as a probable human carcinogen based 23 on annual studies primarily involving rats." 24 Do you see that in your general 25 causation report, Mr. Bottorff?</p>	<p style="text-align: right;">Page 16</p> <p>1 MR. VAUGHN: Let's go to page 47 2 of his class action report, and let's 3 compare that to page 27 of his general 4 causation expert report. 5 BY MR. VAUGHN: 6 Q. And on your general causation 7 expert report, I'm looking at the lines 473 and 8 474. So it ends with: "The carcinogens produced" 9 at 473. 10 Do you see where I'm looking at, 11 Mr. Bottorff? 12 A. Yes. 13 Q. And so now if you look at the 14 class action expert report Line No. 749, you've 15 now inserted a heading "NDE" -- "NDMA and NDEA and 16 valsartan will not reach systemic circulation." 17 Do you see that, Dr. Bottorff? 18 A. I do. 19 Q. Why was that added to your expert 20 report? 21 MR. FOWLER: Objection to form, 22 "added." 23 THE WITNESS: I guess I was 24 trying to -- doing what I would call 25 sort of format form, outline form, sort</p>
<p style="text-align: right;">Page 15</p> <p>1 A. I do. 2 Q. Okay. Now looking at your class 3 action expert report line 724, that entire 4 sentence is no longer in your expert report, is 5 it? 6 A. No. 7 Q. And did you remove that language 8 from your expert report as well? 9 A. It's not there, so it got 10 removed. But it wasn't removed for any particular 11 reason that I can give you. 12 Q. And you're the one that removed 13 that language? 14 A. I wrote this, so it would have 15 been me. 16 Q. And there's no particular reason 17 you removed the language about nitrosamines being 18 probable human carcinogens? 19 MR. FOWLER: Objection, form. 20 Other than the scope of the 21 report? 22 THE WITNESS: And so, no, 23 I -- I'm -- I'm the one, if it came out, 24 that took it out. And there was no 25 particular reason for that.</p>	<p style="text-align: right;">Page 17</p> <p>1 of identify areas in this second report 2 that I would have sections on. So it 3 was a -- working from an outline to the 4 report. 5 BY MR. VAUGHN: 6 Q. And does NDMA or NDEA reaching 7 systemic circulation have anything to do with 8 bioequivalency studies? 9 A. The presence of NDMA and NDEA in 10 valsartan, are you asking if that would have an 11 effect on valsartan's bioequivalence? 12 Q. Correct. Does NDMA or NDEA being 13 in valsartan and the NDMA or NDEA reaching 14 systemic circulation, does that have any impact on 15 valsartan bioequivalency studies? 16 MR. FOWLER: Objection: Form, 17 compound. 18 THE WITNESS: First, I'm -- I'm 19 trying to speak real loud to make sure 20 that you can hear. So if it seems like 21 I'm yelling, it's not in an -- an 22 aggressive kind of response. 23 BY MR. VAUGHN: 24 Q. I appreciate it and your -- your 25 level is actually pretty good.</p>

<p style="text-align: right;">Page 18</p> <p>1 A. Okay. I -- I just didn't want it 2 to come across as -- but I wanted to be sure I got 3 heard. 4 No, I do not believe that the 5 presence of NDMA or NDEA in valsartan has anything 6 to do with valsartan's bioequivalence. 7 Q. And it reaching systemic 8 circulation -- scratch that. 9 And NDMA or NDEA reaching 10 systemic circulation has nothing to do with the 11 bioequivalency studies for valsartan, correct? 12 MR. FOWLER: Objection: Form, 13 lack of foundation, facts not in 14 evidence. 15 THE WITNESS: Because I conclude 16 that they would not reach the systemic 17 circulation, then, again, my best answer 18 to your question is that they have no 19 effect on valsartan's bioequivalence. 20 BY MR. VAUGHN: 21 Q. The opinion that NDMA and NDEA in 22 valsartan will not reach systemic circulation is 23 in relation to your general causation opinions, 24 correct? 25 MR. FOWLER: Objection: Form,</p>	<p style="text-align: right;">Page 20</p> <p>1 almost completely, minimizing exposure to other 2 tissues and organs." 3 Do you see that in your prior 4 report, Dr. Bottorff? 5 A. I do. 6 Q. All right. And let's compare 7 that to the sentence that starts on lines 761 of 8 your class action expert report that reads: "Oral 9 doses at the levels detected in generic valsartan 10 at issue in this litigation are metabolized in the 11 liver almost completely, preventing exposure to 12 other tissues and organs." 13 Did I read that correctly, 14 Dr. Bottorff? 15 A. Yes. 16 Q. What changes did you make in that 17 sentence from your general causation expert report 18 to your class action expert report? 19 A. I don't feel that I made any 20 substantial changes at all. 21 Q. Okay. Do you see in the general 22 causation report you used the word "minimizing 23 exposure to other tissues and organs"? The word 24 "minimizing"? 25 A. Yes.</p>
<p style="text-align: right;">Page 19</p> <p>1 mischaracterizes. 2 THE WITNESS: I think it's, as I 3 said earlier, that there is some overlap 4 in some of the issues between general 5 causation and this part of the 6 litigation, as I understood it, and the 7 concept of -- of first pass metabolism 8 is one of those areas of overlap between 9 the two reports. 10 BY MR. VAUGHN: 11 Q. How does first pass metabolism of 12 NDMA or NDEA impact the bioequivalency studies of 13 valsartan? 14 A. It does not. 15 MR. VAUGHN: Melisha, let's go to 16 page 48 of his class action expert 17 report. Let's compare that to page 28 18 of his general causation expert report. 19 Looking at line 486 of his general 20 causation report where it says: 21 "Minimizing exposure to other tissues 22 and organs..." 23 BY MR. VAUGHN: 24 Q. And the full sentence reads: 25 "Smaller oral doses are metabolized in the liver</p>	<p style="text-align: right;">Page 21</p> <p>1 Q. And do you see that that's been 2 changed to the word "preventing"? It now says: 3 "...preventing exposure to other tissues and 4 organs." 5 Do you see that? 6 A. I do. 7 Q. Do you not think there's much of 8 a difference between "minimizing" and 9 "preventing"? 10 MR. FOWLER: Objection, 11 argumentative. 12 THE WITNESS: Conceptually, what 13 those two sentence [sic] were -- I think 14 mean the same thing about -- because of 15 first pass metabolism, that you minimize 16 exposure, you prevent exposure, you 17 minimize/eliminate risk, and I think 18 they're -- they're just a reflection of 19 the fact that I did not just simply cut 20 and paste from my previous report 21 into -- into this report. I -- I sat 22 down and wrote it de novo with the same 23 knowledge base and information. 24 BY MR. VAUGHN: 25 Q. And this sentence that you</p>

<p>Page 22</p> <p>1 changed has nothing to do with the bioequivalency</p> <p>2 studies, correct?</p> <p>3 A. Correct.</p> <p>4 MR. VAUGHN: Let's go to page 52</p> <p>5 of his class action expert report,</p> <p>6 Melisha. And let's compare that to page</p> <p>7 62 of his general causation expert</p> <p>8 report.</p> <p>9 BY MR. VAUGHN:</p> <p>10 Q. All right. In looking at the</p> <p>11 class action expert report, line 830, do you see</p> <p>12 where you note that: "DNA repair mechanisms in</p> <p>13 humans can be as much as ten times higher than</p> <p>14 rats"?</p> <p>15 A. Yes.</p> <p>16 Q. Okay. And looking at your</p> <p>17 general causation expert report, do you see that</p> <p>18 language anywhere?</p> <p>19 A. Not in the page that -- that you</p> <p>20 have in front of me.</p> <p>21 Q. Do -- do you have your general</p> <p>22 causation expert report?</p> <p>23 A. I can probably get a hard copy</p> <p>24 because we have a printer here, but I don't have</p> <p>25 it sitting right in front of me.</p> <p>Page 23</p> <p>1 Q. Okay. You can also download it</p> <p>2 from the exhibit share file, if you would like to.</p> <p>3 All right. Dr. Bottorff, if you</p> <p>4 could, could you review your general expert report</p> <p>5 and see if anywhere in that report you gave the</p> <p>6 opinion that DNA repair mechanisms in humans can</p> <p>7 be as much as ten times higher than rats?</p> <p>8 MR. VAUGHN: And let's go ahead</p> <p>9 and go off the record while he's</p> <p>10 reviewing this document.</p> <p>11 THE VIDEOGRAPHER: The time is</p> <p>12 now 9:59 a.m. We are off the record.</p> <p>13 (Brief recess observed.)</p> <p>14 THE VIDEOGRAPHER: 10:06 a.m.,</p> <p>15 we're back on the record.</p> <p>16 BY MR. VAUGHN:</p> <p>17 Q. All right. Dr. Bottorff, now</p> <p>18 that you've had time to review your general</p> <p>19 causation expert report, did you find anywhere</p> <p>20 within that report that you gave the opinion that</p> <p>21 DNA repair mechanisms in humans can be as much as</p> <p>22 ten times higher than rats?</p> <p>23 A. No, I -- I didn't find it.</p> <p>24 And -- and what I was looking for and what I</p> <p>25 thought I had in there -- and it may still be in</p>	<p>Page 24</p> <p>1 there; I just didn't have enough time to find</p> <p>2 it -- is I thought I made a statement somewhere in</p> <p>3 the report that said that the metabolism of -- of</p> <p>4 NDMA in the liver was occurring in the organ that</p> <p>5 had the highest capacity to metabolize it.</p> <p>6 And that -- that may be in there</p> <p>7 somewhere if I go line-by-line and try to find it.</p> <p>8 So I may not have quantified it in the original</p> <p>9 report, and I quantified it here from a statement</p> <p>10 made in -- in one of the PEG articles.</p> <p>11 Q. Does quantifying the DNA repair</p> <p>12 mechanisms in humans compared to rats have</p> <p>13 anything to do with your class action opinions?</p> <p>14 A. Yes.</p> <p>15 Q. I'm sorry? I didn't hear that</p> <p>16 answer.</p> <p>17 A. Sorry. Yes.</p> <p>18 Q. What does it have to -- what</p> <p>19 does -- scratch that.</p> <p>20 What do DNA repair mechanisms in</p> <p>21 humans have to do with your class action expert</p> <p>22 report?</p> <p>23 A. The issue of medical monitoring.</p> <p>24 Q. And how does that relate to</p> <p>25 medical monitoring?</p> <p>Page 25</p> <p>1 A. Based on first pass metabolism</p> <p>2 and limiting exposure of NDMA and NDEA to the</p> <p>3 liver, which has the best capability for DNA</p> <p>4 repair mechanisms, would mean that there's no</p> <p>5 exposure enough to downstream organs to justify</p> <p>6 medical monitoring, based on these principles of</p> <p>7 both first pass metabolism and DNA repair.</p> <p>8 Q. So would it be fair to say that</p> <p>9 the DNA repair mechanisms relate to your class</p> <p>10 action expert report because you don't believe</p> <p>11 that nitrosamines can increase the risk of cancer</p> <p>12 in humans?</p> <p>13 MR. FOWLER: Objection, form.</p> <p>14 THE WITNESS: Yes. And that's</p> <p>15 consistent with what I concluded in my</p> <p>16 original report, and it's a portion of</p> <p>17 what I continue to conclude in this</p> <p>18 expert report.</p> <p>19 BY MR. VAUGHN:</p> <p>20 Q. And so you would agree that's a</p> <p>21 general causation expert opinion, the DNA repair</p> <p>22 mechanisms in humans?</p> <p>23 MR. FOWLER: Objection: Form,</p> <p>24 mischaracterizing.</p> <p>25 THE WITNESS: I would agree that</p>
---	---

<p style="text-align: right;">Page 26</p> <p>1 it has relevance to both the general 2 causation issue in my original report 3 and to the medical monitoring issue that 4 I addressed in this report. 5 BY MR. VAUGHN: 6 Q. And when we went off the record 7 for you to review your general causation expert 8 report and Mr. Fowler went off the screen, did he 9 discuss any part of your testimony with you? 10 A. No. None at all. 11 MR. VAUGHN: All right. Melisha, 12 can we go just to his class action 13 expert report, which is Exhibit 1. And 14 let's go to page 50 and look at line 15 802. 16 BY MR. VAUGHN: 17 Q. Doctor, in this paragraph, you're 18 discussing the half-life of NDMA, correct? 19 A. Correct. 20 Q. And in your opinion, what is the 21 half-life of NDMA in humans? 22 A. It's estimated to be about 13 23 minutes. 24 Q. And what are you basing that 25 estimation on?</p>	<p style="text-align: right;">Page 28</p> <p>1 THE WITNESS: It is as a result 2 of metabolism, and to a certain degree, 3 distribution after IV administration 4 that would result in taking 13 minutes 5 in the estimate in humans, and anywhere 6 between 4 and 26 minutes in other animal 7 species who received IV dosing, for that 8 original concentration to be cut in 9 half, and in that same amount of time, 10 for that concentration to be cut in 11 half. 12 BY MR. VAUGHN: 13 Q. So let me make sure I 14 understand -- 15 A. -- and approximately -- 16 Q. I apologize. 17 A. Sorry, go ahead. 18 Q. I'm sorry if I cut you off -- 19 MR. FOWLER: Let's not -- 20 BY MR. VAUGHN: 21 Q. -- with the delay. 22 MR. FOWLER: -- do that. Yeah. 23 BY MR. VAUGHN: 24 Q. It -- it was not intentional. 25 A. Yeah, so I'll -- I'll finish, and</p>
<p style="text-align: right;">Page 27</p> <p>1 A. I'm using the clearance values 2 from one of the Gombar papers. 3 Q. Did you find the Gombar paper to 4 be reliable? 5 MR. FOWLER: Objection, form. 6 THE WITNESS: In some respects. 7 BY MR. VAUGHN: 8 Q. What is half-life? 9 A. The time it takes for a compound 10 amount to be cut in half. 11 Q. What do you mean "cut in half"? 12 A. Drop by 50 percent. 13 Q. Is that after it's been ingested? 14 A. No. These diag- -- these numbers 15 came from the intravenous data from Gombar, which 16 is the part that I don't have any problem with at 17 all. 18 Q. But the half-life is in relation 19 to the substance being inside the body, correct? 20 A. And in this case, getting there 21 by giving it IV. 22 Q. And so that would mean after 13 23 minutes, if no metabolism is taking place of the 24 NDMA, half of it will have disappeared? 25 MR. FOWLER: Objection, form.</p>	<p style="text-align: right;">Page 29</p> <p>1 then we can take that question. 2 So literally what it amounts to 3 is whatever that original concentration is after 4 you give it intravenously, the half-life -- let's 5 take a round number of ten minutes. It would take 6 ten minutes for that concentration to be cut in 7 half. In ten more minutes, that would be cut in 8 half. And by the time you got to five of those, 9 you can't detect the drug anymore. So a general 10 pharmacology rule is five half-lives and the drug 11 is essentially completely gone. 12 Q. So did I understand you correctly 13 that if NDMA is given intravenously to a human, 14 it's going to take approximately 13 minutes for it 15 to decrease by half? 16 A. An estimate from the Gombar data 17 would predict that, if you were to give it IV. 18 Q. And do you agree with that 19 estimate in Gombar? 20 A. I think it's actually a pretty 21 good estimate. 22 Q. Would it matter how much of a 23 dose is given IV? Will that impact the half-life 24 at all? 25 A. It could.</p>

Page 30	Page 32
<p>1 Q. How so?</p> <p>2 A. If -- if a smaller dose is given</p> <p>3 that is in the range of what we call linear</p> <p>4 pharmacokinetics, you'll get a -- a half-life</p> <p>5 value. And if -- if it's a process that can be</p> <p>6 saturated and you give a multiple higher dose,</p> <p>7 then you would saturate elimination and you would</p> <p>8 get a measured longer half-life.</p> <p>9 Q. And in the Gombar study where you</p> <p>10 drew this 13-minute half-life, was it saturated or</p> <p>11 not?</p> <p>12 A. Gombar used his nonsaturated IV</p> <p>13 dose to calculate and then estimate what he</p> <p>14 thought it would be in humans.</p> <p>15 Q. And so in a nonsaturated IV dose</p> <p>16 in humans, NDMA would take 13 minutes to reduce</p> <p>17 the amount in half?</p> <p>18 A. That is an estimate from the</p> <p>19 Gombar data.</p> <p>20 Q. Doctor, do you know how long it</p> <p>21 takes for the blood to do a full circulation in</p> <p>22 the human body?</p> <p>23 A. Off the top of my head, I -- I</p> <p>24 don't. I know I used to know that. And sometimes</p> <p>25 you'll see that expressed as how many cycles per</p>	<p>1 BY MR. VAUGHN:</p> <p>2 Q. If the blood can go all the way</p> <p>3 around the human body multiple times in 13</p> <p>4 minutes, the NDMA would be crossing the liver</p> <p>5 multiple times, wouldn't it?</p> <p>6 MR. FOWLER: Objection: Form,</p> <p>7 lack of foundation, facts not in</p> <p>8 evidence, incomplete hypothetical.</p> <p>9 THE WITNESS: The -- the best</p> <p>10 answer I can give you in a conceptual is</p> <p>11 that when a drug is given IV, whether</p> <p>12 it's NDMA or, you know, a -- an</p> <p>13 FDA-approved drug, giving it in the IV</p> <p>14 route, it does eventually, if it is</p> <p>15 metabolized in the liver, pass through</p> <p>16 the liver as part of its route of</p> <p>17 elimination.</p> <p>18 BY MR. VAUGHN:</p> <p>19 Q. If the liver is able to fully</p> <p>20 metabolize NDMA and systemic circulation takes</p> <p>21 less than five minutes, you wouldn't expect the</p> <p>22 half-life to be 13 minutes, would you?</p> <p>23 A. The issue that I have in being</p> <p>24 able to answer it to the best of my ability is</p> <p>25 that I'm not sure the first part of the question</p>
Page 31	Page 33
<p>1 day or how man- -- how long it takes for one</p> <p>2 cycle. So I know that's available information,</p> <p>3 but I don't have it off the top of my head.</p> <p>4 Q. Do you have an estimate, even?</p> <p>5 A. I know blood volume is</p> <p>6 approximately 5 liters. Typical cardiac output is</p> <p>7 about 3 to 4 liters per minute. So it -- it</p> <p>8 shouldn't take long. Less than ten minutes, maybe</p> <p>9 20 minutes. I can't verify that.</p> <p>10 Q. I mean, if -- if cardiac output</p> <p>11 is around 4 liters and blood volume is around 5</p> <p>12 liters, wouldn't you think that it goes all the</p> <p>13 way around the body in about a minute?</p> <p>14 A. Yeah, I don't think that's the</p> <p>15 case, though.</p> <p>16 Q. Okay. You think it might be less</p> <p>17 than 13 minutes, though?</p> <p>18 A. I --</p> <p>19 MR. FOWLER: Objection,</p> <p>20 we're -- we're -- calls for speculation.</p> <p>21 He's answered this.</p> <p>22 THE WITNESS: I really don't</p> <p>23 know. I'd have to look it up, because</p> <p>24 it's been a while since I've had to use</p> <p>25 that information.</p>	<p>1 is accurate. I think I would need to establish</p> <p>2 how long it takes.</p> <p>3 But remember the liver only gets</p> <p>4 part of -- of cardiac output. Part of cardiac</p> <p>5 output goes to other organs as well.</p> <p>6 Q. All right. Sitting here today,</p> <p>7 though, you have no idea how long it actually</p> <p>8 takes for the blood to go around the human body,</p> <p>9 do you?</p> <p>10 A. No. I -- I -- as of right now, I</p> <p>11 don't. I know the value if I were to -- to look</p> <p>12 it up, but I don't have it in front of me.</p> <p>13 Q. And that's not something you've</p> <p>14 looked into in forming your opinions for either of</p> <p>15 your expert reports that you've submitted in this</p> <p>16 litigation, correct?</p> <p>17 A. Correct. And -- and nor do I</p> <p>18 know the relevance that have any impact on my</p> <p>19 opinions anyway.</p> <p>20 MR. VAUGHN: All right. Melisha,</p> <p>21 let's go to his invoices.</p> <p>22 And this will be Exhibit 3. It</p> <p>23 is a composite exhibit of all of the</p> <p>24 invoices that were produced.</p> <p>25 (Exhibit 3 was marked.)</p>

Page 34	Page 36
Page 35	Page 37
<p>1 MR. VAUGHN: All right. Let's go</p> <p>2 to page 3.</p> <p>3 BY MR. VAUGHN:</p> <p>4 Q. All right. Doctor, and do you</p> <p>5 see that you submitted a bill for eight hours of</p> <p>6 deposition time on September 1st, 2021?</p> <p>7 A. That should probably be November.</p> <p>8 So that's a typo.</p> <p>9 Q. Why should that be November?</p> <p>10 A. Based on the in- -- sorry?</p> <p>11 Q. Why should that be November?</p> <p>12 A. Oh, no. That -- is that the date</p> <p>13 that we did the previous deposition?</p> <p>14 Q. Well, we actually did the</p> <p>15 previous deposition on September 16th, which you</p> <p>16 also billed for.</p> <p>17 MR. VAUGHN: Melisha, if you want</p> <p>18 to go to page 5 on his invoices.</p> <p>19 BY MR. VAUGHN:</p> <p>20 Q. Now we have another bill for</p> <p>21 \$4,000 for an eight-hour deposition on September</p> <p>22 16th, 2021 also in Knoxville and the same start</p> <p>23 and end time.</p> <p>24 A. Yes. I understand now what</p> <p>25 happened. I sent an invoice to GT for the date of</p>	<p>1 September 16th, which was the date of the actual</p> <p>2 deposition, you also billed two-and-a-half hours</p> <p>3 for reviewing articles in advance of the</p> <p>4 deposition. So that's just the morning of the</p> <p>5 deposition you're billing?</p> <p>6 A. Correct.</p> <p>7 Q. Okay. And then the next one on</p> <p>8 October 6th, you note that you: "Preview/find</p> <p>9 Wang article for inclusion and articles</p> <p>10 considered."</p> <p>11 What does that mean?</p> <p>12 A. That I looked at those articles</p> <p>13 to see if I wanted to include them in my articles</p> <p>14 for consideration.</p> <p>15 Q. That was after you submitted your</p> <p>16 expert report and after you sat for deposition,</p> <p>17 correct?</p> <p>18 A. Correct.</p> <p>19 MR. VAUGHN: Let's go to page 7,</p> <p>20 Melisha.</p> <p>21 BY MR. VAUGHN:</p> <p>22 Q. All right, Doctor. Is this where</p> <p>23 you started working actually on your class action</p> <p>24 expert report?</p> <p>25 A. Correct.</p>
<p>1 the deposition, not knowing that that's not who</p> <p>2 should have received the invoice. So this invoice</p> <p>3 that I sent to GT was never paid.</p> <p>4 The other invoice was sent</p> <p>5 to -- I don't know which law firm, but they are</p> <p>6 the one who eventually paid that invoice. So I</p> <p>7 was not paid twice for that deposition.</p> <p>8 Q. Why is there a date inaccuracy of</p> <p>9 it being September 1st on page 3 of your invoice?</p> <p>10 A. Because I'm not very good at</p> <p>11 sometimes having the correct date on there.</p> <p>12 MR. VAUGHN: All right. Can we</p> <p>13 go to the next page, Melisha, page 4.</p> <p>14 BY MR. VAUGHN:</p> <p>15 Q. And on September 1st, on this</p> <p>16 bill, you also billed three-and-a-half hours for</p> <p>17 reviewing Lagana's deposition and conference call</p> <p>18 with counsel, correct?</p> <p>19 A. Correct.</p> <p>20 Q. Is that what you actually did</p> <p>21 then on September 1st instead of the deposition?</p> <p>22 A. Yes, because we just previously</p> <p>23 established that that was not the date of the</p> <p>24 deposition.</p> <p>25 Q. Okay. And then looking at</p>	<p>1 Q. And throughout this I note names</p> <p>2 Steve Fowler, Ken -- I'm not even going to try and</p> <p>3 pronounce that last name -- T. Harper. Are these</p> <p>4 all GT attorneys?</p> <p>5 A. Yes.</p> <p>6 Q. And is Greenberg Traurig, is that</p> <p>7 the law firm you were working with in generating</p> <p>8 this class action expert report?</p> <p>9 A. Yes.</p> <p>10 Q. Is that the only law firm that</p> <p>11 you were working with?</p> <p>12 A. Yes.</p> <p>13 Q. And you were providing opinions</p> <p>14 on bioequivalency studies of all of the Defendants</p> <p>15 in this litigation, correct?</p> <p>16 A. Yes. All that I received</p> <p>17 information on.</p> <p>18 Q. And GT, Greenberg Traurig, was</p> <p>19 the one responsible for giving you documents for</p> <p>20 each Defendant?</p> <p>21 MR. FOWLER: Objection, form.</p> <p>22 THE WITNESS: Yes.</p> <p>23 Every -- every document from</p> <p>24 manufacturers on ANDAs and</p> <p>25 bioequivalence studies that I received,</p>

<p style="text-align: right;">Page 38</p> <p>1 that came through GT. I did not deal 2 with any of the companies directly. 3 BY MR. VAUGHN: 4 Q. Or any of the other law firms? 5 A. Or any other law firms. 6 Q. And so if there were additional 7 documents that you wanted to review, Greenberg 8 Traurig attorneys would have been who you went to? 9 A. Yes. 10 Q. Were there documents that you 11 specifically asked to see, or is it just documents 12 that Greenberg Traurig gave you? 13 A. I asked GT to send me, from as 14 many of the manufacturers as they could, 15 bioequivalence studies that were used to file 16 and -- and received approval for their ANDAs. 17 And -- and then it was out of my hands what I 18 received at that point. It was up to the 19 companies to find and send me those reports 20 through GT. 21 Q. And so you would have expected 22 that all of the bioequivalency studies were given 23 to you, correct? 24 A. I don't expect that. I didn't 25 know what I was going to get. I just evaluated</p>	<p style="text-align: right;">Page 40</p> <p>1 manufacturers, instead of several thousand pages, 2 I only received the BE data only, and so I didn't 3 have to sift through for some of the situations a 4 lot more information than necessary for what I was 5 doing. 6 Q. Do you recall for which companies 7 that was? 8 A. Not off the top of my head, no. 9 Q. A second ago you testified that 10 the submission process is to include the BE data. 11 By that, do you mean that the company is supposed 12 to submit all of their bioequivalency data and 13 studies with their ANDA? 14 A. I believe that to be the case. 15 Q. And that's why you thought it was 16 appropriate just to review the ANDA for their 17 bioequivalency data, correct? 18 A. Well, or the bioequivalence data, 19 if that's all they sent me. I -- it was the 20 bioequivalence data that I was most interested in. 21 Q. And when you're talking about the 22 data, did you actually review the underlying data 23 or did you just review the final report? 24 A. It depends on the format that it 25 came to me. There was often a lot of underlying</p>
<p style="text-align: right;">Page 39</p> <p>1 what I did get. 2 Q. So I note typically on this you 3 note that you're reviewing ANDA files for 4 bioequivalency data. Why is it the ANDA files 5 that you're reviewing to find the bioequivalency 6 data? 7 A. It's -- the part of the ANDA 8 submission process is to include the -- the BE 9 data. So I would often get a file that had 50, 10 60, 70 folders in it, and I had to sift through 11 those and find the ones that actually had the 12 bioequivalence data in there. 13 So there's data on analytical, 14 the case report forms on all the volunteers who 15 were in the studies, what their lab values were, 16 their physical exam results. I mean, there was a 17 lot of information that's included, and it was 18 just the BE data that I was interested in sifting 19 through and finding. 20 Q. Each of those ANDAs are several 21 thousands of pages, correct? 22 A. Correct. 23 Q. And when you said -- 24 A. Just to add -- I'm sorry. Just 25 to add and see if it helps. For some of the</p>	<p style="text-align: right;">Page 41</p> <p>1 data. There were bioequivalence data in humans. 2 A lot of that had subject-by-subject what their 3 individual values were. Then it had summary data 4 on top of that. It just depended on the format in 5 which I received it. 6 Q. And did you look into the testing 7 methods that were employed in the different 8 bioequivalency studies? 9 A. In some of the more extensive 10 files that I received, there were testing data. 11 Q. And -- and for which 12 manufacturers did you have the more extensive 13 data? 14 A. Again, I'd have to go back 15 and -- and look at my files to make that kind of 16 accurate answer. 17 Q. Was it a majority or a minority 18 of the Defendants that you had extensive data on? 19 A. I'd say it was about half. So 20 when you look in my report to see which BE studies 21 I included, I'd say about half of those came from 22 looking at a lot of extensive information, and 23 some were a little bit more targeted towards just 24 the bioequivalence data. 25 MR. VAUGHN: Melisha, let's go to</p>

Page 42

1 the first page of those invoices again.
2 BY MR. VAUGHN:
3 Q. And I just want to run through
4 the billing amount, total billing amounts, Doctor.
5 So this first invoice was
6 \$26,000, correct?
7 A. Correct.
8 MR. VAUGHN: And second invoice,
9 Melisha, page 2.
10 BY MR. VAUGHN:
11 Q. This was \$42,250, correct,
12 Doctor?
13 A. Correct.
14 Q. And the third invoice was \$4,000,
15 correct?
16 A. Yes, but that may be the one that
17 did not get paid because I sent it to the wrong
18 firm for payment.
19 Q. And do you recall what firm you
20 sent that to?
21 A. I sent it to GT, and they sent it
22 to whatever firm was responsible for that.
23 Q. Then the next invoice is \$35,500,
24 correct?
25 A. Correct.

Page 43

1 Q. And the next invoice is \$4,000?
2 A. Again, that may be the overlap
3 with the other one. So both of those did not get
4 paid. One did; one didn't.
5 Q. Okay. And the next invoice is
6 for \$5,000?
7 A. Correct.
8 Q. And the next invoice is for
9 \$41,000?
10 A. Correct.
11 Q. And your final invoice is for
12 \$46,084, correct?
13 A. Correct.
14 Q. And my math shows that all those
15 together is \$204,000. If we drop that other
16 4,000, we're at \$200,000. Does that sound about
17 correct to you, Doctor?
18 A. That sounds right.
19 Q. And have they paid all of those
20 invoices to date?
21 A. Yes.
22 Q. And do you have additional time
23 that you have not billed, that is not reflected in
24 this billing?
25 A. No, I'm sorry. I'm sorry. The

Page 44

1 one you're on right now.
2 Q. Yeah, the last one?
3 A. I have not -- I have not been
4 paid for that one.
5 Q. Okay. And then do you have
6 outstanding time that you have not billed?
7 A. Yes. Between the end of last
8 week and up until today, I've not billed for that.
9 Q. And approximately how much time
10 is that?
11 A. Approximately, I'm going to say,
12 30 hours.
13 Q. And what were you doing during
14 those 30 hours?
15 A. Reviewing my report, reviewing
16 deposition transcripts of some of the Plaintiff
17 experts in this phase of the litigation,
18 rereviewing some of the articles that I thought
19 were most important to my conclusions.
20 I think that's the majority of
21 the work.
22 Q. How many meetings have you had
23 with counsel in preposit- -- preparation for this
24 deposition?
25 A. We met yesterday here in Atlanta,

Page 45

1 and we had three remote sessions between the end
2 of last week and the first part of this week.
3 Q. When you say "we," is that all
4 Greenberg Traurig attorneys?
5 A. Yes.
6 Q. Approximately how many hours
7 would you say those meetings were in total?
8 A. Maybe 16, 18 hours.
9 Q. And do you not charge Greenberg
10 Traurig more money for when you take a deposition
11 versus when you're just writing an expert report?
12 A. No, I don't charge differently.
13 Q. Let's go ahead and take a five,
14 ten-minute break.
15 MR. VAUGHN: Is that okay, Steve?
16 MR. FOWLER: Five minutes would
17 be good. But yeah, go ahead.
18 MR. VAUGHN: Sounds great.
19 Can we get a breakout room?
20 THE VIDEOGRAPHER: Yes.
21 The time is now 10:35 a.m. We're
22 now off the record.
23 (Brief recess observed.)
24 THE VIDEOGRAPHER: The time is
25 10:43. We're back on the record.

<p style="text-align: right;">Page 46</p> <p>1 MR. VAUGHN: All right, Melisha, 2 can we go back to Exhibit 1, 3 Dr. Bottorff's class action expert 4 report? And let's go to page 30. 5 BY MR. VAUGHN: 6 Q. And, Doctor, is this where you 7 begin discussing these bioequivalency studies of 8 the various Defendants? 9 A. Yes. 10 Q. All right. This first one that 11 you note is for Teva valsartan, and it's ANDA 12 090642, correct? 13 A. Correct. 14 Q. And those studies, you note, were 15 conducted in 2004, correct? 16 A. Correct. 17 Q. In your opinion, was Teva's 18 valsartan contaminated with nitrosamines in 2004? 19 A. I don't believe so, but I don't 20 know for sure. 21 Q. Is that something you asked 22 counsel? 23 A. No. 24 Q. Is that something you looked into 25 in any way at all?</p>	<p style="text-align: right;">Page 48</p> <p>1 MR. FOWLER: Objection to form. 2 THE WITNESS: Again, I don't know 3 if it was or wasn't, because 4 I've -- I've not traced company 5 documents about that kind of thing. 6 BY MR. VAUGHN: 7 Q. Right. I understand that 8 you're -- you do not know, Dr. Bottorff, but if 9 it's an "if-then" question. If it was not 10 contaminated, then this would not tell you 11 anything about if nitrosamines impact valsartan's 12 bioequivalency, correct? 13 A. In and of itself, no. 14 Q. Going down to line 496, you have 15 a sentence that reads: "The AUC and Cmax values 16 are expressed as geometric means rather than the 17 more common arithmetic means, since the 18 pharmacokinetic data are usually more log-normal 19 distributed, such that geometrics means giving 20 more accurate description of the central tendency 21 of the data." 22 Can you explain what that means 23 to me, Dr. Bottorff? 24 A. I -- I can as much as neither you 25 or I are not statisticians. But this is the</p>
<p style="text-align: right;">Page 47</p> <p>1 A. No. 2 Q. If Teva's valsartan in 2004 was 3 not contaminated with nitrosamines, how does this 4 study support that nitrosamines won't impact the 5 bioequivalency of valsartan? 6 A. In this particular case, I was 7 wanting to be thorough and include as many of the 8 bioequivalence studies as I could get and not 9 leave those out that -- for whatever reason or any 10 other reason. So I asked for all of them. And 11 every one of them that I got, I included in this 12 report. 13 Q. In the body of your expert 14 report, you included every single bioequivalency 15 study that was provided to you by Greenberg 16 Traurig? 17 A. That was provided to them by the 18 companies who were requested to send it to me, 19 yes. 20 Q. And so you would agree, though, 21 that if, in 2004, Teva's valsartan was not 22 contaminated with nitrosamines, this 23 bioequivalency study does not tell you if 24 nitrosamines will impact the bioequivalency of 25 valsartan, correct?</p>	<p style="text-align: right;">Page 49</p> <p>1 common way in which all of these bioequivalence 2 studies are conducted. It's expected in -- from 3 the FDA when these are submitted that they're 4 analyzed in that fashion. And it's done for the 5 reason that I list here, which has to do with how 6 the data are distributed across normal volunteers. 7 A lot of statistics are done 8 assuming that a negative value could be the same 9 as a positive value, which would lead to that 10 normal distribution in statistics. But when you 11 give a drug and measure AUC, it can only go up. 12 It can't go down. So that's part of this unequal 13 distribution that leads to this format of 14 demonstrating the central tendency using the --the 15 log-normal data. 16 I can describe how it's done, if 17 you want to know. 18 Q. You're not a statistician, are 19 you, Dr. Bottorff? 20 A. No, but I've had classes in 21 statistics and I've actually taught classes in 22 biostatistics. 23 Q. What is your prior experience 24 with bioequivalency studies? 25 A. My first bioequivalence study</p>

<p style="text-align: right;">Page 50</p> <p>1 experience was when I was a -- a -- a trainee in 2 my residency at the University of Kentucky, and I 3 worked in a unit that conducted these kind of 4 bioequivalence studies. And I've done some of my 5 own bioavailability studies where the conduct of 6 the trial is essentially the same.</p> <p>7 Q. What does geometrics mean? What 8 does that mean?</p> <p>9 A. Yeah. An arithmetic mean is you 10 take -- let's say we have three numbers, A, B, 11 and C. You take A plus B plus C, and then you 12 divide by three and that's the arithmetic means. 13 The geometrics mean is you multiply A times B 14 times C, and then you take the cube root of that 15 number.</p> <p>16 Q. And why does the geometric mean 17 then give a more accurate description of the 18 central tendency data?</p> <p>19 A. Well, that's where it gets beyond 20 my statistical understanding, other than it's 21 what's expected to be done in these kind of 22 studies, is they use the geometric instead of the 23 arithmetic mean.</p> <p>24 Q. Are you familiar with the term 25 "harmonic mean"?</p>	<p style="text-align: right;">Page 52</p> <p>1 level versus time data that go sort of up and 2 down, and you try to find the model that draws the 3 best fit through that data, each data point that's 4 not on that line -- as there's a difference 5 between the point and the line that's calculated. 6 And then the line is refit, the line is refit, and 7 you take the square of that difference between the 8 points in the line, and then you select the model 9 that gives you the least squares difference 10 between the predicted values and the observed 11 values.</p> <p>12 Q. Is there a difference between 13 least square means and geometric least square 14 means?</p> <p>15 A. No. I think that's a different 16 way of wording the same process that's done in 17 bioequivalence studies.</p> <p>18 Q. And what's going to give a more 19 accurate description of the central tendency of 20 data, a geometric mean or a geometric least 21 squares mean?</p> <p>22 A. It's the same thing.</p> <p>23 Q. Oh, those are interchangeable as 24 well?</p> <p>25 A. Those -- those are</p>
<p style="text-align: right;">Page 51</p> <p>1 A. Yes. There are -- there are 2 multiple ways of -- of displaying central 3 tendency. That's another one.</p> <p>4 Q. What is a harmonic mean?</p> <p>5 A. I've never used it, so I can't 6 define it for you off the top of my head.</p> <p>7 Q. What about a least squares mean?</p> <p>8 A. That's really part of these as 9 well, is because the FDA expects you, when you do 10 a comparison from drug A to drug B, to not give 11 everybody drug A first and drug B second. Some 12 people will get drug B first and drug A second. 13 And so you put that into a regression model along 14 with the means, and the regression model that 15 gives you the least difference, which is the least 16 squares fit to the data, are how you determine the 17 actual values that are going to be reported. So 18 it's part of the regression model.</p> <p>19 Q. What did you mean by "you put 20 that into a regression model along with means and 21 the regression model that gives you the least 22 difference"? What do you mean by "the model that 23 gives you the least difference"?</p> <p>24 A. Yeah. The -- the best way I can 25 describe it is if -- if you have average blood</p>	<p style="text-align: right;">Page 53</p> <p>1 interchangeable.</p> <p>2 Q. Thank you.</p> <p>3 MR. VAUGHN: All right. Let's go 4 to page 31 of his expert report now. 5 And looking down at the paragraph that 6 starts on line 508.</p> <p>7 BY MR. VAUGHN:</p> <p>8 Q. I like that you line number your 9 expert report, by the way. It makes it much 10 easier to go through.</p> <p>11 So this is the Princeton ANDA for 12 the valsartan 320 milligram, ANDA 204821, correct, 13 Doctor?</p> <p>14 A. Correct.</p> <p>15 Q. And the two studies that were 16 done here, there was a fasting study, H237-11. 17 What is a fasting study?</p> <p>18 A. Typically the FDA requires, when 19 you do these studies, to do one study in -- where 20 you dose in the morning after an overnight fast so 21 there's no food in the stomach, and then you 22 repeat the study with food in the stomach 23 to -- like after a standard breakfast kind of meal 24 to see if there's any effect of food altering the 25 bioavailability or the bioequivalence.</p>

<p>Page 54</p> <p>1 Q. And you note that these studies 2 were done in March and April of 2012. Did you 3 look into the manufacturing date of the product 4 that was actually tested in these bioequivalency 5 studies? 6 A. I -- I didn't for a -- a point of 7 record, but most of the files that I received, 8 there was a section you could go to and it would 9 talk about the date of actual production of what 10 was going to be called the test product, and they 11 even had the date of production of the -- of the 12 reference Diovan. And they would even often have 13 what the testing results on those individual 14 products were. 15 You know, if it said it had 16 320 milligrams, did it have 320 or right around 17 there? So those were often included in the 18 records that I reviewed. 19 Q. Do you recall approximately how 20 much earlier most of the manufacturing dates were 21 than study dates? Several months? 22 A. A few months. These are usually 23 batches that are not so large, because they want 24 to prove that they can demonstrate bioequivalence 25 with them before they go into more larger scale</p>	<p>Page 56</p> <p>1 studies on bioequivalency don't tell you anything 2 on if nitrosamines impact valsartan's 3 bioequivalency, correct? 4 A. Not by itself. 5 Q. And what do you mean by "not by 6 itself"? 7 A. Well, this report -- and I'm sure 8 we're going to keep going through it -- is going 9 to be leading to other bioequivalence studies with 10 some of the combination products where I 11 demonstrate that the addition into a valsartan 12 tablet of milligram quantities of other compounds 13 that do not have overlapping metabolic or 14 distribution pathways do not also alter the 15 bioequivalence. And so to me, it doesn't -- if it 16 is or isn't in there, it's not going to alter the 17 bioequivalence pattern. 18 Q. About line 513, you discuss 19 Hetero Labs' ANDA 203311 and Studies 20 10-VIN -- V-I-N -- -337 and Study 330-VALS-2011, 21 and you note that these studies were conducted in 22 February and July of 2011, correct? 23 A. Correct. 24 Q. And do you know if Hetero Labs' 25 valsartan was contaminated with nitrosamines in</p>
<p>Page 55</p> <p>1 production. 2 Q. Do any additional tests related 3 to bioequivalency have to be done when a company 4 scales up production? 5 A. I know there are times. The 6 majority of these, the FDA requires the in-human 7 bioequivalence study to be done on the largest 8 tablet size that you're going to market. That's 9 why these are almost always in the 320 milligram 10 dosage. And then you're allowed to do in vitro 11 dissolution testing with the smaller doses. 12 So even though the bioequivalence 13 study might have been done with the 320, the ANDA 14 got approved for 40, 80, 160, as well as the 320. 15 And that was often done based on dissolution 16 testing. So when you upscale, you can often 17 demonstrate bioequivalence using the dissolution 18 testing rather than repeat your human trial at 19 that point. 20 Q. And do you know if Princeton's 21 valsartan was contaminated prior to March of 2012? 22 A. I don't specifically know that. 23 Q. And, again, if Princeton's 24 valsartan was not contaminated with nitrosamines 25 at the time of this study, then this -- these</p>	<p>Page 57</p> <p>1 2011? 2 A. Again, I don't. It -- it's my 3 understanding that some of these generic 4 manufacturers were making their drug with a 5 process that may have had nitrosamines in it and 6 they didn't know it. So I can't tell you with 7 each company where that was and when that 8 happened. I -- I'm somewhat certain that some of 9 these did and it wasn't known, but it still didn't 10 alter the bioequivalence. 11 Q. And so is it your testimony today 12 that Hetero Labs' valsartan might have been 13 contaminated with nitrosamines dating back to at 14 least 2011? 15 A. It is my testimony that I don't 16 know which companies may have had it, but that I'm 17 suspicion [sic] -- my suspicion is that some did, 18 and I don't know which. 19 Q. All right. Go to page 32, line 20 517. You are now discussing a Torrent 21 Pharmaceuticals' ANDA 202728 with Studies 22 PK-09-100 and Study PK-09-103. These are on 23 valsartan 320 milligrams, and you note that the 24 studies were done in July of 2010, correct? 25 A. Yes.</p>

<p style="text-align: right;">Page 58</p> <p>1 Q. And Torrent's valsartan, is it 2 your opinion that it was contaminated with 3 nitrosamines back in 2010? 4 A. It is my opinion that I don't 5 know if it was or not. 6 Q. And if Torrent's valsartan was 7 not contaminated with nitrosamines back in 2010, 8 these bioequivalency studies don't tell you 9 anything in relation to if nitrosamines impact the 10 bioequivalency of valsartan, correct? 11 A. And, again, as I said before, not 12 in and of themselves. But as we keep working 13 through this, you'll see one of the premises about 14 having combination products with more than 15 valsartan, like hydrochlorothiazide in 16 six-and-a-half -- or six-and-a-quarter up to 25 17 milligrams, amlodipine 5 or 10 milligrams, having 18 no effect on the bioequivalence of -- of valsartan 19 because of a lack of overlapping metabolic 20 pathways. 21 And so as I've -- I've 22 demonstrated in both reports, the lack of an 23 overlapping metabolic pathway between the 24 nitrosamines and valsartan, that there would be no 25 reason, and in fact there couldn't be any reason,</p>	<p style="text-align: right;">Page 60</p> <p>1 limits are to demonstrate that they remained 2 within the FDA guidelines of the confidence limits 3 being allowed to be as low as 80 percent or as 4 high as 125 percent. 5 Q. So does that mean that -- 6 A. That would be for the A- -- I'm 7 sorry. Whether that be for the AUC value or the 8 Cmax value. 9 Q. And so does that mean that 10 10 percent of the population is allowed to fall 11 outside of the 80 percent to 125 percent range? 12 A. No, that's not what it means. 13 Q. Can you explain further? 14 A. Sure. What it means is that if 15 you were to redo this experiment 100 times, 90 16 times you would still get values that are between 17 that range of upper and lower limit. So it's more 18 of a statistical value than a what-happened- 19 to-a-patient value. 20 Q. I understand now. I appreciate 21 that clarification. 22 And so on the PK-09-103, it's 23 getting up to 123.65 percent, and that's okay 24 because it's less than 125, correct? 25 A. Correct. That's the upper limit</p>
<p style="text-align: right;">Page 59</p> <p>1 to have that have any effect on the bioequivalence 2 of valsartan. 3 Q. What were the two combination 4 drugs that you just mentioned? Amlodipine and 5 what was it? 6 A. Hydrochlorothiazide. Those are 7 the components of the brand name Exforge or 8 Exforge HCT. 9 Q. Are either of those drug 10 genotoxic -- genotoxins? 11 A. No. 12 Q. Are nitrosamines genotoxins? 13 A. In animals, yes, depending on the 14 exposure level. 15 Q. All right. On the PK-09-103 16 Study, on that far right-hand column, it says: 17 "90 percent C.I." 18 What does the C.I. mean? 19 A. It's a confidence interval. The 20 90 percent confidence interval around that value 21 in the column before it, which is the percentage 22 similarity between the brand name and the test 23 product. So it's a -- an -- the average value 24 with the 90 percent confidence limits around that 25 value. And these are to -- these confidence</p>	<p style="text-align: right;">Page 61</p> <p>1 of the FDA's guidelines for demonstrating 2 bioequivalence. 3 MR. VAUGHN: Let's go to page 33, 4 Melisha. 5 BY MR. VAUGHN: 6 Q. All right. Line 537 and 538, you 7 note that: "HCTZ" -- and what's HCTZ? 8 A. Hydrochlorothiazide. 9 Q. Is it okay if I refer to it as 10 HCTZ in the deposition? 11 A. For me it is. 12 Q. Appreciate it. 13 You note that: "HCTZ is 14 primarily eliminated through the kidney," correct? 15 A. Correct. 16 Q. And then you say: "Therefore, 17 HCTZ would have no pharmacokinetic or 18 pharmacodynamic overlap with valsartan or NDMA or 19 NDEA," correct? 20 A. Correct. 21 Q. And why is that? 22 A. Well, there's multiple parts to 23 that question. I previously demonstrated how 24 valsartan is absorbed, taken up into the liver, 25 excreted in bile and has a mild cytochrome P450</p>

<p style="text-align: right;">Page 62</p> <p>1 pathway of elimination. None of those are shared 2 by Hydrochlorothiazide. None of those are shared 3 by NDMA or NDEA. 4 And I guess I should add that's 5 the pharmacokinetic reason for no overlap. The 6 pharmacodynamic reason is that -- that gets to 7 their mechanism of action. How does 8 Hydrochlorothiazide lower blood pressure? Not the 9 same way that valsartan does. So there's no 10 overlap between their -- their blood pressure 11 effects. So that would be a lack of a 12 pharmacodynamic-shared mechanism. 13 Q. And so is part of the reason that 14 there's no overlap is they're being metabolized in 15 different organs? 16 A. Well, that's part of it. Part of 17 it can be you're metabolized in the same organ but 18 by a different pathway. You would still then have 19 no overlap. 20 Q. And NDMA is metabolized, in your 21 opinion, in the liver, correct? 22 A. And how it's given and how much 23 dose is -- is given. 24 Q. The NDMA that has been 25 contaminated in valsartan, it's your opinion that</p>	<p style="text-align: right;">Page 64</p> <p>1 Q. And is -- 2 A. Different from valsartan, 3 separate from NDMA. 4 Q. Thank you. You knew my next 5 question. 6 Now, I don't see that you gave an 7 opinion like you did with HCTZ that it would have 8 no pharmacokinetic [sic] or pharmacodynamic [sic] 9 overlap with valsartan or NDMA/NDEA. 10 Is that also your opinion, 11 though, with amlodipine? 12 A. Yes. I -- I say the same thing 13 in the next sentence, but in a slightly different 14 way, because there's no identified mechanism of 15 drug interaction or no overlapping route of 16 metabolism. 17 Q. Can liver cirrhosis impact the 18 metabolism of any of these drugs? 19 A. Not in a predictable fashion. 20 Q. What do you mean by that? 21 A. Well, there are probably maybe as 22 many as 100 or 150 different cytochrome P450 23 pathways. Some of them have been studied for 24 alterations in cirrhosis; some have not. Most do 25 not show a change in their metabolic capability in</p>
<p style="text-align: right;">Page 63</p> <p>1 it's metabolized in the liver, correct? 2 A. When ingested orally, yes. 3 Q. And valsartan itself is also 4 metabolized in the liver, correct? 5 A. By a different metabolic pathway 6 entirely. 7 Q. And is that the P450 pathway that 8 you were just mentioning? 9 A. Well, there's a P450 pathway for 10 NDMA that's separate and distinct from the minor 11 P450 pathway with valsartan. 12 Q. But they're both metabolized 13 through a P450 pathway, correct? 14 A. Correct, but a separate and 15 distinct different P450 pathway. 16 Q. And then line 545 you note that: 17 "Amlodipine is primarily hepatically metabolized." 18 And that means metabolized by the 19 liver as well, correct? 20 A. Yes. 21 Q. And -- I'm -- 22 A. Again, by a distinct metabolic 23 pathway called 3A4. 24 Q. P450, 3A4? 25 A. Yes.</p>	<p style="text-align: right;">Page 65</p> <p>1 cirrhosis. 2 Q. So liver damage could impact the 3 metabolism of these drugs? 4 MR. FOWLER: Object to form. 5 THE WITNESS: It's probably been 6 studied and there's other types of liver 7 damage from cirrhosis, so it can't be 8 yes/no. You have to look at the type of 9 liver damage and the specific P450 10 pathway to see what's actually been 11 demonstrated or shown not to have an 12 effect. But it can't be done as a 13 blanket statement. 14 BY MR. VAUGHN: 15 Q. Do you have an opinion as to what 16 type of liver damage would impact the metabolism 17 of any of these drugs the most? 18 MR. FOWLER: Objection: Form, 19 foundation. 20 THE WITNESS: I don't. As I said 21 before, it's not something you can say 22 in a blanket yes/no format. So you'd 23 have to literally look at each pathway 24 and the multiple different types of 25 hepatic disease to see what's been done</p>

<p style="text-align: right;">Page 66</p> <p>1 and what's not been done.</p> <p>2 MR. VAUGHN: Let's go to page 34,</p> <p>3 Melisha.</p> <p>4 BY MR. VAUGHN:</p> <p>5 Q. And at 559, we're now at the</p> <p>6 section on Exforge. What is Exforge?</p> <p>7 A. That's the brand name of the</p> <p>8 combination product of valsartan and amlodipine</p> <p>9 made by Novartis.</p> <p>10 Q. Okay. So when one of the</p> <p>11 companies is doing their bioequivalency studies on</p> <p>12 valsartan plus amlodipine, they do it in</p> <p>13 comparison to Exforge?</p> <p>14 A. Correct.</p> <p>15 Q. And line 562, you are now</p> <p>16 discussing Aurobindo's ANDA 206512, and within</p> <p>17 that, their Study No. 368-12 and 369-12. And you</p> <p>18 note that these were done in October of 2013,</p> <p>19 correct?</p> <p>20 A. Correct.</p> <p>21 Q. And you don't recall the date of</p> <p>22 manufacture of the generic pills that were being</p> <p>23 tested, do you?</p> <p>24 A. No. Again, they would have been</p> <p>25 within some, usually few months time frame, but I</p>	<p style="text-align: right;">Page 68</p> <p>1 A. Again, it -- it can't. There's</p> <p>2 no mechanism for it to do such. This, again,</p> <p>3 study in and of itself is demonstrating that by</p> <p>4 showing that you still get all the valsartan</p> <p>5 you're supposed to get, even when amlodipine is</p> <p>6 present, because it doesn't share a metabolic</p> <p>7 pathway.</p> <p>8 Q. Did you even need to look at any</p> <p>9 of these bioequivalency studies, as you had</p> <p>10 already determined that there's no way that</p> <p>11 nitrosamines can impact the bioequivalency of the</p> <p>12 drugs?</p> <p>13 A. Well, the -- the process that I</p> <p>14 went through was not starting with that. I first</p> <p>15 had to go through the metabolic pathways of these</p> <p>16 various components and then look at the</p> <p>17 bioequivalence studies and then draw my conclusion</p> <p>18 at the end of that, not on the front end of that.</p> <p>19 Q. And you think that studies done</p> <p>20 without nitrosamines can tell you if nitrosamines</p> <p>21 are going to impact the bioequivalency?</p> <p>22 MR. FOWLER: Objection: Form,</p> <p>23 mischaracterizes.</p> <p>24 THE WITNESS: Again, I think in</p> <p>25 answering that previously, I -- I said</p>
<p style="text-align: right;">Page 67</p> <p>1 don't know.</p> <p>2 Q. Okay. So is it your opinion that</p> <p>3 Aurobindo's valsartan was contaminated with</p> <p>4 nitrosamines prior to October of 2013?</p> <p>5 A. It is my testimony that I do not</p> <p>6 know, but that it may have had. And that if it</p> <p>7 did, it didn't alter the bioequivalence anyway.</p> <p>8 Q. And if it -- if that -- scratch</p> <p>9 that.</p> <p>10 And if Aurobindo's valsartan was</p> <p>11 not contaminated with nitrosamines during this</p> <p>12 time, then these bioequivalency studies don't tell</p> <p>13 you anything as to if nitrosamines will impact the</p> <p>14 bioequivalency of valsartan plus amlodipine,</p> <p>15 correct?</p> <p>16 A. Well, no, not necessarily</p> <p>17 correct. Because, again, in microgram quantities,</p> <p>18 without any overlapping mechanism for an</p> <p>19 interaction, there's no reason to expect that</p> <p>20 there would be any impact at all.</p> <p>21 Q. But if this study is testing</p> <p>22 pills without any nitrosamines in it, how does</p> <p>23 that add anything? How does that support your</p> <p>24 opinion that the nitrosamines aren't going to</p> <p>25 impact the bioequivalency?</p>	<p style="text-align: right;">Page 69</p> <p>1 that not in and of themselves. You have</p> <p>2 to look at the whole picture. And part</p> <p>3 of the whole picture is valsartan's</p> <p>4 bioequivalence is retained in the</p> <p>5 presence of other compounds, that I had</p> <p>6 to see the data for, before I could draw</p> <p>7 that conclusion.</p> <p>8 And then also understanding that</p> <p>9 some of these probably had nitrates in</p> <p>10 them, even as far back as -- as when</p> <p>11 these bioequivalence studies were done.</p> <p>12 BY MR. VAUGHN:</p> <p>13 Q. You just testified that you have</p> <p>14 to look at the whole picture. What do you mean by</p> <p>15 "the whole picture"?</p> <p>16 A. Look at all the compounds</p> <p>17 involved, their metabolic pathways, the</p> <p>18 bioequivalence studies.</p> <p>19 Q. All of the bioequivalency</p> <p>20 studies?</p> <p>21 A. All that I received, which</p> <p>22 supported my contention and the -- all of the</p> <p>23 metabolic pathways of all the compounds involved.</p> <p>24 Q. If there were other</p> <p>25 bioequivalency studies that you did not receive,</p>

<p>Page 70</p> <p>1 you wouldn't have the whole picture, would you?</p> <p>2 A. I wouldn't have any more</p> <p>3 information than what I've already put in my</p> <p>4 report, but I think there's adequate information</p> <p>5 in my report to make my conclusions.</p> <p>6 Q. If there were bioequivalency</p> <p>7 studies that -- scratch that.</p> <p>8 If some of the generic</p> <p>9 manufacturers conducted bioequivalency studies on</p> <p>10 their valsartan and they failed the bioequivalency</p> <p>11 studies, you would then ex- -- you would have</p> <p>12 expected the Defense attorneys would have given</p> <p>13 you that information, correct?</p> <p>14 A. And they did.</p> <p>15 Q. How do you know they did?</p> <p>16 A. I saw one bioequivalence study</p> <p>17 that the average AUC value and the average Cmax</p> <p>18 value, you know, the two primary determinates of</p> <p>19 rate and extent of absorption, were within the</p> <p>20 FDA's requirements, but the confidence limits</p> <p>21 exceeded the requirements.</p> <p>22 Q. What do you mean by "exceeded"?</p> <p>23 A. So I did see a study --</p> <p>24 Q. Sorry, continue.</p> <p>25 A. So I did see -- I did see a study</p>	<p>Page 71</p> <p>1 that failed the FDA's bioequivalence standards and</p> <p>2 the company did a root cause analysis -- I don't</p> <p>3 remember which one it was right now -- and found</p> <p>4 that it was a -- a change in the size of the</p> <p>5 microparticles when they did the tableting, and so</p> <p>6 they went back and reformulated the tablet and</p> <p>7 redid a bioequivalence study -- and its one of the</p> <p>8 ones that's in here -- that then met the FDA</p> <p>9 standards after the reformulation.</p> <p>10 Q. You don't recall what company</p> <p>11 that is?</p> <p>12 A. I don't. I'd have to go back and</p> <p>13 look through all those files again.</p> <p>14 Q. Do you know what -- if they're</p> <p>15 API?</p> <p>16 A. Again, I -- I don't know off the</p> <p>17 top of my head whether they made their own or</p> <p>18 whether they purchased it.</p> <p>19 Q. You don't know if they were</p> <p>20 getting their API from ZHP?</p> <p>21 A. I don't, off the top of my head.</p> <p>22 Q. And do you happen to know if</p> <p>23 wherever they were getting their API from sent</p> <p>24 them the same API later on that they passed their</p> <p>25 bioequivalency study with?</p>	<p>Page 72</p> <p>1 A. I seem to recall that they were</p> <p>2 using the same API. It was more the tableting</p> <p>3 process that needed to be revised.</p> <p>4 Q. Was it the size of the granules</p> <p>5 of the valsartan API that was causing the</p> <p>6 bioequivalency studies to fail?</p> <p>7 A. No. It was the size of the</p> <p>8 particles that are used as part of the tableting</p> <p>9 process. So, yes, valsartan was in that particle,</p> <p>10 and I don't know whether there was NDMA in there</p> <p>11 or not. But based on the internal report for that</p> <p>12 company, it had nothing to do with the API; it was</p> <p>13 the tableting process.</p> <p>14 Q. What are you basing that on,</p> <p>15 the -- it's the tableting process and not the API?</p> <p>16 A. Their own internal root cause</p> <p>17 analysis.</p> <p>18 Q. But you can't point me to which</p> <p>19 Defendant you're discussing or the document that</p> <p>20 you're relying on?</p> <p>21 A. I could. It might take me two or</p> <p>22 three hours to sift through the files.</p> <p>23 Q. That's okay. I think we'll</p> <p>24 probably get to it later.</p> <p>25 MR. VAUGHN: Let's go to page 36,</p>	<p>Page 73</p> <p>1 Melisha, and start on line 586.</p> <p>2 BY MR. VAUGHN:</p> <p>3 Q. All right. We're talking about</p> <p>4 Torrent's ANDA 202377. And so this would, again,</p> <p>5 be the valsartan plus amlodipine, correct?</p> <p>6 A. Yes.</p> <p>7 Q. And the bioequivalency studies</p> <p>8 within this ANDA is PK-09-192, PK-09-193 and</p> <p>9 PK-10-023, and you note that these were conducted</p> <p>10 between May and July of 2010, correct?</p> <p>11 A. Yes.</p> <p>12 Q. Is it your opinion that Torrent's</p> <p>13 valsartan was contaminated with nitrosamines in</p> <p>14 May of 2010?</p> <p>15 A. Again, it may have been. I -- I</p> <p>16 do not know.</p> <p>17 Q. And so, again, if Torrent's</p> <p>18 valsartan was not contaminated with nitrosamines</p> <p>19 in 2010, then these studies don't actually tell</p> <p>20 you anything specifically on if nitrosamines</p> <p>21 impact the bioequivalency of valsartan plus</p> <p>22 amlodipine, correct?</p> <p>23 A. Again, not in and of itself,</p> <p>24 but -- but if it did contain it, then it does tell</p> <p>25 you that.</p>
---	---	---	---

<p style="text-align: right;">Page 74</p> <p>1 Q. But you have no idea if Torrent's 2 valsartan was contaminated back in 2010 with 3 nitrosamines, do you? 4 MR. FOWLER: Asked and answered. 5 THE WITNESS: I -- I do not know. 6 BY MR. VAUGHN: 7 Q. Do you know what the purpose was 8 of them doing two fasting studies at different 9 milligrams? 10 A. I -- I don't. I don't recall 11 seeing why that selection was made. Again, I know 12 they're required by the FDA to do the highest 13 dose. I don't know why they chose the 160 in 14 addition, so I -- I really don't know. I 15 certainly don't recall seeing in the documents I 16 had access to, that it was explained. 17 Q. Is there any reason why on the 18 fed study the bioequivalency range is on the low 19 end and on the fasting studies it's on the high 20 end? 21 MR. FOWLER: Objection to form. 22 THE WITNESS: I do believe that 23 it's been reported that there's a small 24 reduction in systemic exposure to 25 valsartan when taken with food compared</p>	<p style="text-align: right;">Page 76</p> <p>1 only capable of being different because 2 of a function of being fed or not. 3 BY MR. VAUGHN: 4 Q. Do you -- in relation to 5 valsartan, do you have an opinion if fasting or 6 fed bioequivalency studies are harder to pass? 7 A. I have no opinion that they're 8 any harder to pass. 9 MR. VAUGHN: All right. Page 37. 10 BY MR. VAUGHN: 11 Q. All right. In the Comparison 12 part now is Diovan HCT. Is HCT the same as HCTZ? 13 A. Yes. Novartis, in their branded 14 name, they don't use all four letters. They just 15 use three of them. Whereas in the generic 16 pharmacology vernacular, we always use the four 17 letters of HCTZ. 18 Q. Okay. And so this section is now 19 on the combination of valsartan plus HCTZ pills, 20 correct? 21 A. Correct. 22 Q. And this is Aurobindo ANDA 202519 23 that you're discussing in this paragraph, correct? 24 A. Yes. 25 Q. And the studies within that ANDA</p>
<p style="text-align: right;">Page 75</p> <p>1 to not being taken with food. But then 2 it's in the package label that 3 the -- that small reduction is of -- not 4 of any clinical significance. And so 5 patients in the package labels are 6 instructed that they can take it with or 7 without food and it won't alter the 8 ultimate response to the drug. 9 BY MR. VAUGHN: 10 Q. That small reduction in systemic 11 exposure to valsartan when taken with food, that 12 should be the same for the brand name and the 13 generic, correct? 14 A. Yes. 15 Q. Then why is the generic low on 16 the fed studies but high on the fasting studies? 17 MR. FOWLER: Objection, form. 18 THE WITNESS: I don't think it's 19 only because of whether it's fed or not 20 fed. I think tablet performance, if you 21 go back and look through some of these, 22 some manufacturers, even in a fasting 23 state, their AUCs are a little higher 24 than Diovan and some are a little lower 25 than Diovan. So it -- it's not purely</p>	<p style="text-align: right;">Page 77</p> <p>1 are 304-09 and 305-09. And you note that those 2 were conducted -- well, actually, you don't know 3 what year those were conducted, do you? 4 A. Yeah, I don't know why I didn't 5 put that in there. I tried to be consistent 6 in -- in including the actual dates. And so I 7 don't know if I received only a summary report 8 that didn't have them. 9 What I could do, though, is go to 10 the FDA's website and put in the ANDA number, and 11 you can get from the website the date that the FDA 12 approved the ANDA. So I did have that. 13 Q. Based on Aurobindo's naming 14 structure of their studies, does that -09 indicate 15 anything to you? 16 A. I can't say that I paid attention 17 to whether that was a 09, like 2009 study or not, 18 so I don't know for sure. It may have been the 19 ninth production product or -- you know, I have no 20 idea. 21 Q. Or a 2009 manufacturing date of 22 the product? 23 A. Could have been. 24 Q. Well, let's just assume, then, 25 that this was done in 2010. If this was done in</p>

<p>Page 78</p> <p>1 2010, do you have an opinion as to if Aurobindo's 2 valsartan was contaminated with nitrosamines? 3 A. I don't know. It may have. 4 Q. And if the ANDA wasn't approved 5 until March of 2013, the studies were definitely 6 done in advance of that, correct? 7 A. They were definitely done in 8 advance of 2013, yes. For sure. 9 Q. And the manufacturing date of the 10 valsartan would have been even earlier than the 11 bioequivalency studies, correct? 12 A. By some, usually, a few months 13 time frame. 14 Q. And so you're unaware if the 15 product tested in these bioequivalency studies was 16 contaminated with nitrosamines, correct? 17 MR. FOWLER: Asked and answered. 18 THE WITNESS: Correct, I'm 19 unaware of that. They may have been. 20 BY MR. VAUGHN: 21 Q. And if Aurobindo's valsartan was 22 not contaminated with nitrosamines at the time 23 that these studies were being conducted, these 24 bioequivalency studies don't actually tell you 25 anything on if nitrosamines impact the</p>	<p>Page 80</p> <p>1 the bioequivalence. And -- and if I recall from 2 having read one of Plaintiff expert's depositions, 3 Dr. Najafi, I believe, I think he said the same 4 thing. It didn't matter whether it was in there 5 or not; it wouldn't have affected the 6 bioequivalence. 7 Q. If there are bioequivalency 8 studies that were conducted on valsartan that was 9 known to be contaminated, would you want to review 10 those studies? 11 A. Of course if I had them, I would 12 review them. 13 Q. Would you give more weight to the 14 studies that had no nitrosamines impurities in 15 them versus ones that did have nitrosamines 16 impurities in them? 17 A. No, because they're not going to 18 show any difference, so it wouldn't have any 19 difference to me at all. Wouldn't change my 20 conclusion, it would only support my conclusion. 21 Q. And so without looking at the 22 studies, you can already determine that they're 23 not going to show any difference? 24 A. To the best of our scientific 25 capability through mechanisms whereby there would</p>
<p>Page 79</p> <p>1 bioequivalency of the valsartan plus HCTZ, 2 correct? 3 A. And, again -- and the same if 4 they do. 5 But without an overlapping 6 mechanism, it doesn't matter whether it's in there 7 or not. 8 Q. And so none of these studies that 9 we've looked at actually matter to you, do they, 10 because you don't know if any of them have 11 nitrosamines in the drug product? 12 MR. FOWLER: Objection to form. 13 THE WITNESS: No, that's not what 14 I said about them not mattering. I'm 15 saying whether NDMA was in there or not 16 doesn't matter because the 17 bioequivalence would be retained. 18 BY MR. VAUGHN: 19 Q. So in your expert opinion, it 20 doesn't matter if the study is using a drug 21 product with nitrosamines in order to figure out 22 if nitrosamines impact the bioequivalency of the 23 drug? 24 A. It is my expert opinion that 25 whether they were in there or not would not affect</p>	<p>Page 81</p> <p>1 be an effect on bioequivalence, and those 2 mechanisms do not exist. 3 MR. VAUGHN: All right. Go on to 4 page 38. 5 BY MR. VAUGHN: 6 Q. All right. And you're now 7 discussing at line 613 Princeton ANDA 206083. And 8 again, this is for valsartan plus HCTZ, correct, 9 Doctor? 10 A. Yes. 11 Q. And within the ANDA you note 12 bioequivalency studies H052-12 and H053-12, and 13 you note that these were both done in 2012, 14 correct? 15 A. Yes. 16 Q. And do you have any opinion on if 17 Princeton's valsartan plus HCTZ was 18 contaminat- -- contaminated with nitrosamines in 19 2012? 20 A. I don't personally know that. 21 They may have been. 22 Q. And if Princeton's valsartan was 23 not contaminated with nitrosamines in 2012, these 24 studies don't actually tell you if nitrosamines 25 are going to impact the bioequivalency of</p>

<p>Page 82</p> <p>1 Princeton's valsartan plus HCTZ, correct?</p> <p>2 A. Correct, in that -- in and of</p> <p>3 itself. But, again, with the presence of</p> <p>4 milligram quantities compared to NDMA microgram</p> <p>5 quantities, without overlapping mechanisms, it</p> <p>6 adds to the body of -- of my knowledge that</p> <p>7 there's no reason to expect that NDMA would have</p> <p>8 any effect on bioequivalence at all.</p> <p>9 Q. Okay. And in the paragraph</p> <p>10 starting at line 622, you are discussing ANDA</p> <p>11 091654, which is for Torrent's valsartan plus</p> <p>12 HCTZ, correct?</p> <p>13 A. Yes.</p> <p>14 Q. And then you note Studies</p> <p>15 PK-09-23 and PK-09-024, and you note that these</p> <p>16 bioequivalency studies were conducted in March of</p> <p>17 2009, correct?</p> <p>18 A. Yes.</p> <p>19 Q. And do you have any opinion if</p> <p>20 Torrent's generic valsartan plus HCTZ was</p> <p>21 contaminated with nitrosamines back in 2009?</p> <p>22 A. I do not know. It may have been.</p> <p>23 Q. And if Torrent's valsartan plus</p> <p>24 HCTZ was not contaminated with nitrosamines back</p> <p>25 in 2009, then these bioequivalency studies don't</p>	<p>Page 84</p> <p>1 Here's our bioequivalence result for Diovan/HCT</p> <p>2 versus our equivalent product.</p> <p>3 And so it -- I may have in some</p> <p>4 cases had a much more limited amount of</p> <p>5 information that came with the file that had the</p> <p>6 BE data in it.</p> <p>7 Q. And so for some of the files, you</p> <p>8 were not able to review all the data, correct?</p> <p>9 A. I was able to review the relevant</p> <p>10 bioequivalence data, yes.</p> <p>11 Q. And the Mylan studies, that you</p> <p>12 were discussing in this paragraph, you note were</p> <p>13 conducted in May of 2005, correct?</p> <p>14 A. Yes, I did have that information.</p> <p>15 Q. And did you have any information</p> <p>16 on if Mylan's valsartan plus HCTZ was contaminated</p> <p>17 with nitrosamines back in 2005?</p> <p>18 A. I have no knowledge of that. It</p> <p>19 may have been.</p> <p>20 Q. Your opinion today is that</p> <p>21 Mylan's valsartan might have been contaminated</p> <p>22 going all the way back to 2005?</p> <p>23 A. Do not know.</p> <p>24 Q. And if Mylan's valsartan plus</p> <p>25 HCTZ was not contaminated back in 2005, then these</p>
<p>Page 83</p> <p>1 actually tell you anything on if nitrosamines</p> <p>2 impact the bioequivalency of valsartan plus HCTZ,</p> <p>3 correct?</p> <p>4 A. Correct, to a certain degree.</p> <p>5 But, again, without the overlapping mechanisms and</p> <p>6 the fact that it may have had it in there, then</p> <p>7 I -- I don't think this is changing my conclusion</p> <p>8 at all.</p> <p>9 MR. VAUGHN: Page 39.</p> <p>10 BY MR. VAUGHN:</p> <p>11 Q. All right. Paragraph starting</p> <p>12 line 626, you note Mylan data on bioequivalency</p> <p>13 studies comparing generic valsartan/HCTZ to</p> <p>14 Diovan/HCT, but you don't reference an ANDA on</p> <p>15 this one.</p> <p>16 Is there a reason for that?</p> <p>17 A. It was either not identified in</p> <p>18 the files that I received or that I could not find</p> <p>19 it directly at the FDA website to put a specific</p> <p>20 ANDA number in.</p> <p>21 Q. What do you mean by "not</p> <p>22 identified in the files" you received?</p> <p>23 A. As I said before, some of these</p> <p>24 files I received were very lengthy and very</p> <p>25 comprehensive, and some of them I received were:</p>	<p>Page 85</p> <p>1 bioequivalency studies don't actually tell you</p> <p>2 anything on if nitrosamines impact the</p> <p>3 bioequivalency of valsartan plus HCTZ, correct?</p> <p>4 A. They indirectly do, as I -- as</p> <p>5 I've stated before, because milligram quantities</p> <p>6 of HCTZ without an overlapping mechanism do not</p> <p>7 alter valsartan. So there would be no reason to</p> <p>8 expect that microgram quantities of NDMA or NDEA,</p> <p>9 without overlapping mechanisms, would have any</p> <p>10 effect on the bioequivalence.</p> <p>11 So I -- I don't change my</p> <p>12 conclusion at all.</p> <p>13 Q. Does that meet FDA guidance, that</p> <p>14 just if there's not a known overlapping mechanism,</p> <p>15 that you don't need to do bioequivalency studies?</p> <p>16 MR. FOWLER: Objection: Form,</p> <p>17 foundation.</p> <p>18 THE WITNESS: The FDA requires</p> <p>19 the bioequivalence studies irrespective</p> <p>20 of whether they do or do not have</p> <p>21 impurities in them.</p> <p>22 BY MR. VAUGHN:</p> <p>23 Q. If a drug has a different</p> <p>24 chemical in it, even if it's an excipient, does</p> <p>25 the FDA require additional bioequivalency studies?</p>

<p style="text-align: right;">Page 86</p> <p>1 MR. FOWLER: Objection, form. 2 THE WITNESS: Make sure I'm 3 understanding. Are you asking if two 4 products have different excipients of 5 the same active ingredient, would it 6 require a bioequivalence study? 7 BY MR. VAUGHN: 8 Q. Yeah. If a generic drug that 9 already passed bioequivalency studies added a new 10 excipient, would the FDA require additional 11 bioequivalency studies? 12 A. Probably not in humans. They, 13 again, would probably be allowed to do a 14 dissolution study that showed the same release 15 characteristics. 16 Q. What are you basing that on? 17 A. Basing it on the FDA guidance for 18 bioequivalence testing. 19 Q. Which FDA guidance on 20 bioequivalence testing? 21 A. Probably the one that I referred 22 to in my report. 23 Q. Do you know which year that one 24 is? 25 A. I don't. I know they released a</p>	<p style="text-align: right;">Page 88</p> <p>1 Q. And their reference drug is, 2 again, Exforge HCT? 3 A. Yes. So this is a -- a 4 three-drug combination now. 5 Q. Does Exforge HCT have amlodipine 6 in it? 7 A. Yes. 8 Q. And is Exforge HCT what was also 9 being compared to on the generic valsartan plus 10 HCTZ but not amlodipine? 11 A. Valsartan plus amlodipine alone 12 would be equivalent to the Exforge. Valsartan 13 plus HCTZ would be equivalent to Diovan/HCT. And 14 then valsartan plus amlodipine plus 15 hydrochlorothiazide would be equivalent to the 16 Exforge HCT. 17 Q. Understood. Thank you for that 18 clarification. 19 And so that last paragraph on 20 page 39, you are discussing Teva's ANDA 2004354, 21 valsartan plus amlodipine plus HCTZ, correct? 22 A. Yes. 23 Q. And I don't see that you 24 identified the studies in this ANDA. Do you see 25 if you did, Doctor?</p>
<p style="text-align: right;">Page 87</p> <p>1 new one maybe last year, but I don't think there 2 was substantial changes in it. 3 Q. Did you disagree with anything in 4 the FDA's guidance? 5 MR. FOWLER: Objection, form. 6 THE WITNESS: I'd have to see 7 what you're referring to. 8 BY MR. VAUGHN: 9 Q. As you're sitting here today, do 10 you recall disagreeing with any of the FDA's 11 guidance on bioequivalency studies? 12 A. As I sit here today, I do not 13 recall that. But I don't know what you're 14 referring to. It's -- I -- it's so vague, I 15 can't -- I can't really answer your question. 16 Q. Are you giving any regulatory 17 opinions in this litigation? 18 A. I'm giving no regulatory opinions 19 in this case. I think there are other people that 20 have been asked to provide opinions that are much 21 more qualified than I on that. 22 Q. At the bottom of page 39, we are 23 now in the section regarding valsartan plus 24 amlodipine plus HCTZ, correct? 25 A. Yes.</p>	<p style="text-align: right;">Page 89</p> <p>1 A. I don't see a specific study 2 number. 3 Q. Is there a reason for that? 4 A. It -- it wouldn't have been an 5 oversight on my part, so it must not have been 6 that the actual study number was provided in the 7 materials I was given to review or that I asked 8 for to review. 9 Q. And if the Defendants had that 10 information, you would have expected that they 11 would have given it to you, correct? 12 A. Yes. I'm sure they had it, and 13 it wasn't in the materials that I received. 14 Q. You were sure that the Defense 15 attorneys had it, but they did not give it to you? 16 MR. FOWLER: Objection, form. He 17 didn't say that. 18 THE WITNESS: Yeah, what -- what 19 I meant to -- to mean is that the file 20 that came through Defense lawyers to me 21 from Teva, Teva must not have provided 22 it in what was sent to them to give to 23 me. So I had no direct contact with 24 Teva. 25 BY MR. VAUGHN:</p>

Page 90	Page 92
<p>1 Q. And these studies done in Teva's 2 ANDA 200435, they were conducted in 2009, correct? 3 A. Yes, I did have that information. 4 Q. And do you have an opinion on if 5 Teva's valsartan was contaminated with 6 nitrosamines back in 2009? 7 A. I don't know if it was or not. 8 Q. And therefore, if it was not 9 contaminated with nitrosamines back in 2009, these 10 studies don't tell us anything on if nitrosamines 11 impact the bioequivalency of Teva's valsartan plus 12 amlodipine plus HCTZ, correct? 13 A. Incorrect. Again, this is 14 an -- an even more extreme example of making my 15 point. You now have three drugs in milligram 16 quantities that don't have overlapping mechanisms 17 of metabolism that show no altered bioequivalence. 18 Q. And it's your opinion that that 19 supports that nitrosamines can't alter the 20 bioequivalency of these drugs? 21 A. The absence of an overlapping 22 mechanism of metabolism or distribution, 23 absolutely, I believe that. 24 Q. Did you discuss any other 25 bioequivalency studies in your expert report,</p>	<p>1 I'm even under the impression 2 that some of the Diovan may have had nitrosamines 3 in them as well. Again, I don't think it alters 4 my conclusion at all because it would have no 5 impact on the bioequivalence studies. 6 Q. Did the Defense attorneys tell 7 you to assume that some of the generic valsartan 8 that was studied in these bioequivalency studies 9 were contaminated with nitrosamines? 10 A. Defense attorneys did not tell me 11 to assume anything. They have access to 12 information through other depositions and things 13 that I'm not aware of, but they did tell me that 14 there was the likelihood that some of these 15 generics contained NDMA even before ZHP identified 16 that it had NDMA. 17 Q. How far back did the Defense 18 attorneys tell you that the contamination likely 19 goes? 20 A. I was not given a time frame. I 21 do not know that. 22 Q. And so when you testify -- 23 A. I think it was -- 24 Q. Sorry, go ahead. 25 A. Yeah. I think I was going to say</p>
Page 91	Page 93
<p>1 other than the ones that we have covered? 2 A. I'm assuming you went through 3 every one that -- I haven't going back to -- to do 4 a head count, but I'm assuming it's every one. So 5 I have no additional ones that I had access to. 6 Q. And all of the ones that we 7 reviewed, none of them were you aware if 8 nitrosamines were in the drug product, correct? 9 MR. FOWLER: Asked and answered. 10 THE WITNESS: I don't believe 11 that I -- I don't know, but I'm under 12 the impression that some of them did. 13 BY MR. VAUGHN: 14 Q. Which ones are you under the 15 impression had nitrosamines in them when they were 16 conducting the bioequivalency studies? 17 MR. FOWLER: Objection, asked and 18 answered. 19 THE WITNESS: I -- I don't know 20 which ones, but I'm under the impression 21 that some did. 22 BY MR. VAUGHN: 23 Q. Do the -- 24 A. I'm even under the 25 impression -- I'm sorry.</p>	<p>1 that, again, in -- in reading Dr. Najafi's 2 deposition, I think he was the one that concluded 3 or -- or stated that even Diovan had some NDMA in 4 it. And so I'm saying it doesn't matter. The 5 bioequivalence, and therefore the systemic 6 exposure, and therefore the systemic effect of 7 generic valsartan products are completely 8 independent of whether there is or isn't NDMA in 9 there or whether it was in the branded products or 10 not. 11 Q. Earlier you testified that you 12 were under the impression they had nitrosamines in 13 them when they were [sic] conducted the 14 bioequivalency studies. How are you under that 15 impression? 16 MR. FOWLER: Objection: Form, 17 vague. 18 THE WITNESS: Again, I'm -- I'm 19 under the impression from discussions 20 I've had with counsel that there were 21 some generic manufacturers that have 22 identified that they might have had NDMA 23 even at the time that some of these 24 bioequivalence studies were conducted. 25 BY MR. VAUGHN:</p>

Page 94	Page 96
<p>1 Q. Did you refute --</p> <p>2 A. And it --</p> <p>3 Q. Sorry.</p> <p>4 A. -- doesn't matter. No. I was</p> <p>5 just going to say it doesn't matter, because it's</p> <p>6 not going to have any effect on the bioequivalence</p> <p>7 anyway.</p> <p>8 Q. Did you review any documents that</p> <p>9 indicated that any of the drug products tested in</p> <p>10 these bioequivalency studies were actually</p> <p>11 contaminated with nitrosamines?</p> <p>12 A. I have -- I have seen no such</p> <p>13 documents, no.</p> <p>14 MR. VAUGHN: Why don't we go off</p> <p>15 the record.</p> <p>16 THE VIDEOGRAPHER: The time is</p> <p>17 now 11:53 a.m. We are off the record.</p> <p>18 (Lunch recess observed.)</p> <p>19 THE VIDEOGRAPHER: The time is</p> <p>20 12:38 p.m. We're back on the record.</p> <p>21 BY MR. VAUGHN:</p> <p>22 Q. Welcome back, Dr. Bottorff.</p> <p>23 MR. VAUGHN: Melisha, can we pull</p> <p>24 up the 2011 FDA Guidance for Submission</p> <p>25 of Summary Bioequivalence Data for</p>	<p>1 a citation down to the Final Rule: "Requirements</p> <p>2 for submission of bioequivalence data that was</p> <p>3 published in the Federal Register on January 16th,</p> <p>4 2009," correct?</p> <p>5 A. Correct.</p> <p>6 Q. And do you agree that an ANDA</p> <p>7 applicant should submit all of their</p> <p>8 bioequivalency studies, even studies which failed?</p> <p>9 MR. FOWLER: Objection: Calling</p> <p>10 for a regulatory opinion, outside the</p> <p>11 scope.</p> <p>12 THE WITNESS: I can sit here and</p> <p>13 read that the same as you can, but,</p> <p>14 again, I -- I don't have opinions</p> <p>15 on -- on regulatory issues.</p> <p>16 BY MR. VAUGHN:</p> <p>17 Q. And so you also don't have an</p> <p>18 opinion on if they're supposed to submit failed</p> <p>19 bioequivalency studies that happened after the</p> <p>20 submission of their ANDA?</p> <p>21 MR. FOWLER: Same objection.</p> <p>22 THE WITNESS: Yeah. Again, I</p> <p>23 have no opinion on that.</p> <p>24 MR. VAUGHN: All right. Melisha,</p> <p>25 let's go to the -- the FDA's 2021 Draft</p>
Page 95	Page 97
<p>1 ANDAs?</p> <p>2 And this will be Exhibit 4.</p> <p>3 (Exhibit 4 was marked.)</p> <p>4 BY MR. VAUGHN:</p> <p>5 Q. All right. Have you reviewed</p> <p>6 this document previously, Dr. Bottorff?</p> <p>7 A. Yes, I have.</p> <p>8 MR. VAUGHN: Melisha, can we go</p> <p>9 to PDF page 4? It's page 1 at the</p> <p>10 bottom of the document.</p> <p>11 BY MR. VAUGHN:</p> <p>12 Q. All right. I'm looking at line</p> <p>13 19. Actually, it starts on line 18. Do you see,</p> <p>14 Doctor, where it says: "FDA's final rule on</p> <p>15 requirements for submission of bioequivalence data</p> <p>16 requires an ANDA applicant to submit data from all</p> <p>17 bioequivalence studies the applicant conducts on a</p> <p>18 drug product formulation submitted for approval,</p> <p>19 including studies that do not demonstrate that the</p> <p>20 generic product meets the current bioequivalence</p> <p>21 stamp criteria"?</p> <p>22 A. I see that.</p> <p>23 Q. And at the top of this document,</p> <p>24 it does say that the document contains nonbinding</p> <p>25 recommendations, but the sentence I just read has</p>	<p>1 Guidance now.</p> <p>2 And this will be Exhibit 5.</p> <p>3 (Exhibit 5 was marked.)</p> <p>4 BY MR. VAUGHN:</p> <p>5 Q. Doctor, is this the 2021 Guidance</p> <p>6 that you were referencing earlier in this</p> <p>7 deposition?</p> <p>8 A. Yes. It's the one that I said</p> <p>9 I'd also seen. It existed in a -- in a draft</p> <p>10 format.</p> <p>11 MR. VAUGHN: Go to PDF page 8,</p> <p>12 Melisha. It's going to be page 5 at the</p> <p>13 bottom. And it might be PDF page 9.</p> <p>14 MR. FOWLER: So let me just have</p> <p>15 a running objection to the relevance of</p> <p>16 this 2021 Guidance to this case, so I</p> <p>17 don't interrupt you.</p> <p>18 BY MR. VAUGHN:</p> <p>19 Q. All right. Doctor, on line 147</p> <p>20 where it says: "If a drug product is intended for</p> <p>21 use in both sexes, the applicant should include</p> <p>22 similar proportions of males and females in the</p> <p>23 study or provide a justification supporting the</p> <p>24 use of a single-sex population."</p> <p>25 Why is that?</p>

<p style="text-align: right;">Page 98</p> <p>1 MR. FOWLER: Objection, calls for 2 a regulatory opinion. 3 Go ahead, to the extent you can 4 answer. 5 THE WITNESS: Yeah, I -- I don't 6 know why, but I know it's done. On my 7 CV, I don't know if it was noted or not, 8 but I've been added to a National 9 Investigational Review Board for a 10 company called Advarra. And we review 11 Phase 1 protocols on a weekly basis from 12 a variety of pharmaceutical companies, 13 and I can tell you that the vast 14 majority of them have about an equal 15 number of males and females. 16 Provided, there's all kinds of 17 stipulations about making sure that it's 18 females either of nonchild-bearing 19 potential or who have some of the -- the 20 highest level of -- of pregnancy 21 prevention techniques in place. 22 BY MR. VAUGHN: 23 Q. And designing a bioequivalency 24 study like this with -- using both sexes, is that 25 something that's new as of 2021, or does that date</p>	<p style="text-align: right;">Page 100</p> <p>1 A. I'm not sure. I -- I really 2 don't know. Maybe to broaden the populations of 3 people that get exposed to the early phases of 4 drug development. 5 Q. In a drug like valsartan, it is 6 given to both males and females, correct? 7 A. Well, if the females aren't 8 pregnant. There's a Black Box Warning: Do not 9 give it to pregnant females. 10 Q. And so is that one reason that 11 you'd want to have both sexes in your studies, is 12 so you understand how it works in both males and 13 females? 14 MR. FOWLER: Form. 15 THE WITNESS: Again, I don't know 16 what led to a change, and I don't know 17 when the change occurred. 18 BY MR. VAUGHN: 19 Q. Line 153, it notes: "If a drug 20 product is prom- -- predominantly intended for the 21 use in the elderly, the applicant should include 22 as many subjects as possible at or above age 60." 23 Do you know why that's 24 recommended? 25 A. I'm assuming for what it actually</p>
<p style="text-align: right;">Page 99</p> <p>1 back before 2021? 2 A. I, again, can't tell you when 3 that started, but I know it's being practiced as 4 of today. Since I've been on that IRB, I've seen 5 numerous trials come through that are practicing 6 this standard. 7 Q. And you testified that you've 8 done bioequivalency studies dating all the way 9 back to college, correct? 10 A. Yes. 11 Q. And in those bioequivalency 12 studies, was there a fairly equal number of males 13 and females in the studies? 14 A. There were not. And that was, 15 like, 1982-1983. So it was a fair number of years 16 ago. 17 Q. And do you have any idea when 18 that started to change, that they were 19 recommending to use equal numbers of male and 20 females in the study? 21 MR. FOWLER: Asked and answered. 22 THE WITNESS: I -- I do not. 23 BY MR. VAUGHN: 24 Q. And you do not know why that's 25 recommended?</p>	<p style="text-align: right;">Page 101</p> <p>1 says in that sentence, if it's predominantly 2 intended to be used in the elderly. 3 Q. Do elderly metabolize drugs 4 differently than young people? 5 A. Again, much like the previous 6 question about cirrhosis, it's -- it's not a 7 given. There are many, many studies that I've 8 seen over the years of my career where the 9 pharmacokinetics, and therefore the bioequivalence 10 of a drug, were not altered just by being older. 11 It's more likely the pharmacodynamics that change, 12 sensitivity to the heart rate adjustments 13 or -- it's more the pharmacodynamic end points 14 that change with -- with aging, not so much the 15 pharmacokinetic end point. Sometimes. Sometimes 16 it does. It's not a blanket statement 17 that -- that fits all. 18 Q. So it sometimes does. 19 Would that be a reason you'd want 20 to actually test it in the population the drug is 21 being given to? 22 A. Well, I mean, that's one reason. 23 Q. Can you give me additional 24 reasons? 25 A. Well, maybe, like I said, because</p>

Page 102

1 they're sensitive, and so you might want to do
2 studies with lower doses, if you didn't do
3 bioequivalence studies with lower doses before.
4 Q. In your opinion, what's the
5 average age of a valsartan user?
6 MR. FOWLER: Objection: Form
7 speculation.
8 THE WITNESS: I -- I could not
9 even come close to what the right answer
10 would be, but I can tell you when you
11 look at the FDA-approved indications for
12 hypertension, heart failure and
13 postmyocardial infarction, those are not
14 going to be 18-year-olds, 20-year-olds,
15 25-year-olds. They're going to be 50-
16 60-, 70-year-olds.
17 BY MR. VAUGHN:
18 Q. And then looking at line 169, it
19 reads: "In such situations, applicant should
20 attempt to enroll patients for whom the drug is
21 intended to treat and whose disease process and
22 treatments are stable for the duration of the
23 study."
24 Do you see that, Doctor?
25 A. Yes.

Page 103

1 Q. Do you agree with that statement?
2 A. Well, not in isolation without
3 the sentence before it. Because in some
4 situations, the drug has a safety consideration
5 that would preclude its use in healthy subjects.
6 So I'm thinking -- what jumps out at me at that
7 point are new cancer drugs.
8 Q. Would --
9 A. You would only want to test those
10 in patients with stable cancer.
11 Q. Thank you for that clarification.
12 Now, when it applies to
13 valsartan, would there be any reason why it should
14 not be tested in the patient population it's
15 intended to treat?
16 MR. FOWLER: Objection: Form,
17 mischaracterizing.
18 THE WITNESS: And I -- I don't
19 think -- again, I think this starts
20 getting into a realm of -- of
21 regulatory, but I don't think the
22 companies who did bioequivalence testing
23 in younger, healthy, normal volunteers
24 was anything other than what the FDA
25 expected to see.

Page 104

1 BY MR. VAUGHN:
2 Q. And you see the next line, it
3 says: "Investigational New Drug Application may
4 be required for certain products (such as
5 cytotoxic products.)" And then it cites to 21 CFR
6 312.2(c).
7 Do you see that, Doctor?
8 A. Yes.
9 Q. Were you aware of that?
10 A. Well, I've previously read this,
11 but -- so, yes, I was aware of it.
12 Q. What is an Investigational New
13 Drug Application?
14 A. That's for a drug that's never
15 been given to humans, and so you're looking to get
16 approval to start testing in humans.
17 Q. Is valsartan cytotoxic?
18 A. No.
19 Q. Is NDMA cytotoxic?
20 MR. FOWLER: Form.
21 THE WITNESS: I -- I don't
22 believe so, in what the definition of
23 cytotoxic is, to my recollection. I
24 think of cytotoxic as either antibiotics
25 that are cytotoxic to an organism or

Page 105

1 cancer drugs that are cytotoxic to
2 cancer cells.
3 BY MR. VAUGHN:
4 Q. What is your definition of
5 cytotoxicity?
6 A. It's a drug that kills cells.
7 And we're talking here about active ingredient, so
8 it's an active ingredient whose intent for use is
9 cytotoxicity.
10 MR. VAUGHN: All right. If we
11 can go to page 22 at the bottom,
12 Melisha. I'm not sure what PDF page it
13 is.
14 BY MR. VAUGHN:
15 Q. All right. I'm looking at the
16 line 846, Handling of Outliers. Doctor, you see
17 this first sentence says: "Applicant should not
18 remove data from the statistical analysis of
19 bioequivalency studies solely because that data
20 are identified as statistical outliers."
21 Do you agree with that statement?
22 A. Well, yes, it's in the FDA
23 document.
24 Q. And you agree that a manufacturer
25 shouldn't remove statistical outliers even before

<p style="text-align: right;">Page 106</p> <p>1 2021, right?</p> <p>2 A. Again, the way in which the data</p> <p>3 are handled can vary. Some of this is relating to</p> <p>4 the fact that some patients or subjects will later</p> <p>5 to [sic] be found to have some reason for it, and</p> <p>6 some of that could be biologic. I mean, I don't</p> <p>7 know the details behind it. Starts getting into a</p> <p>8 statistical handling of the data.</p> <p>9 That's not really what I -- what</p> <p>10 I've done.</p> <p>11 Q. You have not done a statistical</p> <p>12 handling of the data of any of these</p> <p>13 bioequivalency studies?</p> <p>14 A. The kind that are down below in</p> <p>15 870, I have, but not removal of outliers, I've</p> <p>16 not.</p> <p>17 Q. Did you notice in any of the</p> <p>18 bioequivalency studies that you reviewed that the</p> <p>19 manufacturer removed outliers?</p> <p>20 A. Never saw any reference to that</p> <p>21 at all.</p> <p>22 Q. Then going to line 854, it notes</p> <p>23 that: "Data from redosing studies are not</p> <p>24 considered as evidence to support removal of</p> <p>25 outlier data from the statistical analysis. Note</p>	<p style="text-align: right;">Page 108</p> <p>1 what I had in relation to these document requests,</p> <p>2 and I either provided answers or what was</p> <p>3 requested.</p> <p>4 Q. Approximately how many documents</p> <p>5 did you send to GT in relation to this document</p> <p>6 request?</p> <p>7 MR. FOWLER: Objection: Form,</p> <p>8 vague, time frame.</p> <p>9 THE WITNESS: Well, I mean, if</p> <p>10 you want to go through one-by-one....</p> <p>11 But in No. 1, I did not send invoices</p> <p>12 because they had them already.</p> <p>13 BY MR. VAUGHN:</p> <p>14 Q. Oh, Doctor, I just mean in total,</p> <p>15 if that helps you. Just cuts the time up.</p> <p>16 MR. VAUGHN: What's your</p> <p>17 objection?</p> <p>18 MR. FOWLER: You said -- you mean</p> <p>19 in total. You mean a total of documents</p> <p>20 in re- -- sent in response to all 15</p> <p>21 requests? I don't understand --</p> <p>22 MR. VAUGHN: Yeah, that's exactly</p> <p>23 what I'm asking. Yeah. Out of all the</p> <p>24 documents requested --</p> <p>25 MR. FOWLER: As opposed to</p>
<p style="text-align: right;">Page 107</p> <p>1 that all subject data should be submitted and</p> <p>2 potential outliers flagged with appropriate</p> <p>3 documentation as part of the submission."</p> <p>4 And you agree with that as well,</p> <p>5 correct, Doctor?</p> <p>6 A. Yes, it's -- it's in their</p> <p>7 document.</p> <p>8 MR. VAUGHN: Let's pull up the</p> <p>9 depo notice, Melisha.</p> <p>10 It's going to be Exhibit 6.</p> <p>11 (Exhibit 6 was marked.)</p> <p>12 BY MR. VAUGHN:</p> <p>13 Q. Have you seen this document</p> <p>14 before, Dr. Bottorff?</p> <p>15 A. Yes, I have seen it.</p> <p>16 Q. When was this document given to</p> <p>17 you?</p> <p>18 A. I believe it was forwarded the</p> <p>19 day -- well, I don't know in relation to when it</p> <p>20 was received by -- by GT, but I received it in an</p> <p>21 e-mail probably earlier this week.</p> <p>22 Q. And did you help GT in responding</p> <p>23 to this document request?</p> <p>24 A. We went through it line-by-line</p> <p>25 or -- or paragraph-by-paragraph, and I was asked</p>	<p style="text-align: right;">Page 109</p> <p>1 counting?</p> <p>2 MR. VAUGHN: -- in this document,</p> <p>3 I asked him approximately, how many he</p> <p>4 sent to GT.</p> <p>5 THE WITNESS: I'm running down to</p> <p>6 see. I have my recollection in my head,</p> <p>7 but I wanted to look at each of the</p> <p>8 points to make sure that I didn't miss</p> <p>9 something. But the only thing that I</p> <p>10 had that I could give were the notes</p> <p>11 that I was under the impression were</p> <p>12 sent to you.</p> <p>13 I had no PowerPoints. I had no</p> <p>14 tables and charts. I had no books. Any</p> <p>15 of the other things that were requested</p> <p>16 here, I didn't have any- -- anything to</p> <p>17 provide.</p> <p>18 BY MR. VAUGHN:</p> <p>19 Q. Your notes were produced to us.</p> <p>20 I do appreciate you getting those to the Defense</p> <p>21 attorneys. And it was both the notes for the</p> <p>22 general causation expert report you did and the</p> <p>23 class action expert report you did.</p> <p>24 Had you previously given GT's</p> <p>25 Defense attorneys your notes for the general</p>

Page 110

1 causation expert report?
2 A. Yes, I had.
3 Q. And when was that?
4 A. I'm assuming in response to the
5 exact same kind of document prior to the
6 deposition for -- for the general causation.
7 MR. FOWLER: They were provided
8 to you at the time of the general
9 causation deposition, Mr. Vaughn.
10 MR. VAUGHN: Did I say they
11 weren't?
12 MR. FOWLER: Your question
13 suggested otherwise, but I just want to
14 be clear on this record.
15 BY MR. VAUGHN:
16 Q. Doctor, are you aware that the
17 Defense produced 16,632 documents 48 hours ago for
18 your reliance materials?
19 A. No. The -- when you combine my
20 reliance materials from the first phase of
21 litigation to this phase, there's a lot of -- a
22 lot of articles that have been looked at and read
23 and a lot of multipage documents, like the
24 Guidance for Industry that we looked at a while
25 ago. So did I do a head count of those? No, I

Page 111

1 didn't.
2 Q. And I'm not talking about pages.
3 I mean documents. They produced 16,632 documents.
4 You think you have reviewed somewhere close to
5 16,000 documents in relation to this litigation?
6 A. Whatever was sent to you were
7 things that I reviewed. Some in more detail than
8 others.
9 Q. And how was that determined that
10 you had reviewed those documents?
11 MR. FOWLER: Form.
12 I don't understand the question.
13 THE WITNESS: I'm not sure I do
14 either, other than if they were
15 documents that -- that I told attorneys
16 that I had looked at or sent to them in
17 a PDF form, along with I read
18 depositions of -- of Plaintiffs'
19 and -- and Defense experts. I read
20 reports from Plaintiff and -- and
21 Defense experts. I'm not sure what to
22 tell you other than we didn't just, you
23 know, randomly select things and throw
24 them on there just to make a number look
25 unbelievable.

Page 112

1 BY MR. VAUGHN:
2 Q. And 16,632 sounds kind of
3 unbelievable, doesn't it?
4 MR. FOWLER: Form.
5 THE WITNESS: Not to me, if
6 that's what's on there. I didn't count
7 them.
8 BY MR. VAUGHN:
9 Q. And so you believe that you've
10 identified or sent 16,000 documents to the Defense
11 attorneys?
12 MR. FOWLER: Mischaracterizing.
13 THE WITNESS: Again, what got
14 sent to you, I have a copy of. I
15 haven't counted the files. I mean, I
16 don't -- I don't know.
17 MR. VAUGHN: Melisha, let's pull

1 All right. Doctor, have you ever
2 seen this document before?
3 A. Can you scroll down, please?
4 Q. Yeah. And you can also download
5 it if you would like to review the entire
6 document, Dr. Bottorff.
7 A. I'm sorry. They're -- they're
8 printing it.
9 Q. Okay. Let's go ahead and go off
10 the record, and you just let us know when you're
11 finished reviewing it.
12 MR. FOWLER: Please, no.
13 It -- it's right here. It's right here.
14 We don't need to go off the record.
15 MR. VAUGHN: Oh, okay. I thought
16 you might want time to review it.
17 MR. FOWLER: He'll still need
18 time to review the document. It's eight
19 pages, just looking through it, to
20 answer your question.
21 THE WITNESS: I'm looking for a
22 date.
23 BY MR. VAUGHN:
24 Q. I can let you know that there is
25 no date on this document, but the metadata

17 BY MR. VAUGHN:
18 Q. So, Doctor, if a bioequivalency
19 study is -- if the manufacturer is deleting the
20 failed test results and retesting the samples
21 until it achieves the results it sought, would you
22 consider those bioequivalence studies to be
23 legitimate?
24 MR. FOWLER: Objection, form.
25 THE WITNESS: Again, this

Page 119

1 is -- this is all regulatory. I have no
2 opinion on the regulatory.
3 BY MR. VAUGHN:
4 Q. Did you not evaluate the
5 legitimacy of the bioequivalency studies that you
6 opined on?
7 A. Yes, and they had approved ANDAs.
8 So they're in a different ball park than what this
9 is.
10 Q. Did you evaluate the underlying
11 studies of the bioequivalency studies to see if
12 any -- scratch that.
13 Did you evaluate the underlying
14 data of the bioequivalency studies to see if
15 failed testing was deleted and retested until it
16 got an accurate result and then submitted the
17 accurate results to the FDA?
18 A. Again, as I testified this
19 morning, I only saw one instance of what was a
20 failed test result, and it was included. My only
21 exposure to that was what I testified to this
22 morning.
23 Q. So you've seen one failed test
24 result. Have you seen any indication of companies
25 retesting samples until they get a different

Page 120

1 result?
2 A. Other than what you just handed
3 me, no.
4 Q. And if the companies in this
5 litigation were doing that with their
6 bioequivalency studies, would you consider those
7 studies to be illegitimate?
8 MR. FOWLER: Objection: Form,
9 outside the scope.
10 THE WITNESS: Again, that's a
11 regulatory, and -- and I have no
12 evidence that that occurred or didn't
13 occur, either way.
14 BY MR. VAUGHN:
15 Q. Not from a regulatory side, from
16 a just statistics side from when it comes to a
17 bioequivalency study and the legitimacy of it. Do
18 you consider a bioequivalency study legitimate if
19 they retested the samples until they got the
20 desired results?
21 MR. FOWLER: Objection: Form,
22 scope, incomplete hypothetical.
23 THE WITNESS: Again, the one
24 instance that I saw, there was a failed
25 bioavailability study. They

Page 121

1 reformulated and passed, and I saw both
2 examples. There was no attempt -- you
3 know, no sixth time or ten-time attempt
4 or multiple attempts. It was a one-time
5 reformulation, and it led to an approved
6 ANDA.
7 MR. VAUGHN: Let's go to page 5,
8 Melisha.

1 This will be Exhibit 19.
2 (Exhibit 19 was marked.)
3 MR. VAUGHN: And if we can scroll
4 down a little bit -- it's about
5 two-thirds of the way down.
6 BY MR. VAUGHN:
7 Q. Doctor, do you see where it says:
8 The pieces of the company, left after bankruptcy,
9 did business as PRACS and returned to the name and
10 the home of one of the legacy companies that had
11 formed Cetero, C-e-t-e-r-o.
12 Have you ever heard of Cetero
13 before?
14 A. I'm not sure.
15 Q. If I represent to you that Cetero
16 is who acquired PRACS, do you have any reason to
17 disagree with that?
18 A. No I have no reason to disagree
19 with that. Like I said, I thought they were
20 bought out or relocated or something. But that's
21 about all I knew.
22 MR. FOWLER: Let me object to
23 relevance of this document and line of
24 questioning.
25 MR. VAUGHN: I'll make it

Page 175

[REDACTED]

Page 177

1 relevant real quick for you.
2 Let's go to the FD- -- the FDA
3 letter to Cetero Research, Melisha.
4 This will be Exhibit 20.
5 (Exhibit 20 was marked.)
6 BY MR. VAUGHN:
7 Q. All right. Doctor, you see this
8 is a letter from the FDA to Cetero Research?
9 A. I see that.
10 MR. FOWLER: I'm going to object
11 to the document and any hearsay
12 contained in the document.
13 BY MR. VAUGHN:
14 Q. Have you ever seen this document
15 before, Doctor?
16 A. No.
17 Q. All right. That first paragraph
18 towards the bottom, do you see where it says: FDA
19 investigators have identified significant
20 violations of the bioavailability and
21 bioequivalence requirements of Title 21 Code of
22 Federal Regulations Part 320?
23 A. I see that.
24 Q. Do you see where the FDA goes on
25 to say that these violations include widespread

<p style="text-align: right;">Page 178</p> <p>1 falsification of dates and times in laboratory 2 records and subject sample extractions and the 3 apparent manipulation of equilibrium samples to 4 meet predetermined accepted criteria? 5 MR. FOWLER: Objection: Hearsay, 6 relevance to anything we're talking 7 about here. 8 THE WITNESS: Yeah, I see that. 9 MR. VAUGHN: All right. Let's go 10 to the next page, Melisha. All right. 11 Second paragraph, the last sentence. 12 BY MR. VAUGHN: 13 Q. Do you see where the FDA says: 14 "The Complainant was aware that many of the 15 chemists were manipulating and falsifying data 16 associated with the samples being used within 17 various projects"? 18 MR. FOWLER: Hearsay. A double 19 layer of hearsay. 20 THE WITNESS: I see that. 21 MR. VAUGHN: Let's go to page 5, 22 Melisha. 23 BY MR. VAUGHN: 24 Q. All right. That first paragraph 25 under No. 2, do you see where they are -- the FDA</p>	<p style="text-align: right;">Page 180</p> <p>1 the bottom. 2 BY MR. VAUGHN: 3 Q. Do you see where the FDA says 4 that this calls into question the validity of all 5 of the information documented on your AP sheets 6 including study results that were used as a basis 7 for NDAs and ANDAs submitted to the FDA? 8 MR. FOWLER: Form, relevance, 9 hearsay. 10 THE WITNESS: I mean, yes, I see 11 that. 12 MR. VAUGHN: And let's go to the 13 next page, Melisha. 14 BY MR. VAUGHN: 15 Q. And under the heading 16 Manipulation of Samples, do you see where it says: 17 "FDA has determined that your firm manipulated 18 test samples in order to meet predetermined 19 acceptance criteria"? 20 MR. FOWLER: Form, lack of 21 foundation, facts not in evidence, 22 relevance. 23 THE WITNESS: I see that. 24 MR. VAUGHN: And let's go to 25 page 10, Melisha.</p>
<p style="text-align: right;">Page 179</p> <p>1 notes that there were frequent alterations in 2 laboratory records that occurred over a four-year 3 period from April 1st, 2005 through June 15th, 4 2009? 5 MR. FOWLER: Objection: Facts 6 not in evidence, hearsay. 7 THE WITNESS: I see it. 8 BY MR. VAUGHN: 9 Q. And do you recall the previous 10 bioequivalency studies that we looked at from 11 Mylan were within this date range? 12 A. They were within that date range. 13 Q. And the company conducting their 14 bioequivalency studies is the company that the FDA 15 is saying has frequent alterations in their 16 laboratory records? 17 MR. FOWLER: Objection: Form, 18 hearsay, facts not in evidence. 19 THE WITNESS: Yeah, I don't see 20 which studies it applies to, but I see 21 that. 22 BY MR. VAUGHN: 23 Q. All right. 24 MR. VAUGHN: Let's go down to the 25 fourth paragraph, three lines up from</p>	<p style="text-align: right;">Page 181</p> <p>1 BY MR. VAUGHN: 2 Q. And do you see where the FDA, on 3 the second paragraph, notes they have significant 4 concerns of all data relevant to FDA-regulated 5 research? 6 A. At the Houston facility, yes. 7 Q. And -- 8 A. My recollection is we talked 9 about Minneapolis and North Dakota, not Houston. 10 Q. So it's your opinion that just 11 the Houston office was manipulating data for this 12 company? 13 MR. FOWLER: Objection: Form, 14 mischaracterizing, lack of foundation, 15 facts not in evidence. 16 THE WITNESS: It's not my 17 testimony. It's what's in the letter 18 that you just provided me. 19 MR. VAUGHN: And let's go to 20 page 11, Melisha. 21 BY MR. VAUGHN: 22 Q. And this was signed by the FDA's 23 Chief of Bioequivalence Investigations branch, 24 correct? 25 A. Well, I don't see a signature,</p>

Page 182

1 but....

2 Q. The name and the position of the

3 person at the end of the letter is the FDA's Chief

4 of Bioequivalence Investigations branch, correct?

5 MR. FOWLER: Object to the

6 mischaracterization of that being a

7 signature.

8 MR. VAUGHN: Oh, you're right.

9 BY MR. VAUGHN:

10 Q. Signature is the Office of

11 Scientific Investigations and Office of Compliance

12 for the Centers of Drug Evaluation and Research,

13 U.S. FDA, Food & Drug Administration, correct?

14 A. Yes, I see the -- the listing of

15 those people's names and their positions there.

16 MR. VAUGHN: All right, Melisha,

17 let's go to Teva ANDAs Withdrawn over

18 Cetero Data document. Let's go to the

19 second page.

20 This will be Exhibit 21.

21 (Exhibit 21 was marked.)

22 BY MR. VAUGHN:

23 Q. That top paragraph, Doctor, do

24 you see where it says: After a six-year effort,

25 the U.S. FDA has run out of patience with Watson

Page 183

1 Laboratories and InvaGen Pharmaceuticals and is

2 moving to withdraw approval of two of their pr- --

3 abbreviated new drug applications because the

4 firms failed to conduct additional bioequivalency

5 studies for the products the companies' ANDAs were

6 supported by, bioequivalence studies conducted at

7 Cetero Research?

8 MR. FOWLER: Objection: Hearsay,

9 lack of foundation, facts not in

10 evidence, relevance.

11 THE WITNESS: I see that.

12 BY MR. VAUGHN:

13 Q. Are you aware that Watson is now

14 Teva?

15 A. I'm aware that -- now how

16 to -- how to -- how to word who's what, but I

17 think they either bought Watson or incorporated

18 Watson or something.

19 Which -- which ANDAs were

20 withdrawn? Were they the ones I'm talking about

21 or other ANDAs?

22 Q. They're ANDAs that used the same

23 contract research organization to do their

24 bioequivalency studies.

25 A. Well, again, the -- the data that

Page 184

1 you showed me was concerned about the Houston

2 facility. The ANDAs that I cited were done in

3 North Dakota and Minneapolis, No. 1; and then

4 secondly, it looks like the ANDAs that were

5 withdrawn were not the ones that I reported in --

6 in my report.

7 So I think if the FDA had had a

8 problem with those in those other facilities, then

9 they would have withdrawn those like they did

10 these.

11 Q. And you see here it took the FDA

12 six years before they withdrew it, correct?

13 MR. FOWLER: Form.

14 THE WITNESS: I -- I mean,

15 whatever it says, that's what it says,

16 but I'm saying it didn't involve the

17 ANDAs that I reported on.

18 BY MR. VAUGHN:

19 Q. But it did involve the contract

20 research organization that did the studies for the

21 ANDAs you reported on, correct?

22 A. Correct. Except not in the

23 facility that was cited. In the other facilities

24 that was not cited.

25 Q. My headset just made a noise that

Page 185

1 it's low on batteries.

2 MR. VAUGHN: Can we go off the

3 record real quick, just take a

4 five-minute break?

5 THE VIDEOGRAPHER: The time is

6 now 2:45 p.m. We're off the record.

7 (Brief recess observed.)

8 THE VIDEOGRAPHER: The time is

9 2:53 p.m. We're back on the record.

10 MR. VAUGHN: All right, Melisha,

11 can we now pull up

[REDACTED]

16 MR. VAUGHN: All right, Melisha,
17 let's go to EMA Press Release regarding
18 GVK Biosciences.
19 This will be Exhibit 31.
20 (Exhibit 31 was marked.)
21 MR. FOWLER: Let me just lodge an
22 objection to the EMA exhibit having
23 nothing to do with products sold in the
24 U.S.; relevance and hearsay.
25 Go ahead.

Page 218

1 BY MR. VAUGHN:
2 Q. Doctor, have you ever seen this
3 May 22nd, 2015 notice by the EMA?
4 A. No.
5 Q. Do you see where the EMA is
6 suspending medications over flawed studies done by
7 GVK Biosciences in India?
8 A. I do see that. I -- I also see
9 later: "There's no evidence of harm or lack of
10 effectiveness of any of the medicines linked to
11 studies conducted by GVK."
12 Q. Were nitrosamines impurities in
13 valsartan known in 2015?
14 A. I don't know.
15 Q. The third paragraph, do you see
16 where EMA is discussing that GVK Biosciences
17 manipulated data regarding generic medications
18 over a period of the last five years?
19 MR. FOWLER: Objection to form,
20 hearsay, lack of foundation, facts not
21 in evidence.
22 THE WITNESS: Which page are we
23 on?
24 BY MR. VAUGHN:
25 Q. On the first page, third

Page 219

1 paragraph.
2 A. Three? Yeah, I see that.
3 Q. And the EMA then goes on to say:
4 "Their systemic nature and extended period of time
5 during which they took place and the number of
6 members of staff involved cast doubt on the
7 integrity of the conduct of trials at the site
8 generally, and on the reliability of data
9 generated."
10 Did I read that correctly,
11 Doctor?
12 MR. FOWLER: Objection: Hearsay,
13 lack of foundation, facts not in
14 evidence, and relevance to medicines not
15 sold in the U.S.
16 BY MR. VAUGHN:
17 Q. Now, Doctor, GVK Biosciences in
18 India was doing bioequivalency studies for these
19 companies that were selling in the U.S., correct?
20 MR. FOWLER: Objection: Form,
21 foundation, facts not in evidence.
22 THE WITNESS: Yes, we did see
23 that in some previous documentation that
24 -- that we reviewed.
25 BY MR. VAUGHN:

Page 220

1 Q. And GVK Biosciences was doing
2 those bioequivalency tests for Defendants in this
3 litigation over the time period referenced in this
4 letter, correct? Over the last five years, as of
5 2015, e-mails; so between 2010 and 2015, correct?
6 MR. FOWLER: Objection: Form,
7 foundation.
8 THE WITNESS: Yes. But, again,
9 you know, they go on to say: "There's
10 no evidence of harm or lack of
11 effectiveness, and patients should
12 continue to take their medicines as
13 prescribed."

20 MR. VAUGHN: All right. Melisha,
21 let's pull up Bottorff 0001.
22 This will be Exhibit 33 [sic].
23 (Exhibit 34 was marked.)
24 THE VIDEOGRAPHER: 34, Counsel.
25 MR. VAUGHN: 34, thank you.

Page 231

1 BY MR. VAUGHN:
2 Q. Doctor, are the -- these the
3 notes you took in preparation for your general
4 causation expert report?
5 A. Yes.
6 MR. VAUGHN: Melisha, can we go
7 to 11? All right, C? Do you see where
8 that's at, Melisha? Yeah, paragraph.
9 BY MR. VAUGHN:
10 Q. Doctor, what does the last
11 sentence of your notes say on that paragraph?
12 A. "New active ingredient does not
13 equate to an int- -- contaminant." This is not my
14 statement. These are -- in this section of my
15 report, I was making notes on what was in the
16 original filing. So it's a regurgitation of what
17 someone else who filed the -- the causation
18 lawsuit. This isn't me making a statement. It's
19 me regurgitating what was put by someone else in
20 the original lawsuit filed.
21 I even cite page 124, I think, in
22 that paragraph just above. In the same paragraph,
23 but just above there. So this isn't me. This is
24 me quoting what was in the document I reviewed.
25 Q. Okay. And what about further

Page 232

1 down right below the very bottom where you note:
2 "FDA inactive ingredients database does not
3 involve contaminants which are covered under
4 chemical hazards," is that from a complaint?
5 A. At this point, to put it into
6 context, I was talking about the FDA definition of
7 inactive versus an active ingredient, like I was
8 referring to a few minutes ago, where the active
9 ingredient is a drug product intended to furnish a
10 pharmacologic activity in the diagnosis, cure,
11 medication, treatment or prevention of disease.
12 Then there is an inactive
13 ingredient database. And the FDA's inactive
14 ingredient database are for things like
15 excipients, methyl cellulose, mannitol, you know,
16 things that are used in the tableting process. So
17 that inactive ingredient database does not include
18 contaminants. That's under Chemical Hazards in
19 their database.
20 Q. And why are you taking notes on
21 contaminants?
22 A. Because the section of the report
23 or the original suit that was filed kept calling
24 the -- the valsartan products unapproved because
25 of the president [sic] -- presence of a

Page 233

1 contaminant. So I was making notes about what the
2 FDA's definitions are in response to that portion
3 of the filing.
4 Q. Is NDMA or NDEA chemical hazards?
5 A. I don't know if they're under the
6 Chemical Database or not, but they're clearly
7 considered an impurity.
8 Q. Are NDMA and NDEA chemicals?
9 A. Chemicals.
10 Q. What does the word "hazardous"
11 mean to you?
12 A. Causing hazard.
13 Q. What does "hazard" mean to you?
14 A. Some form of hazard. It's a very
15 broad definition.
16 Q. So it's your position -- go
17 ahead.
18 A. I'm sorry. Just in my reports, I
19 never disagreed with the IARC definition of NDMA,
20 or NDEA for that matter, being a probable human
21 carcinogen, which is exactly the category that
22 they're listed in. I've never disagreed with that
23 at all. What I've always contended in both
24 reports, that it's an issue of how much and in
25 what form of intake.

Page 234

1 Q. You don't disagree with the IARC
2 definition that NDMA or NDEA are probable human
3 carcinogens, but you dropped it from the second
4 version of your expert report?
5 A. I dropped --
6 Q. Is it --
7 A. -- saying that I don't believe --
8 that I don't believe they are able to cause human
9 carcinogenesis in the route of administration and
10 at the doses or exposure levels that we're talking
11 about.
12 Q. Is it -- in your opinion about
13 the drugs -- that when drugs are approved but that
14 they are contaminated -- scratch that.
15 Is it your position that a drug
16 is only contaminated when it reaches an unsafe
17 level of impurity or contaminant?
18 MR. FOWLER: Objection to form.
19 You're outside the scope of the class
20 certification report, Counsel. I'm
21 letting this go a little bit, but you're
22 -- you're far afield.
23 You need the question again,
24 Doctor?
25 THE WITNESS: Yeah, if I'm

Page 235

1 expected to answer it, I would like to
2 hear the question again.
3 MR. VAUGHN: Court Reporter?
4 THE COURT REPORTER: Yes?
5 MR. VAUGHN: I can reask it.
6 THE COURT REPORTER: It's okay.
7 I can --
8 MR. FOWLER: We'll hear -- we'll
9 hear it from the court reporter, please.
10 Go ahead.
11 THE COURT REPORTER: Okay.
12 (The previous question was read
13 into the record as follows: "You don't
14 disagree with the IARC definition that
15 NDMA or NDEA are probable human
16 carcinogens, but you dropped it from the
17 second version of your expert report?")
18 THE WITNESS: And so, no, there
19 was no intent by, quote/unquote,
20 dropping it from my second report, which
21 was implying that it was done
22 intentionally, which it was not. So I
23 still agree with the IARC classification
24 of being probable human carcinogens. I
25 have -- I have no reason to disagree

Page 236

1 with that.
2 My point is in humans, I don't
3 believe they're carcinogenic in the
4 manner in which they are taken, which is
5 oral, at the levels of exposure, which
6 are in the low microgram quantities.
7 BY MR. VAUGHN:
8 Q. And is it your position, then,
9 that the contamination has to reach an unsafe
10 level before it's actually considered a
11 contamination?
12 MR. FOWLER: Objection, beyond
13 the scope of this report, Counsel.
14 Can you make any proffer how that
15 possibly relates to the class
16 certification report that he has filed,
17 or am I just missing something?
18 BY MR. VAUGHN:
19 Q. Doctor, do you think these drugs
20 have any value?
21 A. What I believe, which is in the
22 -- the rather lengthy Bioequivalence section of my
23 report, is that the bioequivalence, due to the
24 presence of NDEA or NDMA, is not altered and,
25 therefore, they produce the intended therapeutic

Page 237

1 benefit, whether it was lowering blood pressure or
2 managing heart failure or in a post-MI situation.
3 So, no, I don't believe they had
4 any loss of their therapeutic benefit.
5 Q. Are you aware of it being illegal
6 to sell a drug with an unsafe level of
7 nitrosamines in them?
8 MR. FOWLER: Objection to form.
9 By the very question, it called for a
10 legal conclusion.
11 MR. VAUGHN: Please quit
12 interrupting. You're -- you're coaching
13 him. You've been coaching him the
14 entire deposition.
15 MR. FOWLER: No, I'm not.
16 MR. VAUGHN: These are improper
17 depositions. We're going to reserve our
18 right for sanctions.
19 MR. FOWLER: So the Court has
20 asked for specificity in objections,
21 which I've provided, and it's a proper
22 objection. Asking him if something is
23 illegal asks for a legal conclusion.
24 MR. VAUGHN: Do you not recall
25 the Court sanctioning you guys because

<p>Page 238</p> <p>1 you were objecting to "the document 2 speaks for itself" previously, which has 3 been one of your objections in this 4 deposition? Do you recall that, 5 Counselor? 6 MR. FOWLER: I'm not testifying, 7 Counsel. Move on. 8 BY MR. VAUGHN: 9 Q. Doctor, are you aware that it 10 would be illegal to sell a drug with unsafe levels 11 of nitrosamines in them in the United States? 12 MR. FOWLER: Objection, form. 13 THE WITNESS: And -- and my 14 answer is no, I do not have any opinion 15 on what becomes legal or illegal. I 16 have no legal opinions in this case. 17 BY MR. VAUGHN: 18 Q. If it would be illegal to sell 19 something in the United States, does it really 20 have any value? 21 MR. FOWLER: Form. 22 THE WITNESS: Again, I have no 23 opinions on legality. My opinions were 24 on whether the bioequivalence was 25 violated by the presence of the</p>	<p>Page 240</p> <p>1 training and background, but my 2 understanding of adulteration are 3 impurities that are outside the 4 manufacturing process, so during storage 5 or some other nonmanufacturing process 6 that results in adulteration. 7 BY MR. VAUGHN: 8 Q. Transportation of the drug 9 product count, if it got contaminated during 10 transportation? 11 A. I think that probably would fit 12 under that adulterated category, because it's not 13 part of the manufacturing process. 14 Q. And do you know if any of the 15 Defendants are claiming that their product got 16 contaminated during transportation? 17 A. Never seen such materials or 18 documentation. 19 Q. Are you aware that if a drug is 20 contaminated, it's considered adulterated? 21 MR. FOWLER: You're asking for a 22 regulatory opinion. It's outside the 23 scope of this report. 24 THE WITNESS: Yeah. Again, I -- 25 I don't have regulatory input. That's</p>
<p>Page 239</p> <p>1 impurities, and I do not believe that 2 and I believe they maintain their 3 therapeutic expected response. 4 BY MR. VAUGHN: 5 Q. Based purely off of 6 bioequivalency studies that you reviewed that did 7 not involve nitrosamines in the drug product? 8 A. I believe in answering that 9 question a few times before, I said that there's a 10 likelihood that some of the products did have 11 nitrosamine in them. And if they did, it still 12 wouldn't have affected their bioequivalence, and 13 therefore their therapeutic response. 14 Q. And you have no document to cite 15 to that they were likely contaminated at that 16 time? 17 A. I have no document. I've -- I've 18 previously stated that. 19 Q. Do you have an understanding of 20 what it means for a drug to be adulterated? 21 MR. FOWLER: Objection: Form, 22 outside the scope of this general -- 23 this class action report. 24 THE WITNESS: I have a -- a basic 25 understanding because of my pharmacy</p>	<p>Page 241</p> <p>1 -- that's not the nature of my report. 2 BY MR. VAUGHN: 3 Q. As a pharmacist, do you have an 4 understanding that an adulterated drug is not 5 supposed to be sold to U.S. consumers? 6 MR. FOWLER: Objection to form. 7 Again, outside the scope of the class 8 cert report and opinions therein. 9 THE WITNESS: Again, 10 adulteration, I don't know is what we're 11 talking about here, but pharmacists 12 would not dispense a known adulterated 13 product. 14 BY MR. VAUGHN: 15 Q. I have no further questions at 16 this time. 17 MR. FOWLER: We'll take a few 18 minutes, and I've got some redirect. 19 Let's take ten. 20 THE VIDEOGRAPHER: The time is 21 now 4:13 p.m. We're off the record. 22 (Brief recess observed.) 23 THE VIDEOGRAPHER: The time is 24 4:26 p.m. We're back on the record. 25 EXAMINATION</p>

<p style="text-align: right;">Page 242</p> <p>1 BY MR. FOWLER:</p> <p>2 Q. Dr. Bottorff, I'd like to show</p> <p>3 you what I'm marking as Bottorff Exhibit 35. And</p> <p>4 -- which is Defendants' Responses and Objections</p> <p>5 to Plaintiffs' Notice of Videotaped Oral</p> <p>6 Deposition Michael Bottorff, Pharm.D.</p> <p>7 (Exhibit 35 was marked.)</p> <p>8 BY MR. FOWLER:</p> <p>9 Q. Handing you that. Have you seen</p> <p>10 that document before?</p> <p>11 A. Yes.</p> <p>12 Q. You've reviewed that with us?</p> <p>13 A. I did.</p> <p>14 Q. Okay. Let me mark as Exhibit 36</p> <p>15 your Curriculum Vitae, Doctor.</p> <p>16 (Exhibit 36 was marked.)</p> <p>17 BY MR. FOWLER:</p> <p>18 Q. Can you tell us whether that is</p> <p>19 your -- your current CV?</p> <p>20 A. Yes.</p> <p>21 MR. VAUGHN: Real quick, Counsel.</p> <p>22 Are these in the -- the folder for me to</p> <p>23 access?</p> <p>24 MR. FOWLER: I believe so.</p> <p>25 (Discussion off the record.)</p>	<p style="text-align: right;">Page 244</p> <p>1 CV. So it went -- it went beyond just me being</p> <p>2 involved in some bioequivalence studies in around</p> <p>3 1982 or 1983, but probably the next ten years, I</p> <p>4 did maybe a dozen more of those kinds of studies.</p> <p>5 Q. Doctor, do you recall some</p> <p>6 questions towards the end of -- of the questioning</p> <p>7 today with -- where you mentioned definitions of</p> <p>8 FDA concerning active ingredients and inactive</p> <p>9 ingredients.</p> <p>10 Do you recall those questions?</p> <p>11 A. I do.</p> <p>12 Q. Let me mark Exhibit 37. This is</p> <p>13 21 CFR 314.3 Definitions.</p> <p>14 (Exhibit 37 was marked.)</p> <p>15 BY MR. FOWLER:</p> <p>16 Q. And if you'd take a look at that,</p> <p>17 Doctor, and I'd ask you: Does that document</p> <p>18 contain FDA's definitions of those active</p> <p>19 ingredient, inactive, things like that?</p> <p>20 A. Yeah. This has -- I mean, it's</p> <p>21 the -- it's the Code of Federal Regulations 314,</p> <p>22 so they're in here.</p> <p>23 Q. Can you locate the Active</p> <p>24 Ingredient definition and read it for the record,</p> <p>25 please?</p>
<p style="text-align: right;">Page 243</p> <p>1 MR. FOWLER: Oh, I see what he's</p> <p>2 doing. Sorry, Counsel. I didn't</p> <p>3 understand my -- my colleague. He's --</p> <p>4 he's load- -- loading those up.</p> <p>5 BY MR. FOWLER:</p> <p>6 Q. Is that -- continuing on 36,</p> <p>7 Doctor.</p> <p>8 Does that CV include your more</p> <p>9 recent appointment to what you referred to as the</p> <p>10 IRB?</p> <p>11 A. Yeah, the Advarra IRB is on here.</p> <p>12 Q. Doctor, you were asked early on</p> <p>13 in the deposition about your experience with</p> <p>14 bioequivalency studies, and I believe you only got</p> <p>15 as far as maybe in your first year of residency at</p> <p>16 the University of Kentucky, or maybe undergrad.</p> <p>17 Have you had other experience</p> <p>18 working with, conducting, bioequivalency studies?</p> <p>19 A. Yeah. When I first started</p> <p>20 faculty at the University of Tennessee, that would</p> <p>21 have been 1983, I was probably involved in and</p> <p>22 analyzed and published maybe a dozen</p> <p>23 pharmacokinetic-based bioavailability studies with</p> <p>24 a variety of cardiovascular drugs. And so those</p> <p>25 are all publications that are -- that are in my</p>	<p style="text-align: right;">Page 245</p> <p>1 A. Let's see. "Active ingredient is</p> <p>2 any component that is intended to furnish</p> <p>3 pharmacologic activities or other direct effect of</p> <p>4 the diagnosis, cure, mitigation, treatment, or</p> <p>5 prevention of disease, or to affect the structure</p> <p>6 of function of the body in man or -- or animals,"</p> <p>7 if it's veterinary products.</p> <p>8 "The term includes those</p> <p>9 components that may undergo chemical change in the</p> <p>10 manufacture of the drug product and be present in</p> <p>11 the drug product in a modified form intended to</p> <p>12 furnish the specified activity or effect."</p> <p>13 So it's an intended act or</p> <p>14 ingredient.</p> <p>15 Q. Thank you.</p> <p>16 And can you read Inactive</p> <p>17 Ingredient, please?</p> <p>18 MR. VAUGHN: Steve? Steve, I'm</p> <p>19 still not seeing this document in the</p> <p>20 exhibit folder. I've refreshed it</p> <p>21 several times.</p> <p>22 MR. FOWLER: Tim's working</p> <p>23 vigorously.</p> <p>24 MR. VAUGHN: He's working on</p> <p>25 dropping it in, is that what you said?</p>

<p style="text-align: right;">Page 246</p> <p>1 MR. FOWLER: Yeah. He's working 2 on it. I threw him a curve ball. 3 Sorry. 4 MR. VAUGHN: All right. 5 MR. FOWLER: He wasn't ready for 6 that one. 7 MR. VAUGHN: Not a problem. 8 BY MR. FOWLER: 9 Q. Doctor, can you find the 10 definition of Inactive Ingredient in that CFR 11 document? 12 A. Yes. That's on page -- 13 Q. They're alphabetical, aren't 14 they? 15 A. Yeah. That's on page 5 of 11 in 16 that document. It's any component other than the 17 active ingredient. 18 Q. Is that what it says? 19 A. That's what it -- 20 Q. Can you read it verbatim? 21 A. "Inactive ingredient is any 22 component other than active ingredient." 23 So that would cover contaminants, 24 impurities, excipients, or whatever. 25 Q. It refers to specifically the</p>	<p style="text-align: right;">Page 248</p> <p>1 it's uncommon when companies are making generic 2 products, sometimes on the first run, to have 3 something that ends up not being bioequivalent and 4 requires going back to the drawing board and 5 altering particle size or some other component of 6 the formulation until they -- until they get the 7 product that is going to be bioequivalent that 8 would then be FDA approved, the ANDAs approved, 9 and then it's allowed to be given to patients as 10 an AB-rated generic drug. 11 That's not, I don't believe, 12 uncommon. I don't have statistics on that, but I 13 think it's unrealistic to expect them to get it 14 right on the first time every single time. And 15 those are -- as long as those are disclosed to the 16 FDA that we made this change and now we want this 17 approved, and then the FDA approves it. And so 18 all the ANDAs that I -- I included in my report 19 were FDA reviewed, approved, AB-rated and allowed 20 to be generically substituted for a brand name 21 valsartan product. 22 Q. Did any of the BE documents, even 23 including the failed ones that counsel showed you, 24 did any of those show that the valsartan's 25 bioequivalence was affected by the presence of</p>
<p style="text-align: right;">Page 247</p> <p>1 components, doesn't it? 2 A. Yes. 3 Q. Can you read the definition for a 4 Component? 5 MR. VAUGHN: May the record 6 reflect as the Defense counsel 7 repeatedly objected to any type of 8 regulatory questions or opinions and now 9 is solely focussed on regulatory 10 questions. 11 THE WITNESS: "Component is any 12 ingredient intended for use in the 13 manufacture of a drug product, including 14 those that may not appear in such drug 15 product." 16 So that could be a lot of 17 excipients and those kinds of things. 18 BY MR. FOWLER: 19 Q. Thank you. 20 Doctor, have you seen anything in 21 the documents that -- that Plaintiffs' counsel has 22 shown you today with regard to the ANDAs or the 23 bioavailability studies that change -- change any 24 of your opinions in this case? 25 A. No. And -- and I don't think</p>	<p style="text-align: right;">Page 249</p> <p>1 other compounds, whether they be, you know, 2 amlodipine, HCTZ or the combination thereof? 3 A. Yeah, again, we don't know which 4 did or didn't have NDMA, but inclusion of the 5 combination products was demonstrated to support a 6 scientific conclusion that without an overlapping 7 either metabolism or drug distribution system, 8 that those compounds in with valsartan, even in 9 milligram quantities, much less microgram 10 quantities, would not be expected to have any 11 altering effect on the bioequivalence, and 12 therefore the therapeutic response to valsartan. 13 Q. Regard to -- I'm showing you what 14 was marked as Exhibit 19. This, I'll refer to it 15 as the bankruptcy document with regard to PRACS. 16 Is there any mention of valsartan or valsartan 17 testing anywhere in that document? 18 A. No. 19 Q. With regard to the -- with regard 20 to Exhibit 20, Doctor, do you recall the -- the 21 questions concerning Cetero's bioequivalence data 22 and FDA's investigation of that? 23 I'm showing you 20 -- Exhibit 20. 24 Do you recall those questions, the questions on 25 the document?</p>

<p>Page 250</p> <p>1 A. Yes.</p> <p>2 Q. Can you turn to the second page</p> <p>3 and identify what are the drugs that those ANDAs</p> <p>4 of reference in that Exhibit 20, what are those</p> <p>5 drugs?</p> <p>6 A. Federal Register Notices on</p> <p>7 October 28th. "The agency is proposing to</p> <p>8 withdraw Watson's Oxycodone/ibuprofen ANDA and</p> <p>9 InvaGen's Trandologril (phonetic) ANDA."</p> <p>10 Q. Is there anything in that</p> <p>11 document that suggests FDA was critical of any</p> <p>12 testing of the valsartan bioequivalence, if any</p> <p>13 was done at all at that -- by that company at that</p> <p>14 location?</p> <p>15 A. No mention of valsartan at all.</p> <p>16 Q. Doctor, can you explain why it is</p> <p>17 that you spent the time reviewing the BE data from</p> <p>18 each of the various generic manufacturers for the</p> <p>19 various drugs, whether it's valsartan by itself or</p> <p>20 in combination? What was the im- -- what was the</p> <p>21 importance? What was -- why did you review those</p> <p>22 -- that data, and how did it factor into your</p> <p>23 opinion?</p> <p>24 MR. VAUGHN: Object to the form.</p> <p>25 THE WITNESS: Again, from a pure</p> <p>Page 251</p> <p>1 scientific standpoint, if two compounds</p> <p>2 that are known to be in the same tablet,</p> <p>3 let's say, have the chance to interfere</p> <p>4 with each other altering the effect of</p> <p>5 certainly the intended compound, in this</p> <p>6 case valsartan, then I wrote a -- a</p> <p>7 fairly lengthy section in my report</p> <p>8 about what are the different mechanisms</p> <p>9 whereby there would be an interruption</p> <p>10 of the valsartan effectiveness. It had</p> <p>11 to be its absorption, it had to be its</p> <p>12 metabolism, it had to be its hepatic</p> <p>13 distribution, or its effect at the</p> <p>14 angiotensin II receptor site.</p> <p>15 And there's no mechanism whereby</p> <p>16 NDMA or NDEA can do that. There's no</p> <p>17 mechanism whereby hydrochlorothiazide,</p> <p>18 which is in there, can do that. And</p> <p>19 there is no mechanism where amlodipine</p> <p>20 does that. So none of those substances</p> <p>21 have any mechanisms to alter either the</p> <p>22 kinetics or the therapeutic response to</p> <p>23 valsartan.</p> <p>24 BY MR. FOWLER:</p> <p>25 Q. You were shown -- let me, for</p>	<p>Page 252</p> <p>1 example, hand you Exhibit 14 -- hand you</p> <p>2 Exhibit 14 (tendering) -- and direct your</p> <p>3 attention to the table showing the BE results.</p> <p>4 Let me know when you're there.</p> <p>5 A. I'm there.</p> <p>6 Q. The BE results were outside of</p> <p>7 the 80 to -- is it 120 is the FDA range?</p> <p>8 A. 125.</p> <p>9 Q. When they are -- when the BE</p> <p>10 results as reflected there in Exhibit 14 were</p> <p>11 outside the range, do you attribute any of that to</p> <p>12 any presence of NDMA or NDEA?</p> <p>13 A. No. Again, this is usually due</p> <p>14 to some type of tableting issue and -- and</p> <p>15 particle size. So it's -- it's -- I would not</p> <p>16 attribute it to NDEA or NDMA at all.</p> <p>17 Q. Based on your understanding of</p> <p>18 the science of the bioequivalence study process,</p> <p>19 can you explain what reformulation does and how</p> <p>20 that would translate to different results of the</p> <p>21 BE studies?</p> <p>22 MR. VAUGHN: Object to the form.</p> <p>23 THE WITNESS: Yeah, again, this</p> <p>24 starts getting into a pharmaceuticals</p> <p>25 process that's a little bit -- I've had</p> <p>Page 253</p> <p>1 a little bit of training in that and --</p> <p>2 and understanding and have read some</p> <p>3 articles throughout the years.</p> <p>4 But it's mostly involving the --</p> <p>5 the tableting, the particle size, the</p> <p>6 pressure with which you compress the</p> <p>7 tablet, the film coating, the things</p> <p>8 that result in the tablet disintegrating</p> <p>9 and then releasing the active</p> <p>10 ingredient.</p> <p>11 And so it's -- it's more of a</p> <p>12 pharmaceuticals development, tinkering</p> <p>13 that you do with your products to get</p> <p>14 the intended dissolution and then</p> <p>15 ultimate bioequivalence that you're</p> <p>16 looking for.</p> <p>17 BY MR. FOWLER:</p> <p>18 Q. Does the fact that some of the</p> <p>19 studies, the BE studies you were shown by counsel,</p> <p>20 were studies under 100 percent males and 100</p> <p>21 percent Asian males, does that have any impact on</p> <p>22 -- first of all, on the validity of the BE</p> <p>23 results?</p> <p>24 A. No. Again, the FDA allowed those</p> <p>25 studies to be done and approves the ANDAs in the</p>
---	---

Page 254

1 face of those. And remember, what you're doing
2 with the bioequivalence study in the same person
3 is comparing test product with reference products.
4 And then you take it to another
5 person and you test, test product versus reference
6 product. And the fact that that, both times, was
7 in a male or that they weighed 60 kilograms, if
8 you then take that same release characteristic to
9 a female or a person that weighs 78 kilos or a
10 person that's 39 instead of 29, you're still
11 within that same person going to see the -- the
12 approvable release characteristics in that --
13 between those two products. It'll retain its
14 bioequivalence.
15 Q. Do the test subjects or the test
16 methodology of the BE studies, that you were
17 shown, impact your opinion with regard to the
18 presence of NDMA and its impact, if any, on
19 bioequivalence?
20 A. I think it's --
21 MR. VAUGHN: Object to form.
22 THE WITNESS: -- a similar
23 question worded slightly -- I'm sorry,
24 go ahead.
25 MR. VAUGHN: I -- object to form.

Page 255

1 You're good.
2 THE WITNESS: Okay. I think it's
3 a similar question asked a slightly
4 different way, and -- and as I've stated
5 multiple times today -- and it's in my
6 report -- the presence of NDMA and NDEA,
7 there's no mechanism, no scientific
8 rationale beyond how they could alter
9 the bioequivalence of any of the
10 valsartan products.
11 BY MR. FOWLER:
12 Q. Would that be true for either
13 gender or any race, in your opinion?
14 A. Yeah, that's -- would be
15 independent of those issues.
16 Q. Early in the deposition, there
17 were questions about the circulation of -- of
18 blood.
19 Do you recall those questions?
20 A. Uh-huh. Yes. Sorry.
21 Q. And does -- how, if at all, does
22 the blood circulation play a role in your opinions
23 in this case with regard to the NDMA and -- and
24 the valsartan?
25 MR. VAUGHN: Object to form.

Page 256

1 THE WITNESS: In -- in the
2 context that we were talking about at
3 that time, we were talking about the
4 ability to measure an elimination
5 half-life and how that's affected by
6 blood flow, liver blood flow. You can
7 only measure that if there's drug in the
8 blood. And with NDMA at the amounts
9 that we're talking about, that has to be
10 given intravenously, and then you can
11 measure the decline in blood because it
12 started there and you watch it go down.
13 And some of that blood flow goes to the
14 liver, some goes to the heart, some goes
15 to the lungs, you know, whatever.
16 That issue doesn't apply when you
17 talk about giving low doses of these
18 high-clearance drugs in an oral format
19 that don't reach the systemic
20 circulation. You can't measure a
21 half-life in a situation where there's
22 no measurable drug there to begin with.
23 BY MR. FOWLER:
24 Q. Doctor, directing your attention
25 to your report. Do you have that in front of you?

Page 257

1 A. I do.
2 Q. Has counsel asked you about all
3 of your opinions in your report today?
4 A. Pretty much focussed on -- on
5 bioequivalence, I would say.
6 Q. Do you have -- turning your
7 attention to page 52. Do you see a Summary of
8 Opinions and Conclusions section?
9 A. Yes.
10 Q. Would you please read both of
11 those points on page 52 going over to 53 to the
12 third point, please?
13 A. Okay. There are three main
14 points that I addressed in -- in my report, and
15 they're -- they're summarized on the end of page
16 52 and at the beginning of page 53.
17 The first is relevant to what we
18 had a lot of questions on today, and it basically
19 is that the presence of NDMA and NDEA in valsartan
20 could not have had any effect on the kinetics,
21 dynamics, bioavailability or bioequivalence of
22 valsartan generic products because there's --
23 Q. Just please -- just read your --
24 read from your paragraph, please.
25 A. Oh, read it verbatim?

<p>Page 258</p> <p>1 Q. Yes, sir.</p> <p>2 A. I'm sorry.</p> <p>3 Q. You were doing fine.</p> <p>4 A. "The compounds do not share any</p> <p>5 known pharmacokinetic or pharmacodynamic</p> <p>6 mechanism. The presence of active intended</p> <p>7 ingredients with valsartan, such as</p> <p>8 hydrochlorothiazide or amlodipine, also did not</p> <p>9 alter valsartan bioequivalence for the same</p> <p>10 reasons, so there is no overlapping</p> <p>11 pharmacokinetic process. Thus, there is no</p> <p>12 conceivable way for NDMA or NDEA, merely by being</p> <p>13 present, to alter the bioequivalence of valsartan,</p> <p>14 and thus its therapeutic response and efficacy."</p> <p>15 Q. Thank you. And you have another</p> <p>16 opinion?</p> <p>17 A. And my second opinion gets back</p> <p>18 to this concept of first pass metabolism. "The</p> <p>19 levels of NDMA or NDEA that the FDA has detected</p> <p>20 in affected valsartan tablets, when these are</p> <p>21 taken on a daily basis, would not exceed the</p> <p>22 liver's capacity to metabolize the NDMA or the</p> <p>23 NDEA contained in those tablets in a first pass</p> <p>24 metabolism process. And according-" --</p> <p>25 "accordingly, NDMA or NDEA is unlikely to reach</p>	<p>Page 260</p> <p>1 A. Yes.</p> <p>2 Q. We also marked --</p> <p>3 MR. FOWLER: I think we're up to</p> <p>4 Exhibit 37 [sic], Counsel.</p> <p>5 BY MR. FOWLER:</p> <p>6 Q. -- simply the list of materials</p> <p>7 considered that was provided to you. I just</p> <p>8 wanted to mark that as an exhibit.</p> <p>9 (Exhibit 38 was marked.)</p> <p>10 BY MR. FOWLER:</p> <p>11 Q. Doctor, do you recognize that as</p> <p>12 your Materials Considered list?</p> <p>13 A. Yes.</p> <p>14 Q. And then Exhibit 38 [sic] is --</p> <p>15 MR. FOWLER: Counsel, I'm holding</p> <p>16 up the flash drive of Dr. Bottorff's</p> <p>17 Materials Considered. So we're going to</p> <p>18 send this to the court reporter as we've</p> <p>19 done in other depositions and be copied</p> <p>20 that way.</p> <p>21 This is Exhibit 38 [sic]. Madam</p> <p>22 Court Reporter, we'll mail that to you.</p> <p>23 (Late-filed Exhibit 39 was</p> <p>24 marked.)</p> <p>25 BY MR. FOWLER:</p>
<p>Page 259</p> <p>1 the systemic circulation or other organ systems</p> <p>2 outside of the liver; therefore, there is no</p> <p>3 scientific basis to assume that there is any</p> <p>4 increased risk to other organ systems which</p> <p>5 support the medical monitoring that is proposed by</p> <p>6 Plaintiffs' expert Dr. Kaplan."</p> <p>7 Q. Thank you.</p> <p>8 And on the -- on the next page,</p> <p>9 do you have another opinion?</p> <p>10 A. I have another opinion, and --</p> <p>11 and this was more of a mathematical. "Based on</p> <p>12 the known pharmacokinetic principles of</p> <p>13 accumulation, the daily exposure" -- which in this</p> <p>14 case is usually every 24 hours -- "to NDMA or NDEA</p> <p>15 would not accumulate, given the known elimination</p> <p>16 half-life of these compounds, which are in" --</p> <p>17 "measured in minutes."</p> <p>18 So to give something that's gone</p> <p>19 in three to five half-lives, of a five- to</p> <p>20 ten-minute elimination rate, there's no way, given</p> <p>21 that once every 24 hours, could lead to any type</p> <p>22 of accumulation at all.</p> <p>23 Q. Do you hold those opinions to a</p> <p>24 reasonable degree of medical -- of scientific</p> <p>25 certainty?</p>	<p>Page 261</p> <p>1 Q. If you'll indulge us for a</p> <p>2 moment, I may be about finished.</p> <p>3 My much more attentive colleague</p> <p>4 has pointed out that the Materials Considered is</p> <p>5 38 and the flash drive should be 39, so we'll just</p> <p>6 fix that.</p> <p>7 And with that, I'll -- I'll -- I</p> <p>8 have no further questions.</p> <p>9 Thank you very much, Doctor.</p> <p>10 MR. FOWLER: Counsel.</p> <p>11 MR. VAUGHN: Can you just give me</p> <p>12 five minutes to consult with my</p> <p>13 cocounsel? I'll be right back. We'll</p> <p>14 be real quick.</p> <p>15 THE VIDEOGRAPHER: Shall we go</p> <p>16 off the record?</p> <p>17 MR. VAUGHN: Please.</p> <p>18 THE VIDEOGRAPHER: The time is</p> <p>19 4:51 p.m. We're off the record.</p> <p>20 (Brief recess observed.)</p> <p>21 THE VIDEOGRAPHER: 4:56 p.m.,</p> <p>22 we're back on the record.</p> <p>23 EXAMINATION</p> <p>24 BY MR. VAUGHN:</p> <p>25 Q. Dr. Bottorff, do all of your</p>

<p style="text-align: right;">Page 262</p> <p>1 opinions contained within your class action expert 2 report apply equally to all potential class 3 members? 4 A. I'm not sure exactly what that 5 question means. What -- what -- what does that 6 mean exactly so I can better answer it? 7 Q. Which part of the question are 8 you having trouble with? 9 A. Well, maybe start with the 10 definition of the class members. Are they the 11 people who have filed, like, claims or.... 12 Q. I -- I understand now, Doctor. 13 Do all of your opinions contained 14 within your class action expert report apply 15 equally to all of the Defendants? 16 A. Again, I don't know if I had 17 bioequivalence data on -- well, from every 18 Defendant, but I -- I think it does because of the 19 reasons behind it. It doesn't matter that NDMA 20 may have been in there or not. It wouldn't affect 21 the bioequivalence. So I guess I would say yes. 22 Q. As a pharmacist, if you are in 23 possession of an adulterated drug, would you 24 return that adulterated drug to a manufacturer, or 25 would you just throw it away?</p>	<p style="text-align: right;">Page 264</p> <p>1 destruction process that is not flushing 2 them down the toilet. So that's just 3 not how it happens these days. 4 BY MR. VAUGHN: 5 Q. All right. Regardless, you 6 wouldn't be able to sell the contaminated drugs, 7 correct? 8 MR. FOWLER: Objection: Form, 9 outside the scope of his report and his 10 testimony and the redirect. 11 THE WITNESS: Yeah, I -- again, 12 in -- in your hypothetical, you would 13 have to know that something was 14 adulterated, so I don't -- I don't know 15 what that process is. 16 BY MR. VAUGHN: 17 Q. As a pharmacist, if the FDA would 18 not let you sell a drug to the U.S. public, what 19 would you do? Would you be able to get your money 20 back from the manufacturer? 21 MR. FOWLER: Objection, form. 22 This is outside the scope of his 23 entire report, of his testimony, and 24 outside of my redirect. Nothing about 25 The redirect opened up questions for</p>
<p style="text-align: right;">Page 263</p> <p>1 MR. FOWLER: Objection: Form, 2 scope. 3 THE WITNESS: I've never been in 4 that position of -- in -- in that type 5 of practice. I guess I would follow 6 whatever my -- my company's policy was. 7 But I don't -- I don't know what that 8 is. I don't know what that would be. 9 BY MR. VAUGHN: 10 Q. Would you be afraid of 11 contaminating the groundwater if you're just 12 throwing away drugs that are contaminated with 13 carcinogens? 14 MR. FOWLER: Objection, outside 15 the scope of my redirect completely. 16 MR. VAUGHN: Your redirect had 17 him answer quest- -- testifying on every 18 single one of his opinions. You 19 completely opened the scope up. 20 THE WITNESS: Well, what I can 21 answer is that that's not how in 22 pharmacies that we get rid of drugs 23 anymore. There are drug take-back 24 programs that almost every pharmacy runs 25 periodically, and there's some</p>	<p style="text-align: right;">Page 265</p> <p>1 what a pharmacist is going to sell, 2 Counsel. 3 MR. VAUGHN: He -- he submitted 4 an expert report in a class action 5 saying this stuff is worth money. 6 MR. FOWLER: You should have 7 asked him about that in your case in 8 chief here on -- on direct. You're 9 going back, for whatever reason. It's 10 outside the scope, and I would have 11 objected to it in the first place. 12 MR. VAUGHN: You did object to it 13 a bunch in the first place and then you 14 were coaching the witness before and 15 then you opened everything back up by 16 having him read every one of his 17 opinions. You opened the scope. 18 MR. FOWLER: I'm not going to 19 argue with you, Counsel. The words 20 "sell the drugs" was nowhere in his 21 opinions. 22 BY MR. FOWLER: 23 Q. If you can't sell a drug -- 24 (Unintelligible overlapping.) 25 BY MR. VAUGHN:</p>

Page 266

1 Q. -- Doctor, does it have any
2 value?
3 MR. FOWLER: I'm sorry, I spoke
4 over you, Counsel. Please state that
5 again.
6 THE WITNESS: Or I -- I never
7 answered the previous question.
8 MR. FOWLER: He withdrew.
9 THE WITNESS: Oh, okay.
10 MR. FOWLER: So a new question.
11 Go ahead.
12 BY MR. VAUGHN:
13 Q. Would you like to answer the
14 previous -- would you like to answer the previous
15 question, Doctor?
16 A. If you would like me to.
17 Q. So as a pharmacist, if the FDA
18 will not allow you to sell a drug to the U.S.
19 public, would you be able to get your money back
20 from the manufacturer?
21 MR. FOWLER: Same objection.
22 THE WITNESS: And I would say
23 that I've never been in the situation to
24 understand how that works. That's not
25 my -- my academic career has been

Page 267

1 working in hospitals with cardiology
2 patients and cardiologists, and I've
3 never worked in that environment, so I
4 -- I had no experience with that at all.
5 BY MR. VAUGHN:
6 Q. If you can't sell the drug,
7 Doctor, does the drug have any value?
8 MR. FOWLER: Form,
9 incomprehensible.
10 THE WITNESS: Again, I -- I mean,
11 in a hypothetical, if you can't sell it,
12 then obviously you can't sell it, so....
13 BY MR. VAUGHN:
14 Q. Absolutely.
15 A. So I would say, yeah, if you
16 can't sell it -- so it doesn't have value if you
17 can't sell it.
18 MR. VAUGHN: I have no further
19 questions.
20 MR. FOWLER: He'll read.
21 MR. VAUGHN: Thanks for your time
22 again, Dr. Bottorff.
23 MR. FOWLER: Nothing further.
24 THE VIDEOGRAPHER: The time is
25 5:02 p.m. This concludes today's

Page 268

1 testimony from Dr. Michael Bottorff.
2 We are now off the record.
3 FURTHER DEPONENT SAITH NOT.

1 REPORTER'S CERTIFICATE
2 I certify that the witness in the
3 foregoing deposition, MICHAEL BOTTORFF, PHARM.D.,
4 was by me duly sworn to testify in the within
5 entitled cause; that the said deposition was
6 taken at the time and place therein named; that
7 the testimony of said witness was reported by me,
8 a Shorthand Reporter and Notary Public of the
9 State of Tennessee authorized to administer oaths
10 and affirmations, and said testimony, Pages 7
11 through 258 thereafter transcribed into
12 typewriting.
13 I further certify that I am not of counsel
14 or attorney for either or any of the parties to
15 said deposition, nor in any way interested in the
16 outcome of the cause named in said deposition.
17 IN WITNESS WHEREOF, I have hereunto set my
18 hand this 4th day of April 2022.

MIGLIACCIO:</p> <p>4 Q. Good morning, Dr. Chan. My name is Nick</p> <p>5 Migliaccio. I am one of the lawyers for the</p> <p>6 plaintiffs in this case. Thanks for taking time</p> <p>7 with us this morning.</p> <p>8 Could you state your full name for the</p> <p>9 record, please.</p> <p>10 A. Sure. Good morning.</p> <p>11 My name is David Chimin Chan, Junior.</p> <p>12 Q. Okay. And have you ever been deposed</p> <p>13 before?</p> <p>14 A. Yes, I have.</p> <p>15 Q. Okay. I'll go through some ground rules</p> <p>16 even though you've been through it, but I'll -- I'll</p> <p>17 just give them anyway.</p> <p>18 You know, I'm going to ask you a series of</p> <p>19 questions and I'm going to ask that you give me your</p> <p>20 best answers to them and if you don't understand a</p> <p>21 question, I'm going to ask that you tell me and I</p> <p>22 can rephrase it; is that fair?</p> <p>23 A. Yes, thank you.</p> <p>24 Q. Great.</p> <p>25 Are you taking any medication today that</p>
<p>Page 7</p> <p>1 THE VIDEOGRAPHER: We are now on the</p> <p>2 record. My name is Joseph Mourgos. I am a</p> <p>3 videographer for Golkow Litigation Services.</p> <p>4 Today's date is March 3rd, 2022, and the</p> <p>5 time on the video monitor is 7:49 a.m. Pacific time.</p> <p>6 This remote video deposition is being held</p> <p>7 in the matter of Valsartan, Losartan and Irbesartan</p> <p>8 Products Liability Litigation MDL Number 2875 for</p> <p>9 the United States District Court, District of</p> <p>10 New Jersey.</p> <p>11 The deponent is Dr. David Chan.</p> <p>12 All parties to this deposition are</p> <p>13 appearing remotely and have agreed to the witness</p> <p>14 being sworn in remotely.</p> <p>15 Due to the nature of remote reporting,</p> <p>16 please pause briefly before speaking to ensure all</p> <p>17 parties are heard completely.</p> <p>18 Counsel has been noted on the stenographic</p> <p>19 record.</p> <p>20 The court reporter is Elaina Bulda-Jones</p> <p>21 and she will now administer the oath.</p> <p>22 DAVID C. CHAN, JR., M.D.,</p> <p>23 called as a witness by the Plaintiffs herein, being</p> <p>24 first duly sworn by the Certified Shorthand Reporter</p> <p>25 was thereupon examined and testified as is</p>	<p>Page 9</p> <p>1 would impede your ability to recall events or</p> <p>2 testify truthfully?</p> <p>3 A. No.</p> <p>4 Q. Okay. This is not a marathon session.</p> <p>5 You know, we're not going to try to go through the</p> <p>6 whole thing in one -- one shot. So if -- and I know</p> <p>7 you're a doctor, so obviously, if you have an urgent</p> <p>8 patient call, just tell us, you know, because we</p> <p>9 want you to take care of your patients, you know.</p> <p>10 We understand that.</p> <p>11 So, you know, and we will take breaks, you</p> <p>12 know, and if you need a break just ask for one and</p> <p>13 as long as there's not a, you know, question</p> <p>14 pending, that -- that's totally fine, fair?</p> <p>15 A. Yes, thank you.</p> <p>16 Q. In the other depositions that you had,</p> <p>17 when were those depositions?</p> <p>18 A. I believe they were within the last year</p> <p>19 or two.</p> <p>20 Q. Okay. Got it.</p> <p>21 And I -- you know, we're taking this</p> <p>22 deposition remotely, obviously.</p> <p>23 Do you have anybody else in the room with</p> <p>24 you there?</p> <p>25 A. No.</p>

<p style="text-align: right;">Page 10</p> <p>1 Q. Do you have any documents with you?</p> <p>2 A. No.</p> <p>3 Q. Okay. Great.</p> <p>4 Did you see the deposition notice that we</p> <p>5 sent over in this case?</p> <p>6 A. Are you referring to the most recent one</p> <p>7 about a week -- within a week of this?</p> <p>8 Q. That's right.</p> <p>9 A. I believe I was forwarded either the</p> <p>10 notice or some snippet of the notice.</p> <p>11 Q. Got it.</p> <p>12 I'm going to try to share it with you, so</p> <p>13 forgive me if I fumble with this technology because</p> <p>14 I might. But I'm going to do my best to put this</p> <p>15 into your folder because we're going to have</p> <p>16 exhibits, obviously. And I'm going to -- I watched</p> <p>17 the video, and we'll see if it works. I should</p> <p>18 have, perhaps, practiced this.</p> <p>19 Okay. I believe I put your deposition</p> <p>20 notice in the marked exhibits folder.</p> <p>21 A. Okay. Yep, I'm seeing it now.</p> <p>22 Q. Okay. Great.</p> <p>23 MR. MIGLIACCIO: I want to mark that as</p> <p>24 Exhibit 1. I'm not quite sure how to do that but we</p> <p>25 can address that.</p>	<p style="text-align: right;">Page 12</p> <p>1 Q. I'm referring to that, and I'm referring</p> <p>2 to what we've asked for here in Exhibit A.</p> <p>3 A. Okay.</p> <p>4 Q. So in other words, if there's anything</p> <p>5 that we've asked for here that maybe wasn't included</p> <p>6 on the materials considered list or otherwise not</p> <p>7 provided to -- to us.</p> <p>8 A. That would inform my opinions in the</p> <p>9 report?</p> <p>10 Q. Correct.</p> <p>11 A. Okay. So there was -- there's no other</p> <p>12 document, specific document informing my opinions in</p> <p>13 the report other than my expertise as a physician</p> <p>14 and as a health economist.</p> <p>15 Q. Were there any documents or materials that</p> <p>16 you reviewed in preparation for this deposition that</p> <p>17 were not included in the materials that were</p> <p>18 produced to us?</p> <p>19 A. No.</p> <p>20 Q. So you -- fair to say, then, you haven't</p> <p>21 looked at anything other than the materials that</p> <p>22 you've provided?</p> <p>23 A. The materials on the materials considered</p> <p>24 list; is that right? Yes.</p> <p>25 Q. And the materials that have been provided</p>
<p style="text-align: right;">Page 11</p> <p>1 (Whereupon, Chan Exhibit 1 was marked for</p> <p>2 identification.)</p> <p>3 BY MR. MIGLIACCIO:</p> <p>4 Q. Is this the document that you saw?</p> <p>5 A. I don't think I saw the entire document.</p> <p>6 I think I saw some of the questions and document</p> <p>7 requests.</p> <p>8 Q. Okay. I'm going to look.</p> <p>9 So Exhibit A, which is on page 3, contains</p> <p>10 document requests, right?</p> <p>11 A. Correct.</p> <p>12 Q. Okay. Did you search for those documents</p> <p>13 that were requested?</p> <p>14 A. To the extent that I had the relevant</p> <p>15 documents.</p> <p>16 Q. Was there anything that you were not able</p> <p>17 to find?</p> <p>18 A. No.</p> <p>19 Q. Okay. Were there any documents that you</p> <p>20 reviewed in forming your opinion that were not</p> <p>21 included in the documents that you provided to your</p> <p>22 lawyers and, you know, to us?</p> <p>23 A. Are you referring to the materials</p> <p>24 considered list that informed my opinion in the</p> <p>25 report?</p>	<p style="text-align: right;">Page 13</p> <p>1 to us now?</p> <p>2 A. Correct.</p> <p>3 Q. Okay. Were there any documents that you</p> <p>4 wanted to review but you couldn't get or otherwise</p> <p>5 were not provided?</p> <p>6 A. No.</p> <p>7 Q. Okay. What did you do to prepare for your</p> <p>8 deposition?</p> <p>9 A. What did I do to prepare for this</p> <p>10 deposition in particular or what did I do during the</p> <p>11 course of the case to form my opinions?</p> <p>12 Q. Just to prepare for this deposition in</p> <p>13 particular.</p> <p>14 A. Okay. I reviewed the report. I reviewed</p> <p>15 some of the other reports from Conti, Song, and</p> <p>16 Kaplan.</p> <p>17 I had phone calls with the lawyers, and I</p> <p>18 had phone calls with Analysis Group.</p> <p>19 Q. Who is Analysis Group?</p> <p>20 A. Analysis Group is an economic consulting</p> <p>21 firm.</p> <p>22 Q. And where -- where are they located?</p> <p>23 A. I believe they have a number of different</p> <p>24 offices. Most of the people that I worked with are</p> <p>25 in the Boston office, but there are also people --</p>

<p>Page 14</p> <p>1 there's one person that I worked with who's in the 2 Menlo Park office. 3 Q. And when you said you had phone calls with 4 the Analysis Group who did you speak with at the 5 Analysis Group? 6 A. The people that I was in most contact with 7 include several people. So they include Jessica Lu, 8 Michaela Johnson, Brian Ellman, Richard Mortimer, 9 and Molly Frean. 10 Those were the people that I had the most 11 contact with. 12 Q. So can you tell me who those people are 13 and we can ask -- I'll ask you about them later when 14 we go through your invoice. 15 But can you just briefly tell me who 16 those -- those individuals are? 17 A. Sure. 18 MR. STOY: Object to the form. 19 Go ahead. 20 THE WITNESS: Do you -- could you be a 21 little bit more specific about what do you mean by 22 who they are? 23 BY MR. MIGLIACCIO: 24 Q. Well, I know they work for the Analysis 25 Group. You know, what is -- you know, what is their</p>	<p>Page 15</p> <p>1 position and how -- what did they do in terms of 2 working with you? 3 MR. STOY: Object to the form. 4 THE WITNESS: So I can tell you that two 5 of them are partners. Richard Mortimer and Brian 6 Ellman are partners. 7 Other members are managers or people that 8 I think are at the level below partners but have 9 quite a bit of experience and, you know, have 10 advanced degrees in economics or management. Those 11 include Michaela Johnson and Jessica Lu. 12 Molly Frean is another analyst who has a 13 Ph.D. in health policy or health economics. 14 And I believe those are the people that I 15 mentioned that I interacted mostly with. 16 BY MR. MIGLIACCIO: 17 Q. Any physicians in that group? 18 A. No. 19 Q. Okay. Are you the only physician, then, I 20 guess, who worked on this report? 21 A. Of the people that I mentioned, I'm the 22 only physician. There could be other people at 23 Analysis Group that performed very -- that performed 24 a role that -- like a role to check the quality 25 control, the document, or look at the code, for</p>	<p>Page 16</p> <p>1 example, that I don't know exactly who they are. 2 And I can't rule out that there might be 3 some physicians in that group. 4 Q. Who -- who worked on your report? 5 A. Who, for example, might have kind of 6 checked for typos or who might have been in the -- 7 they have an extensive quality control process, I 8 believe, at Analysis Group, to, you know, check -- 9 make sure that all the references that I've looked 10 at are in there, make sure that the document is free 11 of typos, make sure the code is free of errors, make 12 sure that stuff is kind of in the correct folders in 13 the -- in the code and in the input data and the 14 exhibits. 15 So there -- I would expect that there is a 16 fairly big team involved in that, just like there's 17 a team involved in my own research that is involved 18 in quality control. 19 Q. Got it. 20 What did you, you know, read or review to 21 prepare for -- for today's deposition? 22 A. I believe I mentioned I read my report. I 23 read the reports of some of the other experts on the 24 plaintiffs' side, including Dr. Song, Dr. Kaplan, 25 and Dr. Conti.</p>	<p>Page 17</p> <p>1 I reviewed some of the primary sources 2 that I relied upon in forming my opinion. I believe 3 those are the main documents that I read in 4 preparation for this deposition. 5 Q. And I think you told me you spoke with 6 lawyers, too? 7 A. Correct. 8 Q. Who -- who did you speak with? 9 A. I don't remember all of the names of the 10 lawyers. But I spoke to Frank Stoy, who's on this 11 call. I spoke to Bob Kum. K-U-M is his last name. 12 Glenn Kerner. Kate Wittlake. 13 I believe those are -- those are the names 14 that I remember speaking to. 15 Q. And how many sessions did you have 16 speaking to -- to the lawyers? 17 A. In preparation for the deposition? 18 Q. Yes. 19 A. I don't remember exactly the number. I 20 want to say something like four sessions, three to 21 four sessions. 22 Q. How long did those sessions each take? 23 A. I think that they could have been as short 24 as two hours or three hours, and they could have 25 also been longer, more like seven hours. Around</p>
--	--	--	--

<p style="text-align: right;">Page 18</p> <p>1 that ballpark.</p> <p>2 Q. You may have had one or more, like,</p> <p>3 seven-hour sessions?</p> <p>4 A. Maybe one, correct, one or more.</p> <p>5 Q. All right.</p> <p>6 A. Seven-hour sessions.</p> <p>7 Q. Got it. Got it.</p> <p>8 What was discussed during those sessions?</p> <p>9 MR. STOY: I'm going to object and</p> <p>10 instruct you not to answer.</p> <p>11 That question, Dr. Chan, is -- that's</p> <p>12 obviously covered by the privilege and work product</p> <p>13 doctrine.</p> <p>14 THE WITNESS: Okay.</p> <p>15 MR. MIGLIACCIO: Let me rephrase that.</p> <p>16 Q. Which documents were discussed at those --</p> <p>17 at those sessions?</p> <p>18 MR. STOY: And I'll just -- I'll just give</p> <p>19 a limiting instruction, Dr. Chan.</p> <p>20 If you know, you can answer the question</p> <p>21 about particular documents, but I'd ask you not</p> <p>22 to -- I'd instruct you not to disclose anything in</p> <p>23 particular that was discussed about any documents.</p> <p>24 THE WITNESS: Okay.</p> <p>25 MR. STOY: With that instruction, you can</p>	<p style="text-align: right;">Page 20</p> <p>1 review the state of the data, like I believe I just</p> <p>2 mentioned that, the state of the data underlying the</p> <p>3 analyses in my report.</p> <p>4 So yes, I did have calls with Analysis</p> <p>5 Group for that purpose.</p> <p>6 Q. And those -- did you have any calls in</p> <p>7 preparation for this deposition with the Analysis</p> <p>8 Group?</p> <p>9 A. Yes, that -- that was just what I</p> <p>10 mentioned.</p> <p>11 Q. Okay. Okay.</p> <p>12 That -- so that -- those calls were not --</p> <p>13 okay. I assume you also had calls with them when</p> <p>14 you were finalizing the report?</p> <p>15 A. Correct.</p> <p>16 Q. But you were just telling me about calls</p> <p>17 in preparation for the deposition?</p> <p>18 A. Right.</p> <p>19 Q. What -- so those calls were -- that --</p> <p>20 that you had with them, were after the report has</p> <p>21 been finalized, right? Because I think the report's</p> <p>22 dated January 12th.</p> <p>23 When did you have those calls with the</p> <p>24 Analysis Group that you just referenced?</p> <p>25 A. The calls -- those calls were in</p>
<p style="text-align: right;">Page 19</p> <p>1 answer.</p> <p>2 THE WITNESS: I would say that we</p> <p>3 discussed all of the documents that I mentioned in</p> <p>4 general in -- that I used in preparation for this</p> <p>5 deposition, including my report, the reports of some</p> <p>6 of the plaintiffs -- the plaintiff experts,</p> <p>7 including Dr. Song, Dr. Conti, and Dr. Kaplan.</p> <p>8 We also discussed some of the primary</p> <p>9 source material, but I can't remember exactly which</p> <p>10 ones that we discussed.</p> <p>11 BY MR. MIGLIACCIO:</p> <p>12 Q. When you refer to "primary source</p> <p>13 material," what do you mean?</p> <p>14 A. I mean the materials -- some of the</p> <p>15 materials that I considered in forming my opinions</p> <p>16 that are in my materials considered list.</p> <p>17 Q. Got it.</p> <p>18 For the -- did you have preparation</p> <p>19 sessions outside of speaking with the lawyers; in</p> <p>20 other words, did you talk to people, those other</p> <p>21 individuals at the Analysis Group to prepare?</p> <p>22 A. I had calls with the Analysis Group to</p> <p>23 review my report, to review the analyses and the</p> <p>24 data and the code underlying my report.</p> <p>25 I also had -- yeah, I also had sessions to</p>	<p style="text-align: right;">Page 21</p> <p>1 preparation for the deposition. And they were in</p> <p>2 the last two weeks.</p> <p>3 Q. Two weeks.</p> <p>4 Were any of the lawyers on those calls?</p> <p>5 A. No.</p> <p>6 Q. Okay. How many of those calls did you</p> <p>7 have with the Analysis Group?</p> <p>8 A. Maybe two.</p> <p>9 Q. Two. And how long were those sessions?</p> <p>10 A. I think they were less than four hours</p> <p>11 each, maybe three hours each.</p> <p>12 Q. Got it.</p> <p>13 Did you discuss -- and you said you were</p> <p>14 discussing the state of the data, if I -- if you</p> <p>15 could give me a little more background on that,</p> <p>16 maybe -- I didn't mean to misstate what you said, so</p> <p>17 do I have that right?</p> <p>18 A. Yes.</p> <p>19 MR. STOY: Hang on.</p> <p>20 Before you answer, Dr. Chan, I'm going to</p> <p>21 instruct you not to go into any more detail than</p> <p>22 you've already provided regarding those discussions</p> <p>23 with Analysis Group.</p> <p>24 We'd object on the same basis as before</p> <p>25 with respect to the work product.</p>

<p style="text-align: right;">Page 22</p> <p>1 Nick, you know, I allowed him to give you 2 sort of a high level overview of, you know, the 3 discussion that might have occurred with Analysis 4 Group, but we're not going to go into any more 5 detail than that. 6 MR. MIGLIACCIO: Well, Frank, I mean, I 7 think it's relevant to figure out if -- you know, if 8 the date has changed. I mean, the report was 9 submitted on the 12th of January, and that's what 10 I'm trying to drive at here. 11 MR. STOY: Well, you -- you can ask 12 Dr. Chan if the data has changed. I think he can 13 answer that question. But with respect to 14 particulars about discussions with Analysis Group, 15 my instruction's going to be not to answer those 16 questions. 17 MR. MIGLIACCIO: All right. I'll limit my 18 question for the time being to the -- to the data. 19 Q. Did the data change at the time -- did any 20 data change from the time the report was finalized 21 until now? 22 A. No, none of the data had changed. None of 23 the analyses had changed. It was purely to review 24 what I had already reviewed before. 25 Q. Okay. So there wasn't any new work done,</p>	<p style="text-align: right;">Page 24</p> <p>1 relationship with them? 2 A. I have worked with the Analysis Group on 3 other cases. 4 Q. And how long have you worked with them on 5 other cases? 6 A. I believe my first contact with the 7 Analysis Group was before the pandemic so I think 8 about two to three years. 9 Q. Okay. And I'll -- I'll get into those 10 other cases. 11 But I'll just ask you now, were those 12 other cases cases that you provided reports and/or 13 deposition testimony in? 14 MR. STOY: And before you answer, 15 Dr. Chan, I just want to give you an instruction. 16 You can answer counsel's questions for now 17 with respect to cases where you have been identified 18 as a testifying expert. 19 But for any litigations or other matters 20 where you've been retained as a nontestifying 21 consultant and haven't been publicly disclosed, I 22 would instruct you to not reveal the nature of those 23 disclosures, the parties that retained you, any of 24 that information. 25 With that instruction, you can answer the</p>
<p style="text-align: right;">Page 23</p> <p>1 then, in other words? That -- that's what I'm 2 trying to -- to find out. No subsequent analysis 3 has -- was completed? 4 A. No, that's correct. 5 Q. Okay. Did you -- did you obtain -- how 6 did you get information about this case at the -- at 7 the beginning when you were -- when you started 8 working on it? 9 A. Is your question about before I was 10 retained or after I was retained? 11 Q. Well, how about -- why don't -- I'll ask 12 it this way. 13 Why don't you tell me when you were 14 retained and then we can take it from there. 15 A. I believe I was retained around December 16 of last year. It was a pretty short timeline, 17 but -- as I recall, but I don't remember the 18 exact -- when it exactly -- when I was exactly 19 retained, but I think it was around December of last 20 year. 21 Q. And who -- who contacted you? 22 A. My initial contact was Brian Ellman at the 23 Analysis Group. 24 Q. Do you have a working relationship with 25 the Analysis Group or did you have a prior working</p>	<p style="text-align: right;">Page 25</p> <p>1 question. 2 MR. MIGLIACCIO: I'm -- I'm not asking for 3 any of that information. 4 Q. I'm just asking for where you have 5 prepared a report, you know, that you've been 6 designated as an expert or if you testified at 7 deposition. 8 MR. STOY: Thank you. 9 THE WITNESS: Thank you. 10 I don't know exactly what is in the public 11 record and what is not. I can tell you that I have 12 been deposed in some of these cases. 13 BY MR. MIGLIACCIO: 14 Q. Where you have been working with the 15 Analysis Group? 16 A. Correct. 17 Q. Got it. Okay. 18 So you said December, you think it was 19 around December of last year that you were hired? 20 A. Correct. 21 Q. Got it. 22 And you were contacted by -- I forget the 23 person's name -- can you -- somebody at the Analysis 24 Group, right? 25 A. Right. My initial contact was Brian</p>

<p style="text-align: right;">Page 26</p> <p>1 Ellman at the Analysis Group.</p> <p>2 Q. Ellman. Got it.</p> <p>3 How was that contact initiated?</p> <p>4 A. I believe the first contact was by e-mail.</p> <p>5 Q. Okay. And did you -- have you previously</p> <p>6 worked with Mr. Ellman before?</p> <p>7 A. I had been in conversations with him on</p> <p>8 another case that I was not retained on. The cases</p> <p>9 that I was retained on previously was with another</p> <p>10 individual at Analysis Group as the main contact,</p> <p>11 but I did know Brian from previous conversations.</p> <p>12 Q. Okay. And how did you decide that you</p> <p>13 would agree to -- to offer your opinion in this</p> <p>14 case?</p> <p>15 MR. STOY: Object to the form.</p> <p>16 Go ahead.</p> <p>17 THE WITNESS: Can you restate that</p> <p>18 question?</p> <p>19 BY MR. MIGLIACCIO:</p> <p>20 Q. Right.</p> <p>21 How did you come to determine that you</p> <p>22 would offer an opinion in this case?</p> <p>23 A. Is the question how did I come</p> <p>24 determine -- come to determine that I would agree to</p> <p>25 be involved in this case?</p>	<p style="text-align: right;">Page 28</p> <p>1 that I had related to the case.</p> <p>2 So I received materials that I asked for</p> <p>3 from Analysis Group. And from the lawyers, I</p> <p>4 believe I only received legal documents related to</p> <p>5 the case.</p> <p>6 Q. Were you asked -- I mean, I have a copy of</p> <p>7 your report here and we'll put it up and it's -- you</p> <p>8 know, it's lengthy, right. It's 88 pages or so.</p> <p>9 A. Yes.</p> <p>10 Q. Were you asked to render all of the</p> <p>11 opinions that are within this report initially or</p> <p>12 did the scope of your work evolve over -- over time?</p> <p>13 MR. STOY: Object to the form.</p> <p>14 You can answer.</p> <p>15 THE WITNESS: Would you like to restate</p> <p>16 your question?</p> <p>17 BY MR. MIGLIACCIO:</p> <p>18 Q. Yeah.</p> <p>19 Was -- were you asked to render all of the</p> <p>20 opinions that are here in -- in this report that --</p> <p>21 that you signed in January initially from -- from</p> <p>22 the outset or were -- or were you asked to do a</p> <p>23 smaller subset of them at the outset that later</p> <p>24 expanded?</p> <p>25 MR. STOY: Object to the form.</p>
<p style="text-align: right;">Page 27</p> <p>1 Q. That -- that's fair. Yeah.</p> <p>2 A. Okay. The initial conversation was with</p> <p>3 Brian who told me some basic information about the</p> <p>4 case. He may have provided me the complaint in the</p> <p>5 case. Then I had a discussion with the lawyers</p> <p>6 involved in the case.</p> <p>7 I believe I spent some time thinking about</p> <p>8 the questions involved in the case and what types of</p> <p>9 questions I would want to answer if I were involved</p> <p>10 in the case.</p> <p>11 Then I believe I might have had a</p> <p>12 subsequent discussion with the lawyers and then came</p> <p>13 to the conclusion that this was a case that I would</p> <p>14 agree to be involved in.</p> <p>15 Q. What -- what were you initially told about</p> <p>16 the facts? What facts were you provided initially?</p> <p>17 A. I believe I was mostly just provided legal</p> <p>18 documents involved in the case. The complaint</p> <p>19 involved in the case.</p> <p>20 Q. And did there come a point where you asked</p> <p>21 for other materials?</p> <p>22 A. I've only received legal documents from</p> <p>23 the lawyers. Analysis Group is -- is essentially</p> <p>24 assisting me in my research so I kind of -- I</p> <p>25 directed them to find materials to answer questions</p>	<p style="text-align: right;">Page 29</p> <p>1 You can answer.</p> <p>2 THE WITNESS: My assignment, are you</p> <p>3 asking about the assignment of my case, my</p> <p>4 assignment, whether my assignment was fixed from the</p> <p>5 very beginning or whether my assignment expanded</p> <p>6 over time?</p> <p>7 BY MR. MIGLIACCIO:</p> <p>8 Q. You -- you can answer that question. But</p> <p>9 I may have some further questions for you.</p> <p>10 A. My initial assignment was on the claims</p> <p>11 related to medical monitoring and that involved the</p> <p>12 reports of Dr. Song and Dr. Kaplan.</p> <p>13 I believe at a later point in the case, as</p> <p>14 I was writing my report, given my expertise as an</p> <p>15 economist, I was asked to weigh in on the claim of</p> <p>16 worthlessness by Dr. Conti.</p> <p>17 Q. Got it.</p> <p>18 So that was not part of your initial</p> <p>19 assignment when you -- when you first were retained?</p> <p>20 A. When I was first retained, I believe a lot</p> <p>21 was in flux in the case. I think there was nothing</p> <p>22 set in stone, but my initial instructions were to</p> <p>23 address the claim of medical monitoring.</p> <p>24 Q. What documents -- you said you received</p> <p>25 legal documents at the outset from the lawyers.</p>

<p style="text-align: right;">Page 30</p> <p>1 A. Right.</p> <p>2 Q. Do you recall what those documents were</p> <p>3 that you initially received?</p> <p>4 A. I received the complaint. There was a</p> <p>5 protective order I -- I believe I received. And I</p> <p>6 received reports from some of the plaintiff experts.</p> <p>7 The ones that I can remember are the reports by</p> <p>8 Dr. Song, Dr. Kaplan, and Dr. Conti.</p> <p>9 Q. Okay. When you're talking about the</p> <p>10 complaint, are you referring to the third amended</p> <p>11 medical monitoring complaint?</p> <p>12 A. I don't remember exactly what the name of</p> <p>13 the complaint was. I only received one complaint.</p> <p>14 Q. Got it.</p> <p>15 And that -- you've produced that to us, I</p> <p>16 believe; is that -- is that right?</p> <p>17 A. I believe I have.</p> <p>18 Q. Okay. And what documents did you -- I</p> <p>19 think -- what documents did you ask Analysis Group</p> <p>20 to gather for you after you received the legal</p> <p>21 documents?</p> <p>22 MR. STOY: Object to the form.</p> <p>23 Go ahead.</p> <p>24 THE WITNESS: I can't remember exactly</p> <p>25 which documents. I can tell you in general how my</p>	<p style="text-align: right;">Page 32</p> <p>1 the considerations for various patients who might be</p> <p>2 screened for cancer or who might already be screened</p> <p>3 for cancer for other reasons.</p> <p>4 So those were some of the questions that I</p> <p>5 had initially. I can't remember fully all of the</p> <p>6 questions. But those questions prompted requests</p> <p>7 for documents in a way that is consistent with the</p> <p>8 way that I do research.</p> <p>9 Q. So you had those questions and you</p> <p>10 prompted requests for -- they prompted requests for</p> <p>11 documents to Analysis Group to gather information on</p> <p>12 those questions and provide them to you?</p> <p>13 A. Correct.</p> <p>14 Q. Got it.</p> <p>15 And at Analysis Group, I think you told me</p> <p>16 there were -- there may be some physicians, but did</p> <p>17 you know of any physicians who were gathering that</p> <p>18 information for you when you asked for it?</p> <p>19 MR. STOY: Object to the form.</p> <p>20 THE WITNESS: Would you like to restate</p> <p>21 that question?</p> <p>22 BY MR. MIGLIACCIO:</p> <p>23 Q. Yeah.</p> <p>24 I think you testified that there may be</p> <p>25 some physicians at Analysis Group originally, and I</p>
<p style="text-align: right;">Page 31</p> <p>1 research process works if that would be helpful.</p> <p>2 BY MR. MIGLIACCIO:</p> <p>3 Q. Yeah, let me -- I'll ask you another</p> <p>4 question, then. I'll -- I do -- I'll get into that.</p> <p>5 I think you said, "I directed them to find</p> <p>6 materials to answer questions that I had related to</p> <p>7 the case."</p> <p>8 What initial questions did you have</p> <p>9 related to the case that you sought answers --</p> <p>10 sought -- sought documents for?</p> <p>11 A. I can't remember all of the initial</p> <p>12 questions. I would say that my questions could be</p> <p>13 organized in a way that very much reflects the</p> <p>14 organization of my report.</p> <p>15 So some of the questions were organized</p> <p>16 into what are the various risks of cancer, what are</p> <p>17 the -- what is the state of guidelines regarding</p> <p>18 screening for cancer, what are the various</p> <p>19 technologies that we use for screening cancer, what</p> <p>20 are the various risks that are involved in screening</p> <p>21 for cancer, what are the characteristics of various</p> <p>22 screening tests, like the sensitivity and</p> <p>23 specificity of those screening tests for cancer,</p> <p>24 what are -- what are -- I guess this falls under the</p> <p>25 guidelines for screening for cancer, but what are</p>	<p style="text-align: right;">Page 33</p> <p>1 want to know who you directed these questions to and</p> <p>2 who would be gathering the information to provide to</p> <p>3 you and if you knew if those people were physicians?</p> <p>4 MR. STOY: Objection to form.</p> <p>5 THE WITNESS: As I mentioned, I primarily</p> <p>6 dealt with the people that I named that I was</p> <p>7 interacting with at Analysis Group. There is likely</p> <p>8 a support team to help those people, but those</p> <p>9 people are very knowledgeable in healthcare, very</p> <p>10 knowledgeable in health policy and would interface,</p> <p>11 I think, well if there were a physician on the</p> <p>12 health policy question like a screening guideline.</p> <p>13 So I don't know if they were interfacing</p> <p>14 with any physicians at Analysis Group. They could</p> <p>15 have been.</p> <p>16 BY MR. MIGLIACCIO:</p> <p>17 Q. Got it.</p> <p>18 What -- what arrangements did you come to</p> <p>19 regarding your fee and -- and your fees in the --</p> <p>20 for the report?</p> <p>21 MR. STOY: Object to the form.</p> <p>22 THE WITNESS: Can you restate that</p> <p>23 question?</p> <p>24 BY MR. MIGLIACCIO:</p> <p>25 Q. I mean, do you have an arrangement with</p>

<p style="text-align: right;">Page 34</p> <p>1 respect to fees for -- for the report?</p> <p>2 A. Yes.</p> <p>3 Q. And what is that arrangement?</p> <p>4 A. The arrangement is that I am paid for my</p> <p>5 own time at a rate of \$850 an hour, as stated in my</p> <p>6 report. That is the arrangement that I have with</p> <p>7 the lawyers in this case.</p> <p>8 And I also am paid what's called</p> <p>9 attribution, which is a percentage of the fees that</p> <p>10 Analysis Group charges for the work in support of my</p> <p>11 work.</p> <p>12 Q. Got it.</p> <p>13 What is that percentage that you get for</p> <p>14 attribution?</p> <p>15 A. Is that in my report? I'm not sure --</p> <p>16 THE WITNESS: Is that privileged</p> <p>17 information or is that...</p> <p>18 MR. MIGLIACCIO: I don't think that's</p> <p>19 privileged. I mean, I can talk with Frank about it,</p> <p>20 but I think that directly goes to -- to what -- you</p> <p>21 know, what his compensation is.</p> <p>22 MR. STOY: Yeah, you --</p> <p>23 MR. MIGLIACCIO: Frank, I --</p> <p>24 MR. STOY: You can answer that question,</p> <p>25 Dr. Chan, if you know.</p>	<p style="text-align: right;">Page 36</p> <p>1 about that, but that's something that we can talk</p> <p>2 about off the record.</p> <p>3 MR. MIGLIACCIO: Sure.</p> <p>4 MR. STOY: Your request is noted.</p> <p>5 BY MR. MIGLIACCIO:</p> <p>6 Q. Do your hourly rate -- does your hourly</p> <p>7 rate change for deposition testimony, like do you</p> <p>8 have a day rate for this or is it just -- just an</p> <p>9 hourly rate?</p> <p>10 A. It's just the hourly rate.</p> <p>11 Q. Same rate.</p> <p>12 Trial testimony, different rate, same</p> <p>13 rate?</p> <p>14 A. I believe it's the same rate.</p> <p>15 Q. And file review, I mean, if -- do you</p> <p>16 have -- is that a separate rate or is that the same,</p> <p>17 too?</p> <p>18 A. Same rate for everything.</p> <p>19 Q. Okay. So like fair to say, then, that you</p> <p>20 only have this \$850-an-hour rate for whatever you</p> <p>21 do?</p> <p>22 A. Yes.</p> <p>23 Q. It's that simple. Okay. Got it.</p> <p>24 Have you billed anything -- let me --</p> <p>25 strike that.</p>
<p style="text-align: right;">Page 35</p> <p>1 THE WITNESS: Okay.</p> <p>2 20 percent.</p> <p>3 BY MR. MIGLIACCIO:</p> <p>4 Q. 20 percent.</p> <p>5 So that -- so you receive 20 percent of</p> <p>6 the fees that attribution -- that Analysis Group has</p> <p>7 billed and recovered for this report, too?</p> <p>8 A. Correct.</p> <p>9 Q. Got it.</p> <p>10 Is that reflected in a written agreement</p> <p>11 anywhere?</p> <p>12 A. That's reflected in an agreement that I</p> <p>13 have with the Analysis Group.</p> <p>14 Q. Do we have that agreement? I -- I don't</p> <p>15 recall seeing it.</p> <p>16 A. I don't know.</p> <p>17 MR. MIGLIACCIO: Frank, do you know?</p> <p>18 MR. STOY: I don't believe that is</p> <p>19 something that we've produced.</p> <p>20 MR. MIGLIACCIO: Okay. I'm going to just</p> <p>21 mark for the record that I'm -- you know, we do want</p> <p>22 to see it. Prefer to see it today, if possible, so</p> <p>23 we could -- you know, I think it's directly called</p> <p>24 for by the -- by the Rules and by our request.</p> <p>25 MR. STOY: All right. Well, I'm not sure</p>	<p style="text-align: right;">Page 37</p> <p>1 What percentage of your income, you know,</p> <p>2 would you say comes from -- from your expert work?</p> <p>3 MR. STOY: And you can answer that</p> <p>4 question but you don't have to answer -- you don't</p> <p>5 have to elaborate about, you know, what your income</p> <p>6 level is.</p> <p>7 MR. MIGLIACCIO: I'm not asking for that.</p> <p>8 Q. I'm -- yeah, I'm not asking you for that.</p> <p>9 I understand.</p> <p>10 A. Right. Right.</p> <p>11 I'm not sure I can kind of give you a</p> <p>12 precise figure here. I can maybe tell you the</p> <p>13 percent of my time that I spent, but you're asking</p> <p>14 the percent of my income.</p> <p>15 Q. Right. Right.</p> <p>16 You could tell -- tell me your time and --</p> <p>17 I mean, you can think about the income question. We</p> <p>18 can come back to it later. I understand it's -- you</p> <p>19 might have to do some mental --</p> <p>20 A. Right. Yeah.</p> <p>21 Q. -- mental arithmetic.</p> <p>22 A. I'm afraid that if I answer the income</p> <p>23 question, you're going to back out my income.</p> <p>24 Q. I don't intend to back out your income. I</p> <p>25 just want to get -- I'm not trying to -- and this --</p>

<p style="text-align: right;">Page 38</p> <p>1 I mean, I'm not trying to get at sensitive personal 2 information here. That's not my goal. 3 I just want to see, you know, what you do 4 in terms of, you know, is this a big part of -- of 5 your life or is it a small part? That's what I'm 6 trying to drive at. 7 A. Uh-huh. In terms of the hours that I 8 spend on my work, it's -- I would say it's a 9 relatively small part of my life. 10 If you're -- if you're asking whether this 11 is a small part of my life or a big part of my life, 12 I would say it's -- you know, I spend most of my 13 hours not working on litigation consulting. 14 Q. If I could -- could you ballpark a 15 percentage of the percentage of your time spent on 16 litigation consulting? 17 A. I'm sorry, say that again. 18 Q. Could -- could you ballpark a percentage 19 of the time you spend working on litigation 20 consulting? 21 A. Ballpark would be less than 20 percent. 22 Q. Got it. Got it. 23 I want to ask you some questions about 24 your -- your background. 25 I know, you know, you're a physician and</p>	<p style="text-align: right;">Page 40</p> <p>1 in the Ph.D. in economics at MIT after finishing my 2 residency in internal medicine. I finished my Ph.D. 3 in economics in 2013. 4 And then I had my first job as a faculty 5 here at Stanford. 6 Q. Got it. 7 So you started -- the -- the -- it sounds 8 like you -- you took time -- did you take time off 9 from medical school? Do I have that straight or -- 10 A. It was a leave of absence from medical 11 school. I would say about a third of my class took 12 some form of leave of absence to do some type of 13 research work or some type of fellowship in the 14 middle of med school and mine was to do economics 15 and health policy. 16 Q. Got it. 17 I didn't mean that in a pejorative way to 18 say "time off." I understand a leave of absence. 19 So -- and that's when you -- you became a 20 Marshall Scholar and went to -- to get those 21 degrees? 22 A. Correct. 23 Q. Got it. 24 And I think I have your CV up here now. 25 We can --</p>
<p style="text-align: right;">Page 39</p> <p>1 an economist, you know, and you have multiple 2 degrees. I -- you know, can you walk me through 3 your educational history and kind of what -- just 4 for starters. 5 A. Sure. 6 Would you like to refer to the CV or would 7 you like me to just -- 8 Q. We can pull -- you can go -- you can just 9 go and -- because I can try to get the CV up. I'm 10 sure I'll be able to, you know, once I figure out 11 this technology. I'm not trying to hide it from 12 you. 13 A. Sure. 14 My first degree that I post -- after 15 undergrad that I enrolled in was a medical degree at 16 UCLA. In the middle of that medical degree, I 17 became quite interested in health policy and health 18 economics and I took two years off where I was a 19 Marshall Scholar in England and had two master's 20 degrees in health policy and health economics. 21 After coming back from that, I completed 22 medical school and started my residency program at 23 Brigham and Women's Hospital in Boston. 24 And I kind of knew that I wanted to do a 25 Ph.D. when I came back from England and I enrolled</p>	<p style="text-align: right;">Page 41</p> <p>1 MR. MIGLIACCIO: I'd like to mark the 2 report and the attachments as Exhibit 2. 3 (Whereupon, Chan Exhibit 2 was marked for 4 identification.) 5 BY MR. MIGLIACCIO: 6 Q. And I think it's up there now. 7 A. Okay. Yeah, I see it. 8 Q. Yeah. I see -- I think your CV is 9 Appendix A. 10 A. Right. 11 Q. Yeah. 12 A. Great. 13 Q. Yeah. Great. 14 You -- I see. So that -- and that -- I 15 see. So you -- you start -- did you start medical 16 school directly after college? 17 A. Correct. 18 Q. Okay. And then you took the leave of 19 absence to become a Marshall Scholar to go and get 20 these other degrees and then finish medical school? 21 A. Correct. 22 Q. Got it. 23 And then later, obtained your Ph.D. from 24 MIT? 25 A. Correct.</p>

<p style="text-align: right;">Page 42</p> <p>1 Q. Got it.</p> <p>2 What did you -- in terms of your career as</p> <p>3 a physician, could you walk me through that?</p> <p>4 A. Sure.</p> <p>5 My residency was in internal medicine.</p> <p>6 This was at Brigham and Women's Hospital where I</p> <p>7 spent quite a bit of time in primary care. They</p> <p>8 have a primary care track at -- in this residency</p> <p>9 program. So I spent quite a bit in outpatient</p> <p>10 medicine. But the average -- still the average</p> <p>11 residency program is predominantly inpatient</p> <p>12 medicine, but I spent a little bit more time than</p> <p>13 the average resident in primary care.</p> <p>14 I finished that residency in 2008 and</p> <p>15 that's when I started the Ph.D. program in</p> <p>16 economics.</p> <p>17 During the first year of the Ph.D.</p> <p>18 program, I did not have a steady clinical job. I --</p> <p>19 I worked as a physician as a -- what's called a --</p> <p>20 well, it's a moonlighting position where you would</p> <p>21 kind of put in -- I probably worked maybe 20 nights</p> <p>22 that year or 30 nights that year where you kind of</p> <p>23 worked at a hospital, at the Brigham in particular,</p> <p>24 and I admitted patients at that hospital.</p> <p>25 And then in my second year of the Ph.D.</p>	<p style="text-align: right;">Page 44</p> <p>1 jobs.</p> <p>2 And I had my first kind of staff job where</p> <p>3 I was educating residents at Beth Israel Deaconess</p> <p>4 Medical Center. This was in 2010, starting in</p> <p>5 November of 2010. I had that job all the way until</p> <p>6 I finished my Ph.D. in June of 2013.</p> <p>7 And then after that I came here to</p> <p>8 Palo Alto for an academic appointment at Stanford</p> <p>9 where I was a staff physician in internal medicine</p> <p>10 at the Palo Alto Veterans Affairs Health Care</p> <p>11 System.</p> <p>12 Q. Got it.</p> <p>13 So that first position at Brigham --</p> <p>14 Brigham and Women's, you said that that had a</p> <p>15 significant part of outpatient work? Did I have</p> <p>16 that straight?</p> <p>17 A. It had as much -- had more outpatient</p> <p>18 exposure than the average internal medicine</p> <p>19 residency program.</p> <p>20 Q. And how do you characterize that or</p> <p>21 quantify that?</p> <p>22 A. You can quantify it by the number of</p> <p>23 outpatient weeks that we have. So the typical</p> <p>24 internal medicine residency is structured in terms</p> <p>25 of rotations. You spend some rotations on various</p>
<p style="text-align: right;">Page 43</p> <p>1 program, I had my first clinical job as an attending</p> <p>2 physician at Beth Israel Deaconess Medical Center,</p> <p>3 which you see there.</p> <p>4 Actually, strike that.</p> <p>5 That -- that was actually in the -- near</p> <p>6 the beginning of the third year of my Ph.D. so I</p> <p>7 think I continued to do moonlight -- you can see my</p> <p>8 appointments at hospitals and affiliated</p> <p>9 institutions on my CV.</p> <p>10 Q. Where -- can you just tell me that page</p> <p>11 that is?</p> <p>12 A. This is A -- A-2.</p> <p>13 Q. A-2. Okay.</p> <p>14 A. Yeah, so you could see that...</p> <p>15 Q. Yeah.</p> <p>16 A. Right.</p> <p>17 So I had two positions. I had two</p> <p>18 positions before I was a staff physician at Beth</p> <p>19 Israel Deaconess Medical Center. I was a staff</p> <p>20 physician at Brigham and Women's Hospital, but my</p> <p>21 job there was mainly a moonlighting position.</p> <p>22 And I also later that year, in 2008, was a</p> <p>23 staff physician at McLean Hospital, which is a</p> <p>24 hospital in the Massachusetts General Physicians</p> <p>25 Organization. Both of those jobs were moonlighting</p>	<p style="text-align: right;">Page 45</p> <p>1 inpatient wards. You spend some rotations in the</p> <p>2 emergency department, and you spend some rotation</p> <p>3 doing outpatient care. And this residency program</p> <p>4 that I did had more weeks on inpatient care than the</p> <p>5 typical residency program.</p> <p>6 Q. Got it.</p> <p>7 And did that change at some point where</p> <p>8 you ended up spending more time like as typical</p> <p>9 doing inpatient?</p> <p>10 A. Yes. I -- so after residency you have to</p> <p>11 choose what type of doctor you want to be. You</p> <p>12 could either go on to subspecialty fellowship and</p> <p>13 become, you know, say, a cardiologist or infectious</p> <p>14 disease doctor or you can remain within general</p> <p>15 medicine.</p> <p>16 And within general medicine there are</p> <p>17 generally two types of jobs you could have. One is</p> <p>18 an outpatient job so you spend a hundred -- almost a</p> <p>19 hundred percent of your time as an outpatient</p> <p>20 doctor, increasingly so in the way medicine is</p> <p>21 organized right now.</p> <p>22 Or you could be an inpatient doctor and</p> <p>23 spend close to a hundred percent of your time</p> <p>24 clinically as an inpatient doctor. And I chose the</p> <p>25 latter. So I'm what's called a hospitalist.</p>

<p style="text-align: right;">Page 46</p> <p>1 Q. Hospitalist. Got it. Got it. 2 Did you have any -- as a hospitalist, do 3 you have any specialties or is that -- hospitalist 4 is like a generalist; is that fair? 5 A. Yes, a hospitalist by definition is a 6 general internist who does not have a subspecialty. 7 Q. Okay. 8 A. So internal medicine is their specialty 9 and they have no subspecialty. 10 Q. Do you have any areas of interest takeaway 11 like a formal subspecialty? Do you have any areas 12 of interest? Do hospitalists have that? 13 A. No. Hospitalists are quite general. We 14 see a variety of patients in the inpatient setting. 15 At Palo Alto VA, I see patients who are 16 general medicine patients. I see oncology patients. 17 I see cardiology patients. A wide variety of 18 patients who require hospitalization. 19 Q. Got it. 20 And you've been at Palo Alto VA from 2013 21 to the present? 22 A. Correct. 23 Q. How -- how much time do you -- or have you 24 spent there on average, you know, in that period? 25 A. Right. I spend four weeks a year since I</p>	<p style="text-align: right;">Page 48</p> <p>1 A. Yeah, it's determined by how the 2 hospitalists group decides to schedule rotations. 3 Before I believe this last year, or the last two 4 years, the rotations were two-week blocks. So I 5 generally would work in two two-week blocks every 6 year. 7 Starting about a year or two ago, the 8 group decided to change it so that people would 9 generally work in one-week blocks. And so now I 10 work four one-week blocks. 11 Q. Got it. Got it. 12 And has that been the same like from 2013 13 to the present? 14 A. It has either been one-week blocks or 15 two-week blocks since 2013. 16 Q. Yeah. Got it. 17 Four weeks total? 18 A. Four weeks total. 19 Q. Got it. Got it. 20 In your position in -- in Deaconess and 21 in -- the other hospitals back east, what was your 22 schedule there? 23 I mean, I -- that's kind of broad so 24 I'll -- I don't -- let's just start with Beth 25 Israel.</p>
<p style="text-align: right;">Page 47</p> <p>1 started there at -- in 2013. There are some 2 hospitalists at Palo Alto VA that are full time and 3 I think the full time -- I would have to check but 4 oftentimes the full time -- a full-time hospitalist 5 might see less than -- might be on the wards for 6 less than half of the weeks of the year. So there's 7 never a hospitalist that works all of the weeks of 8 the year. 9 It's quite an intense job, I would say, 10 and so it's not something like outpatient medicine 11 where in outpatient medicine you can be seeing 12 patients every week of the year. In hospital 13 medicine, oftentimes a full-time person is half the 14 weeks of the year. 15 And for an academic hospitalist like me 16 that does research in addition to being a 17 hospitalist you can have a range from four weeks a 18 year to, I would say, as much as seven weeks a year, 19 eight weeks a year, within that range. 20 Q. Got it. 21 Do you do those four weeks a year in a row 22 or do you split them up? 23 A. I split them up. 24 Q. Okay. What is the period -- like the 25 split period that you take? Is it a week or --</p>	<p style="text-align: right;">Page 49</p> <p>1 A. Beth Israel Deaconess, I think my -- I 2 don't know a hundred percent sure, but I believe my 3 schedule was six weeks a year back there. And that 4 is a reflection of just the different hospitals have 5 different kind of norms in terms of what is the 6 number of weeks that academic physicians will work. 7 And so, as I mentioned, six weeks a year is kind of 8 within the range. 9 Q. Got it. 10 What -- and what type of people would 11 you -- what would -- how would you describe the 12 patient population, you know, at Beth Israel 13 Deaconess that you saw? 14 A. It was a fairly general patient 15 population. I would see a number of different -- 16 just the same as in Palo Alto VA, I would see 17 patients with a wide variety of internal medicine 18 complaints ranging from infectious disease to renal 19 to, you know, pulmonology, cardiology, oncology, 20 gastroenterology. 21 There -- there would be a number of 22 different inpatient conditions, that is typical of a 23 hospital medicine practice, that I would see there 24 at Beth Israel Deaconess Medical Center. 25 Q. Okay. Would you say there's a difference</p>

<p>Page 50</p> <p>1 at the -- at a VA hospital, like, is the patient 2 population any different than at Beth Israel? 3 A. The patient population at the VA is 4 predominantly male still. I would say it's 5 90 percent -- my patients are 90 percent male. At 6 Beth Israel Deaconess, we did not have that. You 7 know, the most obvious kind of structural difference 8 is that the VA sees veterans and most veterans are 9 male. 10 You will also have veterans that tend to 11 be linked to certain wars. So there's veterans of 12 the Vietnam era or veterans of kind of more recent, 13 Iraq and Afghanistan era. So you'll have the age of 14 the veterans kind of coming in waves that are 15 related to wars as opposed to Beth Israel Deaconess 16 we didn't have them. 17 Q. Got it. 18 So you see waves or bands of -- of age 19 ranges? 20 A. Correct. 21 Q. Got it. 22 The moonlighting job, can you tell me a 23 little bit more about what -- what that was? I 24 mean, I -- I don't mean to say "job." The 25 moonlighting schedule, is that better? Schedule?</p> <p>Page 51</p> <p>1 A. Sure. 2 Q. Yeah. 3 A. That was much more -- that was less -- 4 that was a flexible -- the reason people have 5 moonlighting jobs is to allow for flexibility. You 6 don't necessarily commit to a schedule a whole year 7 in advance, which is what I do now. Nowadays, I 8 will say, what years I'm -- I will know which weeks 9 I'm going to be working a whole year in advance. 10 For the moonlighting job, generally, the 11 way that it works is that people sign up for shifts 12 and this signing up of shifts can happen maybe like 13 two weeks in advance or maybe a month in advance. 14 And generally, these would be for one-night shifts 15 or a shift maybe kind of lasting until the day but 16 not a whole week-shift as what I kind of currently 17 work on. 18 Q. Got it. Got it. 19 And did your duties vary as a -- you know, 20 a hospitalist in these -- across these positions or 21 were they similar, would you say? 22 A. I would say they were quite similar 23 despite the fact that they're on different coasts. 24 Medicine I think is quite homogenous across 25 different medical centers.</p>	<p>Page 52</p> <p>1 In Palo Alto VA, I solely work with 2 residents, whereas in Beth Israel Deaconess, there 3 was -- there were two different campuses, one in 4 which I worked with residents, the other in which I 5 kind of was more like a community doctor role where 6 I saw the patients alone and interacted directly 7 with the patients and the nurse and didn't have this 8 other group of doctors assisting me as I do now a 9 hundred percent. That would be kind of the only 10 difference. But in general, the jobs were quite 11 similar. 12 Q. Got it. 13 What -- I think you've answered this, but 14 you don't have any specific oncology expertise, is 15 that fair, as a generalist? 16 MR. STOY: Object to the form. 17 THE WITNESS: I would say that I don't 18 have oncology subspecialty training. I do see 19 oncology patients because oncology patients often 20 have medical problems, general medical problems. 21 They get infected. They can get quite sick 22 ultimately in ways that a general internist will 23 deal with. 24 I do not make decisions in terms of 25 initiation of chemotherapy so if there is such a</p> <p>Page 53</p> <p>1 decision like that, I will work in consultation with 2 an oncologist. 3 The way that hospital medicine works is 4 that if it's a general medicine problem on an 5 oncology patient I can -- I have -- you know, I 6 handle that on my own. Sometimes it makes sense to 7 consult subspecialty physicians like cardiologist, 8 oncologist to help in the management of a patient. 9 BY MR. MIGLIACCIO: 10 Q. Got it. 11 And when you consult with an oncologist or 12 cardiologist to help with the management of a 13 patient who requires that, like how does the 14 relationship work between the -- the hospitalist and 15 that specialist? 16 A. It's a collegial relationship. I will ask 17 them to see the patient and render -- I think to use 18 legal terms, render their opinions, and they will 19 provide that information to me and ultimately -- it 20 depends on which hospital it is. 21 At the Palo Alto VA, I'm the -- what's 22 called the attending of record. So I have -- 23 ultimately the decision lies with me. So if -- you 24 know, if you had to point to one decisionmaker, it 25 would be me.</p>
--	--

<p style="text-align: right;">Page 54</p> <p>1 That said, I'm going to very much consider 2 what the oncologist or the cardiologist or the 3 nephrologist, you know, the various consultants will 4 kind of provide me. And that information will very 5 much influence what I do. 6 Q. And these are for -- I think you said, and 7 I don't want to put words in your mouth, like this 8 is for a general medicine problems if the patient 9 has such a problem? 10 A. Can you state that again? 11 Q. You're consulting with a specialist if 12 that patient is in your care and they have a problem 13 that's not, you know, an oncology problem or a 14 cardiology problem or -- and -- am I getting this 15 wrong? 16 A. If it's a general medicine problem, then 17 it's fully within my domain to -- 18 Q. Yeah. 19 A. -- make a decision without any input from 20 a consultant. 21 Q. Okay. 22 A. If there is some type of specialized 23 knowledge beyond general medicine that would be 24 helpful in making my decision, then I might consult 25 them.</p>	<p style="text-align: right;">Page 56</p> <p>1 the hospital for pneumonia. That patient I won't 2 consult an oncologist generally. 3 There are other patients where we need to 4 make a decision about changing a chemotherapy 5 regimen. Then I will consult the oncologist. But 6 while the patient is in the hospital, the patient is 7 under my care and the oncologist is secondary. 8 Q. Okay. I think I understand. 9 If somebody -- for purposes of diagnosis 10 of a cancer and initial treatment plan, that would 11 be done by an oncologist? 12 A. For purposes of the treatment plan, like 13 the chemotherapy plan, that would be primarily done 14 by the oncologist. They would have certainly the 15 biggest say in that, with the caveat that the 16 general internist and maybe even the primary care 17 doctor, you're going to try to take the patient's 18 wishes or the patient's preferences into 19 consideration. You have to also consider other 20 comorbidities that the patient has. 21 So it's not purely an oncology decision. 22 It's a holistic decision that's made by generalists 23 and oncologists. 24 With respect to diagnosing cancers, I 25 think that often happens by internist, general</p>
<p style="text-align: right;">Page 55</p> <p>1 The way that it works at Palo Alto VA is 2 that there is no oncology ward where an oncologist 3 is the attending of record so that means all 4 oncology patients will kind of, quote/unquote, 5 belong to me. I am the attending of record for all 6 oncology patients, and I'll be making -- I'm the 7 person -- I'm the single decisionmaker if you were 8 to name one. 9 If there is a specialized question that I 10 would like input on such as a chemotherapy regimen 11 or, you know, something that's specifically about 12 their cancer, then I will generally consult an 13 oncologist. 14 Q. Got it. 15 And so you, as -- as -- in your position 16 at Palo Alto, then, if you have a patient who 17 presents with a cancer, that patient will be under 18 your care or will it -- or -- or jointly under your 19 care and jointly under the care of an oncologist? 20 A. It's hard to define what we mean by 21 "jointly." I would say that some oncology patients 22 we will never consult an oncologist. Some, if their 23 condition is purely medical, for example, you might 24 be an oncology patient to have, like, cancer, you 25 are being treated for this cancer, but you come to</p>	<p style="text-align: right;">Page 57</p> <p>1 internists as opposed to oncologist. Oftentimes the 2 cancer is diagnosed initially by a patient who comes 3 in with a complaint and we find cancer. Then after 4 we find cancer, we refer the patient to an 5 oncologist. So I would say the diagnosis of cancer 6 often happens with generalists. 7 Q. Have you diagnosed cancer before? 8 A. Yes. 9 Q. What -- what types of cancer have you 10 diagnosed? 11 A. Almost all types of cancers, I would say. 12 Q. What is metastatic cancer? 13 A. Metastatic. 14 Q. Metastatic, sorry. 15 A. That is a cancer that has spread to a 16 distant site. 17 Q. Is that type of cancer frequently 18 incurable? 19 MR. STOY: Object to the form. 20 THE WITNESS: I think it depends on the 21 type of cancer. There are some cancers such as 22 leukemia that are widespread. They are quite 23 treatable and quite curable. 24 BY MR. MIGLIACCIO: 25 Q. What are the benefits of finding a cancer</p>

<p style="text-align: right;">Page 58</p> <p>1 early?</p> <p>2 MR. STOY: Object to the form.</p> <p>3 Go ahead.</p> <p>4 THE WITNESS: I think this -- yeah, this</p> <p>5 gets to my report where there -- there could be</p> <p>6 benefits and risks of pursuing a cancer early. When</p> <p>7 you have an earlier cancer, it might be more</p> <p>8 amenable to treatment in a sense that there's</p> <p>9 less -- it has to -- I mean, yeah.</p> <p>10 The cancer needs to be detectable, like if</p> <p>11 the cancer is small enough where it's not</p> <p>12 detectable, then you wouldn't generally operate on</p> <p>13 it to remove it. You also wouldn't give</p> <p>14 chemotherapy.</p> <p>15 So there is, I think, still like an</p> <p>16 optimal time to be thinking about when to detect</p> <p>17 cancer. You don't want to be detecting cancer or</p> <p>18 even try to detect cancer when it's just a few --</p> <p>19 few cells. That would be infeasible.</p> <p>20 And there -- there is also if -- you know,</p> <p>21 the disease burden from cancer is quite advanced and</p> <p>22 for certain cancers, if it's metastatic, it becomes</p> <p>23 harder to -- the patient's life expectancy from</p> <p>24 there is -- is lower and the odds of you</p> <p>25 definitively sending that cancer into remission are</p>	<p style="text-align: right;">Page 60</p> <p>1 a lot of considerations here.</p> <p>2 BY MR. MIGLIACCIO:</p> <p>3 Q. And I'm only asking about the benefits,</p> <p>4 not the costs. I understand that -- that, you know,</p> <p>5 and in your report you lay out your opinions. I</p> <p>6 understand that, you know, but I'm not asking you</p> <p>7 about the downsides. I'm only asking you about the</p> <p>8 upsides.</p> <p>9 MR. STOY: Same objection.</p> <p>10 Go ahead.</p> <p>11 THE WITNESS: Could you state that</p> <p>12 question again?</p> <p>13 BY MR. MIGLIACCIO:</p> <p>14 Q. Yeah.</p> <p>15 What -- what are the benefits, you know,</p> <p>16 not -- not the drawbacks, not the costs, what are</p> <p>17 the benefits of detecting a cancer before it becomes</p> <p>18 metastatic?</p> <p>19 A. It's really kind of hard for me to speak</p> <p>20 generally on this. I think there are a number of</p> <p>21 different types of cancer. This might differ across</p> <p>22 different types of cancer.</p> <p>23 Q. Sure. We can -- we can go through -- we</p> <p>24 can go cancer by cancer.</p> <p>25 Let's talk about, like, let's say,</p>
<p style="text-align: right;">Page 59</p> <p>1 lower as well.</p> <p>2 So it's -- it's -- it's a balance. There</p> <p>3 are -- there are risks and benefits of pursuing a</p> <p>4 cancer early, and I think there is probable an</p> <p>5 optimal time to be thinking about whether somebody</p> <p>6 has cancer.</p> <p>7 MR. STOY: Nick, I don't want to interrupt</p> <p>8 you. If you've got -- you know, if this isn't a</p> <p>9 good spot, but we have been going for a little over</p> <p>10 an hour so, you know, whenever is a good time to</p> <p>11 take a break.</p> <p>12 MR. MIGLIACCIO: Sure. Why don't we just</p> <p>13 take like five more minutes and then we can take a</p> <p>14 break, if that's all right.</p> <p>15 MR. STOY: That's fine.</p> <p>16 MR. MIGLIACCIO: I know -- and even on the</p> <p>17 East Coast here we're close to lunch but we'll sort</p> <p>18 that.</p> <p>19 Q. Can we agree that it's generally</p> <p>20 preferable to detect a cancer before it becomes</p> <p>21 metastatic?</p> <p>22 MR. STOY: Object to the form of the</p> <p>23 question.</p> <p>24 Go ahead.</p> <p>25 THE WITNESS: Yeah, I think there are just</p>	<p style="text-align: right;">Page 61</p> <p>1 prostate cancer.</p> <p>2 A. Uh-huh.</p> <p>3 Q. Which is one example.</p> <p>4 A. Okay.</p> <p>5 Q. What -- what would be the benefits of --</p> <p>6 of catching that before it becomes metastatic?</p> <p>7 A. Even then, even if you focus on a specific</p> <p>8 type of cancer, I think it depends on things that</p> <p>9 are outside of cancer.</p> <p>10 Potentially, if -- if -- you know, again,</p> <p>11 this is a little bit hypothetical, but, you know, if</p> <p>12 you have a patient with metastatic -- as I</p> <p>13 mentioned, if you have a patient with metastatic</p> <p>14 prostate cancer, it becomes harder to treat.</p> <p>15 And this is kind of a very general</p> <p>16 statement. As I mentioned, I am not, you know, an</p> <p>17 oncologist.</p> <p>18 When somebody comes into the hospital and</p> <p>19 has a medical problem, I'm generally treating that</p> <p>20 medical problem. I'm not making chemotherapy</p> <p>21 decisions, so -- and I'm also not following cancer</p> <p>22 patients long-term as well. I'm not directing --</p> <p>23 chemotherapy is usually an outpatient regimen.</p> <p>24 So, you know, I can speak to this in</p> <p>25 general terms, but, you know, I think that there are</p>

<p style="text-align: right;">Page 62</p> <p>1 just so many different factors to consider in -- 2 there are -- it's -- it's a complicated decision 3 that requires, you know, more than just like an 4 inpatient hospitalization, which is what I deal 5 with. 6 Q. Got it. 7 But we can agree that it's easier to 8 treat, then, before it becomes metastatic, a 9 prostate cancer? 10 MR. STOY: Object to the form. 11 THE WITNESS: Again, it depends, but I 12 would say that in many cases, in many cases, it is 13 treating a cancer that has not metastasized, or once 14 a cancer has metastasized, you would need more 15 systemic agents like chemotherapy as opposed to 16 surgery so it rules out certain therapeutic options. 17 And I can at least say that. 18 MR. MIGLIACCIO: Why don't we -- we can 19 take a break now, a quick break, maybe just ten 20 minutes or so. I know we need to figure out what 21 we're going to eat here. 22 MR. STOY: Oh, no, that -- that's fine. 23 I'm more worried about Dr. Chan's lunch and he's 24 still a little ways away. 25 MR. MIGLIACCIO: Yeah.</p>	<p style="text-align: right;">Page 64</p> <p>1 confidentiality order that governs any reports that 2 you might have authored in those cases. 3 So, you know, with that instruction to not 4 reveal any potentially confidential information 5 related to those other engagements, you can answer 6 the question to the extent you can. 7 THE WITNESS: Right. That leaves very 8 little room for me to discuss this. I think I can 9 say that you can see the parties involved in each of 10 these cases, the dates of the case, and I was 11 retained as an expert on the defendants' side. I 12 think I can say that. 13 BY MR. MIGLIACCIO: 14 Q. Okay. For each of those three cases? 15 A. Correct. 16 Q. Okay. And those cases -- were those -- 17 these are not whistleblower cases, are they? Are 18 they -- were the cases themselves filed under seal? 19 A. I don't think they're whistleblower cases. 20 Q. Okay. Can you tell me what you know about 21 the case, with the cases from what you know from the 22 publicly filed documents or complaints that were 23 filed in these cases? 24 A. Are the complaints public? Can I -- are 25 we certain that the complaints are public?</p>
<p style="text-align: right;">Page 63</p> <p>1 MR. STOY: So let's -- 2 MR. MIGLIACCIO: Right. 3 MR. STOY: Let's come back at 12:10, does 4 that work, 12:10 Eastern time? 5 THE VIDEOGRAPHER: All right. We're off 6 the record at 9:01 a.m. 7 (Whereupon, a brief recess was taken.) 8 THE VIDEOGRAPHER: We are back on the 9 record. The time is 9:15 a.m. Pacific time. 10 BY MR. MIGLIACCIO: 11 Q. Okay. All right. 12 Dr. Chan, I want to ask you a few 13 questions about your prior -- the prior reports and 14 opinions or deposition testimony that you offered 15 in -- I think it looks like three other cases that 16 are listed on your CV. I am on -- looking at it 17 right now, it looks like it's Appendix B. Okay. 18 Can you tell me about those cases? You 19 can start with just -- just from the top. 20 A. I don't know how much I can reveal. 21 MR. STOY: Yeah, before you -- before you 22 answer, Dr. Chan, I'll place an objection to the 23 form of the question, and I'll also just caution 24 you, I'm aware that there are protective orders in 25 place in those cases and I believe that there's a</p>	<p style="text-align: right;">Page 65</p> <p>1 Q. Well, that's -- that's why I asked if they 2 were -- if they were filed under seal and that's, 3 you know, what I'm trying to find out. They don't 4 appear to me to be whistleblower cases. They appear 5 to be -- 6 MR. STOY: Yeah, again, I'll just -- I'll 7 put this -- I'll reference my prior instruction and 8 just say, I mean, I think it's okay to talk about 9 the case generally at a high level but just not to 10 reveal anything that, you know, would potentially be 11 confidential. And if you -- if you're not able to 12 answer the question with that instruction, then so 13 be it. 14 But I just wanted to place that on the 15 record. 16 THE WITNESS: Frank, would you instruct me 17 to -- because I just don't know the legal -- the 18 legal details, whether this is the -- the complaints 19 are under seal or not. Am I allowed to discuss 20 the... 21 MR. STOY: Yeah, I don't -- I don't know 22 if -- Nick, if these complaints were filed under 23 seal or -- or what is confidential or what isn't. I 24 just know that there are confidentiality orders in 25 place and --</p>

<p style="text-align: right;">Page 66</p> <p>1 MR. MIGLIACCIO: Uh-huh.</p> <p>2 MR. STOY: -- you know, aspects of his</p> <p>3 report and testimony would be confidential.</p> <p>4 That is the limit of my knowledge so</p> <p>5 that's why I put the instruction that I did on the</p> <p>6 record.</p> <p>7 MR. MIGLIACCIO: Yeah, I understand that.</p> <p>8 And, you know, I do know we asked for this</p> <p>9 information, these transcripts, and I think you</p> <p>10 objected to providing them.</p> <p>11 I -- I think, you know, you could tell us</p> <p>12 the general subject matter of the case. I don't</p> <p>13 think you would be breaching any confidentiality.</p> <p>14 That -- that would be my request, that you tell us.</p> <p>15 MR. STOY: Yeah, I mean, I think he can</p> <p>16 answer a question like, you know, what is -- what's</p> <p>17 the product that was at issue in the case or</p> <p>18 something like that. But I just think, you know,</p> <p>19 it's going to depend on the question. And if the</p> <p>20 question is a really broad one, then it's going to</p> <p>21 be difficult for Dr. Chan to be able to provide an</p> <p>22 answer.</p> <p>23 THE WITNESS: And I would only want to</p> <p>24 reveal what's public information because I wouldn't</p> <p>25 want to divulge anything that's under confidential</p>	<p style="text-align: right;">Page 68</p> <p>1 Q. Okay. These -- these are all -- these</p> <p>2 were deposition -- these aren't trial testimony,</p> <p>3 this is all deposition testimony?</p> <p>4 A. Correct.</p> <p>5 Q. Do you know -- and you were retained by</p> <p>6 the defendants in these respective -- these three</p> <p>7 cases?</p> <p>8 A. I was retained by Janssen Pharmaceuticals.</p> <p>9 There are multiple defendants in this case. And I</p> <p>10 was retained by one of the defendants, which is</p> <p>11 Janssen Pharmaceuticals.</p> <p>12 Q. Okay. Did you -- was your opinion -- did</p> <p>13 you rely upon your expertise as a medical doctor or</p> <p>14 as an economist in -- in offering your opinion?</p> <p>15 A. Both.</p> <p>16 MR. STOY: Object to the form.</p> <p>17 BY MR. MIGLIACCIO:</p> <p>18 Q. All right. Have you -- has your testimony</p> <p>19 been -- been challenged in any of these three cases?</p> <p>20 A. No.</p> <p>21 Q. Do you know what I mean when I say</p> <p>22 "challenged"?</p> <p>23 A. I'm not a legal expert. My understanding</p> <p>24 of your question is that there was a movement by the</p> <p>25 other side to strike my testimony or strike my</p>
<p style="text-align: right;">Page 67</p> <p>1 order. And I -- I just don't know what is under</p> <p>2 confidential order or not. Yeah, I mean...</p> <p>3 MR. STOY: Well, let's wait. I don't</p> <p>4 think there's a question pending right now,</p> <p>5 Dr. Chan, so let's wait and -- wait for a question.</p> <p>6 BY MR. MIGLIACCIO:</p> <p>7 Q. But I mean, there was -- I just wanted to</p> <p>8 know what the general subject matter of the cases</p> <p>9 are. You know, what -- what are the cases about.</p> <p>10 You can -- you can tell me what the product at issue</p> <p>11 is. That -- that's fine.</p> <p>12 What -- what is the product at issue?</p> <p>13 THE WITNESS: Is that okay, Frank?</p> <p>14 MR. STOY: Yeah, I think -- I think you</p> <p>15 can answer that question, if you know.</p> <p>16 THE WITNESS: Right.</p> <p>17 The -- the product at issue in all three</p> <p>18 of these cases are -- were products by Janssen</p> <p>19 pharmaceutical or Johnson & Johnson. They were two</p> <p>20 specific opioid products produced by Janssen</p> <p>21 Pharmaceuticals or Johnson & Johnson.</p> <p>22 BY MR. MIGLIACCIO:</p> <p>23 Q. Not Janssen, Johnson & Johnson?</p> <p>24 A. They're -- I think -- my understanding is</p> <p>25 that Janssen is a subsidiary of Johnson & Johnson.</p>	<p style="text-align: right;">Page 69</p> <p>1 expertise.</p> <p>2 Q. It's to exclude or strike it, yeah,</p> <p>3 that -- that's my question, right.</p> <p>4 A. Right.</p> <p>5 Q. Yeah. And so the answer to that was no?</p> <p>6 A. That's no.</p> <p>7 Q. Okay. Did your testimony include any</p> <p>8 opinion relating to healthcare spending or pricing?</p> <p>9 MR. STOY: Object to the form.</p> <p>10 You can answer that question.</p> <p>11 THE WITNESS: It's hard for me to answer</p> <p>12 that question. It related to healthcare spending.</p> <p>13 Not sure about pricing.</p> <p>14 BY MR. MIGLIACCIO:</p> <p>15 Q. Healthcare spending. Got it.</p> <p>16 And when were you retained in these cases,</p> <p>17 if you can recall?</p> <p>18 A. I believe my first contact was before the</p> <p>19 pandemic so that would mean sometime in 2020,</p> <p>20 earlier 2020.</p> <p>21 Q. And is your work being done in those cases</p> <p>22 also with the Analysis Group?</p> <p>23 A. Yes.</p> <p>24 Q. Okay. In all three of them?</p> <p>25 A. Yes.</p>

<p>Page 70</p> <p>1 Q. Okay. Do you have -- what is your 2 relationship with the Analysis Group? Are -- are 3 you a consultant? Are you an owner? Are you an 4 employee? Could you just shed some light on that? 5 MR. STOY: Object to the form. 6 THE WITNESS: As I mentioned, I have a -- 7 an agreement with the Analysis Group that is -- 8 is -- basically allows me to use their services in 9 preparing work for or litigation consulting. I'm 10 not an employee of Analysis Group. I'm what's 11 called an affiliate of Analysis Group. And I 12 believe that just means that I have worked with them 13 in the past and I have a working relationship with 14 Analysis Group. 15 BY MR. MIGLIACCIO: 16 Q. Got it. 17 What was -- I think we -- we -- we 18 discussed this earlier, but what was the process 19 that you used -- I think you've -- you've answered 20 this. 21 Did your process for preparing your report 22 in this case differ for your process in preparing 23 any expert witness report in other cases? 24 MR. STOY: Object to the form. 25 THE WITNESS: Would you like to be more</p> <p>Page 71</p> <p>1 specific? 2 BY MR. MIGLIACCIO: 3 Q. I think you told me about your process 4 this morning. I'm not sure if you finished your 5 answer, if we finished that line of questioning. 6 But my question is, in the way that you 7 prepared this report, was this -- the way you 8 prepared this report, was it any different from -- 9 from what you've done in -- in other cases, 10 including these three that we just looked at? 11 MR. STOY: Object to the form. 12 You can answer. 13 THE WITNESS: Different from what I 14 described earlier. So I think you are referring to 15 my general process of reading the complaint, 16 thinking about the question, identifying lines of 17 inquiry that I would like more information or 18 analyses. 19 Are you referring -- if you're referring 20 to that, then that is my general process of thinking 21 through my opinions in a case of litigation 22 consulting. 23 BY MR. MIGLIACCIO: 24 Q. Have you -- other than these three 25 reports -- or rather, prior testimony, have you</p>	<p>Page 72</p> <p>1 offered opinions in any other litigation? 2 A. No. 3 Q. So -- so these three that you've been 4 deposed in that are listed on Appendix B, and this 5 case, this is the fourth case in total that you have 6 been retained for and offered expert opinions or -- 7 or testimony? 8 I'm not asking for questions about -- I'm 9 not asking for any cases where you may be a 10 consulting expert. I'm asking, you know, where 11 you've been disclosed and provided opinions or 12 deposition testimony. 13 A. And could you clarify to me what you mean 14 by provided expert opinions? Is this -- is this a 15 specific term meaning... 16 Q. A report, like a report. 17 A. A report. Okay. 18 Q. Yeah. 19 A. Thank you. 20 MR. STOY: Dr. Chan, my understanding is 21 he's limiting his question to cases where you've 22 been disclosed as a testifying expert, like in this 23 case, not any case that you might have been retained 24 as a consultant. 25 THE WITNESS: Okay.</p> <p>Page 73</p> <p>1 So the answer is yes. These -- these are 2 the only cases that I have been disclosed as an 3 expert. 4 BY MR. MIGLIACCIO: 5 Q. Got it. 6 And -- and -- and the first one looks 7 like -- I mean, you've just started this, you've 8 just started working as a disclosed expert with 9 these four cases, including these three? 10 A. By "just started working," you can see the 11 dates here -- 12 Q. Right. 13 A. -- is that what you mean? 14 Q. Yeah, that -- that's right. I mean, so 15 you -- there's not an earlier part of your career 16 where you provided expert testimony or expert 17 reports in other cases? 18 A. Correct. 19 Q. Okay. Got it. 20 I have -- in your report here you have a 21 list of materials relied upon. Looks like that's 22 exhibit -- it's just Appendix C of your report. 23 Do you have that up there? 24 A. Yes. 25 Q. So you looked at the Consolidated Third</p>
--	--

<p style="text-align: right;">Page 74</p> <p>1 Amended Medical Monitoring Class Action Complaint, 2 Plaintiffs' Memorandum of Law in support of their 3 motion for class certification, and the Third 4 Amended Consolidated Economic Loss Class Action 5 Complaint. 6 A. Correct. 7 Q. And I think you testified to this earlier 8 that you looked at Dr. Conti, Dr. Kaplan, and 9 Dr. Song's reports. 10 You also, I see here, looked at the report 11 of Dr. Panigrahy; is that right? 12 A. I believe so, but I don't particularly 13 remember much about that report. 14 Q. Okay. And then are you aware that -- did 15 you ask to see any other expert reports? 16 A. No. 17 Q. No. 18 Did you -- are you aware that the 19 plaintiffs had put forward general causation expert 20 reports in this case? 21 A. Not very aware that. 22 Q. Are you aware that there were reports by 23 Dr. Etminan, Dr. Hecht, and Dr. Lagana? 24 A. No, I don't know those names. 25 Q. Are you aware of Dr. Daniel Catenacci?</p>	<p style="text-align: right;">Page 76</p> <p>1 have various data listed, is that right, on the next 2 page? 3 A. Uh-huh. 4 Q. And I'm just going to refer you to the 5 "Medical Expenditure Panel Survey data." 6 Do you see that? 7 A. Yes. 8 Q. Who -- who gathered that data for you? 9 A. I directed the Analysis Group to gather 10 that data, those data. 11 Q. Who is your -- who did you interface with 12 with respect to getting that information? 13 A. Almost all of my calls with the Analysis 14 Group involved the people that I mentioned earlier. 15 All of them. Some of the calls did not include 16 Molly Frea. But almost all of the calls involved 17 the other four people that I named, Brian Ellman, 18 Frank Mortimer -- Richard Mortimer, Jessica Lu, and 19 Michaela Johnson. And I directed them as a group to 20 get those data. 21 Q. Got it. 22 I want to look at your -- were there any 23 conclusions that you reached that did not make it 24 into your final report? 25 A. No.</p>
<p style="text-align: right;">Page 75</p> <p>1 A. No, I don't know who that is. 2 Q. Dr. Janice Britt? 3 A. No. 4 Q. Have you ever heard of those names before? 5 A. I've never heard those names before. 6 Q. All right. What was your recollection -- 7 I mean, what is your recollection, as you sit here 8 today, of Dr. Panigrahy's report? 9 A. I don't have much of a recollection at 10 all, actually. I don't know who that person is. 11 I -- I might have seen that report, but I don't 12 remember anything about it. 13 Q. Do you recall anything about the 14 depositions of Judson -- I'm just -- it says, 15 "Depositions and Declarations." 16 A. Oh. 17 Q. And it looks like there are one, two, 18 three, four -- seven of them listed there. 19 A. Uh-huh. I know some of their medical 20 conditions. I know that they're specific named -- 21 named -- named plaintiffs and so I know -- I know 22 their -- as I mention in my report, I know some of 23 their medical conditions. 24 Q. Got it. 25 And then I see further below, "Data," you</p>	<p style="text-align: right;">Page 77</p> <p>1 Q. And let -- let's look at your -- the 2 invoices. I think I -- I will put -- pull those up 3 for you if we just bear with me for a moment. 4 Did I do it right? Okay. It should -- 5 they should pop up in a few minutes -- or a few 6 seconds. 7 Let me know when you can see them. 8 A. Yes, I can see them. 9 (Whereupon, Chan Exhibit 3 was marked for 10 identification. 11 BY MR. MIGLIACCIO: 12 Q. Okay. Great. 13 This is -- this is the invoice we were 14 provided with. 15 A. Uh-huh. 16 Q. And it's dated February 3rd, 2022. 17 A. Right. 18 Q. And it looks like it was "For professional 19 services rendered in connection with the above 20 referenced case for the period ending December 31, 21 2021." 22 A. Uh-huh. 23 Q. Are there any other invoices or did you 24 spend any other time on this report? 25 MR. STOY: Object to -- object to the</p>

<p style="text-align: right;">Page 78</p> <p>1 form. I think that's two different questions. 2 THE WITNESS: Okay. Yeah. 3 BY MR. MIGLIACCIO: 4 Q. Yeah. First, are there any other invoices 5 that haven't been -- 6 A. I have not yet submitted any other 7 invoices. 8 Q. Okay. Do you have -- do you have a plan 9 to submit another invoice? 10 A. Yes. 11 Q. Okay. And what would be included on that 12 invoice aside from today's deposition or in 13 preparation for the deposition? 14 A. I haven't prepared them yet. Those would 15 be invoices for the months of January and for the 16 month of February. 17 Q. Okay. How much time -- so your report 18 looks like it's dated January 12th, right? 19 A. Right. 20 Q. Could you estimate how much time you spent 21 in the month of January on the report before it was 22 signed and submitted on the 12th? 23 A. Off the top of my head, no. I think it 24 was a significant amount of time given that we were 25 up against a deadline. But off the top of my head,</p>	<p style="text-align: right;">Page 80</p> <p>1 subsequently. Off the top of my head, I don't know 2 what Ph.D. he has, but it's likely -- I believe he's 3 an economist. 4 Q. Ellman, B. Ellman? 5 A. Brian Ellman, I think he has an MBA. I 6 don't remember exactly where the MBA is from. He's 7 an economist and he's a principal. 8 Q. M. Johnson? 9 A. Michaela Johnson, my understanding is a 10 manager is below the level of a partner but is quite 11 experienced, has quite a bit of industry experience 12 as well as consulting experience. She has an MBA 13 from MIT. 14 Q. I. Karagodsky? 15 A. I believe he was on maybe one call or two 16 calls. I don't know him as well. 17 Q. Do you know what qualifications he may 18 have? 19 A. I don't know in particular. 20 Q. Okay. 21 A. I believe it's all -- I would expect that 22 all to be on their website if I wanted to look it 23 up. 24 Q. Got it. 25 F. Balestrieri?</p>
<p style="text-align: right;">Page 79</p> <p>1 I can't tell you the number of hours. 2 Q. Got it. Got it. 3 So to -- to look, I'm looking at the 4 first -- or rather, the second page, page 2, and 5 there I think the people that you've referenced are 6 listed as professionals with their titles and their 7 hours and rates. 8 A. Right. 9 Q. Do you see that? 10 A. I do. 11 MR. STOY: Object to the form. 12 BY MR. MIGLIACCIO: 13 Q. Can you tell me, you know, Mortimer, 14 R. Mortimer, what background that person has in 15 terms of degrees or qualifications? 16 A. Richard Mortimer. I believe he has a 17 Ph.D. in economics from Berkeley. He's a principal, 18 which means a partner. I don't know the difference 19 between a managing principal and a principal, but I 20 think, broadly speaking, they're -- they're like 21 partners at -- at AG. 22 Q. Fink. S. Fink? 23 A. Stephen Fink is another partner. He was 24 involved -- I -- now I remember he was involved in 25 early discussions in the case but not very much</p>	<p style="text-align: right;">Page 81</p> <p>1 A. F. Balestrieri was not on most of the 2 call -- I don't remember that person being on calls. 3 Q. J. Bernard? 4 A. I don't remember that person being on 5 calls. 6 Q. And you don't know Balestrieri or Bernard, 7 their -- their qualifications? 8 A. No. 9 Q. J. Lu? 10 A. Jessica Lu. 11 Q. Yeah. 12 A. Was on almost all the calls. She has an 13 MBA from MIT. And she's a manager. 14 Q. S. Livingston? 15 A. I don't know who that person is. 16 Q. M. Frea? 17 A. Right. Molly Frea. She has a Ph.D. from 18 University of Pennsylvania. 19 Q. And did you work with her a lot on this? 20 A. I would say less than Jessica and 21 Michaela, Brian, and -- she was less present than 22 those four but she was present on a few of the 23 calls. 24 Q. A. Khan? 25 A. I don't remember working with that person.</p>

<p style="text-align: right;">Page 82</p> <p>1 Q. And N. Mwonga?</p> <p>2 A. I don't remember working with that person</p> <p>3 either.</p> <p>4 Q. T. Radtke?</p> <p>5 A. I don't remember working with that person.</p> <p>6 Q. Okay.</p> <p>7 I. Tibrewal?</p> <p>8 A. And I don't remember working with that</p> <p>9 person.</p> <p>10 Q. Got it.</p> <p>11 Were there any other people that you</p> <p>12 remember working with other than that -- that are --</p> <p>13 that are listed here?</p> <p>14 A. No.</p> <p>15 Q. Okay. Did you review this bill before it</p> <p>16 was submitted?</p> <p>17 A. I submitted my hours, but I don't review</p> <p>18 the hours of -- submitted by Analysis Group.</p> <p>19 Q. Got it. All right.</p> <p>20 I want to ask you some questions about the</p> <p>21 scope of your opinions here in this case.</p> <p>22 Were you -- or are you offering any</p> <p>23 opinions on epidemiology or general causation?</p> <p>24 A. What do you mean by "general causation"?</p> <p>25 Q. Are you offering an opinion whether the</p>	<p style="text-align: right;">Page 84</p> <p>1 to my opinion.</p> <p>2 BY MR. MIGLIACCIO:</p> <p>3 Q. And you're not offering that opinion</p> <p>4 specifically?</p> <p>5 A. No.</p> <p>6 Q. Okay. Fair to say you did not do anything</p> <p>7 to review the epidemiology in this case or</p> <p>8 investigate general causation?</p> <p>9 MR. STOY: Object to the form to the</p> <p>10 extent it misstates his testimony.</p> <p>11 Go ahead.</p> <p>12 THE WITNESS: I would say that I did</p> <p>13 not -- it's not a core opinion of mine to comment on</p> <p>14 general causation. Epidemiology is relevant in</p> <p>15 other ways, broadly speaking.</p> <p>16 When you consider epidemiology as the</p> <p>17 prevalence of other diseases or the characteristics</p> <p>18 of people that take valsartan versus the people that</p> <p>19 don't take valsartan, there are other elements of</p> <p>20 epidemiology that are important for my opinion.</p> <p>21 BY MR. MIGLIACCIO:</p> <p>22 Q. Let me -- let me give you more specific</p> <p>23 question.</p> <p>24 You didn't look at the question of -- you</p> <p>25 didn't look at epidemiology with respect to the</p>
<p style="text-align: right;">Page 83</p> <p>1 contaminated valsartan at issue in this case, it can</p> <p>2 cause cancer?</p> <p>3 A. I'm not rendering any opinions on whether</p> <p>4 valsartan with nitrosamine impurities can cause</p> <p>5 cancer.</p> <p>6 Q. Got it.</p> <p>7 I want to direct you to paragraph 44 of</p> <p>8 your -- of your report.</p> <p>9 A. Okay.</p> <p>10 Q. And what -- you state -- and -- "While</p> <p>11 NDMA and NDEA exposure may be perceived as a</p> <p>12 potential general cancer risk, it has not been</p> <p>13 demonstrated as a risk with respect to any specific</p> <p>14 type of cancer, nor has the presence of nitrosamines</p> <p>15 in certain valsartan products been shown to present</p> <p>16 a general or specific cancer risk."</p> <p>17 Are you offering that opinion or are -- is</p> <p>18 that -- or is that an assumption that you are</p> <p>19 stating?</p> <p>20 MR. STOY: Object to the form.</p> <p>21 You can answer.</p> <p>22 THE WITNESS: That's not a core opinion</p> <p>23 that I'm offering. That is something that I am</p> <p>24 citing -- it's my understanding that I'm citing from</p> <p>25 some literature that I reviewed but it's not central</p>	<p style="text-align: right;">Page 85</p> <p>1 question of whether the contaminated valsartan can</p> <p>2 cause cancer in this case?</p> <p>3 MR. STOY: Object to the form.</p> <p>4 THE WITNESS: In my report, there are some</p> <p>5 sources that I reviewed about what other agencies</p> <p>6 have said about the link between nitrosamines and</p> <p>7 the potential for cancer. But my core opinions do</p> <p>8 not concern that.</p> <p>9 BY MR. MIGLIACCIO:</p> <p>10 Q. Okay. Did you review any dietary studies</p> <p>11 that discussed increased risk of cancer at higher</p> <p>12 levels of NDMA ingestion?</p> <p>13 A. Yes.</p> <p>14 Q. You did?</p> <p>15 A. Strike that.</p> <p>16 I reviewed studies on the concentration of</p> <p>17 NDMA and NDEA in various dietary sources.</p> <p>18 I also reviewed sources that had</p> <p>19 estimates, for example, from the FDA on the</p> <p>20 potential risk of cancer given nitrosamines.</p> <p>21 Q. But you're not offering any opinions with</p> <p>22 respect to those studies?</p> <p>23 A. No.</p> <p>24 Q. Okay. When you say this isn't a core</p> <p>25 opinion that you're offering, does that mean this is</p>

<p style="text-align: right;">Page 86</p> <p>1 not an opinion that you would be testifying to at 2 trial if there was a trial in this case? 3 MR. STOY: Object to the form. 4 THE WITNESS: I wouldn't be testifying on 5 issues of general causation. 6 BY MR. MIGLIACCIO: 7 Q. Got it. 8 I want to direct you to paragraph 68 of 9 your complaint -- of your -- I'm sorry, your -- your 10 report where you discuss the M-E-P-S data. 11 A. The MEPS data. 12 Q. Right. 13 Can you tell me what MEPS data is? 14 A. Sure. I think that paragraph actually 15 does a pretty good job of doing that. 16 MEPS is a data source that's collected by 17 survey. It is a -- supposed to be a representative 18 survey of the U.S. population and it collects data 19 on healthcare utilization, healthcare -- health 20 insurance coverage. It also has information on 21 patient diseases and demographics. And it conducts 22 these surveys yearly. Doesn't necessarily follow 23 the same people all the time, but it conducts a 24 representative survey over time on -- on -- on this 25 type of information.</p>	<p style="text-align: right;">Page 88</p> <p>1 who took affected valsartan" -- and when we're 2 talking about affected valsartan we're talking about 3 the valsartan at issue in this case, right, that has 4 the nitrosamine contamination in it, right? 5 A. To be clear, affected valsartan is -- 6 we -- we would have to define it by an NDC code. 7 Q. Uh-huh. 8 A. We don't know anything more than that. We 9 don't know what the lot was that the patient took 10 the valsartan from. As would be the case for many 11 of the patients in the proposed class. But we know 12 the NDC number which means we know the manufacturer 13 of the valsartan. And that's what -- 14 Q. So that's what you're -- that's what 15 you're talking about when you're talking about 16 affected valsartan? 17 A. Right. So the valsartan may or may not 18 have actually contained nitrosamines but it was from 19 a manufacturer as specified by the NDC code. 20 Q. And you say 38 -- just to -- to continue 21 that sentence, "who took affected valsartan 22 (34.8 percent for diabetes, 20.2 percent for cancer) 23 was similar to the rate of individuals who took 24 non-affected valsartan (38.2 percent for diabetes 25 and 19.1 percent for cancer)."</p>
<p style="text-align: right;">Page 87</p> <p>1 Q. Who -- and who -- what organization 2 sponsors this or -- or, you know, collects the data? 3 A. I believe it's the federal government. 4 Q. Okay. And you directed that this data be 5 pulled for -- for patients who took affected 6 valsartan and non-affected valsartan? 7 A. As well as patients who don't take -- 8 Q. Valsartan at all. 9 A. We wanted to compare that. 10 I believe there are three -- three sets of 11 patients: patients who didn't take valsartan at 12 all, patients who took affected valsartan, patients 13 who took non-affected valsartan. 14 Q. Was -- how big is this sample, you know, 15 what -- what percentage would you say it -- it 16 captured of the population? 17 A. I can't -- I don't know exactly right now 18 but I know it's a representative sample and it's -- 19 the survey design is -- is meant to, you know, 20 survey enough people so that it -- you know, 21 inferences can be made with reasonable certainty on 22 a representative sample of the U.S. 23 Q. And I'm just looking at paragraph 68. 24 You state, "I found that the rate of 25 cancer and diabetes in the MEPS data for individuals</p>	<p style="text-align: right;">Page 89</p> <p>1 A. Correct. 2 Q. Could we agree that 20.2 percent is 3 greater than 19.1 percent? 4 A. It depends on the -- the -- the number -- 5 the number 20.2 and the number 19.1 in complete 6 isolation, if you were just to ask me which number 7 is greater, I would say 20.2. 8 But if you are doing a study on this you 9 would have to ask what the statistical significance 10 is between 20.2 and 19.1. You would also have to 11 ask whether this is clinically significant given -- 12 you know, this is not -- we're not using this as a 13 study of causation at all. 14 You know, you would have to -- you would 15 have to control for a number of different things in 16 order to kind of ask whether there's a clinically 17 and statistically meaningful relationship between 18 affected valsartan and cancer. This is simply 19 descriptive. 20 Q. You haven't done any of those things, 21 statistical study or clinical study on that, right? 22 A. On -- on causation? 23 Q. Yeah. With respect to this paragraph. 24 A. Correct. The goal of this is not to ask 25 whether valsartan could cause cancer -- affected</p>

<p style="text-align: right;">Page 90</p> <p>1 valsartan could cause cancer.</p> <p>2 Q. Got it.</p> <p>3 Do you have any experience -- we talked, I</p> <p>4 think at some length, about your -- you know, your</p> <p>5 work as a hospitalist, as -- as a physician.</p> <p>6 You know, do you have any experience</p> <p>7 setting up a medical monitoring program?</p> <p>8 A. No.</p> <p>9 MR. STOY: Object to the form.</p> <p>10 You can answer.</p> <p>11 THE WITNESS: Okay.</p> <p>12 No. By "medical monitoring" -- do you</p> <p>13 want to be a little bit more specific, actually,</p> <p>14 before I say --</p> <p>15 BY MR. MIGLIACCIO:</p> <p>16 Q. Yeah.</p> <p>17 Well, what experience do you have</p> <p>18 monitoring at-risk patient populations? I'll put it</p> <p>19 that way.</p> <p>20 A. Patients at risk for -- for what?</p> <p>21 Q. For cancer.</p> <p>22 A. As a hospitalist, I don't have -- it's not</p> <p>23 part of my job as a hospitalist to monitor at-risk</p> <p>24 patient populations for diseases that have not yet</p> <p>25 become known.</p>	<p style="text-align: right;">Page 92</p> <p>1 Q. They haven't specifically focused on that?</p> <p>2 A. They have not specifically focused on the</p> <p>3 process of making cancer diagnoses.</p> <p>4 Q. What -- what -- and it sounds like it's a</p> <p>5 pretty broad or general interest of yours. Can you</p> <p>6 explain a little bit more about, you know, are you</p> <p>7 writing it -- that as an economist? Like, what is</p> <p>8 the -- like, can you give me some more meat on the</p> <p>9 bone for that?</p> <p>10 MR. STOY: Object to the form.</p> <p>11 THE WITNESS: I'm writing about this as</p> <p>12 both a clinician and an economist. The -- I've</p> <p>13 written economics papers on the process of making</p> <p>14 diagnoses and how to understand kind of, you know,</p> <p>15 various tradeoffs between overdiagnosis versus</p> <p>16 underdiagnosis as well as the accuracy of the</p> <p>17 diagnosis process.</p> <p>18 Some -- some providers may make both more</p> <p>19 Type I errors and Type II errors, and it's not a</p> <p>20 tradeoff between those providers and other</p> <p>21 providers.</p> <p>22 So this economics literature is focused on</p> <p>23 systems of care, provider behavior, and kind of</p> <p>24 specific objects of diagnostic errors such as Type I</p> <p>25 errors and Type II errors.</p>
<p style="text-align: right;">Page 91</p> <p>1 Q. Got it.</p> <p>2 Have you -- have you done anything to</p> <p>3 monitor at-risk patient populations for diseases</p> <p>4 that have not become known? Have you done that in</p> <p>5 any other part of your work other than a</p> <p>6 hospitalist, like, you know, as -- in -- in academia</p> <p>7 or -- or elsewhere?</p> <p>8 MR. STOY: Object to the form.</p> <p>9 THE WITNESS: In academia, part of my</p> <p>10 research agenda is on the process of making</p> <p>11 diagnoses and part of that involves studying the</p> <p>12 properties of diagnostic tests and the -- the kind</p> <p>13 of human behavior that goes into the process of</p> <p>14 making diagnosis. So that would be related to this</p> <p>15 idea of screening for diagnoses, identifying</p> <p>16 diagnoses. That -- that's -- I think that's all I</p> <p>17 can say.</p> <p>18 I've studied it from an academic</p> <p>19 perspective that's interested in the process of</p> <p>20 making diagnoses.</p> <p>21 BY MR. MIGLIACCIO:</p> <p>22 Q. The process of making diagnoses, have they</p> <p>23 related to cancers?</p> <p>24 A. They could certainly be applied to the</p> <p>25 process of diagnosing cancers.</p>	<p style="text-align: right;">Page 93</p> <p>1 I have applied this type of research for a</p> <p>2 clinical audience as well. I'm working on an</p> <p>3 opinion piece in JAMA for a clinical audience that</p> <p>4 talks about diagnostic efficiency, what makes for</p> <p>5 diagnostic errors, and how can we improve the</p> <p>6 quality of diagnoses.</p> <p>7 BY MR. MIGLIACCIO:</p> <p>8 Q. These -- this research, is it fair to say,</p> <p>9 has not focused on specific patient subpopulations</p> <p>10 who are at risk for cancer?</p> <p>11 A. It has not specifically focused on that,</p> <p>12 so -- population. It has kind of viewed the process</p> <p>13 of diagnoses more broadly.</p> <p>14 But, you know, the diagnosis of cancer is</p> <p>15 one of the major -- one of the -- one of the most</p> <p>16 important kind of domains of diagnostic</p> <p>17 decision-making. I would say cancer is -- is quite</p> <p>18 important in terms of diagnostic error,</p> <p>19 misdiagnoses, and how we can improve our process of</p> <p>20 making diagnoses.</p> <p>21 Q. Do you have -- I think -- now -- I think I</p> <p>22 asked this one way. I'll ask it another way.</p> <p>23 Do you have any experience administering a</p> <p>24 medical monitoring program --</p> <p>25 A. No.</p>

<p>Page 94</p> <p>1 Q. -- to monitor a group?</p> <p>2 Before you offered your opinion here in</p> <p>3 this case, have you had any litigation experience</p> <p>4 with opining relating to -- offering an opinion with</p> <p>5 respect to medical monitoring?</p> <p>6 A. With respect to medical monitoring for</p> <p>7 patients at risk for cancer?</p> <p>8 Q. Yes.</p> <p>9 A. No.</p> <p>10 Q. Okay. Any other aside from that narrow</p> <p>11 group, anything broader?</p> <p>12 A. Some of my other opinions relate to</p> <p>13 physician behavior. And physician behavior -- an</p> <p>14 important part of physician behavior is deciding</p> <p>15 whether a certain treatment is appropriate for a</p> <p>16 patient or deciding whether a certain test is</p> <p>17 appropriate for a certain patient. And that relates</p> <p>18 to diagnoses, making diagnoses.</p> <p>19 Q. Okay. Do you know of any medical</p> <p>20 monitoring programs that have been, you know,</p> <p>21 approved by courts?</p> <p>22 MR. STOY: Object to the form.</p> <p>23 THE WITNESS: I haven't researched which</p> <p>24 medical monitoring programs have been approved by</p> <p>25 courts.</p> <p>Page 95</p> <p>1 BY MR. MIGLIACCIO:</p> <p>2 Q. Got it.</p> <p>3 Have you looked or researched into -- of</p> <p>4 any medical monitoring programs in the United States</p> <p>5 that are not approved by courts? And I'm talking</p> <p>6 about programs outside of the guidelines that you</p> <p>7 reference in your report.</p> <p>8 MR. STOY: Object to form.</p> <p>9 THE WITNESS: Can you state that again,</p> <p>10 please?</p> <p>11 BY MR. MIGLIACCIO:</p> <p>12 Q. Yeah.</p> <p>13 Have you looked at or researched any</p> <p>14 medical monitoring programs in the United States</p> <p>15 that -- that aren't court-approved, you know, like</p> <p>16 there's the 9/11 medical monitoring program, is that</p> <p>17 something you've looked at, ever?</p> <p>18 MR. STOY: Object as to form.</p> <p>19 THE WITNESS: I can't recall whether I've</p> <p>20 looked at that or not, whether I've looked at the</p> <p>21 9/11 program.</p> <p>22 BY MR. MIGLIACCIO:</p> <p>23 Q. For -- that -- that was just an example.</p> <p>24 I mean, you know, there may be others.</p> <p>25 But you can't recall any others?</p>	<p>Page 96</p> <p>1 A. No.</p> <p>2 Q. Okay. I want to direct you to</p> <p>3 paragraph 32 in your report.</p> <p>4 A. Okay.</p> <p>5 Q. Okay. And I'm -- I'm going down toward</p> <p>6 the -- I guess it's the one -- second -- the third</p> <p>7 sentence where -- that begins, "In contrast."</p> <p>8 And it says, "In contrast the screening</p> <p>9 guidelines I discuss in this section refer to the</p> <p>10 testing of an apparently healthy, asymptomatic</p> <p>11 target population."</p> <p>12 A. Right.</p> <p>13 Q. Would you agree that the screening</p> <p>14 guidelines that you have discussed in this report</p> <p>15 are for the average risk population?</p> <p>16 A. I am not sure about that. The</p> <p>17 guidelines -- some of these guidelines are for</p> <p>18 smokers, for example. I don't know what you mean by</p> <p>19 "average risk population."</p> <p>20 I -- here, I say patients without</p> <p>21 symptoms.</p> <p>22 Q. Aside from smokers -- smokers have a</p> <p>23 special set of guidelines, right?</p> <p>24 A. Right.</p> <p>25 Q. I think you discussed them. And maybe you</p> <p>Page 97</p> <p>1 might have discussed one other. But smokers have --</p> <p>2 they get low-dose CT scans.</p> <p>3 What is the guideline for smokers again?</p> <p>4 A. I believe that's in my report in</p> <p>5 Figure number 1.</p> <p>6 Q. Figure 1. Okay.</p> <p>7 A. Yeah. Would you like to turn to that?</p> <p>8 Q. Sure.</p> <p>9 A. Okay. So for lung cancer, the USPSTF has</p> <p>10 a recommendation of "B" for adults aged 50 to 80</p> <p>11 with a 20 pack-year smoking history who currently</p> <p>12 smoke or quits within the last 15 years.</p> <p>13 Q. And you reference the USPSTF; is that</p> <p>14 right?</p> <p>15 A. Yes. Uh-huh.</p> <p>16 Q. Who -- what organization is the USPSTF?</p> <p>17 A. The USPSTF is the U.S. Preventive Services</p> <p>18 Task Force, and that is the main organization that</p> <p>19 comes up with guidelines related to preventive</p> <p>20 services.</p> <p>21 My boss is a member of this task force.</p> <p>22 It's a -- it's -- it's a high profile task force</p> <p>23 that considers evidence on various -- various</p> <p>24 population-based guidelines -- I'm sorry, various</p> <p>25 population-based interventions that you could do</p>
---	--

<p style="text-align: right;">Page 98</p> <p>1 or -- or -- or screening tests. And it issues 2 recommendations based on this evidence. 3 Q. Have you ever been a member of the USPS -- 4 USPSTF? 5 A. No. 6 Q. Okay. The NCI, you referenced the 7 National Cancer Institute. What -- what does the 8 NCI do? 9 A. The National Cancer Institute is an 10 organization that is an authority on cancer, 11 various -- and in this -- and in this setting, the 12 NCI -- I refer to the NCI if it has any guidelines 13 with respect to screening of cancer. 14 Q. Are you familiar with the National 15 Comprehensive Cancer Network, or NCCN? 16 A. I've heard of that organization. 17 Q. Do -- what do you know about the NCCN? 18 A. I know that that organization also puts 19 out quality measures on cancer care. I'm not sure I 20 know very much more about the NCCN. 21 Q. Is it fair to say that the development and 22 treatment -- the development and establishment of 23 treatment guidelines for cancer has not been a focus 24 area of your research; is that fair to say? 25 MR. STOY: Object to the form.</p>	<p style="text-align: right;">Page 100</p> <p>1 A. Yeah. Let's turn to the CV. 2 Q. Okay. 3 A. This is in -- under working paper number 2 4 on page A-2. 5 Q. A-2? 6 A. Yeah. 7 Q. Okay. 8 "Fixing Misallocation with Guidelines"? 9 A. Correct. 10 Q. "Awareness versus Adherence"? 11 A. Correct. 12 Q. Got it. 13 NBER, National Bureau of Economic 14 Research? 15 A. Exactly. 16 Q. And you have an appointment or -- with 17 that group right now? 18 A. I do. I have an affiliation with that 19 group. 20 Q. Okay. You've had that for a long time? 21 A. I've had -- well, it's something that you 22 need to be nominated and I guess approved for by 23 the -- this is something that I got in my first year 24 as a faculty. It's called -- it's in my CV under 25 "Faculty Research Fellow, National Bureau of</p>
<p style="text-align: right;">Page 99</p> <p>1 THE WITNESS: Could you say that again? 2 BY MR. MIGLIACCIO: 3 Q. That is it fair to say that the 4 development and establishment of treatment 5 guidelines for cancer has not been a focus of your 6 research? 7 A. The -- 8 MR. STOY: Object to the form. 9 THE WITNESS: The development and -- of 10 cancer -- the development of cancer guidelines has 11 not been a focus of my research. I have focused on 12 other types of guidelines in my research. 13 BY MR. MIGLIACCIO: 14 Q. What other types of guidelines have you 15 focused on? 16 A. Specifically, I focused on guidelines for 17 the treatment of atrial fibrillation, which in -- 18 you know, which are similar in ways that you are 19 developing guidelines based on evidence. There are 20 risks and benefits for recommending a certain course 21 of action for a broad set of patients. And in this 22 particular research, I'm interested in how providers 23 respond to guidelines. 24 Q. So could you -- could you direct me to any 25 papers you have on that subject?</p>	<p style="text-align: right;">Page 101</p> <p>1 Economic Research." 2 Q. Got it. Got it. Got it. Okay. 3 And this working paper was published in 4 July of last year? 5 A. That was the most recent version of the 6 paper, correct. 7 Q. Oh. Has -- it's changed over time? Have 8 there been -- 9 A. Yeah, you can see previous versions of the 10 paper if you go to that website. 11 Q. Got it. Got it. 12 And have they all -- have they all related 13 to atrial fibrillation or have they -- those papers 14 changed their focus? 15 A. The -- the empirical focus of the paper 16 has been on atrial fibrillation throughout. The 17 paper of course is motivated much more broadly. 18 It's motivated about how do we form guidelines, how 19 do physicians respond to guidelines; if you're 20 trying to optimize outcomes for a patient 21 population, how should you best make use of 22 guidelines. 23 Q. Your coauthors, there are -- it looks like 24 one, two, three -- four other authors? 25 A. Right.</p>

Page 102

1 Q. Have they been the same authors on -- on
 2 this series of papers over time or has it -- has it
 3 changed?
 4 A. I believe it's been the same for -- ever
 5 since we've had a working paper, it's been the same.
 6 Q. Are they physicians or economists or both?
 7 A. Both.
 8 Q. All right. So all four are
 9 physician/economists?
 10 A. Oh, sorry. Two of them are -- three --
 11 two of them economists. Leila Agha and Jason
 12 Abaluck are economists. Daniel Singer is a
 13 physician. And Diana Zhu is a Ph.D. student in
 14 economics.
 15 Q. Got it.
 16 Have you contributed in any way to the
 17 development of a USP -- P -- USPSTF guideline
 18 relating to cancer?
 19 A. No.
 20 Q. Have you contributed to the evidence-based
 21 reviews provided by the NCI as referenced in your
 22 report, I think paragraph 35?
 23 A. Paragraph 35.
 24 Q. I mean, I'm not saying that you did. I'm
 25 just asking. That -- that's my -- I think you --

Page 103

1 you discuss the evidence-based review that NCN
 2 does -- NCI does?
 3 A. Uh-huh.
 4 No, I have not.
 5 Q. Okay. Do you consider yourself to be an
 6 expert in the formulation of the derivation of the
 7 original clinical guidelines in the screening for
 8 cancers?
 9 A. The formulation or derivation?
 10 Q. Uh-huh.
 11 A. Could you clarify that?
 12 Q. Or the creation --
 13 A. Okay. Do I --
 14 Q. -- of the clinical guidelines?
 15 A. Okay. Sorry, could you restate the
 16 question?
 17 Q. Yeah.
 18 A. Do I consider myself an expert in?
 19 Q. In the creation of clinical guidelines for
 20 the screening of cancers?
 21 A. No.
 22 MR. STOY: Object to the form.
 23 Go ahead.
 24 BY MR. MIGLIACCIO:
 25 Q. Can we agree that it can take a long time

Page 104

1 to get screening procedures added to national
 2 guidelines at USPSTF?
 3 MR. STOY: Object to the form.
 4 THE WITNESS: I don't know what I would
 5 characterize as a long time. I think it's --
 6 there's a reason why we don't -- we require a
 7 certain level of evidence in order to change a
 8 guideline. Because evidence is incremental and
 9 because evidence can change we want to have a
 10 certain level of certainty whenever we have a type
 11 of guideline.
 12 And as I discuss in my report, when the
 13 guidelines are for screening, we have to be very
 14 cognizant of the potential risks of screening. And
 15 that's why I think we would have just a higher bar
 16 to -- to, you know, recommending a guideline for
 17 a -- a new guideline for screening.
 18 BY MR. MIGLIACCIO:
 19 Q. And for -- for example, you know, can we
 20 agree that it took many years before low-dose CT
 21 scans were added as a guideline for tobacco users?
 22 MR. STOY: Object to form.
 23 THE WITNESS: I don't know the particular
 24 history of that. Are you specifically referring to
 25 low-dose CT scans as opposed to chest x-rays?

Page 105

1 BY MR. MIGLIACCIO:
 2 Q. Uh-huh.
 3 A. I would need to look into the history of
 4 when low-dose CT scans were available. And, you
 5 know, there is a certain -- as I discuss in my
 6 report, one of the considerations of using a certain
 7 technology for screening is characterizing the
 8 performance of that technology in terms of false
 9 positives and false negatives as well as
 10 characterizing any risk that may come from using
 11 this new technology of a CT scan versus a chest
 12 x-ray. I would imagine even if it's low dose, there
 13 would be much more radiation than the chest x-ray.
 14 Q. Can you -- there'd be more radiation from
 15 a low-dose CT scan than a chest x-ray?
 16 A. Than a chest x-ray. I would imagine that
 17 a CT scan -- a usual CT scan has I think orders of
 18 magnitude, more radiation than a single plain film
 19 chest x-ray, and even if it's a low-dose CT scan I
 20 would have to -- I would have to look at -- review
 21 the evidence, but I think there would still be some
 22 concern of higher radiation from a low-dose CT scan
 23 than a chest x-ray.
 24 Q. But you're not offering that opinion here
 25 and now? You don't know the answer to that without

<p style="text-align: right;">Page 106</p> <p>1 reviewing the information?</p> <p>2 A. Correct. I don't know in that specific</p> <p>3 case. But I would -- and what -- but what is</p> <p>4 central to my opinions is that all of these</p> <p>5 screening tests have potential risks both in terms</p> <p>6 of false positives and false negatives so that's why</p> <p>7 you need to understand the testing characteristics</p> <p>8 for a certain screening procedure but also some of</p> <p>9 these screening procedures have physical risks such</p> <p>10 as radiation.</p> <p>11 Q. I will be going through more of your</p> <p>12 report. I think you -- so to -- I think you have --</p> <p>13 you have stated in your report that certain</p> <p>14 thresholds need to be met.</p> <p>15 And I think that's what you're saying now</p> <p>16 before a screening guideline is made; fair to say?</p> <p>17 A. Correct.</p> <p>18 Q. And I'll direct you to some portions of</p> <p>19 your report on that in -- in a moment.</p> <p>20 MR. STOY: Nick, before we --</p> <p>21 MR. MIGLIACCIO: Yeah.</p> <p>22 MR. STOY: If you're about to jump to</p> <p>23 another topic, we've been going a little over an</p> <p>24 hour now.</p> <p>25 MR. MIGLIACCIO: Yes.</p>	<p style="text-align: right;">Page 108</p> <p>1 of asymptomatic patients."</p> <p>2 And then you say below, "In my opinion,</p> <p>3 the evidence related to NDMA and NDEA in affected</p> <p>4 valsartan fails to meet the bar required to use a</p> <p>5 uniform screening process on a broad population of</p> <p>6 asymptomatic patients."</p> <p>7 Do you have a -- what do you mean by "a</p> <p>8 high threshold must be met for a risk factor to be</p> <p>9 incorporated into a guideline to screen</p> <p>10 populations"?</p> <p>11 A. I believe there's another part of my</p> <p>12 report that kind of elaborates on this threshold.</p> <p>13 Q. Okay.</p> <p>14 A. Right. So I think paragraph 35 gets at</p> <p>15 this here. Here I talk about the USPSTF guidelines.</p> <p>16 But I think it's -- it's broadly applicable to the</p> <p>17 general framework we would need to consider a</p> <p>18 threshold.</p> <p>19 Would you like me to read the relevant</p> <p>20 sentence?</p> <p>21 Q. Sure.</p> <p>22 A. "USPSTF recommendations are based on a</p> <p>23 framework which considers questions such as whether</p> <p>24 screening may reduce morbidity; whether sufficiently</p> <p>25 sensitive and specific screening tests are</p>
<p style="text-align: right;">Page 107</p> <p>1 MR. STOY: Would this be a good time for a</p> <p>2 quick break?</p> <p>3 MR. MIGLIACCIO: Yeah, I think so. Why</p> <p>4 don't we go on off the record and we can discuss how</p> <p>5 long.</p> <p>6 MR. STOY: Okay.</p> <p>7 THE VIDEOGRAPHER: Off the record at</p> <p>8 10:19 a.m. Pacific time.</p> <p>9 (Whereupon, a brief recess was taken.)</p> <p>10 THE VIDEOGRAPHER: We are back on the</p> <p>11 record. The time is 10:44 a.m. Pacific time.</p> <p>12 BY MR. MIGLIACCIO:</p> <p>13 Q. Okay. Great. All right.</p> <p>14 Dr. Chan, I think we were talking before</p> <p>15 the break about thresholds and I want to ask you</p> <p>16 some questions about that.</p> <p>17 I direct you to paragraph 16 of your</p> <p>18 report.</p> <p>19 A. Okay.</p> <p>20 Q. Okay. And I want to direct you to midway</p> <p>21 through it, there's a sentence that says, "While</p> <p>22 there are many risk factors for the nine types of</p> <p>23 cancers identified by Plaintiffs in this case, a</p> <p>24 high threshold must be met for a risk factor to be</p> <p>25 incorporated into a guideline to screen populations</p>	<p style="text-align: right;">Page 109</p> <p>1 available; whether early detection and treatment</p> <p>2 makes a difference in morbidity; and what the</p> <p>3 potential harms of screening and subsequent</p> <p>4 screening-implied treatment may be."</p> <p>5 So this sentence does not specifically</p> <p>6 mention the agent in question, such as NDMA and</p> <p>7 NDEA, but the agent in question and the potential</p> <p>8 cancer type related to this agent bears on many of</p> <p>9 these factors in this sentence such as whether a</p> <p>10 screening may reduce morbidity.</p> <p>11 The agent needs to be sufficiently</p> <p>12 associated with cancer in the sense that we expect</p> <p>13 sufficiently high number of patients associated with</p> <p>14 this agent or this risk factor, for screening to</p> <p>15 reduce morbidity.</p> <p>16 Q. And you're -- but you are not offering, as</p> <p>17 we discussed, a general causation opinion here,</p> <p>18 you're not offering an opinion on -- on what you've</p> <p>19 just said?</p> <p>20 A. I'm not --</p> <p>21 MR. STOY: Object to the form.</p> <p>22 Sorry, Doctor.</p> <p>23 THE WITNESS: It's not my assignment to</p> <p>24 offer an opinion on causation, but as I mentioned</p> <p>25 earlier, I refer to sources that have some estimate</p>

<p style="text-align: right;">Page 110</p> <p>1 of the associated -- a potential associated cancer 2 risk. 3 So, for example, in paragraph 88 of the 4 report, I cite a very conservative estimate, meaning 5 like a worst -- somewhat of a worst-case scenario 6 that the FDA has estimated that the highest dose of 7 valsartan, one additional cancer case may be 8 expected per 8,000 patients exposed to NDMA 9 containing valsartan. And one additional cancer 10 case maybe expected per 18,000 patients exposed to 11 NDEA containing valsartan. 12 Q. Yes. And I -- yeah, I do -- I do see 13 that. 14 "The maximum exposure to NDMA from 15 affected valsartan is approximate" -- "of 29,498 16 micrograms is approximately 12 times the lifetime 17 acceptable intake, implying an excess cancer risk of 18 12 in 100,000 or approximately 1 in 8,000," right, 19 of paragraph 92? 20 A. Yes. I was reading paragraph 88 but part 21 of 92 also mentions. 22 Q. I'm sorry, I think I said paragraph 93, 23 but I may have that wrong, I may have said -- 24 given -- yeah, I was referring to paragraph 93. 25 A. Okay. Yep, I see that you're reading</p>	<p style="text-align: right;">Page 112</p> <p>1 my saying that the R or the threshold is quite high. 2 If you look at the risk factors that make 3 it into a screening guideline, as I read, there are 4 a number of different criteria that need to be met 5 and one of those criteria include a high risk of 6 cancer. 7 BY MR. MIGLIACCIO: 8 Q. And is your opinion, is that 1 in 8,000 is 9 not a high risk of cancer? 10 A. I think compared to some of the other 11 risks that I mention in my report it's much lower. 12 Q. Where do you draw the line as a high risk 13 or low risk, what is the -- what is the numerical 14 threshold? Do you have one? 15 A. I'm not sure if I can say precisely where 16 it is, but I can say that 1 in 8,000 is an order or 17 two of magnitude lower than some of the other risks 18 that we have and many of these other risks don't 19 make it into broad population guidelines. 20 Q. What other risks that we have are you 21 referring to? 22 A. Yeah, it's in my report. If I can refer 23 to that. 24 For example, radiation, I think is one 25 thing that I do mention in my report.</p>
<p style="text-align: right;">Page 111</p> <p>1 paragraph 93. 2 Q. Yeah. 3 A. And I was reading from 88. 4 Q. Is this 1 in 8,000 risk an acceptable 5 cancer risk to you as a physician? 6 MR. STOY: Object to the form. 7 THE WITNESS: I'm not sure what you mean. 8 MR. STOY: I'm sorry. I just want to add 9 an objection to the extent it's outside the scope 10 of -- of Dr. Chan's report. 11 Go ahead. I'm sorry. 12 THE WITNESS: Right. I'm not sure what 13 you mean by "acceptable cancer risk," and I'm 14 commenting on this not as a physician per se, but in 15 my analysis of what organizations like the USPSTF 16 and NCI have -- what types of risk factors have made 17 it into a guideline. 18 So if you look at Figure 1 and Figure 2 of 19 my report, particularly Figure 2, there are a number 20 of different risk factors that are associated with 21 all of these nine cancers. And in my report, I talk 22 about the magnitude of some of these risk factors. 23 Some of these risk factors are quite -- 24 much higher than the 1 in 8,000 for NDMA and 1 in -- 25 did I say 18,000 for NDEA. And that is the basis of</p>	<p style="text-align: right;">Page 113</p> <p>1 Yes, so I believe this is in figure -- 2 this is in Figure 2 and paragraph 42 of my report. 3 The risk for lung cancer including one 4 first degree family member affects -- so family 5 history, you know, you have, like, a relative risk 6 of 2.59 -- 57. You have radiation therapy at 7 relative risk of two. 8 And if you convert these to number of 9 people you would need to screen to get one cancer, 10 they would be much higher than the number that I 11 just cited for NDMA and NDEA. 12 The relative risk for lung cancer of 8 13 of -- of a 20- to 30-pack history of smoking is 8 -- 14 8.2. So that's substantially even higher than the 15 other relative risk that I just cited. 16 And if you convert these to number of 17 people you would need to screen to find one patient 18 with a -- who truly has the cancer they would be 19 much, much -- much lower than you would need for 20 NDMA and NDEA. 21 Q. What is the type of -- of screening that's 22 done for lung cancer? 23 A. I believe that's in my report. That 24 should be in Figure 3. 25 So in Figure 3, there are a number of</p>

<p style="text-align: right;">Page 114</p> <p>1 different potential options and the one that is 2 recommended is low-dose CT scan currently. 3 Q. And as you testified earlier, that may 4 have a higher radiation dosage than a regular x-ray? 5 A. Higher, correct. 6 Q. Higher. Got it. 7 So that there is, in your opinion, a 8 certain degree of risk that is associated with a 9 low-dose CT scan? 10 A. Right. 11 Q. Got it. 12 I see in paragraph 42, you cite to 13 epidemiology studies in footnotes 59 and 60. 14 A. Uh-huh. 15 Q. But you have not done so with respect to 16 NDMA, you have not looked at the -- right, at least 17 I don't see the citations for the -- for 18 epidemiology studies and relative risk associated 19 with NDMA. Or if I am missing something you can 20 point it to me. 21 MR. STOY: Object to the form. Object to 22 the extent it mischaracterizes the report. 23 Go ahead. 24 THE WITNESS: The report does cite the FDA 25 calculation for the number of additional cases of</p>	<p style="text-align: right;">Page 116</p> <p>1 the most conservative in the sense that they are 2 considering the highest dose of NDMA and NDEA and 3 over a long period of time. 4 Q. And you haven't looked at this, though, to 5 offer that opinion, you're -- this is like ancillary 6 to -- to your opinion? 7 A. This is -- 8 MR. STOY: Object -- hang on, Doctor. 9 Object to the form of the question to the 10 extent it mischaracterizes. 11 Go ahead. 12 THE WITNESS: I would characterize this as 13 this is an input into my opinion in the sense that 14 I've looked at a range of sources that have various 15 linkages between NDMA and affected valsartan to 16 cancer. Some of which are no linkage. 17 And if I take the most conservative 18 estimate, meaning the highest risk, and compare that 19 to some of the other risks that I list in 20 paragraph 42 and Figure 2, that linkage between NDMA 21 and NDEA and kind of more importantly the linkage 22 between affected valsartan and cancer is low. 23 BY MR. MIGLIACCIO: 24 Q. And, you know, to be clear, you have not 25 looked at any of the other plaintiffs' expert</p>
<p style="text-align: right;">Page 115</p> <p>1 cancer potentially in -- you know, with the highest 2 dose of NDMA and NDEA. And that I think can be 3 converted to a relative risk. I'm not sure if in 4 the report we've done that, but it could be -- it 5 could certainly be converted to a relative risk. 6 BY MR. MIGLIACCIO: 7 Q. Fair to say, though, the sole basis for 8 your opinion, then, on the -- I'll -- what I'll say 9 is your view that there's a low relative risk, and 10 you can tell me if I'm wrong about that, is the FDA 11 citation that you give here; is that fair? 12 A. I don't think it's the sole basis. There 13 are other sources that I do cite that are even -- 14 that have a lower to potential -- other sources 15 don't demonstrate a risk of cancer in humans to -- 16 you know, based on on NDMA or NDEA, and I believe 17 I've cited one of those sources. 18 So I think there's a range of potential 19 linkages between NDMA and NDEA to cancer, in 20 particular, valsartan -- affected valsartan to 21 cancer. As I said earlier, causation is not, you 22 know, my -- my main area of focus here. 23 But the magnitude of any potential linkage 24 is relevant to my opinions and that's where I 25 believe the FDA estimate of the linkage is perhaps</p>	<p style="text-align: right;">Page 117</p> <p>1 reports other than the ones we have discussed 2 already today? 3 A. Correct. 4 Q. So the threshold that you're identifying, 5 I see that you cite to paragraph 40 in -- you cite 6 in paragraph 35 to a study or an article in 7 footnote 47. 8 Do you see that? By Vearrier and 9 Greenberg? 10 A. Correct. 11 Q. That -- that's the sole citation you have 12 for that -- that sentence that you read to me 13 earlier about what USPSTF recommendations are based 14 on, right? 15 A. That is the only citation in that 16 footnote, but I don't think it's -- it's not really 17 the only source that I have for that statement. In 18 fact, that might be a -- you know, this -- this 19 citation is about the implementation of medical 20 monitoring programs following potentially hazardous 21 exposures, a medical-legal perspective, this seems 22 like it's a comment -- it's a perspective in a 23 framework on how we should think about medical 24 monitoring programs. 25 But there -- if you read all of the USPSTF</p>

<p style="text-align: right;">Page 118</p> <p>1 recommendations, which are in separate cites, I 2 don't kind of list them as cites for that particular 3 sentence, but they could very well be related. If 4 you read any of those USPSTF recommendations, they 5 do walk you through a way of thinking about this 6 framework. 7 Q. So fair to say there is -- you don't 8 have -- or you're not offering a numerical 9 threshold -- or you're not offering an opinion that 10 there is a numerical threshold, but you just, you 11 know, add as to whether a monitoring program would 12 be appropriate? 13 A. I think based on the sentence that I read 14 in paragraph 35, this is a multidimensional 15 consideration. It can -- it depends on a number of 16 different considerations and therefore, if it 17 depends on all of these things, it shouldn't -- one 18 threshold, it wouldn't be a single scale or 19 threshold based on the risk of cancer. 20 That's one important consideration, but 21 there are other considerations that I just read from 22 that sentence. 23 Q. Uh-huh. So when you talk about threshold, 24 you say "a high threshold," you know, I think you 25 used that terminology maybe once, twice, three times</p>	<p style="text-align: right;">Page 120</p> <p>1 Does that mean a group of people who are 2 not at increased risk, excluding of course the 3 smokers that we've talked about? 4 A. No. I think by definition, any population 5 that you're going to specify screening for has to be 6 at increased risk. What I mean by asymptomatic 7 means that they don't have symptoms. 8 So if you are talking about lung cancer, 9 they don't have a cough that you want to kind of 10 evaluate further. If you're talking about colon 11 cancer they don't have abdominal pain. They don't 12 have symptoms, but they could be at increased risk. 13 Q. What are the increased risks that are -- 14 that are found in the broad asymptomatic population? 15 A. I believe that's in Figure 2. 16 Q. Okay. 17 A. Figure 2, I list the number of different 18 risk factors for each type of cancer in the last 19 column, Figure 2. 20 Q. Colorectal. And we've discussed this 21 already, colorectal and lung, there are these 22 additional screening guidelines for people at 23 increased risk, right? 24 A. There are guidelines to screen certain 25 populations based on age in the setting of</p>
<p style="text-align: right;">Page 119</p> <p>1 in the report. That's -- what you're referring to 2 is this paragraph? 3 A. What I -- yeah, when I say "threshold" I 4 don't mean a single number that is -- maps to the 5 risk of cancer. What I mean is a decision-making 6 threshold that considers a number of different 7 factors and a lot of these factors are 8 individualized for a clinician to reach a 9 decision-making threshold for a given patient. 10 And there's a separate threshold that you 11 might make for a guideline to screen a population of 12 asymptomatic patients and this would also similarly 13 consider a number of different factors here that I 14 just read. 15 Q. And that's -- that second threshold is the 16 one that I -- I was talking about. 17 A. Right. 18 Q. And that's what I think you're referring 19 to in your report for -- for the guidelines? 20 A. Correct. 21 Q. Going back to paragraph, I think 32, and I 22 think I asked you about the -- the types of -- the 23 screening guidelines that you have cited elsewhere 24 in your report and -- and you've referred to a broad 25 population of asymptomatic patients.</p>	<p style="text-align: right;">Page 121</p> <p>1 colorectal cancer, and based on age and smoking 2 history in the setting of lung cancer. 3 Q. Got it. 4 Those are used to define populations for 5 an asymptomatic testing but -- and in -- correct? 6 A. I'm sorry? 7 Q. I said those are used to define the 8 populations for asymptomatic testing? 9 A. Those are used to -- correct. Correct. 10 Q. Would you agree that blood tests and stool 11 tests proposed by Dr. Kaplan are not highly 12 invasive? 13 MR. STOY: Object to the form. 14 Go ahead. 15 THE WITNESS: Do you want to define 16 "invasive"? 17 BY MR. MIGLIACCIO: 18 Q. Yeah, I mean, I think you talk about the 19 risks that certain test -- tests may -- may have for 20 people. And I think you said physical risks 21 earlier? 22 A. Right. 23 Q. I think you talk about risks. Do blood 24 tests or stool tests present physical risks to 25 patients?</p>

<p style="text-align: right;">Page 122</p> <p>1 A. They don't -- you're right that they don't 2 present physical risks. The physical risks would be 3 quite minor. But they are not great tests. And if 4 you look at Figure 3, you'll see that there's really 5 not a recommendation to use many blood tests in most 6 cases. 7 And even for stool tests, you know, a lot 8 of people have colonoscopies rather than fecal -- 9 what are called blood -- you know, basically stool 10 tests for colon cancer. 11 So what I also talk about in my report is 12 not just the risk of a physical harm from the 13 screening procedure, it is the risk of getting a 14 false positive and false negative. 15 And if you use tests with lower 16 sensitivity or specificity to screen in a population 17 that is not at particularly high risk for the 18 cancer, you're at risk for getting false positives 19 and false negatives, and that can harm the patient. 20 There are ways in which that can set the patient 21 down a path that would be harmful. 22 Q. You talk about scrutiny-dependant cancers. 23 I think in paragraph 53. 24 A. Uh-huh. 25 Q. And I think you reference four cancers:</p>	<p style="text-align: right;">Page 124</p> <p>1 to treat the cancer has not necessarily gotten 2 better. And the underlying nature of the cancer 3 when it is, you know, newly detectable may not imply 4 anything toward quality of life or for life 5 expectancy. 6 So the definition of scrutiny-dependent 7 could change over time depending on the technology 8 to screen and the technology to treat. 9 Q. Got it. 10 Do you have any evidence, though, or any 11 opinion right now that any of those seven cancers I 12 just detailed are scrutiny-dependent? 13 A. I haven't thought hard enough -- haven't 14 thought about it long enough at this point. I could 15 return to that at some later point but at this 16 moment of the deposition, I can't offer an opinion 17 on that. 18 Q. Got it. 19 Is there any way for a physician to know 20 that a certain cancer when caught very early, let's 21 say prostate cancer, I'm just giving an example -- 22 A. Uh-huh. 23 Q. -- you know if it's caught very early, if 24 it is going to be aggressive or if it is not going 25 to be aggressive?</p>
<p style="text-align: right;">Page 123</p> <p>1 prostate, breast, thyroid, and lung. 2 Do you see that? 3 A. Yes. 4 Q. Do you understand that there are nine 5 cancers that Dr. Kaplan has offered an opinion about 6 in this case? 7 A. Yes. 8 Q. Okay. Are you offering the opinion that 9 the following cancers are what you'd call 10 scrutiny-dependent: liver, stomach, colorectal, 11 intestinal, esophageal, bladder, pancreatic, and 12 blood? 13 A. These -- what I cite as scrutiny-dependent 14 cancers in this paragraph are examples. I haven't 15 ruled out the possibility that other cancers could 16 also be scrutiny-dependent. 17 Whether a cancer is scrutiny-dependant or 18 not depends on the technology that we have. It may 19 not be scrutiny-dependant now but it could be 20 scrutiny-dependent later. It depends on the -- of 21 course the nature of the cancer, but also the nature 22 of treatment that we have available for that cancer. 23 So what makes it scrutiny-dependent is 24 that our technology to detect the cancer, if we look 25 hard enough, has gotten better. But our technology</p>	<p style="text-align: right;">Page 125</p> <p>1 A. I think there are ways to have an educated 2 guess. Not being an oncologist myself so I don't 3 consider myself an expert on prostate cancer, but 4 I'm -- know more about prostate cancer than the 5 average person. 6 There are ways where you could consider 7 epidemiology, what happens to the average patient 8 that you diagnose with prostate cancer with a given 9 PSA test, for example. And is there variation when 10 you have a given PSA test. That kind of -- and 11 reflects on the quality of the PSA test, which we 12 know to be not great. When you have patients who 13 can have the same PSA test but have -- you know, a 14 test could be neither sensitive nor specific if like 15 the test -- knowing the test doesn't give you that 16 much information. 17 So, again, you can know the general 18 epidemiology of what happens for a patient with 19 these given characteristics and their diagnosis with 20 prostate cancer. You could also ask what happens 21 when you have additional clinical information such 22 as the PSA test and what that means for the 23 possibilities of whether that cancer is going to be 24 aggressive or not. 25 Q. But I think you said it would be an</p>

<p style="text-align: right;">Page 126</p> <p>1 educated guess, really, there's not a way to know 2 whether? 3 A. We -- we -- 4 Q. -- it's aggressive or not? 5 A. It's -- it's kind of a spectrum. We 6 wouldn't know in general with certainty. But we 7 would have an educated guess and sometimes we would 8 know more and sometimes we would know less. 9 Q. Uh-huh. So from the time, let's say, a 10 prostate cancer is -- it's diagnosed, right, by a -- 11 by a biopsy, right? Am I wrong about that? 12 A. You know more -- you know the most about 13 it, yes, after you've actually taken tissue out and 14 you've kind of looked at that tissue with -- with 15 pathology. 16 Q. Right. That's -- is that when the 17 prostate cancer diagnosis is made or is it made 18 based on PSA levels? 19 A. It would require tissue to diagnose 20 prostate cancer. 21 Q. So if you do -- if you take a tissue 22 pathology of prostate cancer, can you know with the 23 result of that pathology report whether it's an 24 aggressive cancer or not? 25 A. It would give you more information. I --</p>	<p style="text-align: right;">Page 128</p> <p>1 your -- I mean, have you studied tissue biopsies of 2 cancers or is this something that you're -- kind of 3 have more general expertise in? 4 A. This is something as a hospitalist I'm 5 familiar with how patient care, the process of 6 patient care involves tissue biopsy in order to 7 prognosticate and in order to make treatment 8 decisions and in order to diagnose. 9 Q. Got it. 10 It's not something that you do as -- on 11 a -- on a regular basis? 12 A. I don't -- if you could clarify what you 13 mean by what I do, so I don't -- I'm not a 14 pathologist. I'm a hospitalist. 15 As a hospitalist you do kind of make plans 16 to get a biopsy and do -- use the results of the 17 biopsy for decisions. You often do this in concert 18 with other experts such as oncologists. So I -- I'm 19 familiar with how they're used with the caveats that 20 I just told you. 21 Q. Got it. 22 I think, you know, I've asked you and 23 you've told me now several times about, you know, 24 general causation or lack thereof with respect to 25 your opinion.</p>
<p style="text-align: right;">Page 127</p> <p>1 again, that would depend on the characteristics of 2 the pathology test. And the pathology test is 3 probably the best you can know up until that point 4 without kind of foresight into the future. 5 But I would have to review the 6 characteristics of the pathology test and the 7 epidemiology associated with different histologies 8 that you might find on the pathology test. 9 Q. So fair to say that without foresight in 10 the future you're not going to know the answer, I 11 mean, and nobody has a crystal ball with that 12 foresight to know if -- if that particular tissue 13 biopsy represents an aggressive or less aggressive 14 form of prostate cancer? 15 A. I think it's fair to say we don't know 16 with a hundred percent certainty. But I -- I would 17 have to review the evidence to tell you how much 18 uncertainty there is with a tissue biopsy. 19 Q. How much uncertainty as to? 20 A. The aggressiveness of the cancer or the 21 life expectancy -- 22 Q. Got it. 23 A. -- of the patient. 24 Q. Got it. Got it. 25 Is that something that you have done in</p>	<p style="text-align: right;">Page 129</p> <p>1 I want to ask you about the -- the -- the 2 threshold that the plaintiffs have placed in their 3 class definition. 4 Have you -- have you reviewed that 5 threshold, lifetime cumulative threshold that's in 6 the third amended complaint? 7 MR. STOY: Object to the form. 8 THE WITNESS: Have I reviewed the 9 threshold, is your question? 10 BY MR. MIGLIACCIO: 11 Q. Yes. Yep. 12 A. I'm familiar with the statement of some 13 threshold in the acronym lifetime -- LCT, lifetime 14 cumulative threshold. 15 Q. Got it. 16 Are you offering any opinions with respect 17 to that threshold? 18 MR. STOY: Object to the form. 19 BY MR. MIGLIACCIO: 20 Q. Or LCT? 21 A. I'm offering opinions on whether that 22 threshold is feasible to assess. 23 Q. In what -- in what way? 24 A. In the sense that in my report I describe 25 a number of different sources of cancer, a number of</p>

<p style="text-align: right;">Page 130</p> <p>1 different sources of nitrosamines, not just affected 2 valsartan, but potentially other drugs and other 3 dietary sources, and endogenous production of 4 nitrosamines. 5 And in my report an opinion of mine is 6 that it would be difficult to assess whether 7 somebody has passed the lifetime cumulative 8 threshold. Aside from the question of whether the 9 lifetime cumulative threshold is actually a valid 10 concept. 11 Q. Do you understand that the lifetime 12 cumulative threshold set forth by the plaintiffs 13 defines a risk or exposure floor? 14 MR. STOY: Object to the form to the 15 extent it assumes facts not on the record. 16 Go ahead. 17 THE WITNESS: Frank, I can barely hear 18 you. 19 MR. STOY: I'm sorry. 20 I made an objection to form to the extent 21 it assumes facts not on the record. I'll speak up. 22 THE WITNESS: Okay. 23 And, Nick, can I hear you ask the question 24 again? 25</p>	<p style="text-align: right;">Page 132</p> <p>1 we haven't answered that yet, then I'm not sure how 2 we even know a lower bound on the -- on the causal 3 effect of nitrosamines on cancer. 4 BY MR. MIGLIACCIO: 5 Q. I -- I was asking you to assume that. But 6 that -- that's -- I'm asking you to make that 7 assumption. 8 A. Okay. Sure. 9 Q. Yeah. 10 Then do you understand that it would set 11 a -- a floor, an -- a floor, a risk floor? 12 MR. STOY: Same objections. 13 THE WITNESS: Well, under the assumption 14 that we have a lower bound, then by construction it 15 does set a floor. 16 BY MR. MIGLIACCIO: 17 Q. Got it. 18 How -- I want to ask you some questions 19 about pricing, which I -- I think you detailed 20 elsewhere in -- in your report. I think you use an 21 example of Massachusetts General as one of the 22 hospitals. I think Dr. Song might be associated 23 with Massachusetts General. 24 A. We all love MGH. 25 Q. Yeah. Yeah, yeah.</p>
<p style="text-align: right;">Page 131</p> <p>1 BY MR. MIGLIACCIO: 2 Q. Yes. 3 I mean, do you understand that the 4 lifetime cumulative threshold set forth by the 5 plaintiffs defines a risk or exposure floor, that 6 it's a floor? 7 A. I'm not sure I understand that because, 8 again, I'm not an expert on causation. But if it's 9 possible that nitrosamines don't cause cancer, then 10 I'm not sure how it would set a floor unless if the 11 floor includes zero. 12 Q. Got it. 13 And if it's possible, let's just say 14 for -- hypothetically, for your purposes, I guess, 15 that nitrosamines do cause cancer and that the -- 16 the threshold and the system, the scoring system set 17 forth by the plaintiffs details how much nitrosamine 18 is in a particular dosage, would -- then would you 19 understand that -- that it would set a floor? 20 MR. STOY: Objection. Incomplete 21 hypothetical. 22 Go ahead. 23 THE WITNESS: I'm not sure how that would 24 be done. If -- first you -- as you say, you would 25 need to say that nitrosamines do cause cancer. If</p>	<p style="text-align: right;">Page 133</p> <p>1 Do you know Dr. Song? 2 A. I -- I do. 3 Q. You do. Yeah. 4 A. Yeah. 5 Q. Yeah, I can't imagine there are that many 6 MD-Ph.D. experts out there in the world. Probably a 7 very small number, I guess. 8 A. Yeah. I think less than 20 probably. 9 Q. Wow, wow, wow. 10 So my question about MGH, I mean, is it 11 fair to say that MGH has a -- has a lot of market 12 power? 13 MR. STOY: Object to the form. 14 THE WITNESS: I'm not sure exactly how I 15 would characterize it, but I know that MGH has been 16 involved in litigation regarding its market power. 17 BY MR. MIGLIACCIO: 18 Q. Okay. Did you have any involvement in 19 that? 20 A. No. 21 Q. Let me -- I mean, I think we've taken a 22 break. I'm not -- I do want to go back to one of 23 the -- you know, I want to about explore a little 24 bit more this question of -- of your -- your 25 testimony in the -- in the -- in the opioid</p>

<p style="text-align: right;">Page 134</p> <p>1 litigation.</p> <p>2 You know, Frank can obviously object if --</p> <p>3 as -- as necessary, but I did want to see if you</p> <p>4 could testify more about, you know, the subject</p> <p>5 about -- you know, the subject matter in a general</p> <p>6 matter.</p> <p>7 A. More about what? Sorry?</p> <p>8 Q. The subject matter of that litigation in</p> <p>9 a -- in a general matter, if you could give us that</p> <p>10 in -- in a general matter without divulging any</p> <p>11 confidential information?</p> <p>12 MR. STOY: I -- I think the challenge</p> <p>13 there, Nick, is with a question that broad he might</p> <p>14 not be comfortable answering it because he's not</p> <p>15 sure where those lines are, right.</p> <p>16 MR. MIGLIACCIO: Uh-huh.</p> <p>17 MR. STOY: A more specific question he</p> <p>18 might be able to give you a specific answer.</p> <p>19 MR. MIGLIACCIO: Well, how -- let me try</p> <p>20 to -- I'll try to narrow it down a little bit.</p> <p>21 Q. Can you tell us how the testimony in those</p> <p>22 cases is similar to the testimony you're offering</p> <p>23 here?</p> <p>24 A. Sort of -- like thematically, is that --</p> <p>25 is that your question?</p>	<p style="text-align: right;">Page 136</p> <p>1 transcripts exist.</p> <p>2 THE WITNESS: Oh.</p> <p>3 BY MR. MIGLIACCIO:</p> <p>4 Q. That's what I'm asking.</p> <p>5 A. Yeah. Yeah, transcripts exist.</p> <p>6 Q. They do exist, okay.</p> <p>7 And do you know, are they -- do you know</p> <p>8 if they are marked confidential or not in their</p> <p>9 entirety?</p> <p>10 A. I don't know.</p> <p>11 Q. Okay. Got it.</p> <p>12 Is that litigation currently ongoing? Can</p> <p>13 you answer that question?</p> <p>14 A. I am not sure. I think so.</p> <p>15 Q. Okay. I'm not -- I don't want to ask you</p> <p>16 anything about it. Just if it -- okay. Okay.</p> <p>17 So going back to -- to this question on,</p> <p>18 you know, Massachusetts General's market power or --</p> <p>19 or -- you know, is it fair to say that the prices in</p> <p>20 one area of the country can, you know, differ in --</p> <p>21 for instance, Massachusetts General may have high</p> <p>22 prices, but if you go to rural western Massachusetts</p> <p>23 the prices would be lower, of medical care, medical</p> <p>24 services?</p> <p>25 A. It's fair to say that prices differ a lot</p>
<p style="text-align: right;">Page 135</p> <p>1 Q. Thematically or subject matter. You know,</p> <p>2 is the subject matter similar. Both of those</p> <p>3 questions, thematically and subject matter.</p> <p>4 MR. STOY: Dr. Chan, if you can ask -- if</p> <p>5 you can answer that question from a high level, I</p> <p>6 think it's okay. So that would be my instruction to</p> <p>7 you.</p> <p>8 THE WITNESS: From a high level, I am</p> <p>9 relying on my expertise as an economist, as a</p> <p>10 clinician, and as somebody who is familiar with</p> <p>11 health policy.</p> <p>12 BY MR. MIGLIACCIO:</p> <p>13 Q. Do -- can -- did those other cases, do</p> <p>14 they involve class action claims?</p> <p>15 A. No.</p> <p>16 Q. There are transcripts of those</p> <p>17 depositions, is that right, the ones that you</p> <p>18 took -- that you gave?</p> <p>19 THE WITNESS: Sorry. Go -- go ahead,</p> <p>20 Frank.</p> <p>21 MR. STOY: No, you can answer that. Go</p> <p>22 ahead.</p> <p>23 THE WITNESS: I don't know if the</p> <p>24 transcripts are public, in the public domain.</p> <p>25 MR. STOY: He just asked you if</p>	<p style="text-align: right;">Page 137</p> <p>1 across different hospitals and different payors. I</p> <p>2 am not sure if your prediction is true where</p> <p>3 Massachusetts General would necessarily have higher</p> <p>4 prices than western Massachusetts.</p> <p>5 And I think part of the analyses that I</p> <p>6 lay out is not just to show the average price of</p> <p>7 Massachusetts General Hospital but that even within</p> <p>8 the same hospital, there is wide variation across</p> <p>9 different payors.</p> <p>10 Q. Uh-huh. And you know about that wide</p> <p>11 variation, right? I mean, you -- you have data that</p> <p>12 demonstrates it?</p> <p>13 A. Correct.</p> <p>14 Q. So is it fair to say that that variation</p> <p>15 is knowable?</p> <p>16 MR. STOY: Object to the form.</p> <p>17 THE WITNESS: Some of the variation's</p> <p>18 knowable. With respect to this class, it's likely</p> <p>19 that we might not know as researchers or as, you</p> <p>20 know, using publicly available data, what the</p> <p>21 relevant price would be for the members of the</p> <p>22 class.</p> <p>23 BY MR. MIGLIACCIO:</p> <p>24 Q. You're talking about the proposed class</p> <p>25 here in this case?</p>

<p style="text-align: right;">Page 138</p> <p>1 A. Correct.</p> <p>2 Q. And you know -- I mean, you know, you</p> <p>3 understand that this class has not been finally</p> <p>4 certified yet, right?</p> <p>5 A. Correct.</p> <p>6 Q. So there -- it's not -- you know,</p> <p>7 there's -- there is not yet a defined class and the</p> <p>8 definition could potentially be different than the</p> <p>9 way it is presently, correct?</p> <p>10 A. Correct.</p> <p>11 The reason I answered the question that</p> <p>12 way is because what we know about Massachusetts</p> <p>13 General Hospital -- first of all, this is a recent</p> <p>14 development within the year that we required</p> <p>15 hospitals to be more transparent about their prices.</p> <p>16 There is still uncertainty about whether there's</p> <p>17 full transparency about the prices and furthermore,</p> <p>18 we only know prices in the hospital setting. We</p> <p>19 don't know prices in the outpatient setting. So</p> <p>20 there is still big gaps in what we know.</p> <p>21 Q. Tell me about this recent development that</p> <p>22 just happened with respect to -- that you just</p> <p>23 referenced.</p> <p>24 A. I believe that in the last year or so the</p> <p>25 government mandated hospitals to be more transparent</p>	<p style="text-align: right;">Page 140</p> <p>1 certain services but out of network for other</p> <p>2 services because the hospital might employ different</p> <p>3 people and they might not know what prices they're</p> <p>4 going to get.</p> <p>5 So I think surprise billing is</p> <p>6 specifically about the question about whether</p> <p>7 they're in -- whether they're in network or out of</p> <p>8 network, and there could be huge differences in</p> <p>9 prices faced that are unexpected by patients as a</p> <p>10 result of that.</p> <p>11 Q. Got it. Got it.</p> <p>12 So you think that the government --</p> <p>13 that -- that the government has started with</p> <p>14 hospitals as -- as -- as a first priority, but it</p> <p>15 may not have moved to outpatient procedures yet?</p> <p>16 A. It has not. It has not moved to</p> <p>17 outpatient procedures.</p> <p>18 Q. It has not.</p> <p>19 And do you know when of if it will move to</p> <p>20 outpatient procedures?</p> <p>21 A. I don't. It's -- I was -- we, you know, I</p> <p>22 don't think most people saw that the Trump</p> <p>23 Administration would make price transparency a</p> <p>24 priority and now we might have other priorities and</p> <p>25 it's unclear.</p>
<p style="text-align: right;">Page 139</p> <p>1 with their prices and the reason it did that was</p> <p>2 because it was well known that there was a lot of</p> <p>3 intransparency in what prices would be if a patient</p> <p>4 kind of walked into the emergency department at</p> <p>5 Massachusetts General and got a procedure, there</p> <p>6 could be tenfold, maybe even a hundredfold</p> <p>7 difference in kind of prices depending on where they</p> <p>8 went and what provider -- what insurer they had.</p> <p>9 There was just huge amount of</p> <p>10 intransparency and uncertainty from patients'</p> <p>11 perspectives. The government decided to make that a</p> <p>12 priority and it started with hospitals, for</p> <p>13 hospitals to make prices more transparent.</p> <p>14 Q. This was legislation, right, like federal</p> <p>15 legislation?</p> <p>16 A. I don't know if it's legislation or an</p> <p>17 executive order.</p> <p>18 Q. Okay. And are you talking about -- I</p> <p>19 mean, I've heard of something called surprise</p> <p>20 billing. Is that related to -- to what you're</p> <p>21 talking about now?</p> <p>22 A. It's potentially -- it's related. It's</p> <p>23 not exactly the same. Surprise billing is another</p> <p>24 whole level of complexity where somebody can go to</p> <p>25 the hospital and they could be in network for</p>	<p style="text-align: right;">Page 141</p> <p>1 They've been intransparent for decades.</p> <p>2 They suddenly became transparent in this one kind of</p> <p>3 sector of the healthcare industry. Who knows what's</p> <p>4 going to happen in the future.</p> <p>5 Q. When did this happen, like when did the --</p> <p>6 just January 1 of this year?</p> <p>7 A. Within the year, within 2020 -- or</p> <p>8 actually, 2021. I'm not -- I would have to review</p> <p>9 the dates of this.</p> <p>10 Q. Sure.</p> <p>11 And -- and you think it was an executive</p> <p>12 order that did it?</p> <p>13 A. It -- it could have been an executive</p> <p>14 order.</p> <p>15 Q. Okay.</p> <p>16 A. I'm not sure.</p> <p>17 Q. Got it.</p> <p>18 Yeah, I -- I won't hold you to it. We</p> <p>19 could look at it and figure it out exactly if</p> <p>20 necessary.</p> <p>21 A. Yes.</p> <p>22 Q. How does that change or -- your analysis</p> <p>23 in your report or does it because since this sector</p> <p>24 now has great -- great transparency?</p> <p>25 MR. STOY: Object to the form.</p>

<p style="text-align: right;">Page 142</p> <p>1 THE WITNESS: I -- I don't know if I'd 2 characterize it as great transparency. Again, 3 it's -- it's a part of the healthcare -- it's a -- 4 it's a sub -- subset of providers that work in 5 hospitals that are now required to disclose prices 6 with various insurers. We don't know whether this 7 information is accurate yet. It's only been out 8 there for a little while.</p> <p>9 There is a vast majority -- there's a lot 10 of other places that patients get care, most of the 11 time in outpatient settings, that we still don't 12 know what those prices are.</p> <p>13 BY MR. MIGLIACCIO: 14 Q. Are you doing any research into this, like 15 is this part of your academic research?</p> <p>16 A. This is not -- it's not currently a part 17 of my research agenda. It's certainly within my 18 scope of expertise, and I could become interested in 19 it at some later point.</p> <p>20 Q. Yeah. Has -- have the -- has the first 21 dataset become available?</p> <p>22 A. They are available on the -- on -- I 23 believe they're -- they're required to make the 24 datasets available. If you look at, for example, 25 figure -- where I have like the prices at</p>	<p style="text-align: right;">Page 144</p> <p>1 done by a hospital. So it's, for example, a clinic 2 that is associated with MGH.</p> <p>3 Q. Okay. So -- so I'm in Washington, D.C. 4 And I'm just going to, you know, give you a -- like 5 kind of an example of how it is here.</p> <p>6 MedStar is a big hospital system in the 7 Washington, D.C. area.</p> <p>8 A. Uh-huh.</p> <p>9 Q. And if you go to a physician -- as an 10 outpatient, there are many physicians now, it seems 11 to me, that are like the MedStar, you know, office 12 of a certain specialty, but they're an outpatient 13 clinic.</p> <p>14 Does Massachusetts General have outpatient 15 clinics that do things like urinalysis, 16 colonoscopies, et cetera?</p> <p>17 A. Yes.</p> <p>18 Q. Okay. And they're like branded as 19 Massachusetts General, you know, GI specialists? 20 I'm giving a hypothetical, fictional example, but is 21 that a realistic sort of thing?</p> <p>22 A. That -- that possibility does -- does 23 exist where --</p> <p>24 Q. Okay.</p> <p>25 A. -- there's a clinic that is I believe</p>
<p style="text-align: right;">Page 143</p> <p>1 Massachusetts General --</p> <p>2 Q. Uh-huh.</p> <p>3 A. -- there is a note that tells you where to 4 download those data.</p> <p>5 Q. Uh-huh.</p> <p>6 A. So Figure 8 is where you would look for 7 MGH. And I would imagine that other hospitals have 8 other sites where you could download their data.</p> <p>9 Q. Got it.</p> <p>10 So you got this from that -- from that 11 database?</p> <p>12 A. Correct.</p> <p>13 Q. That's where this came from. Got it.</p> <p>14 And had it relates to -- and so the -- 15 the -- the CPT HCPS -- HP -- HCPCS code --</p> <p>16 A. You can call it -- you can call it 17 "hick-picks."</p> <p>18 Q. "Hick-picks"? Did I say that right?</p> <p>19 A. Yes.</p> <p>20 Q. "Hick-picks." Got it. Okay. Thanks.</p> <p>21 Those codes, so these would be procedures 22 that were done inpatient; is that right?</p> <p>23 A. These are procedures --</p> <p>24 Q. Oh, outpatient. Outpatient. Sorry.</p> <p>25 A. Right. They're outpatient but they're</p>	<p style="text-align: right;">Page 145</p> <p>1 owned by MGH and submits claims under the 2 Massachusetts General Hospital tax ID, there are 3 examples of that.</p> <p>4 Q. Okay. And so the pricing of all these 5 clinics -- or of that particular hypothetical, 6 fictional, potentially, you know, fictional clinic, 7 would be transparent now in this matter?</p> <p>8 MR. STOY: Object to the form to the 9 extent it misstates his prior testimony. Objection. 10 Incomplete hypothetical.</p> <p>11 THE WITNESS: You want to restate your 12 question? You had a lot of fictional, hypothetical 13 in there.</p> <p>14 BY MR. MIGLIACCIO: 15 Q. Sure.</p> <p>16 I mean, so let's say there's an MGH 17 outpatient clinic that does colonoscopies. The 18 prices of those colonoscopies are now going to be 19 known?</p> <p>20 MR. STOY: Object to the form. Same 21 objection.</p> <p>22 THE WITNESS: It's unclear whether we 23 actually do know the prices.</p> <p>24 I also want to say that we -- I'm not sure 25 if we know all of the -- you know, it's -- it's</p>

<p style="text-align: right;">Page 146</p> <p>1 helpful to circle back to this class, and I believe 2 the class are the patients here. 3 So we would be interested in what the 4 patients would pay, not necessarily the price that 5 the provider is getting. I don't know if we know 6 all of the details of the insurance contract. I 7 know that this price transparency, it could be 8 limited to just the price that the provider is 9 getting between the provider and the insurance 10 company. 11 It does not give you information on cost 12 sharing in this insurance contract between the 13 patient and the -- and -- and the insurer. And as I 14 just mentioned, we don't know the quality of this 15 data yet. These data yet. 16 BY MR. MIGLIACCIO: 17 Q. But you've used it in your report, at 18 least in Figure 8? 19 A. Yes. Because we can see that even if the 20 quality was off, even if we didn't have the price 21 exactly right, it does show quite a bit of 22 variation. And that variation is illustrative. 23 There's other sources of research out there even 24 before this price transparency. 25 This, you know, within the last year that</p>	<p style="text-align: right;">Page 148</p> <p>1 Q. It's on page 69. 2 A. Uh-huh. 3 Q. Is that the announcement of this -- 4 this -- this new transparency requirement? 5 A. Possibly. Although this is a little bit 6 earlier than I thought it would be. 7 Q. Okay. Yeah, that's why I was asking 8 because I don't know. 9 A. It's possible. 10 Q. All right. Got it. Okay. I mean -- 11 yeah. 12 Do you -- with respect to -- to the -- 13 this issue that you just raised of pricing the -- 14 the split between what the patient pays and what the 15 insurer pays, do you understand that Dr. Song's 16 report focuses on estimating total price, not just 17 the patient's share of the price? 18 A. That was a little confusing to me, as I 19 understood the complaint to be the -- to be the cost 20 that the patient would bear, not total price. But I 21 did notice that in Dr. Song's report he didn't delve 22 into issues of cost sharing. 23 Q. So would -- would -- would it change your 24 opinion now if you understood that he is only 25 focusing on estimating the total price and not just</p>
<p style="text-align: right;">Page 147</p> <p>1 has demonstrated large variation in prices within 2 insurer, within provider, kind of looking at the 3 intersection between providers and insurers. It's 4 a -- it's a -- it's a research finding as of five, 5 six years ago that there is huge variation in price 6 across different private insurers and private -- and 7 providers. 8 Q. How -- do you know if there has been any 9 research done to determine whether the price -- 10 pricing data is -- is inaccurate? 11 MR. STOY: Object to the form. 12 THE WITNESS: This is something that 13 people are currently looking at. I think it's still 14 pretty new for us to know. 15 BY MR. MIGLIACCIO: 16 Q. It's required by federal law, right, and 17 this is not something that's being done voluntary, I 18 imagine? 19 A. That's right. This new -- at least what I 20 just -- by it, what I just discussed about hospitals 21 publishing data on prices for various procedures and 22 various payors. 23 Q. I'm looking at footnote 207 of your 24 report. Can you -- 25 A. Okay.</p>	<p style="text-align: right;">Page 149</p> <p>1 the payment -- patient share of the price? 2 A. I understand what he's doing, but my 3 understanding of the class is that we are interested 4 in what patients would bear. So I was a bit 5 confused. It seemed to me that that was an omission 6 in the analysis that he did. 7 Q. Is it fair to say that the total price is 8 the more appropriate measure for the burden borne by 9 society for -- for testing? 10 MR. STOY: Object to the form. 11 THE WITNESS: I think that would be a much 12 more complicated question. The burden borne by 13 society. I don't think that total price is a good 14 measure of that either because that includes profits 15 by hospitals and like charges versus what they 16 actually get after negotiations. There is just a 17 lot of additional complexity there. I think burden 18 borne to society would have to be better defined. 19 BY MR. MIGLIACCIO: 20 Q. All right. I'll give you some -- just 21 some -- I'll set this up with some hypothetical 22 questions for you. 23 Let's say there is a person at risk of 24 developing cancer, you know, as a result of a 25 medication contaminated with a carcinogen, right.</p>

<p>Page 150</p> <p>1 Let -- let's assume all those things are -- are 2 true. There's somebody who took a -- you know, 3 ingested a carcinogen and they are at a risk -- a 4 higher risk of developing cancer. 5 Can -- do you follow that? 6 A. Yes. 7 Q. Okay. Who in society should bear the 8 burden for screening that person for cancer risks? 9 MR. STOY: Objection. Incomplete 10 hypothetical. Objection to the extent it calls for 11 a legal conclusion. 12 You can go ahead. 13 THE WITNESS: Your question is who -- if 14 there is a pill that somebody ingested that puts 15 them at higher risk for cancer, who should be 16 responsible for bearing that burden? 17 I don't think that's within the scope of 18 my report. I don't know if that's within my 19 expertise to say who should be responsible for that. 20 BY MR. MIGLIACCIO: 21 Q. As a healthcare economist, what -- does 22 your research focus or include expertise on who 23 should pay what in -- in the healthcare system? 24 MR. STOY: Object to the form. 25 THE WITNESS: No. By "should," do you</p> <p>Page 151</p> <p>1 mean some normative sense of who bears 2 responsibility, who should -- as an economist, I 3 think that would take a lot of careful thinking. We 4 might have the tools to consider that but I wouldn't 5 have the tools to think about it right off the bat 6 on this call. 7 We often -- it depends on contracts. It 8 depends on the legal system. We use -- we are quite 9 familiar with contracts and who does pay the burden 10 and we might compare different contracting 11 arrangements and compare which one is better in 12 terms of welfare for society. But those would be 13 complicated analyses that would take deeper thought. 14 BY MR. MIGLIACCIO: 15 Q. In the current regime we have in this 16 country for healthcare -- for healthcare generally, 17 who pays for healthcare for an -- an average person? 18 Maybe that -- maybe that's too difficult for you -- 19 you know, a hypothetical person, let's give it a 20 hypothetical person. 21 MR. STOY: Object to the form. 22 THE WITNESS: Yeah. 23 MR. STOY: Objection. Incomplete 24 hypothetical. 25 (Whereupon, a brief discussion off the</p>	<p>Page 152</p> <p>1 record.) 2 THE WITNESS: I was -- I was starting the 3 shortest answer is that it's complicated. It 4 depends on the person. It changes year to year 5 depending on healthcare reform or not. There are 6 just so many variables to consider here I don't 7 think I could give you an answer that would fit 8 within my seven hours probably. 9 BY MR. MIGLIACCIO: 10 Q. Yeah. Let me try to -- let me try to put 11 some specificity around this and see if we can fit 12 within the seven hours. 13 Medicare. Who -- who -- who's eligible in 14 this country? 15 A. Broadly speaking, there are two types of 16 people that are eligible for Medicare. People that 17 are above 65 and people with some disability. There 18 are also special populations such as people that 19 have renal failure and get dialysis. 20 Q. Let's say somebody's over the age of 65, 21 right, they're eligible for Medicare. 22 Who pays for Medicare for that person who 23 is eligible for it? 24 A. There are several levels to this. 25 Medicare is a government program so the government</p> <p>Page 153</p> <p>1 runs -- the government funds Medicare through 2 taxpayer dollars. There are -- again, I could give 3 you a longer answer, but I think the shorter answer 4 is that it's a government-run program that is funded 5 by taxpayer dollars and administered by private 6 contractors. 7 So who pays, it could be like any of 8 those, it could be the taxpayers, it could be the 9 government, or it could be the private contractors 10 that administer Medicare in different jurisdictions. 11 Q. Where does the money ultimately come from? 12 MR. STOY: Object to the form. 13 BY MR. MIGLIACCIO: 14 Q. For that person's healthcare? 15 A. As I said, it -- you know, one way to 16 trace it back is, you know, taxpayers fund the 17 Medicare program. 18 Q. Yeah. Got it. 19 So if there is a person -- strike that. 20 I'll -- I'll ask it a different way. 21 Have you done any research into -- I think 22 you were -- you had talked about the research you've 23 done with diagnoses and trying -- and I don't want 24 to misstate it. What was that research again? 25 A. It was research on the diagnostic process,</p>
--	--

Page 154

1 the -- yeah, I think I would just succinctly sum it
2 up as the research on the diagnostic process.
3 Q. And then that related to Afib, right,
4 atrial fibrillation, or was that a different?
5 A. The guidelines research is related to
6 atrial fibrillation.
7 Q. Got it.
8 What are the --
9 A. Go ahead.
10 Q. What -- what are the risks associated with
11 some -- with -- with an individual or a patient
12 population who does not get timely treatment for
13 atrial fibrillation?
14 MR. STOY: Object to the form.
15 THE WITNESS: Your question was whether --
16 what are the risks for patients that don't get
17 timely treatment for atrial fibrillation.
18 I think this is actually -- so I was going
19 to say that my research on diagnoses is not
20 necessarily the research on atrial fibrillation.
21 The research on atrial fibrillation is my research
22 on guidelines. Timeliness of diagnosis is not
23 really an issue with atrial fibrillation.
24 Atrial fibrillation's a chronic condition.
25 Most people have it, you know, by the time they're

Page 155

1 very old. And the question here is how you should
2 treat atrial fibrillation, not whether you should
3 diagnose it or how do you diagnose it.
4 BY MR. MIGLIACCIO:
5 Q. Got it.
6 The research you did on diagnoses, were
7 those for any particular disease? Did they focus on
8 anything specific?
9 A. The research is motivated very broadly.
10 The paper where I dig into a specific clinical
11 setting in depth is in the presentation of patients
12 in the emergency department with potential
13 pneumonia.
14 Q. And what was your conclusion there?
15 A. That there are real possibilities of
16 Type I and Type II error in the diagnosis process.
17 That there are questions about how many people we
18 should diagnose or not.
19 But more importantly, there are questions
20 about diagnostic accuracy. You could diagnose the
21 same number of people but have a much higher
22 accuracy in doing so. And that the diagnostic
23 process is not just a simple test like a chest x-ray
24 but it also involves human interpretation and
25 involves a system of care that could be prone to

Page 156

1 error.
2 Q. Got it.
3 With respect to pricing, is it fair to say
4 that industry and government agencies use averages
5 for pricing certain things? I'll say, for instance,
6 gasoline?
7 MR. STOY: Object to the form. Objection
8 beyond -- to the extent it's beyond the scope.
9 THE WITNESS: Do you want to be more
10 specific about how they use the averages?
11 BY MR. MIGLIACCIO:
12 Q. Well, even if there is variation in the
13 real world, I mean, doesn't -- can't you determine
14 the average price of gasoline?
15 A. I think the question is whether the
16 average price of gasoline, in this case the average
17 price of a service used in screening, is the
18 relevant object.
19 Of course you can calculate an average but
20 the question you should ask is whether it's the
21 right average for the right patient population and
22 whether it's the only thing that matters.
23 Obviously, we -- we measure standard
24 deviation in variants in a lot of settings because
25 we care about variation. So the question is not

Page 157

1 whether we can measure an average, but it's whether
2 that average is the right measure for what we want
3 to do.
4 Q. Uh-huh. You use averages in your own
5 work; isn't that fair to say?
6 MR. STOY: Object to the form.
7 THE WITNESS: Again, the question is what
8 average am I using. You know, if you're using an
9 average in your research paper, you have to defend
10 that that's the right average, that that's the
11 average that we care about. And you -- if you're
12 not, you should expect pushback from your peers
13 about whether you're using the right average or not.
14 BY MR. MIGLIACCIO:
15 Q. Can you give me some examples of where
16 you've used an average and where you've had pushback
17 and where you've defended it?
18 MR. STOY: Object to the form. Objection.
19 Beyond the scope of his report.
20 THE WITNESS: I can't remember the last
21 time I personally got pushback, but I could imagine
22 getting pushback if you are saying that you're
23 interested in one patient population and you're
24 giving the average for another patient population.
25

<p style="text-align: right;">Page 158</p> <p>1 BY MR. MIGLIACCIO:</p> <p>2 Q. Got it.</p> <p>3 So like two distinct patient populations.</p> <p>4 What would be an example of like one patient</p> <p>5 population and an average for a different one? Can</p> <p>6 you -- can you give me one?</p> <p>7 A. Yes, I think in this case it would be the</p> <p>8 average -- if you're using the average price -- the</p> <p>9 private insurance price for some general patient</p> <p>10 population that isn't well defined and you're</p> <p>11 applying that to the patients that took at-issue</p> <p>12 valsartan. Those would be two different patient</p> <p>13 populations.</p> <p>14 Q. I think you stated in your report that</p> <p>15 the -- when you looked at some of the data, that you</p> <p>16 saw the average age of a valsartan -- of somebody</p> <p>17 who took one of the valsartan-containing drugs was</p> <p>18 63 years old.</p> <p>19 Do you remember that?</p> <p>20 A. Yes, I do. I would have to look...</p> <p>21 Q. Yeah, I'll -- I see that.</p> <p>22 MR. STOY: And, Nick, while he's</p> <p>23 looking --</p> <p>24 MR. MIGLIACCIO: Yeah.</p> <p>25 MR. STOY: -- we're coming up on noon</p>	<p style="text-align: right;">Page 160</p> <p>1 record. The time is 12:36 p.m.</p> <p>2 BY MR. MIGLIACCIO:</p> <p>3 Q. All right. Dr. Chan, I want to ask you a</p> <p>4 few questions.</p> <p>5 I want to go back to paragraph 42 briefly</p> <p>6 of your report. And you have -- I think you detail</p> <p>7 Figure 2 and discuss risk factors for specific</p> <p>8 populations.</p> <p>9 A. Okay.</p> <p>10 Q. I think I'm going to read the last</p> <p>11 sentence of paragraph 42 which states, "Even with</p> <p>12 these substantial relative risks, again, only age</p> <p>13 and smoking history are used to define the specific</p> <p>14 population recommended for colorectal and lung</p> <p>15 cancer screening."</p> <p>16 Did you detail the relative risk of age</p> <p>17 for colorectal cancer in this paragraph?</p> <p>18 A. Not in this in paragraph. It might be</p> <p>19 detailed somewhere else in the report, but I can't</p> <p>20 find it right now.</p> <p>21 Q. Okay. All right.</p> <p>22 Yeah, well I couldn't find it either so,</p> <p>23 you know, I -- if we have more time I might ask you</p> <p>24 to look and see or at least tell me where it can be</p> <p>25 found.</p>
<p style="text-align: right;">Page 159</p> <p>1 Dr. Chan's time so just --</p> <p>2 MR. MIGLIACCIO: Yeah.</p> <p>3 MR. STOY: -- keep that in mind.</p> <p>4 MR. MIGLIACCIO: Sure. Are you hungry,</p> <p>5 Dr. Chan, if you want to eat something, please just</p> <p>6 say the word because I was starving before and I</p> <p>7 don't want you --</p> <p>8 THE WITNESS: I could -- I could certainly</p> <p>9 eat, yeah. I could definitely eat.</p> <p>10 MR. MIGLIACCIO: Please do. We could</p> <p>11 take -- we could take a break.</p> <p>12 THE WITNESS: Okay.</p> <p>13 MR. MIGLIACCIO: Yeah.</p> <p>14 THE WITNESS: You want to do 30 minutes?</p> <p>15 MR. MIGLIACCIO: That's fine with me.</p> <p>16 MR. STOY: Will that be okay with the</p> <p>17 overall time constraints, Nick?</p> <p>18 MR. MIGLIACCIO: I think so. I -- I</p> <p>19 really -- I do. And I'm -- because I think even</p> <p>20 from now we have like five hours and I think --</p> <p>21 MS. HILTON: Can we go off the record?</p> <p>22 THE VIDEOGRAPHER: We're off the record at</p> <p>23 11:56 a.m. Pacific time.</p> <p>24 (Whereupon, a brief recess was taken.)</p> <p>25 THE VIDEOGRAPHER: We are back on the</p>	<p style="text-align: right;">Page 161</p> <p>1 A. Yeah.</p> <p>2 Q. Because I did not see it myself.</p> <p>3 But in the meantime, I will go back and</p> <p>4 ask you some other questions.</p> <p>5 We were talking, I think, before the break</p> <p>6 about pricing of medical services and -- you know, I</p> <p>7 want to ask you about Dr. Song. If you would agree</p> <p>8 that he's qualified to offer the opinions that he</p> <p>9 has offered?</p> <p>10 MR. STOY: Object to the form. Objection</p> <p>11 to the extent it calls for a legal conclusion with</p> <p>12 regard to qualifying Dr. Song as an expert.</p> <p>13 THE WITNESS: Yeah, I'm not sure if I can</p> <p>14 qualify -- I'm qualified to assess whether he's</p> <p>15 qualified.</p> <p>16 BY MR. MIGLIACCIO:</p> <p>17 Q. Would you agree he's well respected in the</p> <p>18 field?</p> <p>19 MR. STOY: Object to form.</p> <p>20 THE WITNESS: I'm -- I'm not sure how to</p> <p>21 characterize that. I know him.</p> <p>22 BY MR. MIGLIACCIO:</p> <p>23 Q. Okay. Have you ever cited his work in any</p> <p>24 of your own publications?</p> <p>25 A. I'm not sure if I have.</p>

<p style="text-align: right;">Page 162</p> <p>1 Q. Would you agree that the publications that 2 Dr. Song relied upon are well accepted and 3 peer-reviewed in his report? 4 MR. STOY: Object to the form. 5 THE WITNESS: I'm not sure -- can you 6 restate that again? 7 BY MR. MIGLIACCIO: 8 Q. Yeah. 9 Would you agree that the publications that 10 Dr. Song relied upon in his report, and I know 11 you've reviewed it for purposes of yours, would you 12 agree that the publications that he relied upon are 13 well accepted and peer-reviewed? 14 MR. STOY: Objection to form. 15 THE WITNESS: I don't remember going over 16 his -- the sources that he relied upon in detail. 17 And I'm not sure how I would characterize whether a 18 publication is well accepted or not. 19 BY MR. MIGLIACCIO: 20 Q. What do you recall of the -- of the 21 publications that Dr. Song relied upon? 22 A. I don't recall much. I would have to look 23 at his report again to refresh my memory. 24 Q. Okay. I can -- I think we have that. 25 Let's -- let's go get that. Bear with me. I can</p>	<p style="text-align: right;">Page 164</p> <p>1 to have lost it for the time being. 2 But would you agree with me that if -- 3 that if the average age of a valsartan user is 63, 4 and for us, and here, that the class concludes 5 several years ago, in 2018, would you agree that 6 this class, the proposed class that we have defined, 7 the majority of the class would be -- would be on 8 Medicare? Can you agree with that, if the age 9 was -- is 63 years old, the average age? 10 MR. STOY: Objection. Form. Incomplete 11 hypothetical. 12 THE WITNESS: I'm not sure if I can agree 13 with that. I think we could probably look at that 14 in more detail. But just based on these facts 15 alone, I'm not sure if that necessarily leads to 16 that conclusion. 17 BY MR. MIGLIACCIO: 18 Q. What data did you rely upon to determine 19 that the average age of a valsartan user was 20 63.3 years old? 21 A. I believe what is cited in that sentence 22 comes from another study. 23 Q. Okay. 24 A. In footnote number 87. 25 Q. Uh-huh.</p>
<p style="text-align: right;">Page 163</p> <p>1 try to pull that up for you. I'm going to try to 2 make this work on my end. So I won't -- I'll move 3 on to something while -- while I'm trying to do 4 that. 5 I'm going to ask you about some of -- of 6 your own publications. And I think I -- we had 7 discussed before the break that it's -- the average 8 age of a valsartan user was 63 years old. I think 9 we -- you -- that's what you detailed in your 10 report, right? 11 A. Yeah, I would need to look at the relevant 12 paragraph, but that sounds right, yep. 13 Q. Which paragraph was that? 14 A. I see something in paragraph 65. Is that 15 what you're referring to or... 16 Q. I think that that is what I was referring 17 to. 18 A. Okay. 19 Q. It looks to me that you -- that that data 20 was based on data that you -- 63.3 years old, right? 21 And this data was pulled in 2018; is that right? 22 A. Where do you see that it was pulled in 23 2018? 24 Q. I'm going to believe that is what I have. 25 I'm going to try to find a citation for you. I seem</p>	<p style="text-align: right;">Page 165</p> <p>1 A. And I think that would be -- it might have 2 been some summary statistics calculated in that 3 study. 4 Q. Got it. 5 Do you know if that was a meta-analysis, 6 that study? 7 A. It might have -- it likely drew from other 8 previous studies. 9 Q. Got it. Got it. 10 I'm going to show you, if I can now, 11 Dr. Song's report. And hopefully I'll be able to 12 bring it into your folder here. 13 MR. MIGLIACCIO: This will be Exhibit 4. 14 (Whereupon, Chan Exhibit 4 was marked for 15 identification.) 16 BY MR. MIGLIACCIO: 17 Q. Once I rename it. 18 A. Okay. 19 Q. You should have it now, hopefully. 20 A. Yes. 21 Q. Okay. So I had asked you about the 22 publications that he uses and used in his -- in 23 his -- in his report. I wanted to know if they were 24 authoritative, well accepted or peer-reviewed, but I 25 want -- you know, I know you've looked at this in</p>

Page 166

1 detail and it's, you know, fairly lengthy but I
 2 wanted to ask you if anything here jumps out at you
 3 as -- as being none of those things, any of the
 4 sources he cites?
 5 A. Are you asking me to refer to the
 6 materials relied upon for him?
 7 Q. Right.
 8 MR. STOY: I'm just going to put an
 9 objection on the record to -- I mean, there's over a
 10 hundred cites here, so...
 11 THE WITNESS: Yeah, I'm not sure if I'll
 12 be able to look through this and pull out any
 13 sources that don't meet those criteria. There's
 14 certainly some of these that are not peer-reviewed.
 15 And I'm not sure what you mean by
 16 authoritative and well accepted still. It's
 17 something could be very appropriate for one purpose
 18 but not very appropriate for the purposes that we
 19 require in this case.
 20 We might have a -- an article that is very
 21 appropriate when it describes the ratio of prices
 22 between private insurance and Medicare for that
 23 audience but would not be appropriate if we're
 24 trying to apply it to this case. So what you mean
 25 by well accepted and authoritative is -- depends on

Page 167

1 what you're using it for.
 2 BY MR. MIGLIACCIO:
 3 Q. Okay. Let me restate my question.
 4 A. Okay.
 5 Q. You -- you -- you reviewed his report in
 6 detail, right, in -- before you offered your
 7 opinions?
 8 A. I reviewed his report. I am not sure what
 9 you mean by "in detail." I have the hours that I
 10 reported in terms of how long I spent on reading his
 11 report.
 12 Q. You did not in your report that -- the
 13 document that you've produced, you did not identify
 14 any publications that Dr. Song relied upon that, in
 15 your mind, were suspect, did you?
 16 MR. STOY: Objection. Form.
 17 THE WITNESS: Not specific sources that I
 18 thought were suspect.
 19 BY MR. MIGLIACCIO:
 20 Q. Okay.
 21 A. But, again, some of these sources are fine
 22 for one purpose but not fine for the purposes that
 23 we need in this case and I think in my report I do
 24 describe those.
 25 Q. Which sources, and can you point me to

Page 168

1 those specifically?
 2 A. I'm not sure which paragraph I mentioned
 3 this. But I think it gets to the point of averages
 4 for a different patient population are not the
 5 averages that we want here. This has to do with
 6 needing to know how various quantities that we care
 7 about, such as prices or such as what services are
 8 going to be used, how they might correlate with
 9 patient characteristics in patients who might be in
 10 a class, and whether those data to come up with
 11 those averages even exists anywhere that anybody
 12 could use to calculate the relevant average.
 13 Q. Can you direct me to that, to that portion
 14 of your report?
 15 A. Sure. Let's see. Let me go back to my
 16 report. Now it's kind of hard -- which exhibit is
 17 it, is my report?
 18 Q. Yeah, I'm sorry, I renamed them. I
 19 believe it's Exhibit 2.
 20 A. 2. Okay. Let's see.
 21 I think paragraph 100 speaks a little to
 22 this.
 23 When you say something is correlated with
 24 something else, then you can't just calculate the
 25 average of that something else without knowing what

Page 169

1 you're conditioning on in the first place. So if
 2 something is correlated that means the average that
 3 you care about might change if you switch
 4 populations.
 5 Q. And, again, you -- you -- you do know that
 6 this population has not been determined with
 7 finality, right?
 8 A. Right. But I know that it would likely be
 9 different than the sources that Dr. Song is relying
 10 upon and I also think that it wouldn't be feasible
 11 even to measure that with the data that we have.
 12 Q. Well, why do you think it would not be
 13 feasible?
 14 A. Because the data have not been made
 15 public.
 16 Q. Which data have not been made public?
 17 A. Many of the pricing data have not been
 18 made public and how that correlates with individual
 19 characteristics of patients that would determine
 20 what services we need to recommend for the medical
 21 monitoring program. The cost sharing agreements in
 22 these contracts are not public. There are a number
 23 of different components to evaluating spending that
 24 would not be public.
 25 Q. Isn't it fair to say, though, that, you

Page 170

1 know, the government knows how much it spends
2 annually on -- on Medicare?
3 A. That, again, is an average.
4 Q. Uh-huh.
5 A. That's an overall -- that's an average for
6 how much it's spending for the entire population of
7 Medicare patients. So there's two problems with
8 that. Number one, there could be patients in the
9 class that are not Medicare patients. And number
10 two, there are Medicare patients that aren't in our
11 class.
12 Q. Right. I -- but the government
13 nonetheless can determine how much it spends for
14 the -- for the whole population, right? I mean,
15 that -- that is --
16 A. Of patients --
17 Q. -- that is --
18 A. Of patients under Medicare. But, again,
19 that's abstracting away from the possibility that we
20 care about cost sharing, which I'm still not clear
21 about if we're -- it depends on who -- you know, my
22 understanding is that the class is any -- any
23 payments that the patients would have to make for
24 monitoring, not the payor.
25 So first, that's one issue. And then

Page 171

1 another --
2 Q. Where do you draw that -- I'm sorry,
3 Doctor, to interrupt you.
4 But where do you draw that -- how -- how
5 did you come across that assumption? Where -- where
6 do you -- where do you draw that assumption from?
7 A. I think that would be -- I think I
8 discussed this in my -- my assignment and my
9 understanding of the complaint.
10 Q. Okay.
11 A. Let's see.
12 So in paragraph 8, it says, "The proposed
13 medical monitoring class consists of individuals
14 'who consumed a sufficiently high Lifetime
15 Cumulative Threshold of NDMA, NDEA, or other
16 nitrosamine, in generic valsartan-containing drugs
17 manufactured by or for Defendants."
18 So the -- the class are the individuals
19 who consumed this. It's not named that the
20 third-party payors are in that class. This is in
21 contrast to the other class of economic loss where
22 the third-party payors are included in that class.
23 And that's in paragraph 9.
24 Q. So that -- that is how you have reached
25 that conclusion, that is how you -- you have that

Page 172

1 assumption, right?
2 A. That's my understanding of the complaint.
3 Q. Did anybody provide that understanding to
4 you or did you just -- is that your understanding,
5 sitting here with your own interpretation?
6 A. That's my understanding after having read
7 the complaint and bringing this up with the
8 attorneys involved in the case.
9 Q. And if you read the beginning portion of
10 paragraph 8, "In regards to the proposed medical
11 monitoring class, I further understand that, among
12 the remedies requested, Plaintiffs seek" -- you
13 know, quote -- "seek injunctive and monetary
14 relief, including creation of a fund to finance
15 independent medical monitoring services."
16 Where do you -- or do you see within that
17 language any implication with respect to cost
18 sharing?
19 A. It just reads to -- it read to me that the
20 class for medical monitoring were patients, and
21 third-party payors were explicitly not included.
22 They were not named in that class. And that is
23 contrast with the second class of economic loss
24 where third party payors are explicitly named.
25 Q. So that's the basis for your -- for that

Page 173

1 assumption and that conclusion?
2 A. Correct.
3 Q. And you're not -- not a lawyer, right?
4 A. No.
5 Q. Okay. And this -- this -- this assumption
6 was also provided to you, or in part, by counsel; is
7 that correct?
8 A. That is --
9 MR. STOY: Objection. Asked -- hang on.
10 Objection. Asked and answered.
11 Objection. Form. To the extent it misstates what
12 he previously testified to.
13 THE WITNESS: Correct. I previously said
14 that I read the complaint.
15 MR. STOY: Go ahead.
16 THE WITNESS: This distinction, I noticed
17 this distinction in the complaint, and I
18 discussed -- I discussed this idea with the lawyers
19 involved in this case.
20 BY MR. MIGLIACCIO:
21 Q. I see.
22 And is it fair to say that if you -- how
23 many class action complaints have you read?
24 A. This is my first one.
25 Q. First one. Got it.

Page 174

1 Is it fair to say that if you -- if this
2 assumption was incorrect with respect to cost
3 sharing that it would alter your opinions in some
4 fashion?
5 MR. STOY: Object to the form.
6 THE WITNESS: I don't know if you want to
7 clarify what you mean by "alter in some fashion,"
8 but there are -- there's a section in my report on
9 cost sharing.
10 BY MR. MIGLIACCIO:
11 Q. Uh-huh.
12 A. And that is under the assumption that we
13 are interested in what patients are paying.
14 If we are not interested in what patients
15 are paying and there is some other concept that is
16 not well defined, it would need to be defined first,
17 and it would likely -- it's possible that could lead
18 to other variation that's unaccounted for.
19 Q. The question of variation of cost sharing,
20 if cost sharing wasn't an issue, there would be no
21 issue with respect to variation of cost sharing,
22 right?
23 MR. STOY: Object to form. Incomplete
24 hypothetical.
25 THE WITNESS: I guess what I'm saying is

Page 175

1 that we need to specify what is the object that we
2 are interested in quantifying. Even if there is no
3 cost sharing, there's a difference between charges
4 and difference between charges and costs and
5 ultimate amount that's reimbursed plus patient cost
6 sharing.
7 There's many different kind of optics that
8 we could be considering, and we would need to define
9 that first. And some objects will entail other
10 sources of variation.
11 BY MR. MIGLIACCIO:
12 Q. But cost sharing would no longer be a
13 source of variation if we're not talking about cost
14 sharing?
15 A. You're saying but cost sharing would no
16 longer be of interest if we're not talking about
17 cost sharing?
18 Q. No, would no longer be a source of
19 variation if -- if -- if it's not at issue in this
20 case?
21 MR. STOY: Objection. Incomplete
22 hypothetical.
23 Go ahead.
24 THE WITNESS: If the assumption is that
25 cost sharing is not at issue, then we would not

Page 176

1 consider variation in cost sharing.
2 BY MR. MIGLIACCIO:
3 Q. Got it.
4 Paragraph 117 in your report, you state
5 that -- let me know when you are there.
6 A. I'm here.
7 Q. Yep. 117.
8 A. Yep.
9 Q. Yep. Okay.
10 A. Yes.
11 Q. I'm looking for where I -- you state in
12 the middle, "Given the substantial price variation
13 that I summarize above, there is no reason to
14 believe that the average prices experienced by a
15 proposed" -- "proposed class members is the same as
16 the average prices experience" -- "experience by the
17 nation as a whole."
18 I think you just said that earlier.
19 A. Yeah.
20 Q. Isn't it fair to say that you have not
21 made an effort to determine the extent to which you
22 say the average prices experienced by proposed class
23 members is the same as the average prices
24 experienced by the nation as a whole? You haven't
25 tried to -- to determine that?

Page 177

1 A. In the report I do say how patients that
2 take valsartan are different than patients who don't
3 take valsartan. That is evidence in that direction.
4 But more broadly, in my report, I would
5 say that it would be infeasible to determine the
6 prices for patients in the class as -- for reasons I
7 just told you, including the unavailability of data.
8 Q. Well, if we take the cost sharing out,
9 which we'll -- we placed aside for these
10 discussions, what other data do you contend is -- is
11 unavailable?
12 A. Should we also define over what time span
13 this is going to be for?
14 Q. What -- what time span a medical
15 monitoring program will be for?
16 A. Right.
17 Q. Well, I think we can define it within a
18 finite period of time. We could say one year for --
19 for purposes of our discussion.
20 A. So you --
21 Q. I'm -- I'm just -- I'm giving you a
22 hypothetical to say could you determine that for --
23 for one year how much something would cost?
24 MR. STOY: So you're not -- you're not --
25 that's not a stipulation, huh, Nick?

<p style="text-align: right;">Page 178</p> <p>1 MR. MIGLIACCIO: No, that's a 2 hypothetical. To aid in the calculations here. 3 THE WITNESS: So we're not looking into 4 the future by very much. We're going to restrict 5 patients only to those who have Medicare. 6 BY MR. MIGLIACCIO: 7 Q. Uh-huh. 8 A. And we know exactly whether screening is 9 appropriate for every single patient individually, 10 then we could calculate the prices for patients in 11 Medicare for this year. 12 Q. Got it. 13 Have you made any effort -- you know, 14 since you -- you don't believe that the -- the 15 prices experienced by class members are the same as 16 the prices experienced nationwide, what efforts have 17 you made to determine how far off you believe them 18 to be? 19 A. I think this is supported by a few 20 analyses in the report. So it's supported by the 21 fact that patients who take valsartan are different 22 than patients who don't take valsartan. It's 23 supported by the variation in price among patients 24 seeing the same provider, MGH. 25 It's supported by also variation in price</p>	<p style="text-align: right;">Page 180</p> <p>1 class"? 2 A. So, for example, 5th percentile means 3 5 percent of the population is -- is, you know, at 4 the 5th percentile or below. Or 95th percentile is 5 5 percent of the population is at or above this 6 price. 7 So if you have a class that's 5 percent of 8 the population you could be as unlucky to get 9 something that's 400 percent off if you compare the 10 5th to the 95th percentile. 11 Q. When we're talking about the size of the 12 class, how do you mean in terms of a small class, a 13 big class, what do you mean by that? 14 A. So -- so kind of implicit in my previous 15 answer is you would ask how many people are in this 16 class and how many people are in the overall 17 population of the nation. That's one way of asking 18 that. 19 Or if you are -- even if under the 20 assumption that all members of the class -- you were 21 able to measure prices for some bigger sub -- bigger 22 set of people that include everybody in this set, 23 included people in the class, which I don't think is 24 true, you could use that bigger population. 25 So in our previous example where we're</p>
<p style="text-align: right;">Page 179</p> <p>1 that I -- that I show in other -- other exhibits 2 like figures -- Figure 9, "OptumHealth commercial 3 pricing," variation for the proposed procedures. 4 So if there's variation -- if there's no 5 variation then you would be much more confident that 6 the averages shouldn't differ between groups of 7 patients. But if there's a lot of variation, that 8 tells you that there's a lot of scope for averages 9 for one population differing from averages for 10 another population. And that, I think, is enough 11 evidence to show that you could be wildly off. 12 Q. When you say "wildly off," like, can you 13 ballpark that percentage? 14 A. Yeah, I mean, I think that's what some of 15 these figures do. You could be off by a factor of 16 like 400 percent if -- especially if the class is 17 not a big class. 18 If the class is a subset of patients who 19 took at-issue valsartan, it's a small population 20 relative to the entire population. And therefore, 21 you could be -- you could be in the 5th percentile 22 or in the 95th percentile and the difference between 23 the 5th and the 95th percentile for one given 24 provider is 400 percent. 25 Q. How do you define like a -- "not a big</p>	<p style="text-align: right;">Page 181</p> <p>1 only talking about the Medicare patients, we would 2 look at Medicare patients and we'd ask how big is 3 Medicare patients relative to the size of our class. 4 Q. And what are your -- do you have 5 assumptions with respect to the size of the class 6 here? 7 A. No. 8 Q. You have no assumptions? 9 A. No. 10 Q. Okay. 11 A. I mean, I -- I -- I have some intuition 12 that it's not going to be 50 percent of the U.S. 13 population. 14 Q. But no assumption on -- on -- on the size, 15 the number, the -- the -- you know, how many people 16 other than that intuition? 17 A. I haven't -- yeah, I haven't -- no. 18 Q. Have you asked for that information? 19 A. I so far have not asked for that 20 information, but I think that would be relevant for 21 moving forward. I wouldn't -- you know, I would 22 reserve the right to look at that in the future. 23 Q. Got it. 24 So for calculating the prices as we just 25 went through that hypothetical, in a limited</p>

Page 182

1 fashion, that we -- that we could calculate the
 2 prices for -- for patients in Medicare for a year,
 3 could you calculate that for two years?
 4 A. So I say in my report the farther into the
 5 future that you get, the more uncertain this is
 6 going to be.
 7 Q. Yeah.
 8 A. It's going to be more uncertain for
 9 private insurance than for Medicare, but even within
 10 Medicare, the Medicare budget changes every year,
 11 the conversion factor between RVUs and dollars could
 12 change and does change every year.
 13 The geographic price indices between
 14 different regions in the country, that changes. It
 15 could change quite drastically. For example, Alaska
 16 doubled in one year.
 17 So the farther that you move out, even
 18 within Medicare, there would be more uncertainty on
 19 prices alone.
 20 But I think the bigger point, this might
 21 not be -- this is kind of a combination of both
 22 Kaplan and Song, is that we can't evaluate the
 23 overall spending for a medical monitoring program
 24 only by asking about prices. We have to ask what
 25 are the services that are going to be rendered and

Page 183

1 this -- there's a lot of uncertainty about what
 2 those services would be the farther we move out.
 3 Q. So how would -- you know, would it be
 4 possible to do two years if you knew what the
 5 services are or the menu of service?
 6 A. I said it's -- it's possible, but it
 7 becomes more uncertain.
 8 Q. Okay.
 9 A. Moving from one year to two years.
 10 Q. How about three years?
 11 A. More uncertain then.
 12 Q. Okay. So your work in the NBER, do you
 13 ever work on budgeting, working in the NBER?
 14 A. The government budget?
 15 Q. Or -- or have you ever dealt with
 16 budgeting issues working in that capacity, in -- in
 17 that --
 18 A. Can you clarify what you mean by
 19 "budgeting issues"?
 20 Q. Where the government, the federal
 21 government seeks to budget things out into the
 22 future, right, isn't that typically how the federal
 23 government works, they have a budget and it -- they
 24 have amounts that -- that are -- that are set into
 25 the future?

Page 184

1 MR. STOY: Object to the form.
 2 THE WITNESS: I'm familiar somewhat with
 3 how the budget for Medicare has been set.
 4 BY MR. MIGLIACCIO:
 5 Q. What -- what is your familiarity with
 6 that?
 7 A. So there is some budgeting into the future
 8 but this could be changed by Congress any given
 9 year.
 10 Q. Uh-huh. How -- tell me, how is it -- what
 11 is your familiarity of how -- how does Medicare get
 12 budgeted into the future?
 13 A. It's very complicated. I know that a lot
 14 of it has to do with politics. I know that one
 15 example of this is called a "doc fix" where in order
 16 to have a balanced budget there was some promise to
 17 eventually lower prices on medical spending for
 18 physician services but every year or every couple of
 19 years there'd be a delaying of this.
 20 So I think there is quite a bit of
 21 political influence on what the Medicare budget is.
 22 It's not some formula that gets set by something
 23 that's free of politics and is kind of -- you know,
 24 is -- is let to run in some predetermined fashion.
 25 Q. How far out does the Medicare budget get

Page 185

1 set; do you know?
 2 A. I think in -- as I said, in practice, it
 3 could change in a year.
 4 Q. Uh-huh.
 5 A. So by definition it's not in practice set
 6 in stone.
 7 Q. And is it determined annually, on an
 8 annual basis?
 9 A. I think it could change at any point.
 10 Q. The government knows how much it spends on
 11 Medicare for a given year, right?
 12 MR. STOY: Objection. Asked and answered.
 13 THE WITNESS: For -- for a given year, I
 14 believe the government could track down how much it
 15 spent on Medicare.
 16 BY MR. MIGLIACCIO:
 17 Q. Do you believe -- you know, is it your
 18 opinion that for one price to be representative of
 19 another, they would need to be the same?
 20 A. Say that again.
 21 Q. Is it your opinion that for one price to
 22 be representative of another, they would need to be
 23 the same?
 24 A. For one price to be representative of
 25 another price, the two prices would have to be the

Page 186

1 same?

2 Q. Yes. That -- that's what I'm asking you.

3 A. I'm not sure what I -- I'm not -- I'm not

4 sure I understand that question. Sorry.

5 Q. So if you were to -- if you were to

6 attempt to estimate the prices for a -- a patient

7 population, would you -- you would look at

8 representative prices, right; is that something that

9 you would do?

10 MR. STOY: Objection. Incomplete

11 hypothetical.

12 THE WITNESS: What do you mean by

13 "representative prices"?

14 BY MR. MIGLIACCIO:

15 Q. You would look at average prices?

16 A. Average prices. I'm not sure -- yeah, I'm

17 not sure I understand, like -- ultimately, what we

18 want to do is to be able to quantify total spending.

19 I'm not sure what we mean by "average prices."

20 Like, is there some weighting to the

21 prices? The average prices alone don't -- some

22 unweighted version of average prices is not going to

23 tell you how much we are going to spend in a medical

24 monitoring program.

25 Q. I'm going to direct you to paragraph 117.

Page 187

1 You can tell me when you are there.

2 A. Yes.

3 Q. Yeah. I mean, you discuss Dr. Song's

4 proposed estimates.

5 A. Uh-huh.

6 Q. Based on national averages and -- and you

7 say, "not average prices specific to members of the

8 proposed class."

9 A. Uh-huh.

10 Q. And you say, "Given the substantial price

11 variation that I summarize above, there is no reason

12 to believe that the average price" -- "prices

13 experienced by proposed class members is the same as

14 the average prices experience by the nation as a

15 whole."

16 A. Uh-huh.

17 Q. So my question to you is, that given that

18 you don't believe the prices experienced by class

19 members are the same as the prices --

20 A. Uh-huh.

21 Q. -- experienced nationwide, what efforts

22 have you made to determine how far off they are,

23 like how far off do they vary?

24 A. I think as I said before, the analyses

25 that show that the class members -- or people that

Page 188

1 take valsartan are different than people who don't

2 take valsartan and that prices vary in several of

3 the analyses that I do within Optum or within MGH

4 suggests that they could vary quite a bit.

5 Q. They could. But -- but have you

6 determined that they do?

7 A. I think my level of certainty is quite

8 high that they do vary. I haven't seen any evidence

9 to suggest that they would be the same.

10 Q. So how much do they vary?

11 A. In order to -- in order to do this you

12 would have to first specify the class, right?

13 Q. Right. And the class has not yet been

14 determined.

15 A. Right.

16 Q. Class hasn't been certified. So have

17 you --

18 A. But I can tell you that --

19 MR. STOY: Hang on, Dr. Chan. I don't

20 think there was a question pending.

21 BY MR. MIGLIACCIO:

22 Q. So have you determined, then, how much

23 they vary here?

24 MR. STOY: Objection. Asked and answered.

25 THE WITNESS: If there's no class, then I

Page 189

1 wouldn't be able to -- and I think this is part of

2 the problem of -- of defining a class. First you

3 would need to know who -- you would need to define

4 the class in order to ask whether it's feasible

5 to -- the class would of course have to be captured

6 by either a -- fully captured by Medicare data or

7 fully captured by sources of data that are publicly

8 available in order for you to ask how would the

9 prices differ for members of the class versus

10 other -- other patients.

11 What we can do is that we know that

12 patients who take valsartan are different than

13 patients who don't take valsartan. That's a

14 starting point. That would suggest that these

15 patients are -- there's no reason why you would

16 think that -- so patients who take valsartan have,

17 you know, hypertension. They have heart failure.

18 And those by construction, like the fact

19 that they take valsartan implies certain medical

20 conditions that other patients don't have. You

21 would expect that patients that have certain medical

22 conditions to have different forms of insurance.

23 And if you have different forms of

24 insurance, you would expect that the prices should

25 be different for those patients than for patients

<p style="text-align: right;">Page 190</p> <p>1 who don't take valsartan. 2 BY MR. MIGLIACCIO: 3 Q. If we disregard the cost sharing, right, 4 that -- that -- that different forms of insurance 5 issue falls away, right? 6 A. No. If you are saying, you know, some 7 patients might be more likely to be covered under 8 the VA or some patients might be more likely to have 9 private insurance, again it all depends on what 10 object you really want to focus on. 11 Even if you disregard cost sharing and you 12 say it's the object of how much the insurance 13 company pays providers, which I'm not sure is 14 what -- it hasn't been specified exactly what the 15 object should be, but if that is the object, that 16 would depend on whether the patient has private 17 insurance or Medicare or is a patient at the VA. 18 Q. But, again -- and -- and I -- I mean, I 19 think you've answered this, but I want to make sure 20 that I understand it. 21 You have not made any effort to determine 22 whether prices experienced -- whether the prices for 23 class members would vary by a certain percentage 24 from the national average prices? 25 A. I just don't have the --</p>	<p style="text-align: right;">Page 192</p> <p>1 think there's -- I mean, you point to them. Do you 2 think there's some -- are -- are they useful for -- 3 for your -- for your opinion? 4 A. I don't think they would -- they're enough 5 for us to estimate how much paying for medical 6 monitoring would be for this class. 7 Q. But you used them to argue that -- or to 8 opine, rather, that -- that it -- that it can't be 9 estimated; is that right? 10 A. In some of the stuff that you've read from 11 my report, I say that the national average price is 12 different from -- for the -- different than the 13 price that would be applicable for members of the 14 class. 15 Q. And -- and you -- you don't have that 16 delta, you don't have that difference? 17 A. I don't think anybody has that. And I 18 don't think it would be feasible to calculate it 19 because you can't calculate the price. 20 Q. Is it fair to say that you can get much 21 more locally accurate commercial-to-Medicare price 22 ratios by using data that show local variations in 23 these ratios? 24 MR. STOY: Object to form. 25 THE WITNESS: Can you restate that</p>
<p style="text-align: right;">Page 191</p> <p>1 MR. STOY: Objection. 2 Hang on. 3 Objection. Asked and answered. 4 Go ahead. 5 THE WITNESS: I don't have the data to do 6 that. You can -- you can demonstrate that patients 7 who take valsartan are different than patients who 8 don't, but I don't have all of their private 9 insurance prices that they are facing, like -- and I 10 don't think anybody has those data. 11 BY MR. MIGLIACCIO: 12 Q. So -- so you -- you don't have an answer, 13 then. You don't -- you -- you have not reached 14 the -- 15 A. Yeah. And I think it's an opinion that 16 it's not really answerable unless you have much more 17 detailed data sources than are publicly available. 18 Q. Would you agree that Medicare prices are 19 available by geography at the state and local level? 20 A. Medicare prices are available, yes, 21 Medicare prices are available if you know the 22 provider type and if you know the geography and if 23 you know the service. 24 Q. Do you -- do you think that the national 25 average prices are useful in your analysis? Do you</p>	<p style="text-align: right;">Page 193</p> <p>1 question? 2 BY MR. MIGLIACCIO: 3 Q. Yeah. 4 Can you get much more locally accurate 5 commercial-to-Medicare price ratios by using data 6 that shows local variations in these ratios? 7 MR. STOY: Object to form. 8 THE WITNESS: I think my point is that you 9 actually don't observe the real ratios for many -- 10 for -- in many settings and for many providers, for 11 many insurers. 12 We have, like, limited -- we have limited 13 data. For example, Optum is from a specific class 14 of insurers. We have hospital prices for certain 15 insurers. But we don't have the data relevant that 16 we would need for the prices of this medical class. 17 So we wouldn't be able to calculate the ratios. 18 BY MR. MIGLIACCIO: 19 Q. This is a general question as to whether 20 you can get more locally accurate 21 commercial-to-Medicare price ratios by using data 22 that shows local variation in these ratios? 23 A. Do the data exist? Is it available? 24 Q. Would you agree to that, yes? 25 A. I don't think the data are available.</p>

<p>Page 194</p> <p>1 Q. You don't think -- you don't think that 2 there is data that allows you to get much more 3 locally accurate commercial-to-Medicare price 4 ratios, you don't think it exists? 5 A. I think we could get data that are more 6 locally accurate than the data that Dr. Song relies 7 upon. But I don't think we have data available to 8 get us what would be the relevant spending for a 9 medical monitoring program for this class that has 10 not yet been specified. 11 Q. Tell me about the more accurate local 12 data. Where does that data exist? Where can you 13 get it? 14 A. That is quite hypothetical. 15 I -- you know, I think -- what Dr. Song 16 relies upon is -- or at least in his report, is a -- 17 to my understanding, it's a paper that measures 18 private insurance prices for some population of 19 patients that's aggregated and compares that with 20 Medicare prices. So certainly you could do better 21 than that. 22 There are data on private insurance prices 23 that are incomplete. So, you know, they're 24 incomplete. They -- they -- they leave out 25 populations of patients. They're only in certain</p> <p>Page 195</p> <p>1 settings. 2 They may or may not have geographic 3 identifiers. And if you have geographic 4 identifiers, then you could come up with something 5 that is more, in your words, local to a geography. 6 But geography is not the only variation that we need 7 to account for. 8 Q. When you say certainly you can do better 9 than that, what -- in your last answer, what do you 10 mean by that and how much better could you do? 11 A. What I mean is that in Dr. Song's 12 methodology he's using a ratio from a paper that is 13 not published for this purpose. It's some average 14 ratio in some population of patients that is almost 15 certainly different than the population of patients 16 that we care about in this class. And it's a single 17 ratio. 18 And if you wanted to get more granular, 19 you could look at different locations, if there are 20 geographic identifiers. And that's what I mean by 21 you could do better. If you wanted to have 22 something that accounted for geographic variation in 23 the ratios, you could use local prices from -- and 24 private insurance, but those prices would omit, you 25 know, classes of patients that I just mentioned and</p>	<p>Page 196</p> <p>1 so they wouldn't -- there would be shortcomings 2 there. 3 So -- so there -- there are different 4 dimensions in which prices vary. Geography is one 5 of them. And there are others that you might 6 actually be worse. If you're focusing on, say, 7 Optum data, Optum data are only from a certain class 8 of private insurers. So you might do worse if you 9 focus only on Optum data. 10 Q. What would those shortcomings be? Could 11 you quantify how big they would be? How big -- how 12 big would we be from the truth? Like, how far off? 13 A. I can tell you that there's big variation. 14 If there's big variation that the potential 15 shortcomings could be as large as the variation. 16 Q. Do you know how -- have you quantified how 17 large the variation could be? 18 A. It's possible that the variation could be 19 as large as 400 percent. 20 Q. What is the basis for that opinion? 21 A. The basis of that opinion is that there's 22 variation between the 5th and the 95th percentile in 23 prices that is as large as 400 percent and if you 24 have a class that is the size that's small enough, 25 say, 5 percent of the population, then you could</p> <p>Page 197</p> <p>1 have very unfortunate variation where it's -- you 2 get your 400 percent off. 3 Q. Isn't it fair to say that most people 4 reside in the center of the histogram and not at the 5 tail ends, at the 5 percent or the 95th percentile? 6 A. It depends on the population. 7 MR. STOY: I was going to object to the 8 form. 9 THE WITNESS: It depends on the 10 population. If you say do most doctors reside in 11 the center of the overall U.S. population in terms 12 of income, the answer would be no. Most doctors 13 reside in the top 5 percent. 14 BY MR. MIGLIACCIO: 15 Q. Right. And I'm not asking about income 16 but I -- you know, I appreciate that. 17 I'm asking about, you know, healthcare 18 spending or healthcare prices that people -- that 19 would be paid for a person. 20 A. I think healthcare spending exhibits some 21 of the same properties as income. So there are big 22 kind of skewed -- they're -- they are not normally 23 distributed actually, the healthcare spending. 24 They're obviously all positives so they're not 25 normally distributed. They could be log-normally</p>
--	--

<p style="text-align: right;">Page 198</p> <p>1 distributed. So there is a possibility that you 2 have skewed distributions and you could have 3 outliers. 4 This is well known, that certain regions 5 in the U.S. spend way more than others. There 6 are -- there are -- for example, McAllen, Texas, 7 versus San Antonio, Texas. So there could be -- you 8 could actually have a small population that is in 9 the tails of the distribution. The tails can be 10 quite large. 11 Q. Do you have any reason to believe that 12 people who ingested contaminated valsartan are not 13 in the middle of the population? 14 A. I don't have any reason to believe that 15 they are in the middle of the population because by 16 definition they have -- you know, first of all, we 17 would have to look at where -- who's in the class. 18 I mean -- so if you just say people who 19 take valsartan versus people who don't take 20 valsartan, that's a little bit easier and then you 21 could say are they similar to the average 22 population. I think probably not. They have heart 23 failure. They have hypertension. 24 Are they similar to some population maybe, 25 like you would have to work on specifying that</p>	<p style="text-align: right;">Page 200</p> <p>1 center of the histogram chart -- 2 A. It depends on -- 3 Q. -- even though -- 4 A. It depends on the population you're 5 talking about. If you're comparing two populations, 6 there's no guarantee that the most -- by -- it 7 depends on the distribution. It depends on whether 8 you're talking about one or two populations. In 9 this case, we're talking about two populations. 10 So you're asking whether most people in 11 one population falls in the center of another 12 population. There's no reason to believe that. 13 Q. But there's also no reason to believe they 14 reside in the tail ends, right? 15 A. I think there's something that 16 distinguishes the population that takes valsartan. 17 They have heart failure. They have hypertension. 18 There is something that distinguishes them. And 19 I -- I don't know if most of the population has 20 heart failure. Probably most of the population 21 doesn't have heart failure. 22 Q. Does not. So you're saying -- 23 A. Does not. 24 Q. -- you have -- you don't think -- but do 25 you -- do you think the majority of the population</p>
<p style="text-align: right;">Page 199</p> <p>1 population, but it's not clear to me how you would 2 specify that population that they're similar to. 3 Q. And -- but you have not done this analysis 4 to determine where a population of people who 5 consumed valsartan-containing drugs, contaminated 6 valsartan, where they would fall, right? 7 A. Again, I'm not sure if it's feasible to do 8 this analysis if you want to account for private 9 insurance prices and so forth. 10 Q. But to answer my question, you haven't 11 done it? 12 A. I have done an analysis to show how 13 patients who take valsartan are different than 14 patients who don't take valsartan. 15 I haven't done an analysis to show what 16 would the average price be for patients who take 17 valsartan compared to patients who don't take 18 valsartan, but I don't think an analysis could be 19 done if you want to account for private insurance 20 prices. 21 Q. Fair to say that you would have a reason 22 to assume that a -- that -- that our proposed class 23 would be in the middle because that's where most 24 people are, right? Most people -- isn't that -- 25 isn't there the -- most people do just fall into the</p>	<p style="text-align: right;">Page 201</p> <p>1 that takes valsartan has heart failure? 2 A. I would need to look further into that. 3 Q. You're not offering that opinion here? 4 A. I'm not offering that opinion. I'm just 5 offering the opinion that there are obvious 6 differences between people that take valsartan and 7 people who don't. 8 Some of this is in my report that 9 describes the characteristics of people who take 10 valsartan versus people who don't take valsartan. 11 Q. How would heart failure impact Medicare 12 costs for -- for the screening services that 13 Dr. Kaplan has detailed in his report? 14 A. Right. So as I mentioned in my report, 15 heart failure or just medical comorbidities would 16 impact whether somebody is a candidate for screening 17 or whether somebody has preferences that would make 18 screening make sense. 19 Heart failure is a disease for whom most 20 adults have a relatively limited life expectancy if 21 they have it. And given that, that would impact the 22 decision for whether somebody should be screened for 23 cancer. 24 Q. So it would impact -- and your opinion is 25 it impacts the decision of whether screening would</p>

<p style="text-align: right;">Page 202</p> <p>1 need to be done, but it doesn't impact the price, 2 the cost for a fixed service, right? 3 A. Oh, I see. For your -- your price -- 4 Q. Yeah. 5 A. Your question's about price? 6 Q. Correct. 7 A. If you have heart failure, that could 8 certainly -- and you don't have Medicare, that could 9 certainly impact the type of insurance that you 10 have. If you're a sick patient with heart failure 11 versus a healthy patient without heart failure, and 12 you're choosing between private insurance plans, you 13 would pick a different insurance plan if you have 14 heart failure, likely. 15 Q. Assuming the person is on Medicare? 16 A. Assuming the person is not on Medicare. 17 Q. That's your assumption, the person is not 18 on Medicare? 19 A. Correct. 20 Q. Got it. 21 But I mean, as we looked at, the average 22 age for a valsartan -- somebody who takes valsartan 23 was 63, right, that was with that -- that 63.3, and 24 the age of Medicare is 65, right? 25 A. Right. The -- the age --</p>	<p style="text-align: right;">Page 204</p> <p>1 interrupt you. 2 A. I think what I was saying earlier is that 3 patients may choose different insurance plans and 4 different insurance plans may have different prices. 5 Q. And you -- have you done that analysis 6 here to determine what that -- what that 7 differential might be? 8 A. For MGH in particular, I show that the 9 differential could be quite a bit. 10 Q. Have you done it for any other hospital 11 system? 12 A. No, but I think MGH is quite illustrative. 13 Q. I want to show you some of your -- I think 14 some of your papers. 15 MR. STOY: Hey, Nick, would this -- 16 MR. MIGLIACCIO: Yeah. 17 MR. STOY: Would this be a good time to 18 take ten? 19 MR. MIGLIACCIO: Sure. Yeah, we can do 20 that. 21 THE VIDEOGRAPHER: Okay. We're off the 22 record. The time is 1:41 p.m. Pacific time. 23 (Whereupon, a brief recess was taken.) 24 THE VIDEOGRAPHER: We are back on the 25 record. The time is 1:57 p.m. Pacific time.</p>
<p style="text-align: right;">Page 203</p> <p>1 Q. Eligibility. 2 A. -- of Medicare eligibility is 65. If the 3 average age is -- again, I think you asked this 4 question before. 5 If I know the average age is 63, can I say 6 that the majority of patients on valsartan is on 7 Medicare? And I think I said that I wouldn't be 8 able to automatically reach that conclusion. It 9 could be -- because you would need to know the 10 entire distribution. 11 Like, for example, if the distribution is 12 a normal distribution, and half the people are above 13 63 and half the people are below 63, you could have 14 close to half of the people not being on Medicare. 15 It all depends on the shape of the distribution, not 16 just the average of the distribution. 17 Q. If -- if you take away the cost sharing 18 issue that we talked about at some length, right, 19 the fact that somebody may have heart failure or a 20 comorbidity shouldn't impact the cost for a fixed 21 service, right? 22 MR. STOY: Object to the form. 23 THE WITNESS: For -- I -- 24 BY MR. MIGLIACCIO: 25 Q. For a screening service. I'm sorry to</p>	<p style="text-align: right;">Page 205</p> <p>1 BY MR. MIGLIACCIO: 2 Q. All right. Dr. Chan, I want to ask you a 3 few questions about some of your own academic 4 publications. And I'm going to move into the 5 exhibit -- the file of paper that you have submitted 6 to the New England Journal of Medicine. 7 Here we go. I can do it. All right. I 8 thought I got -- was getting the hang of this. 9 Okay. 10 MR. MIGLIACCIO: It will be Exhibit 5. 11 (Whereupon, Chan Exhibit 5 was marked for 12 identification.) 13 MR. MIGLIACCIO: And it is a New England 14 Journal of Medicine document. 15 Q. Let me know when you have a chance to see 16 it. 17 A. It's open. 18 Q. Okay. Great. 19 So is it -- is it fair to say that you 20 have asserted in your own work the importance of a 21 common methodology when it comes to the pricing of 22 medical services? 23 MR. STOY: Object to the form. 24 THE WITNESS: Is there a -- a part of this 25 article you'd like to draw my attention to?</p>

<p style="text-align: right;">Page 206</p> <p>1 BY MR. MIGLIACCIO:</p> <p>2 Q. I'm asking you generally. I mean, it's --</p> <p>3 it's a nine-page article. I'll ask you some</p> <p>4 specifics, but I -- that's a general question.</p> <p>5 A. Can you ask that again?</p> <p>6 Q. Sure.</p> <p>7 Is it fair to say that you have asserted</p> <p>8 in your own work the importance of a common</p> <p>9 methodology when it comes to the pricing of medical</p> <p>10 services?</p> <p>11 MR. STOY: Object to the form.</p> <p>12 THE WITNESS: I'm not sure. I...</p> <p>13 BY MR. MIGLIACCIO:</p> <p>14 Q. In this paper, you discuss using median --</p> <p>15 median time values in defining benchmarks versus</p> <p>16 mean values.</p> <p>17 Do you see that in the Discussion section?</p> <p>18 A. Uh-huh.</p> <p>19 Q. Then you go on to say that you use medians</p> <p>20 as an alternative, right?</p> <p>21 A. Uh-huh.</p> <p>22 Q. And you write "average" or "on average"</p> <p>23 roughly nine times in -- in this study, right?</p> <p>24 I mean, you can look for it.</p> <p>25 A. Right, yep, 9 percent. Is that right?</p>	<p style="text-align: right;">Page 208</p> <p>1 it a lot?</p> <p>2 A. I think this is similar to our previous</p> <p>3 discussion about the use of averages in research.</p> <p>4 It -- it's important to use the right averages.</p> <p>5 In this case, you know, this is not a</p> <p>6 paper just comparing one average with another</p> <p>7 average. It's a paper that is comparing the average</p> <p>8 for a given procedure in a survey with an average in</p> <p>9 a nationally representative data source that --</p> <p>10 or -- sorry.</p> <p>11 It's -- it's an average in a data source</p> <p>12 that measures the time of how long this surgery</p> <p>13 takes, called NSQIP, and we are asking whether these</p> <p>14 two averages match up. And this is actually a</p> <p>15 research finding. It's not -- it's not -- we're</p> <p>16 actually asking whether the two averages for a given</p> <p>17 procedure match up. It's not -- it's not</p> <p>18 predetermined that they would match up.</p> <p>19 So it's -- it's kind of like -- it's a --</p> <p>20 it's a -- it's a research inquiry to ask whether</p> <p>21 using this average is representative of another</p> <p>22 average. And in this case, these two measures do</p> <p>23 closely follow each other, but it's not a foregone</p> <p>24 conclusion that they would.</p> <p>25 Q. But it's fair to say that, you know,</p>
<p style="text-align: right;">Page 207</p> <p>1 Q. No. I said you used the word "average" --</p> <p>2 A. Oh.</p> <p>3 Q. -- throughout and -- throughout the --</p> <p>4 A. Oh, okay.</p> <p>5 Q. -- paper.</p> <p>6 A. Yeah. I think -- yeah, go ahead. Sorry.</p> <p>7 Q. Yeah. And I do see that you -- that --</p> <p>8 that 9 percent, is that the average that you --</p> <p>9 you've reached ultimately?</p> <p>10 A. No, actually, that paragraph is an example</p> <p>11 where...</p> <p>12 Q. I'm sorry, were you finishing --</p> <p>13 A. No, I'm -- I'm reading it.</p> <p>14 Q. Okay.</p> <p>15 A. Sorry.</p> <p>16 Q. Please, no, go ahead. I didn't mean to --</p> <p>17 don't mean to interrupt your reading.</p> <p>18 A. Yeah, I think that discussion is just</p> <p>19 saying that there are different ways of -- different</p> <p>20 moments in a distribution to consider. Mean is one,</p> <p>21 or average. And the other one is median. And they</p> <p>22 just tell you different things.</p> <p>23 Q. Would you say this emphasis of averaging,</p> <p>24 the importance of averaging across data points, is</p> <p>25 it -- is it important in your research? Do you do</p>	<p style="text-align: right;">Page 209</p> <p>1 whether -- whether it was right or wrong, right,</p> <p>2 whether -- whether the -- whether they matched or</p> <p>3 they didn't, it's a common methodology to average,</p> <p>4 right? You used a common methodology, a methodology</p> <p>5 of averaging to determine if they -- if they would</p> <p>6 match the national average, right?</p> <p>7 MR. STOY: Object to the form.</p> <p>8 THE WITNESS: I don't know what you mean</p> <p>9 by common method -- I mean, I don't...</p> <p>10 BY MR. MIGLIACCIO:</p> <p>11 Q. You used the methodology of averaging,</p> <p>12 right?</p> <p>13 A. Not really. I don't think that's what</p> <p>14 we're doing here.</p> <p>15 Q. I thought you just told me that you were</p> <p>16 determining -- you were looking at something</p> <p>17 national versus another dataset --</p> <p>18 A. Uh-huh.</p> <p>19 Q. -- and to see if -- if they matched on</p> <p>20 average?</p> <p>21 A. We were asking whether average times for a</p> <p>22 given procedure matched average survey responses.</p> <p>23 This is a research question. It's not a common</p> <p>24 methodology per se. I'm not sure what you mean by</p> <p>25 "common methodology."</p>

<p style="text-align: right;">Page 210</p> <p>1 Q. Well, you used -- I mean, you -- you did 2 these calculations to see if -- if -- if they would 3 match, right, that's what you did? 4 A. That's maybe in one exhibit in this -- 5 okay. There are several exhibits in this -- in this 6 paper. 7 Exhibit 1, Figure 1, asks whether -- this 8 is kind of -- it's kind of most directly related to 9 what you're saying, which is the -- whether the 10 average time that we observe in one dataset matches 11 the average survey in another -- a survey response 12 for the time in another dataset. 13 Now, Figure 2 is doing something very 14 different, which is asking about discrepancy. 15 That's, you know -- and discrepancy that kind of 16 changes over time. So that's not just comparing 17 averages. 18 Figure 3 is asking about the implications 19 of discrepancy on different surgical specialties 20 such as orthopedic surgery, urology, general 21 surgery, showing that these implications can be 22 large in terms of dollar terms. 23 For example, orthopedic surgery is paid 24 more than \$150 million more than what it would get 25 if they had resorted to another measure. And</p>	<p style="text-align: right;">Page 212</p> <p>1 for this one particular exercise. But as I said, we 2 also could do it in terms of medians instead of 3 averages. 4 Q. Uh-huh. 5 A. And in this exercise, it was a regression. 6 So after you have each individual observation, which 7 is a procedure, a surgical procedure is one 8 observation -- or a surgical procedure at a given 9 point in time is one observation. We have many 10 observations of these. Then we run a regression 11 that kind of fits a line on these points here. 12 Q. When you say you could also use the 13 median, what did you do with respect to the median? 14 A. So instead of using an average time from 15 the NSQIP data we could use the median time. That's 16 just a different moment in the distribution. 17 Q. Uh-huh. 18 A. And so when we do that, I mention 19 discussion that we get a different result if we use 20 the median instead of the average. 21 Q. Got it. 22 What was -- what's the difference? 23 A. It's a 9 percent difference in this case. 24 Q. Between the average and the median? 25 A. Uh-huh.</p>
<p style="text-align: right;">Page 211</p> <p>1 cardiothoracic surgery is paid about \$125 million 2 less than it would have been paid if it kind of used 3 another measure. 4 And then Figure 4 is asking whether 5 discrepancies are kind of resolved with 6 re-evaluation. So it's focusing on the 7 discrepancies. 8 So I don't think this paper, overall, is 9 only about comparing averages. It's about -- it's 10 much more. 11 Q. Got it. I understand. 12 So -- and I appreciate that clarification. 13 But for -- for Figure 1, who did the 14 averaging work? Was that something that you did or 15 your team did in -- in gathering -- in gathering the 16 dataset and averaging it? 17 A. I don't know if I would characterize 18 Figure 1 as like a dataset of just doing averaging 19 work. It's -- this work overall was done by me and 20 my research team. Some of them are coauthors on 21 this paper. Others are research assistants. 22 Q. What was -- what did you do beyond just 23 averaging it? 24 A. I would say that's just the first step. 25 We need a dataset with -- we chose these averages</p>	<p style="text-align: right;">Page 213</p> <p>1 Q. Got it. Okay. 2 Who did that work in determining the 3 median information, was that you or -- 4 A. The same research team. 5 Q. Got it. Got it. 6 And that's a methodology that you -- that 7 you use frequently determining medians? 8 A. Often. Oftentimes the median is a better 9 measure. If the distribution is skewed, you might 10 want to use the median instead of the average. 11 Q. Got it. 12 Are there other measures other than median 13 and average that you use -- 14 A. Yes. 15 Q. -- in analyzing datasets? 16 A. Quantiles, like I -- like I mentioned in 17 the -- like I use in the report, there's like 18 95th percentile, 5th percentile. There's a -- 19 they're -- those are called quantiles. 20 Q. Quantiles. 21 A. And sometimes you kind of work with logs, 22 like log -- logarithmic transformation. So you 23 might take a mean of the log instead of a -- just 24 the mean. So you first take a log, logarithm, of 25 the value, then you take the mean.</p>

<p>Page 214</p> <p>1 Q. And you use that methodology as well in 2 your work as an economist, as a healthcare 3 economist? 4 A. Yeah, I'm not sure if I'd call it a 5 methodology. They're just different kind of ways 6 to -- ways to characterize distributions. 7 Obviously, the most comprehensive way is 8 just to show the entire distribution but you might 9 focus on various moments of the distribution. You 10 can focus on quantiles and medians, on averages. 11 You might transform the distribution by first 12 applying a logarithm to it, then taking an average. 13 And that's quite different than just taking the 14 average of the underlying distribution. 15 So there are various kind of 16 transformations of the underlying data and there are 17 different ways to characterize a distribution. 18 Q. When you -- if you were to do that, 19 what -- what would -- what does it do to take the -- 20 I think you said take a -- first apply a logarithm 21 to it and then take an average? 22 A. Uh-huh. 23 Q. What -- what -- can you explain that a 24 little bit more? 25 A. Many distributions are skewed. For</p>	<p>Page 216</p> <p>1 reliable. 2 Q. Uh-huh. Got it. Got it. 3 Let me -- I want to show you something 4 else. Bear with me. Okay. 5 I just put in what we'll make as 6 Exhibit 6, which is your -- your national -- your 7 New England Journal of Medicine response letter. It 8 should be coming up right quickly. 9 (Whereupon, Chan Exhibit 6 was marked for 10 identification.) 11 THE WITNESS: Yes. 12 BY MR. MIGLIACCIO: 13 Q. Let me know if you have that. 14 A. I do. 15 Q. Okay. So this study received three formal 16 published critiques in the form of letters to the 17 editor, right? 18 A. Uh-huh. 19 Q. And you responded to those critiques, 20 correct? 21 A. Yes. 22 Q. Okay. And I think -- is it fair to say 23 you acknowledged some limitations of the study 24 including some special cases where your methodology 25 was less applicable --</p>
<p>Page 215</p> <p>1 example, income or spending, medical spending. So 2 it would be quite fragile if you were to actually 3 take an average of the underlying distribution of 4 spending and it would be much more robust if you 5 took a logarithm. 6 What a logarithm does is it transforms a 7 variable that ranges from just above zero to a very 8 large number, to something that's much more well 9 behaved and symmetric -- potentially around zero, so 10 it transform -- it might transform something to a 11 more normal distribution. 12 And that's kind of -- earlier in my 13 deposition I mentioned something called a log-normal 14 distribution. 15 Q. Uh-huh. 16 A. That is something that only starts looking 17 like a normal distribution when you take a 18 logarithm. 19 Q. Got it. 20 You used -- and used that methodology, 21 too, in -- in -- when you create averages? 22 A. Yeah, again, I'm not sure if I would call 23 it methodology. It's just a way of transforming -- 24 it's -- it's a very basic mathematical operation to 25 transform data into something that more -- is more</p>	<p>Page 217</p> <p>1 A. Uh-huh. 2 Q. -- but you went on to defend the study by 3 arguing that, and I quote, "Our study goal was to 4 identify and characterize forms of inaccuracy in the 5 RUC's time estimates and develop a general approach 6 for obtaining better estimates. The crux of that 7 approach is the use of large, longitudinal data 8 sources." 9 A. Uh-huh. 10 Q. And, "We welcome debate, reflection, and 11 refinements regarding the most appropriate data 12 sources and estimation techniques." 13 Did I read that correctly? 14 A. Yes. 15 Q. Is it fair to say that you were using 16 estimation techniques in your -- in -- in your 17 paper, in the underlying paper? 18 A. Estimation techniques. 19 I'm just going to read this again. 20 Q. Yeah, I want you to -- please take -- 21 A. Yeah. 22 Q. Feel free. 23 A. I believe this reply in the critiques are 24 almost entirely about multi-procedure -- cases where 25 more than one procedure is done at the same time; is</p>

<p style="text-align: right;">Page 218</p> <p>1 that right? That's my interpretation of -- upon 2 re-reading the reply. 3 Q. Is it fair to say that you used estimation 4 techniques? 5 MR. STOY: Object to the form. 6 THE WITNESS: I'm not sure what you mean 7 by "estimation techniques." 8 BY MR. MIGLIACCIO: 9 Q. So I'm just going to read the last 10 sentence of your reply, which is, "We welcome 11 debate, reflection, and refinements regarding the 12 most appropriate data sources and estimation 13 techniques." 14 Do you see that? 15 A. Uh-huh. 16 Q. What did you mean by that? 17 A. I think I meant -- so the entire goal of 18 this -- this committee called the RUC, the relative 19 value scale update committee, is to form estimates 20 of certain things that are going to go into the 21 decision-making process of how much to price a 22 procedure for Medicare. 23 So they have a technique, which is to, you 24 know, use surveys and ask physicians how long they 25 spend on a given procedure. That's their estimation</p>	<p style="text-align: right;">Page 220</p> <p>1 is about time. 2 Q. Uh-huh. Is it fair to say there's a -- 3 there's variation in time that surgical procedures 4 take across different people -- 5 A. Yes. 6 Q. -- of patient populations? 7 A. Yes. 8 Q. And what is the R -- the RUC? What -- 9 what is the -- what is RUC seeking to do? What is 10 the purpose of RUC? 11 A. The purpose of the RUC is to make 12 recommendations to how Medicare might price services 13 in the Medicare physician fee schedule. 14 Q. Got it. 15 So there may be variations across patients 16 for patient populations that are reflected in NSQIP. 17 RUC seeks to price those services regardless of the 18 variations; is that fair? 19 A. Sometimes, you know, it might change. 20 This is -- you know, it's a good question. Like 21 sometimes, because things vary so much, you might 22 decide to have two different services instead of one 23 service. 24 Q. Uh-huh. 25 A. So it's --</p>
<p style="text-align: right;">Page 219</p> <p>1 technique. And so this paper is about the accuracy 2 of their estimation technique and what's reflected 3 in another data source, in this case, the NSQIP. 4 So I'm not sure if I would say I use 5 estimation techniques or I'm commenting on how their 6 estimation technique compares with measures in 7 another data source. 8 Does that make sense? 9 Q. I -- I think so. 10 What -- what is the NSQIP? 11 A. This is the National Surgical Quality 12 Improvement Program data source that measures time 13 spent on various procedures. 14 Q. How does it do that? 15 A. That is a good question. I'm not 16 intimately knowledgeable about exactly all of the 17 mechanisms that are put in place. But it records 18 the time that a surgery -- a surgical procedure is 19 started and it records the time that the surgical 20 procedure is ended. 21 I would assume that this takes some type 22 of report by the surgeon in question to report the 23 starting and the ending time, and then once you have 24 those, you can -- you -- you measure the amount of 25 time a given procedure took. So here an estimation</p>	<p style="text-align: right;">Page 221</p> <p>1 Q. But the same service, the same service, 2 same price, right? 3 A. But you could -- so how you define 4 services is completely -- it's a -- it's not set in 5 stone. 6 For example, colonoscopy has multiple 7 services associated with that, right, it's 8 colonoscopy with clipping. Sometimes you could, 9 like, define a service based on the patient that's 10 getting the service. 11 So when you say one service and it's very 12 different and there's only one price, that's not 13 entirely accurate because medical societies, the 14 AMA, you know, when they figure out how to design 15 CPT codes, they could actually specify different 16 services if those -- if that single service is 17 different enough in different cases. 18 Q. But there are certain codes, right, so -- 19 so if you have -- and I understand that the service 20 could -- there might be different types of 21 colonoscopies. But let's talk about the one that -- 22 I think you said colonoscopy with clipping, right? 23 That's one code, right? 24 A. I -- I would have to review the codes. 25 There -- there might be multiple codes.</p>

<p style="text-align: right;">Page 222</p> <p>1 Q. Okay. Let's take -- let's hypothetically 2 take one, right, one code. If that code is being 3 priced, the RUC seeks to -- to -- to impose a price 4 on that code regardless of whether there might be 5 variation of the time spent providing the service in 6 that particular code; is that fair? 7 A. What I'm saying is that the American 8 Medical Association does not necessarily take that 9 as given. The American Medical Association, which 10 houses both the RUC and the CPT committee, can 11 recommend that we have two different CPT codes and 12 not one CPT code. 13 Q. Sure. But in each CPT code there is one 14 price being paid; is that right? 15 A. For a given CPT code in a given year and 16 given geography for a given type of provider, 17 Medicare pays one price. 18 Q. Got it. 19 Regardless of the variation of the patient 20 population that receives that service or regardless 21 of whether the service might take longer in one 22 individual patient versus another? 23 A. That I'm not a hundred percent sure. I 24 know that there's a lot more nuance than even I am 25 aware of.</p>	<p style="text-align: right;">Page 224</p> <p>1 looking at individual Medicare claims and asking to 2 what extent is the Medicare reimbursement fully 3 determined by the characteristics that I just told 4 you. 5 Q. Is there a central -- is data kept on 6 deviation from the schedule? Does that data exist? 7 A. For Medicare? Yes. 8 Q. Uh-huh. It does? 9 A. Yes. 10 Q. Okay. And that data would be the data 11 that we would look at to determine, you know, 12 whether and what percentage there -- there may be a 13 deviation from the schedule on the whole? 14 A. Right. For -- for Medicare? Yes. 15 Q. Got it. 16 So for the Medicare prices, then, that we 17 just talked about, taking aside the deviation that 18 we don't -- haven't characterized, those prices are 19 knowable, right, depending on the geography, the 20 services provider -- you listed a few different 21 items, but those prices are knowable, right? 22 MR. STOY: Object to the form. 23 THE WITNESS: Aside from the deviations, 24 yeah. For Medicare, yes. 25</p>
<p style="text-align: right;">Page 223</p> <p>1 For example, if Medicare is -- is paying a 2 teaching hospital or the hospital has like sicker 3 patients in a -- some type of disproportionate 4 service pool where the patients are underserved, 5 Medicare can still deviate from its fee schedule and 6 pay a higher price. They can pay different prices, 7 even if.. 8 So what I just told you is a very stylized 9 world where it's just the geography, the type of 10 provider, the year, and the service. But largely 11 that's true for Medicare, but even -- even then, 12 there's a lot -- there's more nuance than I think 13 somebody who is steeped in Medicare would be able to 14 tell you. 15 Q. When you say "largely that's true," you 16 know, what percentage -- you know, how true would 17 that be, you know, would you say 95 percent true, 18 99 percent true? Do you have an estimate? 19 A. I can't really give you a number right 20 now, no. 21 Q. Does such a number exist somewhere? 22 A. It should. It should exist somewhere. 23 You can -- go ahead. 24 Q. Sorry. 25 A. I think you could do the analysis by</p>	<p style="text-align: right;">Page 225</p> <p>1 BY MR. MIGLIACCIO: 2 Q. Got it. 3 Do you use Medicare data in your work? Is 4 that -- is that information that you -- you use a 5 lot in your academic work? 6 A. I use it to some extent. 7 Q. What extent do you use it? 8 A. It's hard for me to place a percentage on 9 it. I would say nontrivial extent, probably not the 10 majority of my work. 11 Q. What -- okay. 12 I'm going to show you another paper here. 13 Bear with me. 14 MR. MIGLIACCIO: I'm going to name this 15 Exhibit 7. 16 (Whereupon, Chan Exhibit 7 was marked for 17 identification.) 18 BY MR. MIGLIACCIO: 19 Q. And it is a paper that you published in -- 20 let's see. I'll tell you in a second. 21 That was published in -- can you see it 22 now -- Quarterly Journal of Economics? 23 A. Uh-huh. 24 Q. Okay. Great. 25 I'll give you a chance to look at that.</p>

Page 226

1 A. Yep.
2 Q. Okay.
3 A. Uh-huh.
4 Q. Okay. This study, you focused on health
5 insurance prices, right?
6 A. Study focuses on pricing recommendations
7 from the same company that I just described, the
8 RUC.
9 Q. Uh-huh.
10 A. And it looks at Medicare prices. It also
11 looks at private insurance prices.
12 Q. Got it.
13 You use the term "average" eight times in
14 this paper.
15 A. Uh-huh.
16 Q. Is that right?
17 A. I would need to check. I don't have
18 any --
19 Q. Yep.
20 A. -- reason to dispute it.
21 Q. Okay.
22 A. Actually, I think --
23 Q. More than that.
24 A. It says 17 times.
25 Q. Yeah, that's what I got, too. Glad I'm

Page 227

1 wearing my reading glasses. I can -- I can --
2 A. Yeah.
3 Q. I wasn't before.
4 A. I say "median" twice.
5 I see -- say "standard deviation"
6 probably -- it's tucked with standardized so --
7 let's see. There it is. I say "standard deviation"
8 five times.
9 I say "variants" once. "Covariants" once.
10 I say "variation" 32 times.
11 Q. I see the standardized, too. Let's --
12 let's look at that.
13 What did you do to standardize this in --
14 you said -- and I'm looking at Figure 3. I think.
15 A. Uh-huh. Figure 3?
16 Q. Yeah -- or actually, I'll look at where --
17 where you say on page -- I guess on page 1316.
18 A. Uh-huh.
19 Q. The bottom of the first paragraph,
20 "Finally, for interpretation, we standardize" -- and
21 I won't try to say that equation because I'll mess
22 it up -- "by subtracting the sample mean and
23 dividing by the sample standard deviation, and
24 denote this standardized measure."
25 What -- so tell us what you did with

Page 228

1 respect to standardizing.
2 A. The standard -- the term "standardize"
3 means to do exactly that, you subtract the mean and
4 you divide by the standard deviation. The mean is
5 the first moment and the standard deviation's the
6 second. It's the square root of the second moment.
7 And the second moment is a measure of variation.
8 Q. I see.
9 So what -- what is the -- you were a math
10 major, right, I think I saw that in your resumé.
11 A. Yes.
12 Q. I could see how that would come in handy
13 once you move into economics.
14 What is the benefit of standardizing the
15 dataset that you -- that you standardized here? Why
16 did you do it?
17 A. The primary benefit is that you can
18 then -- you become -- you make the scale of the
19 variation the same between two different variables.
20 So you're standardizing -- if you divide it by the
21 standard deviation, it means that you're not going
22 to have one data -- one set of observations that --
23 values that range from, say, zero to, like, 8,000
24 and another one that ranges from, like, 0.5 to 3.5.
25 Like it's -- when you standardize

Page 229

1 something, you make the distributions comparable by
2 having standard deviation by definition being zero.
3 If you divide by the standard deviation, the
4 distribution of the standardized variable is going
5 to have a standard deviation of one and a mean of
6 zero. So you don't have to worry about what's
7 called the location of the variable, which is the
8 mean, and the variants of the variable because it's
9 all standardized to zero and 1.
10 Q. Got it.
11 What was the dataset here that you were
12 working with?
13 A. This one -- the thing that I'm
14 standardizing is quite an involved variable, which
15 is -- it's described in equation 4 there -- where
16 it's quite involved.
17 What I would need to know to do that, to
18 calculate that, is this -- first you would need to
19 know this little A -- okay. So in order to -- to
20 know this you'd have to go to equation 3, which
21 tells you what this little A thing is.
22 This little A thing is -- okay. And we're
23 actually having to go to equation 2. I think.
24 Q. Yeah, yeah, yeah. And I have to go back
25 to -- yeah, yeah. Okay.

Page 230

1 A. Okay. So I don't want to waste your time
 2 here because it's going to be quite involved and I'm
 3 not sure it's related to --
 4 Q. Yeah, yeah, let me -- let me try to -- let
 5 me try to reframe my question.
 6 When -- the dataset that you were working
 7 with -- I think you say you -- you had three
 8 datasets; is that right? I'm -- I'm just trying to
 9 see what -- what was the -- what were the datasets
 10 that you were working with in this paper?
 11 A. Uh-huh. Umm, I believe that it might be
 12 in -- is that in the paper described? There's a
 13 Section III.A on page 1310 that talks about the data
 14 that I'm using.
 15 Q. Yep. Yep. Three sources of data.
 16 A. Yeah.
 17 Q. RUC's liberations. Yep.
 18 A. Yep. So there -- there's -- roughly
 19 speaking, I know each proposal -- this is about the
 20 pricing decisions that the RUC makes, or the pricing
 21 recommendations.
 22 And so for each CPT code that gets priced,
 23 I know who are the people that are on the proposal,
 24 so it -- it's a political process in some ways where
 25 if there's a CPT code that is done by cardiologists

Page 231

1 that needs to be priced, there will be a proposal
 2 that's written by cardiologists and maybe having
 3 other subspecialties or specialties on that
 4 proposals.
 5 So I'll know who are -- what are the
 6 identity of the specialties on that proposal, what
 7 are the identities of the specialties on this
 8 committee called the RUC. That's one dataset.
 9 The other dataset is using Medicare
 10 claims.
 11 And I believe -- is there a third dataset
 12 that is kind of using private sector prices. So
 13 that's not quite used in the equation that you
 14 highlighted. The equation that you highlighted uses
 15 the first two datasets.
 16 Q. Got it.
 17 But it sounds like -- I mean, you -- you
 18 have created some averages. You've used some
 19 standard -- you've standardized certain datasets.
 20 What other -- what other techniques did
 21 you use with this data?
 22 A. Yeah, I mean, so there are several, right.
 23 There's --
 24 Q. Yeah.
 25 A. If you look at equation 2, it's -- it's

Page 232

1 creating a share. It's -- it's summing up a number
 2 of quantities and dividing -- so there's a numerator
 3 which is part of the denominator so this is creating
 4 a fraction. And when you have the fractions, I'm
 5 creating a vector of fractions that's sum for one.
 6 That's equation 3.
 7 I'm calculating the Euclidean distance,
 8 which is the -- kind of the sum of squares and you
 9 take the square root of that and then once you have
 10 that, then I'm taking the maximum operator in
 11 equation 4 and then I'm taking an average of that.
 12 So an average does play a role in this but
 13 it's not the only operation that I'm doing here.
 14 Q. Right. Right.
 15 I mean, would you agree with me that --
 16 that you do use averages to arrive at a measure of
 17 central tendency in -- in your -- in your work?
 18 MR. STOY: Object to the form.
 19 THE WITNESS: Averages have a role here.
 20 But as I said earlier in the deposition, it really
 21 matters that you get the sample right. If you take
 22 an average of a different sample and try to apply
 23 that to another sample, that would be invalid.
 24 What I'm doing here is I'm describing --
 25 I'm not trying to say that this is a representative

Page 233

1 of some other sample that is not the same. I'm just
 2 describing the sample that I have. It's just a
 3 descriptive thing. I'm not saying that this should
 4 apply for something out of sample. This is just a
 5 description of the sample that I'm talking about.
 6 BY MR. MIGLIACCIO:
 7 Q. Is it fair to say that the use of averages
 8 to make sense of real world data and formulate
 9 useful parameters for policy decisions is a central
 10 tool of healthcare economics research?
 11 MR. STOY: Object to the form.
 12 THE WITNESS: Averages are useful but if
 13 you don't use them correctly, you could reach very
 14 misleading conclusions.
 15 BY MR. MIGLIACCIO:
 16 Q. So in this case, in this study, by
 17 definition, taking averages across datasets sets,
 18 they don't represent all data points exactly, right?
 19 An average doesn't represent every single data point
 20 exactly, it's an average; is that correct?
 21 A. By definition when you're calculating
 22 average you're losing information, yes.
 23 Q. That -- and that's the whole point of
 24 using an average, right?
 25 A. The point of using an average is most

<p style="text-align: right;">Page 234</p> <p>1 often to describe the dataset that you have -- to 2 describe the data that you have at hand. It becomes 3 dangerous when you use that to extrapolate to 4 another dataset that you don't have or to use -- to 5 extrapolate to another thing that you're interested 6 in that is different. That's kind of the point that 7 I'm trying to make. 8 Q. So I'm going to show you one more, one 9 more paper here. Let's see. This paper here -- 10 A. Oh. Let me just -- oh. 11 Q. Yeah, no, I'm -- I'm still -- I'm going to 12 ask you just a few more questions about this one. 13 A. Oh, okay. This is Exhibit 1 or Exhibit 7? 14 Q. This is still -- this is the same exhibit 15 we were just looking at, so -- 16 A. I just left it. Okay. So it's Exhibit 7. 17 Q. Exhibit 7, yes. Yep, yep, yep. Yep. 18 So this paper, is it -- 19 (Whereupon, a brief discussion off the 20 record.) 21 BY MR. MIGLIACCIO: 22 Q. Is it fair to say that this paper is 23 concordant with lots of other studies showing a 24 strong relationship between Medicare and commercial 25 prices?</p>	<p style="text-align: right;">Page 236</p> <p>1 the proposing specialty have higher affiliation 2 versus lower affiliation, you can see a big 3 difference in the slope here. Which means that the 4 relationship depends on that. 5 Second, is that I think for the purpose of 6 this case, we care not about kind of changes on 7 changes or the slope. We care about the levels. We 8 care about if private insurance is, say, 50 percent 9 higher or 20 percent higher or, you know, 10 percent 10 higher than -- than Medicare. So it's the exact 11 magnitude. 12 So even if we had something that was 13 exactly concordant, meaning if we increased the 14 price in Medicare by 5 percent, the private 15 insurance price would be increased by 5 percent. 16 The level matters a lot when we're coming 17 up with the price of the medical monitoring program 18 or the spending that would be involved in the 19 medical monitoring program because it could be 20 50 percent higher or it could be 20 percent higher 21 uniformly and that could be a big difference in how 22 much we decide to -- you know, how much we're saying 23 that the medical monitoring program has to -- is 24 going to cost. 25 So if you look at this graph on panel A,</p>
<p style="text-align: right;">Page 235</p> <p>1 MR. STROY: Object to the form. 2 MR. KUM: Madam Court Reporter, can you 3 read the question back to me. 4 (Whereupon, the reporter read the record 5 as follows: 6 "Question: Is it fair to say that this 7 paper is concordant with lots of other studies 8 showing a strong relationship between Medicare and 9 commercial prices?") 10 MR. KUM: Thank you. 11 THE WITNESS: So I think we have to be 12 precise about the relationship here. The figure 13 that talks about this relationship is in -- is 14 Figure 7 on page 1338. 15 And what it shows there is that it shows 16 various kind of slopes here. Which means that, 17 generally speaking, when you have a procedure that 18 has a higher price in Medicare, you're going to have 19 a procedure that has a higher price in private 20 insurance, okay. 21 But you can see that this slope differs 22 between different types of procedures. That's kind 23 of the main point of this figure, is that when a 24 procedure is priced by the RUC versus not or when 25 the procedure is priced in a case where the RUC and</p>	<p style="text-align: right;">Page 237</p> <p>1 for example, the scale on the Y axis goes from zero 2 to negative 4 logs. Whereas the scale on the X axis 3 goes from negative 6 to zero. That's huge in terms 4 of log terms. 5 Usually, when you talk about -- it's hard 6 to kind of interpret exactly, but when something is 7 0.5 logs higher that means it's generally 50 percent 8 higher. So if -- if you just look at the scale, the 9 scale tells you the private insurance is much more 10 generous than Medicare. And it could vary by a lot. 11 BY MR. MIGLIACCIO: 12 Q. Is it fair to say that in many situations, 13 notably when the RUC (verbatim) update committee, 14 the RUC, changes Medicare prices there is a 15 consistent and strong relationship between Medicare 16 prices and commercial insurer prices? 17 A. I think it depends. 18 Q. What does it depend on? 19 A. In this figure, what I'm showing you is 20 that it depends on the -- whether it comes from the 21 RUC. There are many price changes that don't come 22 from the RUC. And whether the RUC prices comes 23 from, like, a proposal process where the proposers 24 are more affiliated or less affiliated to the RUC. 25 And that's just one dimension in which it depends.</p>

Page 238

1 Q. Would you say it's fair that this paper
2 supports the use of Medicare as a way to predict or
3 estimate commercial prices, which may be --
4 A. No.
5 Q. -- imperfect but does offer an important
6 methodology; in other words, if you know Medicare
7 prices, you could use the existing academic
8 literature to estimate where commercial prices might
9 fall?
10 A. I think it would be -- go ahead.
11 MR. STOY: Object. Object to the form of
12 the question.
13 Go ahead.
14 THE WITNESS: That's -- that's not -- it
15 would not be fair to say that.
16 BY MR. MIGLIACCIO:
17 Q. Why not?
18 A. It, again, depends on the purpose that
19 you're trying to use it for. If the purpose is to
20 estimate the spending that you would have for a
21 medical monitoring program you might be 50 percent
22 off or you might be a hundred percent off.
23 Q. I'm -- I'm not asking you about estimating
24 anything for a medical monitoring program. I'm
25 asking you -- this is an academic paper, right, this

Page 239

1 wasn't published for a particular purpose. I'm
2 asking if that's a fair reading of your conclusion.
3 A. Can you restate -- a fair reading --
4 again?
5 Q. Yeah.
6 Is it fair to say in many situations,
7 notably, when the RUC changes prices, there is a
8 consistent and strong relationship between Medicare
9 prices and commercial insurer prices?
10 A. It's fair to say that when the RUC changes
11 prices, you will see changes in the same direction
12 in private insurance in general. This is talking
13 about changes on changes, not levels of prices. For
14 the medical monitoring program you would need levels
15 of prices, not just changes.
16 Q. The RUC sets the prices, though, does it
17 not?
18 A. It recommends prices in some cases.
19 Q. Okay. In some cases.
20 Didn't -- we just talked about that in
21 relation to your last paper, didn't we?
22 A. Correct.
23 Q. That it recommends prices and -- but
24 for deviation at times, which we haven't quantified,
25 those are the prices that are paid, right?

Page 240

1 A. The RUC recommends prices, then the
2 federal government decides whether to implement the
3 RUC's recommendations.
4 Q. Okay. How often -- so the RUC -- the
5 federal government decides and then what happens
6 after -- if the federal government decides to
7 implement them, then what -- what happens next?
8 A. Then it goes into the Medicare Physician
9 Fee Schedule.
10 Q. Got it. Got it.
11 Is it fair to say that your findings here
12 in this paper -- and I'm not asking you about the
13 medical monitoring at issue in this case -- but just
14 generally, you know, if the findings here provide
15 another data point to support the known relationship
16 between Medicare and commercial prices?
17 MR. STOY: Objection. Form and scope.
18 THE WITNESS: Can you restate the question
19 again?
20 BY MR. MIGLIACCIO:
21 Q. Yeah.
22 Is it fair to say that your findings here
23 in this paper generally provide another data point
24 to support the known relationship between Medicare
25 and commercial prices?

Page 241

1 A. It's fair to say that this study supports
2 a relationship between Medicare and commercial
3 prices.
4 Q. Have other people recognized that
5 relationship?
6 A. Yes.
7 Q. Okay. Who -- who else has recognized that
8 relationship?
9 A. In the economic literature, I think the
10 paper that most people would cite to you is Clemens
11 and Gottlieb, which I believe I cite in this paper.
12 Q. Uh-huh. Tell me about that paper. Was
13 that peer-reviewed?
14 A. Yes.
15 Q. Was this -- was this paper peer-reviewed?
16 A. Yes.
17 Q. Is the Clemens and Gottlieb paper known to
18 be reliable?
19 A. You know, again, it depends on reliable
20 for what?
21 Q. For the conclusion that there is a
22 relationship, a known relationship between Medicare
23 and commercial prices?
24 A. Yes.
25 Q. Okay. And your paper here, is it reliable

Page 242

1 for that conclusion as well?

2 A. My paper here is kind of -- adds

3 additional interpretation to that relationship.

4 Q. And is it reliable for that additional

5 interpretation?

6 A. I believe so.

7 Q. Who is Michael J. Dickstein?

8 A. He is a professor at NYU.

9 Q. And you were coauthors on this paper?

10 A. Correct.

11 Q. Did you receive any comments on it or that

12 you responded to? Was there any further

13 correspondence with respect to it?

14 A. In the same way that the --

15 (Technical difficulties.)

16 (Whereupon a brief discussion off the

17 record.)

18 THE WITNESS: Okay. I asked, in the same

19 way that the New England Journal paper had

20 correspondence?

21 BY MR. MIGLIACCIO:

22 Q. Yeah.

23 A. No.

24 Q. Okay.

25 MR. MIGLIACCIO: Why don't we -- I don't

Page 243

1 know how long we've been going but why don't we take

2 a quick five-minute break and go off the record.

3 THE VIDEOGRAPHER: Okay. We're off the

4 record at 2:51 p.m. Pacific time.

5 (Whereupon, a brief recess was taken.)

6 THE VIDEOGRAPHER: We are back on the

7 record at 3:03 p.m. Pacific time.

8 BY MR. MIGLIACCIO:

9 Q. Okay. All right.

10 Dr. Chan, just a few more questions before

11 I pass it to my colleague. Really about the

12 creation of your report.

13 Did you personally write the whole report?

14 A. I'm not sure what you mean by "personally

15 write," but yes, I did. I -- I wrote the -- the

16 entire report is mine, and I wrote the report.

17 Q. And with respect to the individuals that

18 helped you, did you screen them or vet them in any

19 fashion before you used their work?

20 A. I have a working relationship with

21 Analysis Group, and I did get to work with the

22 people that I mentioned on the call to a pretty

23 close extent. And I was able to evaluate the

24 quality of their work throughout as I prepared this

25 report.

Page 244

1 Q. Did you ever meet with any of them?

2 A. And what do you mean by "meet"?

3 Q. Like in person. I assume the answer would

4 be no, but I'm just curious.

5 A. Yes, the answer is -- is no. It was all

6 remote, by Zoom, by telephone.

7 Q. Did you vet the data that -- that was

8 provided to you? How -- you know, how did you

9 determine that the data that was provided to you was

10 accurate?

11 A. I did take a look at the data. I took a

12 look at the code that was used to produce the -- so

13 the -- basically the analytical process, which is

14 the raw data, the code, and the outputs and whether

15 the -- the outputs were consistent with my clinical

16 expertise and my knowledge of health policy.

17 So I evaluated the entire analytical

18 process from being aware of how the raw data looked

19 like, being aware of the analyses that were used to

20 process the data, and the outputs.

21 Q. Did you -- have you been paid yet for --

22 for your time?

23 A. I'm not sure if I've been paid for the

24 invoice that I submitted in January -- or, sorry,

25 for December. That would be the only time that it

Page 245

1 would be paid because I have not submitted invoices

2 for January or February.

3 Q. All right. When you do get paid, do you

4 get paid your rate plus the attribution at the same

5 time?

6 A. It's not always the same time. I think

7 it's usually separate, if I -- if I remember

8 correctly.

9 Q. How's -- how is it separate?

10 A. I believe there are -- there's payment for

11 my time.

12 Q. Uh-huh.

13 A. As a deposit or a check. I think in this

14 case, it's a deposit. And there is a separate

15 payment for the attribution.

16 Q. Got it.

17 And -- but are those made like

18 contemporaneously, is I guess what I'm asking?

19 A. Not necessarily. I think usually not.

20 Q. How -- do you know when you would be paid

21 for the attribution?

22 A. Not really. It's kind of random. I don't

23 quite understand the -- when the payments get made.

24 Q. You get them at some point after you get

25 the -- your payments?

<p style="text-align: right;">Page 246</p> <p>1 A. Potentially. It's not always after. I 2 don't understand the timing. 3 Q. Got it. Okay. 4 MR. MIGLIACCIO: Well, look, I thank you, 5 you know, for your time, and I want to pass the 6 question -- questions over to Layne. 7 THE WITNESS: Thank you very much. Thank 8 you. 9 EXAMINATION 10 BY MS. HILTON: 11 Q. Good afternoon, Doctor. My name is Layne 12 Hilton and I am an attorney for the plaintiffs and 13 I'm going to be asking you about the portions of 14 your report that pertain to Dr. Conti's analysis. 15 Do you have an understanding of what the 16 term "medical benefit" means? 17 A. I have an understanding of what it means 18 to me. I'm not sure if it's a technical term, but 19 it -- to me it -- I do have an interpretation of 20 that term. 21 Q. If I were to use the term "medical 22 benefit" to describe the activities of a commercial 23 health insurance plan that pertain to things like 24 doctors' appointments and tests and other sorts 25 of -- you know, all of the things that you basically</p>	<p style="text-align: right;">Page 248</p> <p>1 you, without you having to specify which cases, if 2 in any of your previous expert testimony you 3 provided testimony about the pharmacy benefit. 4 A. Yes. 5 Q. And what aspects of the pharmacy benefit 6 have you previously testified about? 7 A. I'm not sure what I can disclose other 8 than that I have testified on the structure of 9 pharmacy benefits in the healthcare landscape. 10 Q. And are you -- are you referring to the 11 tiering structure of formularies? 12 A. That's part of it. 13 Q. Have you previously testified about the 14 pharmacy benefit as it relates to generic drugs? 15 A. Some of my previous testimony does bear on 16 generics. 17 Q. What aspects of the generic drug pharmacy 18 benefit have you previously testified about? 19 A. I'm not sure if I could specify other than 20 that generic drugs are covered under pharmacy 21 benefits. Sometimes pharmacy benefits will favor 22 one drug or another. Cost considerations and 23 efficacy are some considerations. 24 Q. Have you ever previously provided 25 testimony about the economic value of certain</p>
<p style="text-align: right;">Page 247</p> <p>1 have been discussing with my colleague all day, 2 would that be accurate that all of those activities 3 would fall under something called a medical benefit 4 of a commercial health insurance? 5 A. So you're referring to benefits of a 6 commercial -- of a -- of a health insurance plan; is 7 that right? 8 Q. Yes, I am. 9 A. Okay. That makes sense. 10 Q. And -- and so would you understand all of 11 those activities that you have been discussing all 12 day to be activities that fall under the medical 13 benefit of a commercial health insurance plan? 14 A. Correct. 15 Q. What is your understanding, then, of the 16 pharmacy benefit associated with a commercial health 17 insurance plan? 18 A. So whereas medical benefit reimburses 19 care -- medical care, including such as office 20 visits or other medical services that are provided, 21 a pharmacy benefit would reimburse the cost of 22 drugs. 23 Q. Now, I understand from your discussions 24 earlier today that you have provided expert 25 testimony in a variety of cases. I'm going to ask</p>	<p style="text-align: right;">Page 249</p> <p>1 generic prescription drugs to consumers? 2 A. No. 3 Q. Have you ever previously testified about 4 the economic value of certain generic prescription 5 drugs to third party payors? 6 A. I haven't testified on that, no. 7 Q. Have you ever provided any testimony about 8 the costs of generic prescription drugs paid by 9 consumers at the pharmacy point of sale? 10 A. I have not testified on that. 11 Q. Have you ever previously testified about 12 the costs of generic prescription drugs paid by 13 third party payors at the pharmacy point of sale? 14 A. I'm not sure. 15 Q. Have you ever provided any testimony about 16 the generic drug approval process? 17 A. Not directly. It may have been touched 18 upon in the context of discussing generic drugs. 19 Q. Have you ever provided any direct 20 testimony about the food and drug cosmetics act? 21 A. No. 22 Q. Have you ever provided any direct 23 testimony about the Drug Supply Chain Security Act? 24 A. No. 25 Q. In your academic life, as it were, have</p>

Page 250

1 you ever conducted any research on the food and drug
2 cosmetics act?
3 A. No.
4 Q. Have you ever conducted any research on
5 the Drug Supply Chain Security Act?
6 A. No.
7 Q. Have you ever worked on any FDA task
8 forces related to the approval and regulation of
9 generic prescription drug products?
10 A. No.
11 Q. Have you ever worked as an advisor to the
12 FDA's Office of Generic Drugs?
13 A. Not in that office, no.
14 Q. Which office with the FDA have you worked
15 for?
16 A. I believe that is in -- on my CV. Under
17 Other Professional Positions on page A-2.
18 Q. Yes, I see it.
19 It looks like you worked for the Center
20 for Devices and Radiological Health?
21 A. Yes.
22 Q. And also, you worked in the -- as the --
23 in the White House Office of Science and Technology
24 Policy; is that right?
25 A. In the office of planning and analysis at

Page 251

1 the Center for Drug Evaluation and Research.
2 Q. Great.
3 In the context of your work as a staff
4 fellow with the office of planning and analysis for
5 CDER, as I will shorten it to get us through this,
6 what -- what sort of activities did you engage in?
7 A. In various policy analyses I worked with a
8 group of economists, mostly, who were in this
9 office. I -- some of the issues that we analyzed
10 were ways to surveil for potential drug side effects
11 and potential safety -- kind of prescription drug
12 safety programs to -- to ensure that the drugs were
13 being safely used.
14 Q. Did any of this work relate to potentially
15 counterfeit or illegitimate drugs?
16 A. No.
17 Q. Did any of this work with the FDA relate
18 to potentially adulterated or misbranded drugs?
19 A. No.
20 Q. Throughout your report, you use the term
21 "affected valsartan."
22 In your own words, how do you define
23 "affected valsartan"?
24 A. I believe that's in paragraph 11 of my
25 report, "valsartan products that were recalled due

Page 252

1 to possible nitrosamine impurity."
2 Q. So your term "affected valsartan" only
3 relates to the valsartan products which were
4 recalled; is that right?
5 A. Which were eventually recalled, I believe.
6 I think that any valsartan -- valsartan that had the
7 possibility of a nitrosamine impurity -- again, I'm
8 not a -- I haven't read so much on the -- on the
9 exact sequence of events here, but I believe that
10 valsartan products that had the potential for
11 nitrosamine impurities were eventually recalled.
12 Q. Are you aware that there were valsartan
13 products manufactured by the defendants in this
14 litigation that had expired by the time of the
15 recall and therefore were not part of the scope of
16 the recall?
17 A. I'm not aware of that. That wasn't
18 something that I looked into in great detail.
19 Q. So your report makes no opinion or takes
20 no opinion about products manufactured by the
21 defendants which were expired and never recalled by
22 the FDA; is that right?
23 MR. STOY: Object to the form.
24 Mischaracterizes testimony.
25 THE WITNESS: Can you say that again?

Page 253

1 BY MS. HILTON:
2 Q. Sure. It's a confusing question.
3 Does -- do you -- do you have any opinion
4 about valsartan products that were manufactured by
5 the defendants but which expired before the FDA's
6 recall?
7 A. Were these products ever used by patients?
8 Q. They were.
9 A. What do you mean by "expired"? So they
10 were -- they -- they were expired in the patients'
11 hands or they were prescribed to patients after they
12 had expired?
13 Q. So as I understand it, for some period of
14 time between 2012 and let's call it 2016 or 2017,
15 there were many valsartan products that bore unique
16 NDC codes that were dispensed to patients at the
17 point of sale that were manufactured by the
18 defendants in this litigation.
19 At the time of the FDA recall, many of
20 these products had expired and had already been
21 consumed by the patients and therefore, were not
22 within the scope of the FDA's recall list.
23 And so my question is -- you know, and
24 perhaps I can ask it a different way.
25 Did you expand your analysis to include

Page 254

1 those products which were not a part of the FDA's
2 recall list but were nevertheless manufactured by
3 the defendants, you know, from 2012 until 2018?
4 A. So these include drugs that were actually
5 consumed by consumers before the recall, before it
6 was known that nitrosamine -- before that -- before
7 nitrosamine impurities were known; is that right?
8 Q. Correct.
9 A. I believe I do consider those drugs.
10 Q. And how did you identify the NDC codes
11 associated with those drugs?
12 A. I believe the NDC codes are linked to the
13 manufacturer of the drugs. So we would look for
14 valsartan -- we have a list of -- in my report I
15 believe I do describe how we identified the NDC
16 codes.
17 So for -- this is kind of looking at
18 footnote 23.
19 It says, "For my analyses in this report,
20 I used the list of NDC's identified as recalled on
21 the FDA's website to determine 'affected valsartan'
22 products."
23 So these are -- this is something I'll
24 have to think about whether the NDC codes -- so the
25 NDC codes are specific for a manufacturer of a -- of

Page 255

1 this -- of this -- a manufacturer and a molecule
2 and -- so these are drugs that were eventually
3 recalled but even -- but these NDC codes would have
4 existed before the recall.
5 Q. Correct. And -- and this was actually an
6 attachment to Dr. Conti's report. I was -- I guess
7 I was trying to determine if you used the same NDC
8 list that was used by Dr. Conti in her report or if
9 you used a different list. It looks here like
10 instead you used the FDA recall list; is that right?
11 A. To the best of my understanding right now,
12 yes, but we could check the two lists to -- to -- to
13 figure out whether they're the same or how they
14 differ.
15 Q. Thank you.
16 For the purposes of your report related to
17 Dr. Conti, did counsel ask you to make any
18 assumptions in drafting this report?
19 A. Not to my knowledge.
20 Q. So counsel did not ask you to assume that
21 the affected valsartan was considered adulterated by
22 the FDA?
23 MR. STOY: Object to the form. Calls for
24 a legal conclusion.
25 THE WITNESS: I'm not sure if that

Page 256

1 assumption is required. I know I considered that
2 possibility, that affected valsartan contained
3 nitrosamine impurities and that there is even a
4 possibility of cancer risk due to these impurities.
5 BY MR. MIGLIACCIO:
6 Q. So you assume that the affected valsartan
7 contains nitrosamine impurities and that there was a
8 possible cancer risk due to those impurities?
9 MR. STOY: Objection. Mischaracterizes
10 his testimony.
11 THE WITNESS: I considered the possibility
12 that affected valsartan contained nitrosamine
13 impurities that could increase the risk of cancer
14 for some patients.
15 BY MR. MIGLIACCIO:
16 Q. You didn't assume that the affected
17 valsartan was considered adulterated by the FDA?
18 MR. STOY: Asked -- asked and answered.
19 THE WITNESS: Can you restate that
20 question?
21 BY MS. HILTON:
22 Q. I'll ask it a little bit more clearly.
23 Did you assume that the affected valsartan
24 was considered adulterated by the FDA?
25 MR. STOY: Objection. Asked and answered.

Page 257

1 THE WITNESS: I did consider -- you can
2 see in my report that the FDA -- the actions of the
3 FDA are considered in my report but they're not
4 central to my opinion of the value of valsartan.
5 BY MS. HILTON:
6 Q. And looking at your report, you actually
7 never use the term "adulterated"; is that fair to
8 say?
9 A. I believe I have -- I don't use that term.
10 I say valsartan with impurities. I am not an expert
11 to tell the difference between the term of
12 "impurity" versus "adulterated."
13 Q. So you're not providing any expert
14 testimony about adulteration generally; is that fair
15 to say?
16 A. Adulteration versus impurity, I don't know
17 any difference between the words.
18 Q. For the purposes of your report, did you
19 assume that the affected valsartan was manufactured
20 in compliance with all regulations, including
21 Current Good Manufacturing Practices?
22 A. Can you ask that question again?
23 Q. Sure.
24 For the purposes of your report, did you
25 assume that the affected valsartan was manufactured

<p style="text-align: right;">Page 258</p> <p>1 in compliance with all regulations, including 2 Current Good Manufacturing Practices? 3 A. I don't think so. And I don't think that 4 assumption is necessary for my opinions. 5 Q. Why don't you think that assumption was 6 necessary for your analysis of Dr. Conti's report? 7 A. Because for the claim of worth -- the 8 worth of valsartan, I am considering what does that 9 valsartan do. I -- I'm considering the benefits of 10 valsartan in terms of blood pressure control and in 11 terms of treating heart failure. And I'm 12 considering the possibility of a cancer risk. 13 Whether the valsartan was manufactured in 14 a certain way and whether it met certain 15 regulations, whether supply was allowed by the FDA 16 or not, that is not something that I considered 17 relevant for the assessment of worth. 18 Q. You are aware, however, that Dr. Conti's 19 value and opinion about the value of the affected 20 valsartan hinges upon the fact that the valsartan 21 was considered adulterated because it was 22 manufactured in a way that did not comply with 23 Current Good Manufacturing Practices, correct? 24 A. I'm aware of her opinion on that, yes. 25 Q. So no aspect of your particular report</p>	<p style="text-align: right;">Page 260</p> <p>1 affirmatively. 2 Are you offering any opinions about the 3 pharmacy benefit structures and the cost paid by 4 consumers or TPPs at the point of sale for affected 5 valsartan? 6 A. That information is not central to my 7 opinion. Although the idea of costs and revenues 8 and profits to various parties is something within 9 economic -- my economic expertise. 10 Q. But you're not offering any of those 11 opinions in this report for this purpose today? 12 A. Correct. 13 Q. Right? 14 A. Correct. 15 Q. In your -- are you offering any opinions 16 on a drug manufacturer's obligation to comply with 17 Current Good Manufacturing Practices? 18 A. No. 19 Q. Are you offering any opinions on contracts 20 which may impact the amount paid for affected by -- 21 for affected valsartan by any TPP? 22 A. No. 23 Q. I would like to talk to you about getting 24 into the context of a report which I believe was 25 previously marked as Exhibit 2.</p>
<p style="text-align: right;">Page 259</p> <p>1 directly addresses that opinion; is that fair to 2 say? 3 MR. STOY: Object to the form. 4 THE WITNESS: I think it's fair to say 5 that I don't agree with that framework of assessing 6 value. 7 BY MS. HILTON: 8 Q. Before we get into your proposed framework 9 of value, let's make sure that I understand the sort 10 of limitations of your opinion as it relates to the 11 economic value of the prescription drugs. 12 You're not offering any opinions about the 13 data sources used by Dr. Conti in her calculation of 14 damages, correct? 15 A. I'm not commenting on the data sources 16 because my primary opinion is at odds with her 17 framework. 18 Q. You're likewise not offering any opinions 19 on pharmacy benefit structures and the cost paid by 20 consumers or TPPs at the point of sale for the 21 affected valsartan that was dispensed at the 22 pharmacy, correct? 23 A. Can you restate that? 24 Q. Sure. 25 Are you offering -- I'll put it more</p>	<p style="text-align: right;">Page 261</p> <p>1 A. Uh-huh. 2 Q. I'd like to talk to you about 3 paragraph 133 of your report, if you'd like to flip 4 there. 5 A. Okay. 6 Q. And in this paragraph you are discussing 7 the -- let's call it supply and demand framework of 8 Dr. Conti's opinion. 9 A. Uh-huh. 10 Q. And you write, starting in the middle of 11 that paragraph, "The implementation of her approach 12 relies on faulty reasoning. Dr. Conti asserts that 13 'according to economic theory, for a consumer 14 product to have economic value, demand for the 15 product must exist and supply must be allowed to 16 meet demand.' However, the demand curve alone 17 speaks to a product's economic value and is based on 18 each patient's and TPP's willingness to pay for a 19 drug." 20 Do you see that? 21 A. Yes. 22 Q. And then to support that economic theory 23 you cite to a -- let's call it a -- a chapter or a 24 textbook or some sort of treatise; is that right? 25 A. Yes.</p>

<p style="text-align: right;">Page 262</p> <p>1 MS. HILTON: I am going to mark for the 2 record --and which -- what exhibit are we on? 3 THE WITNESS: 7. 4 MS. HILTON: Yeah. Exhibit 8, I think. 5 THE WITNESS: Okay. 6 MS. HILTON: I am going to mark as 7 Exhibit 8 this citation footnote 252. 8 (Whereupon, Chan Exhibit 8 was marked for 9 identification.) 10 BY MS. HILTON: 11 Q. Okay. Let me know when you have Exhibit 8 12 up. 13 A. Yep. 14 Q. Can you tell me what particular section of 15 this chapter you were using to support your opinion 16 that the demand curve alone speaks to a 17 pharmaceutical product's economic value and is based 18 on a patient/TPP's willingness to pay for a drug? 19 A. Okay. So in these pages, there is no 20 supply curve. What we call consumer surplus is very 21 closely related to the economic value. Consumer 22 surplus is the demand curve that lies above the 23 price. 24 Q. Do you -- does this particular chapter 25 relate to pharmaceutical drug products?</p>	<p style="text-align: right;">Page 264</p> <p>1 That's irrelevant. It's only relevant in so far as 2 it affects consumer surplus or the demand curve. It 3 doesn't depend on a supply curve. 4 Q. If we look at the second page of this 5 particular PDF, it says, "To calculate the aggregate 6 consumer surplus in a market," does that not 7 indicate that there must be the product on the 8 market? 9 A. You can also talk about consumer surplus 10 for a good that doesn't yet exist. It does not 11 presuppose that there must be a market for it. It 12 happens to say in the market, but that's not a 13 requirement. 14 Q. Where in this particular chapter does it 15 indicate that it is not a requirement of the product 16 at issue for consumer surplus must not be in the 17 market? 18 A. In this chapter there is no mention of a 19 supply curve. 20 Q. So that is the basis for your statement -- 21 A. It doesn't require a supply curve. 22 Usually we do have a market and that's why this is 23 kind of the usual setting but when you're talking 24 about willingness to pay and when you're talking 25 about utility you don't need a market.</p>
<p style="text-align: right;">Page 263</p> <p>1 A. This is an economic -- an economics 2 textbook which is quite general when we talk about 3 demand curves and supply curves. This particular 4 chapter uses a very -- it uses any -- it uses just a 5 random example of rock concert tickets but the focus 6 is not about rock concert tickets. 7 Q. Does this chapter in the discussion of the 8 consumer surplus presuppose that all of the items 9 that are subject to this consumer surplus analysis 10 are items that can legally be on the market? 11 A. There's no presupposition of that. 12 Q. So this would relate to anything, even 13 products that are illegal to sell on the market? 14 A. It could have been illegal rock concert 15 tickets or it could be -- 16 Q. I'm sorry. 17 A. -- or -- go ahead. 18 Q. No, continue. 19 A. They could have been illegal tickets. 20 Q. Where does it say that it -- that the 21 tickets could have been illegal? 22 A. It doesn't say it in the text, but if you 23 were to ask any economist -- well, I guess maybe if 24 you were to many economists -- Dr. Conti's an 25 economist -- it does not presuppose the legality.</p>	<p style="text-align: right;">Page 265</p> <p>1 Q. Would you agree that the market for 2 concert tickets is very different than the highly 3 regulated market of prescription drugs? 4 A. Yes, but this chapter is not about concert 5 tickets. This chapter is a general economic 6 textbook on economics, on microeconomics, and this 7 chapter is about consumer surplus which applies to 8 both concert tickets and prescription drugs. 9 Q. If we look at the next sentence of 10 paragraph 133 you go on to write -- I think this is 11 what you were alluding to before -- that sometimes 12 there could be a value for a product that is not yet 13 on the market. 14 You write, "Consider a pill that cures 15 cancer, there is no supply for such a pill as one 16 has not been invented yet, but it is certainly 17 possible to consider the patient and TPP's 18 willingness to pay for such a pill and the inherent 19 economic value such an innovation would provide." 20 Do you see that? 21 A. Yes. 22 Q. In this particular example of the 23 hypothetical pill that cures cancer, are you 24 assuming that the pill at issue has been 25 manufactured in compliance with good manufacturing</p>

Page 266

1 practices?
2 A. No.
3 Q. So it is your opinion that consumers and
4 TPPs would be willing to pay for a pill that has not
5 been manufactured in compliance with good
6 manufacturing practices and could not assure that
7 it's safe?
8 A. I think it's certainly possible.
9 Q. You don't have any evidence to associate
10 that, correct?
11 A. I think it's -- I would say it's common
12 sense. You are pay -- you are willing to pay for
13 the benefits of a good. If there is some
14 uncertainty about the benefits of the good, that's
15 why things like, you know, good manufacturing
16 processes, that's why those might be valuable, but
17 if -- in this hypothetical world where we already
18 knew that this pill would cure cancer, we wouldn't
19 have to know whether it was manufactured under good
20 manufacturing practices.
21 Q. Do you believe that generic drug products
22 that are manufactured in such a way that the product
23 contains glass are valuable?
24 A. That's a hypothetical question. I think
25 it would depend on the circumstance.

Page 267

1 Q. Are you -- have you ever heard of a
2 generic drug manufacturer named Ranbaxy?
3 A. Can you restate that question?
4 Q. Have you ever heard of a generic drug
5 manufacturer named Ranbaxy?
6 A. I might have. I don't recall right now.
7 Q. If I were to tell you that Ranbaxy
8 manufactured generic products that contained
9 glass --
10 MR. STOY: Are you --
11 (Whereupon, a brief discussion off the
12 record.)
13 BY MS. HILTON:
14 Q. If I were to tell you that Ranbaxy
15 manufactured generic products that contained glass
16 and that this -- that these products had to be
17 recalled from the market, would it be your position
18 that these glass-contaminated generic products had
19 value?
20 A. I don't know enough about this situation
21 to say anything. It's possible that they could
22 still have value, but I don't know enough.
23 Q. What would you need to know in order to
24 assess whether the drug had value or didn't have
25 value?

Page 268

1 A. I would need to know the medical benefits
2 of taking that drug and the medical harms of taking
3 that drug.
4 Q. Do you agree with Dr. Conti's conclusion
5 that there exists substantial asymmetry of
6 information about the safety and quality of
7 prescription drugs between the manufacturers of
8 those drugs and the patients who purchase and
9 consume those drugs?
10 MR. STOY: I'll object to the extent it's
11 beyond the scope of Dr. Chan's analysis.
12 But you can answer.
13 THE WITNESS: I don't have a particular
14 opinion on that. I think it's possible. But I
15 think it might depend.
16 BY MS. HILTON:
17 Q. What would it depend on?
18 A. Depends on what the product is. It
19 depends on -- so you -- can -- can you just restate
20 the question? It's asymmetric information between
21 the manufacturers of a drug and -- and who else?
22 Q. And the patients who purchase and consume
23 those drugs.
24 MR. STOY: Same objection.
25 THE WITNESS: It really depend -- I mean,

Page 269

1 there are different types of asymmetric information,
2 right, the patient may have more information about
3 their medical condition than the manufacturer. The
4 manufacturer might have more information about how
5 they manufactured the drug. So the information is
6 not symmetric in different ways.
7 BY MS. HILTON:
8 Q. Is that a topic of upon which you'll opine
9 in your report?
10 A. I don't believe that's a central -- that's
11 a central element required for my opinions in the
12 report. I think ultimately, at the end of the day,
13 the value of a drug is the medical benefit weighed
14 against any harms of the drug.
15 Q. You describe that -- in the body of your
16 report that in order, as you see it, to calculate
17 the economic value of a product to a particular
18 plaintiff or patient, you would need to know
19 something you describe as the ex-ante value as well
20 as the ex-post value; is that right?
21 A. In my report, I describe ex-ante value and
22 ex-post value. I just -- I describe that because
23 there are different concepts. There are different
24 concepts of value. It depends on when you're asking
25 about value.

Page 270

1 And this is particularly important when
2 there's uncertainty about what actually is in the
3 drug. Even before we knew that there might be
4 impurities in the valsartan drug, there is still an
5 ex-ante value that could account for the possibility
6 of this impurity. And then after we find out about
7 the possibility of impurity in some of the lots, the
8 value of the drug could be updated in ex-post way.

9 Q. You -- you testified that there was the --
10 that it was possible somebody might know about the
11 impurity at the time that they purchased the drug
12 and that would be a part of its ex-ante value?

13 A. They might know about a possibility of
14 impurity.

15 Q. What evidence did you review in this case
16 that demonstrated that any one particular patient
17 had any inkling that their valsartan might contain
18 carcinogens?

19 A. So as one consideration -- one piece of
20 evidence that I -- I mention in the report is that
21 at one point we did know about impurities in
22 valsartan and the FDA recommended patients to
23 continue taking their valsartan. That's one
24 specific -- that's one specific instance about --
25 about impurities specifically related to

Page 271

1 nitrosamines.

2 But my earlier statement was about the
3 general possibility that we may discover something
4 about a drug that we didn't know. When you purchase
5 something, there's not a hundred percent certainty
6 about what that thing is in general. And you may
7 discover something that nobody else -- nobody knew
8 about this thing that you purchased and it could
9 include the possibility of impurities in general.

10 Q. I want to talk a little about your first
11 statement that the FDA made a statement that people
12 should continue to take their valsartan drugs.

13 You're aware that that statement was made
14 in August 2018, correct?

15 A. Correct.

16 Q. So at that point, all of the -- or most of
17 the manufacturers and the defendants in this case
18 had already recalled all of their product off the
19 market at the time that the FDA made this statement,
20 right?

21 MR. STOY: Object to the form.

22 THE WITNESS: I don't know the timeline.

23 Can you -- can you say that again?

24 BY MS. HILTON:

25 Q. Yeah.

Page 272

1 As of August 2018, at the time that the
2 FDA made the statement you just referred to about
3 the possibility of nitrosamine contamination, many
4 of the defendants had started recalling all of their
5 products off the market; isn't that right?

6 A. I don't know all the details but if what
7 you just said is true, then some of them did not
8 recall just yet.

9 Q. But regardless, what the FDA said about
10 the drugs in August of 2018 would have no bearing
11 whatsoever on the ex-ante value of a drug purchased
12 from 2012 until June of 2018, right?

13 A. That statement would have bearing for
14 people who purchased the drug after the statement.

15 Q. So would not relate to any of the
16 purchases prior to August of 2018?

17 A. I think it still relates to whether people
18 would purchase before that time in the sense that
19 that statement is talking about potential value.
20 It's talking about the medical benefits of taking
21 that drug and that would be in the consideration of
22 people who purchased it before.

23 What I was saying in the second part of my
24 response about the possibility of impurities is that
25 there's always the possibility that something --

Page 273

1 there might be something about that drug that you
2 don't know just yet and that's what I'm calling the
3 ex-ante value.

4 Q. How does your opinion regarding the
5 ex-ante value of the affected valsartan change in
6 light of the fact that there was valsartan on the
7 market that did not contain nitrosamines?

8 A. I did consider that.

9 Q. How did you consider that?

10 A. So when you're talking about a demand
11 curve, the demand curve incorporates other products
12 that are already in the market.

13 Q. So is the ex-ante value of a valsartan
14 that did not contain nitrosamine manufactured by a
15 manufacturer that is not a defendant in this case
16 different than the ex-ante value of the affected
17 valsartan?

18 A. Can you say that again?

19 Q. Is the ex-ante value of the uncontaminated
20 valsartan manufactured by manufacturers who are not
21 defendants in this case different than the ex-ante
22 value of the affected valsartan at issue in this
23 litigation?

24 A. And by ex-ante you mean before we knew
25 which manufacturers were associated with affected

Page 274

1 valsartan; is that right?

2 Q. Correct.

3 A. I can't say whether they're exactly the

4 same. They could still differ. I don't know the

5 other considerations that might differentiate

6 different manufacturers before it was known which

7 ones were linked to affected valsartan.

8 Q. In your discussion of the ex-ante value of

9 affected valsartan, you delineated a list of factors

10 that you would look at to determine the value; is

11 that right?

12 A. Can you point me to the paragraph that

13 you're talking about?

14 Q. Sure.

15 134.

16 A. Uh-huh.

17 Q. From an economics perspective, how would

18 you go about incorporating these values and these

19 factors in a calculation to determine a prescription

20 drug's ex-ante value?

21 A. That is not a core -- that's not a core

22 analysis that I did in this report, although I talk

23 about it. The core opinion of this report is

24 whether we can say that affected valsartan is

25 worthless.

Page 275

1 Q. So you have no opinion whatsoever on how

2 to actually go about calculating the ex-ante value

3 of the affected valsartan; is that right?

4 A. I have some ideas --

5 MR. STOY: Objection to form.

6 THE WITNESS: -- but I don't know if

7 they're kind of -- if they're thought through at the

8 proper level that I would be willing to offer them

9 at this deposition.

10 BY MS. HILTON:

11 Q. Have you ever conducted a mathematical

12 calculation of a generic prescription drug product's

13 ex-ante value before?

14 A. I personally have not but I think that

15 there are several ways in which you could address

16 this.

17 Q. What are those ways?

18 A. So without having thought in great detail

19 for this deposition, there are ways to value what

20 consumers -- value consumers' utility in terms of

21 different health outcomes. It would -- you can

22 incorporate the value of getting cancer with the

23 value of controlling hypertension. The value of

24 treating heart failure. There are methods to value

25 those things and if -- that's one way to kind of --

Page 276

1 to perhaps to get at these ex-ante values

2 incorporating any uncertainty.

3 There are possibly other ways to do this

4 that I haven't thought to to the level of detail

5 that I think it would require for this deposition.

6 Q. Have you ever read any literature about

7 conducting the mathematical calculation for the

8 ex-ante value of a generic prescription drug?

9 A. I'm aware of literature that -- that uses

10 the approach that I just described to you. And that

11 approach could be applied to the value of a generic

12 prescription drugs.

13 Q. Is that literature cited in your report?

14 A. That's -- it's possibly cited in my

15 report. I can't recall. This is not a -- as I

16 said, my report primarily addresses the claim of

17 whether valsartan is worthless, not how one would

18 conduct an economic evaluation of the worth.

19 Q. Well, you, yourself, have never actually

20 endeavored to conduct such a calculation or

21 evaluation of a generic prescription drug's ex-ante

22 value, correct?

23 A. Specifically --

24 MR. STOY: Asked and answered.

25 THE WITNESS: Go ahead, Frank.

Page 277

1 MR. STOY: I just objected to asked and

2 answered.

3 You can go ahead.

4 THE WITNESS: That's a very specific

5 question that you asked, whether I endeavored to

6 calculate the ex-ante value before an information

7 revelation of a generic prescription drug.

8 It's hard for me to kind of answer whether

9 I have done cost-effectiveness analyses for analyses

10 of patient utility that could bear on that exact

11 specific question, but I have done economic analyses

12 that value different patient health outcomes and

13 weighed them against each other.

14 BY MS. HILTON:

15 Q. So the answer is no, you haven't conducted

16 a mathematical calculation to determine the ex-ante

17 value of a prescription generic drug; is that right?

18 A. It's possible that I have. I just can't

19 remember.

20 Q. After determining the ex-ante value of a

21 prescription drug, you write that in order to figure

22 out the -- I guess the injury to a particular

23 plaintiff you have to then ascertain the ex-post

24 value of that product.

25 What is your definition of ex-post value?

<p style="text-align: right;">Page 278</p> <p>1 A. What I refer to here as ex-post value is 2 the value that you have after the information 3 revelation. 4 But I think it's important to note that 5 there are many different steps of information 6 revelation that could be possible. 7 There is information revelation that you 8 consumed a drug that could contain nitrosamines. 9 And there's further revelation of you may know 10 whether or not you had a lot that had nitrosamines 11 in it. And then ultimately you would need to know 12 whether you suffered cancer as a result of 13 nitrosamines. That could be an event later down the 14 road. There are many different kind of points in 15 the timeline at which you might have different 16 values. 17 Q. So is it fair to say there's no real 18 concrete way to actually calculate a -- the effect 19 of valsartan's ex-post value? 20 A. No, it's not fair to say that. 21 Q. Why not? 22 A. There is a framework that you could 23 undertake -- and this is not something that I -- 24 again, the key point of my report is that I'm 25 rejecting the idea that anybody who consumed</p>	<p style="text-align: right;">Page 280</p> <p>1 actually have knowledge of that risk? 2 A. No. 3 Q. Why not? 4 A. A risk aversion does not require knowledge 5 of risk. It tells you what -- what is the expected 6 utility of somebody given uncertainty in the future 7 and this person could have many different 8 realizations of whether they get something that's 9 an -- like an -- what would be called a negative 10 shock to their utility versus a positive shock to 11 their utility. 12 All they need to know in order to 13 calculate risk aversion is how that person's utility 14 varies across different states of the world. 15 Q. So your testimony is that risk aversion 16 and the idea of risk does not require a person to 17 actually have knowledge of the risk; is that right? 18 A. To measure risk aversion you don't need -- 19 you don't -- you don't need to know the person's 20 knowledge. It does not require a person's knowledge 21 of the risk to measure risk aversion. 22 In order to calculate somebody expected 23 value -- expected willingness to pay at a given 24 point in time you would need to know what are the 25 possible states of the world in the future and you</p>
<p style="text-align: right;">Page 279</p> <p>1 affected valsartan had a value of zero. That is the 2 key point that I'm saying. 3 But if you needed to calculate exactly 4 what somebody's ex-post value would be, as I 5 mentioned, there are methods to use health outcomes 6 and methods to incorporate uncertainty to arrive at 7 a willingness to pay. 8 Q. Have you ever conducted a mathematical 9 calculation of a generic drug's ex-post value? 10 A. I think my answer would be similar to your 11 question about whether I've conducted a mathematical 12 analysis to calculate the ex-ante value of a drug. 13 It's possible that I have. I can't really comment 14 at this point. The methods that you would use to do 15 such a thing I have done. 16 Q. If we look at the second-to-last sentence 17 in paragraph 137, you were talking about risk 18 aversion in this paragraph, and you write, "Second, 19 any reduction in economic value depends on a 20 patient's level of risk aversion, which has been 21 shown to vary across individuals." 22 Do you see that? 23 A. Uh-huh. Yes. 24 Q. When discussing risk aversion, isn't it 25 necessary that a person who is averting risk</p>	<p style="text-align: right;">Page 281</p> <p>1 would need to know the risk aversion but to know 2 their risk aversion you don't need patient knowledge 3 of various events in the future. 4 Q. But you do agree that the additional risk 5 that nitrosamines in the affected valsartan could in 6 some instances reduce the economic value of the 7 drug, right? 8 A. In some instances, yes. 9 MS. HILTON: Can we go off the record. I 10 may be close to finish and I just want to check in 11 with my colleagues. 12 THE VIDEOGRAPHER: Okay. We're off the 13 record at 4:03 p.m. Pacific time. 14 (Whereupon, a brief recess was taken.) 15 THE VIDEOGRAPHER: We are back on the 16 record. The time is 4:09 p.m. Pacific time. 17 BY MS. HILTON: 18 Q. Dr. Chan, have you ever prescribed 19 valsartan to a patient? 20 A. Yes. 21 Q. How did you personally become aware of the 22 recall of the affected valsartan products? 23 A. I became aware of the recall through this 24 case. 25 Q. So prior to this case, you had no</p>

<p style="text-align: right;">Page 282</p> <p>1 knowledge that the FDA had initiated an 2 unprecedented classwide recall of the affected 3 valsartan? 4 MR. STOY: Object to the form. 5 THE WITNESS: As a hospitalist, I don't 6 decide which valsartan, which -- specifically which 7 NDC gets delivered to a patient, gets dispensed to a 8 patient. I write valsartan, the dose, the 9 frequency, and I don't concern myself with whether 10 it's branded or generic and if it's generic, which 11 type of valsartan it is. So there's no reason for 12 me to pay attention to that. 13 BY MS. HILTON: 14 Q. And do you not concern yourself with these 15 things because the generic is supposed to be the 16 same as the branded drug? 17 MR. STOY: Object to the form. 18 THE WITNESS: That's not the reason that I 19 don't pay attention to these things. The reason 20 that I don't pay attention to these as a 21 hospitalist, personally as a clinician, is that I 22 don't determine which of these drugs, which NDC code 23 is going to be dispensed to a patient for whom I 24 prescribe valsartan. 25</p>	<p style="text-align: right;">Page 284</p> <p>1 BY MS. HILTON: 2 Q. And at what point in your education did 3 you learn about the impurities that may be present 4 in generic drugs? 5 A. I'm not sure if I remember the time in my 6 education. But I think it's in some ways common 7 sense. You know that generic drugs are made by 8 different manufacturers. You know that they're not 9 exactly the same. The requirement of generic drugs 10 is that they have the same active ingredient. It's 11 not required that they're exactly the same. 12 And so it follows naturally that there 13 might be things that differ between generic drugs 14 and branded drugs and that we don't know all of 15 these, including the generic manufacturers at the 16 time, don't know all of these things at this point 17 and some of these things could be revealed later on. 18 Q. Would it surprise you to know that one of 19 the generic manufacturers in this case had knowledge 20 that their valsartan contained nitrosamines a year 21 before they were actually recalled from the market? 22 MR. STOY: Object to the form. Beyond the 23 scope. Mischaracterizes. 24 THE WITNESS: I have no knowledge of that. 25 MR. STOY: Mischaracterizes the evidence.</p>
<p style="text-align: right;">Page 283</p> <p>1 BY MS. HILTON: 2 Q. Just generally, though, in your practice 3 as a physician do you have an expectation that the 4 generic products are the same as the branded 5 reference listed drugs? 6 MR. STOY: Objection. Beyond the scope of 7 his report. 8 You can answer. 9 THE WITNESS: This is not a -- this is 10 not -- this is not within the scope of my report. 11 Would you like me to comment on -- I'm not sure. 12 BY MS. HILTON: 13 Q. Yeah, I'm just asking you, as a physician, 14 you have that expectation that the generic drugs are 15 the same as the reference listed brand drugs? 16 MR. STOY: Object to the form. 17 Go ahead. 18 THE WITNESS: I think my main expectation 19 is that they should contain the same active 20 ingredient. I know that there is a process by which 21 we might identify impurities in drugs and recall 22 drugs. And that there is no guarantee that a 23 generic drug will be exactly the same as a branded 24 drug. 25</p>	<p style="text-align: right;">Page 285</p> <p>1 Go ahead. 2 THE WITNESS: I have no knowledge of that. 3 I'm not sure if I can comment on that. 4 BY MS. HILTON: 5 Q. Okay. Have you ever monitored any 6 patients for cancer? 7 A. No, not -- let me just -- let me clarify. 8 I have in the past ordered screening tests 9 for cancer. My current clinical responsibilities 10 does not primarily focus on screening for cancer as 11 a hospitalist. 12 Q. What screening tests did you order for 13 cancer? 14 A. In primary care you could order a number 15 of screening tests such as Pap smears or 16 colonoscopies. 17 Q. Aside from the opinions that are contained 18 within your report, do you intend to offer any other 19 opinions in this litigation? 20 A. I don't have any plans to do so right now. 21 MS. HILTON: Thank you, Doctor. I have no 22 further questions. 23 MR. STOY: Thank you. 24 Let's go off the record. 25 THE VIDEOGRAPHER: Off the record for the</p>

Page 286

1 day or does anyone have anything else?
 2 MR. STOY: We may have some follow-up
 3 questions. I want to take ten minutes.
 4 THE VIDEOGRAPHER: No problem.
 5 We're off the record at 4:15 p.m.
 6 (Whereupon, a brief recess was taken.)
 7 THE VIDEOGRAPHER: We are back on the
 8 record. The time is 4:26 p.m. Pacific team.
 9 EXAMINATION
 10 BY MR. STOY:
 11 Q. All right. Dr. Chan, good afternoon
 12 again. Welcome back. I know it's been a long day
 13 so I'm going to be brief but I do have a few
 14 follow-up questions to ask you, okay?
 15 A. Okay.
 16 Q. My first question is, as a matter of
 17 economics, can you explain the interplay between
 18 price and value?
 19 MS. HILTON: Objection to form.
 20 BY MR. STOY:
 21 Q. Go ahead.
 22 A. Sure.
 23 Value relates to the utility that somebody
 24 would get from a product and together this forms the
 25 demand curve. Price is something when you have a

Page 287

1 market and you have supply and where demand meets
 2 supply that's where you have price. So you can have
 3 value even if there's no market and even if there's
 4 no supply.
 5 Q. Are price and value considered
 6 interchangeable terms in economics?
 7 A. No.
 8 Q. Is economic value the same thing as
 9 equilibrium price?
 10 A. No.
 11 Q. In paragraph 44 of Dr. Conti's report, and
 12 I believe it's maybe Exhibit 3, you can pull it up
 13 if you want to, but I'm going to read a statement.
 14 She says, and I quote, According to
 15 economic theory, for a consumer product to have
 16 economic value, demand for the product must exist
 17 and supply must be allowed to meet demand.
 18 Do you agree with that statement by
 19 Dr. Conti regarding economic theory?
 20 A. No, I don't agree with that. That is not
 21 consistent with what I have described as economic
 22 theory and the relationship between price and value.
 23 Q. Can a product have economic value even if
 24 there is no equilibrium price in the market?
 25 A. Yes.

Page 288

1 Q. Is willingness to pay the only thing to
 2 consider in determining economic value?
 3 A. Yes. Willingness to pay and economic
 4 value are synonymous.
 5 Q. Dr. Chan, you were shown an article that
 6 you had previously written in the New England
 7 Journal of Medicine. I believe it was Exhibit 5.
 8 Do you remember that?
 9 A. Yes.
 10 Q. And then you were also shown some comments
 11 that were received that were sent to the author. I
 12 believe that was Exhibit 6.
 13 Do you remember that?
 14 A. Yes.
 15 Q. Is it uncommon for peer-reviewed
 16 publications for the authors to be sent comments by
 17 people?
 18 A. I don't know how common it is. But in
 19 this case, this was a comment that was a bit
 20 ancillary to the main analysis and we acknowledged
 21 the comment. And the article itself, I think the
 22 main points that we made in the article itself are
 23 still valid. The -- it's also -- it also bears
 24 mentioning that the comment didn't really make a
 25 point about averages versus other types of moments

Page 289

1 of a statistical distribution.
 2 Q. Did the New England Journal of Medicine
 3 retract your article after those comments were
 4 submitted?
 5 A. No.
 6 Q. Was the article ever retracted?
 7 A. No.
 8 Q. Now, I want you to go back to your report,
 9 Dr. Chan. And specifically, I want you to look at
 10 paragraph 117.
 11 Are you there?
 12 A. Okay. Yep.
 13 Q. Do you recall earlier you were asked some
 14 questions with regard to the use of averages?
 15 A. Yes.
 16 Q. Why is Dr. Song's use of averages in his
 17 report inappropriate, in your opinion?
 18 MS. HILTON: Objection to form.
 19 THE WITNESS: And I want to clarify that
 20 averages are not in and of themselves a bad thing.
 21 It depends on how you're using the averages and as I
 22 said during the deposition, which sample you're
 23 getting the average from and what purpose you're
 24 using the average for.
 25 The problem with Dr. Song's use of an

<p>Page 290</p> <p>1 average from some publication that looks at another 2 population, probably a general population, comparing 3 private insurance prices and Medicare prices, is 4 that that average might not be applicable to the 5 class at hand, which by definition, would have had 6 to be patients who took valsartan. And it's 7 possible that that average could be wildly off. 8 MR. STOY: Okay. Thank you, Dr. Chan. I 9 have no further questions. 10 MS. HILTON: Can we go off the record for 11 a moment. I just want to confer. 12 THE VIDEOGRAPHER: Okay. We're off the 13 record at 4:32 p.m. 14 (Whereupon, a brief recess was taken.) 15 THE VIDEOGRAPHER: We are back on the 16 record at 4:35 p.m. 17 EXAMINATION 18 BY MS. HILTON: 19 Q. Doctor, Mr. Stoy asked you questions about 20 equilibrium price. 21 Do you remember that? 22 A. Yes. 23 Q. What's your definition of equilibrium 24 price? 25 A. Equilibrium price is where supply and</p> <p>Page 291</p> <p>1 demand meet in terms of price. 2 Q. And it's your testimony that a product can 3 have economic value even if there is no equilibrium 4 price in the market? 5 A. Yes. 6 MS. HILTON: I have no further questions. 7 EXAMINATION 8 BY MR. MIGLIACCIO: 9 Q. Doctor, I just have I think one. Maybe -- 10 I thought it was one. We'll see. 11 You -- Mr. Stoy asked you questions about 12 averages in paragraph 117. And you testified 13 that -- that the average might not be applicable to 14 the class at hand and that it's possible that that 15 average could be wildly off, correct? 16 A. Correct. 17 Q. That was your testimony. 18 I just want to confirm you have not, in 19 fact, done any calculations to determine if the 20 average is not applicable to the class at hand or 21 that the average is, in fact, wildly off? 22 A. I think I said during the deposition that 23 I have evidence that it's likely that members of the 24 class will be different than the average population 25 and that there is scope for getting the average</p>	<p>Page 292</p> <p>1 wrong if you just look at variation in prices, which 2 we have done in the report. 3 Q. You have not, in fact, done any 4 calculations, though, to determine if the averages 5 are wildly off or not applicable? 6 A. The other thing I think I've said in the 7 deposition is that I think it would be quite 8 difficult to actually calculate it so I don't think 9 anybody's done any calculations to show me something 10 about what that price would be other than what the 11 overall average is. 12 Q. Including you, you have not done? 13 A. Include me or -- 14 Q. Okay. 15 A. -- anybody else among the plaintiffs' 16 side. 17 Q. Got it. 18 MR. MIGLIACCIO: I have no further 19 questions. Thank you, Doctor. 20 MR. STOY: Nothing further from us. 21 THE VIDEOGRAPHER: Okay. This marks the 22 end of today's testimony of Dr. David Chan. 23 We are off the record at 4:37 p.m. Pacific 24 time. 25 (Whereupon, the deposition was concluded</p> <p>Page 293</p> <p>1 at 4:37 p.m.) 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25</p>
--	---

<p style="text-align: right;">Page 294</p> <p style="text-align: center;">INSTRUCTIONS TO WITNESS</p> <p>Please read your deposition over carefully and make any necessary corrections. You should state the reason in the appropriate space on the errata sheet for any corrections that are made.</p> <p>After doing so, please sign the errata sheet and date it.</p> <p>You are signing same subject to the changes you have noted on the errata sheet, which will be attached to your deposition.</p> <p>It is imperative that you return the original errata sheet to the deposing attorney within thirty (30) days of receipt of the deposition transcript by you. If you fail to do so, the deposition transcript may be deemed to be accurate and may be used in court.</p>	<p style="text-align: right;">Page 296</p> <p style="text-align: center;">ACKNOWLEDGMENT OF DEPONENT</p> <p>I, _____, do hereby certify that I have read the foregoing pages, and that the same is a correct transcription of the answers given by me to the questions therein propounded, except for the corrections or changes in form or substance, if any, noted in the attached Errata Sheet.</p> <p>_____ DAVID C. CHAN, JR., M.D. DATE</p>

BOGDAN: 2 Q. Good morning, Dr. Chodosh, we've met before. 3 My name is Rosemarie Bogdan and I represent the 4 plaintiffs in the Valsartan, Losartan, Irbesartan 5 Products Liability Litigation that is pending in the 6 United States District Court, District of 7 New Jersey. 8 I'm going to be asking you some questions 9 today and I would ask if you don't understand the 10 question that I pose to you, that you please let me 11 know that so I have the opportunity to rephrase it. 12 If you answer the question, I'm going to 13 assume that you understood it; is that fair? 14 A. It's fair, with the proviso of I may think 15 that I understood it but that may be different than 16 what you understand it to mean. Not to pick hairs. 17 Q. Okay. Well, if you, for any reason, don't 18 understand or perceive that you don't understand 19 what I'm asking, please let me know that so I have 20 the opportunity to rephrase my question for you, 21 okay? 22 A. Absolutely. 23 Q. Where are you currently located? 24 A. You mean where am I sitting? 25 Q. Yes.</p>
Page 7	Page 9
<p>1 THE VIDEOGRAPHER: Good morning, we 2 are now on the record. My name is 3 Bill Geigert, I'm a videographer for Golkow 4 Litigation Services. Today's date is 5 March 10th, 2022, and the time is 9:15 a.m. 6 This remote video deposition is being 7 held in the matter of Valsartan, Losartan 8 and Irbesartan Products Liability Litigation 9 for the United States District Court for the 10 District of New Jersey. The deponent is 11 Dr. Lewis Chodosh. 12 All parties to this deposition are 13 appearing remotely and have agreed to the 14 witness being sworn in remotely. Due to the 15 nature of remote reporting, please pause 16 briefly before speaking to ensure all 17 parties are heard completely. 18 All counsel will be noted on the 19 stenographic record. The court reporter is 20 Peg Reihl and she will now swear in the 21 witness. 22 LEWIS A. CHODOSH, M.D., Ph.D., having 23 been duly sworn as a witness, was examined 24 and testified as follows: 25</p>	<p>1 A. I am sitting in Greenberg Traurig on 2 Arch Street in Philadelphia. 3 Q. Okay. And is there anyone in the room with 4 you? I'm asking that because we are taking this 5 deposition remote. 6 A. Yes, there is. 7 Q. Okay. Who is in the room with you? 8 A. Nick Insogna and Alyson. And I'm not sure I 9 know Alyson's last name. 10 Q. And is Alyson one of the counsel? 11 A. That is my understanding, yes. 12 Q. So with the same firm? 13 A. I don't believe so, but I don't know. 14 MR. INSOGNA: Rosemarie, if it helps, 15 it's Alyson Lotman with Duane Morris. 16 MS. BOGDAN: Okay, I didn't see her 17 appearance on the record, so thank you. 18 BY MS. BOGDAN: 19 Q. All right. Now, what electronics are you 20 using today for this deposition? 21 A. Everything in this room. 22 Q. Okay. 23 A. A lot of electronics in this room. 24 Q. Well, the electronics that are available to 25 you personally and you can control them, I see a</p>

<p style="text-align: right;">Page 10</p> <p>1 laptop in front of you perhaps?</p> <p>2 A. Yeah, there's a laptop with a window that</p> <p>3 says "Lewis Chodosh, M.D., Marked Exhibits."</p> <p>4 Q. And are there any -- other than the exhibit</p> <p>5 portal that is on that laptop and open to you, are</p> <p>6 there any other applications or e-mails or message</p> <p>7 systems or anything available to you on that laptop?</p> <p>8 A. There are applications on there. There's</p> <p>9 nothing else open on this laptop.</p> <p>10 Q. Actually, I should --</p> <p>11 A. I think all computers have applications on</p> <p>12 them, but there's one window open on this laptop and</p> <p>13 that's the one I just told you.</p> <p>14 Q. Okay. And you're not using any of those</p> <p>15 other applications that might be available on that</p> <p>16 laptop?</p> <p>17 A. No, I am not.</p> <p>18 Q. What about any type of a cell phone or iPad</p> <p>19 or hand-held device, are you using anything like</p> <p>20 that during the deposition today?</p> <p>21 A. No.</p> <p>22 Q. What did you do to prepare for your</p> <p>23 deposition today?</p> <p>24 A. I reread some materials, including my</p> <p>25 reports. I met with attorneys, that was pretty much</p>	<p style="text-align: right;">Page 12</p> <p>1 that binder?</p> <p>2 MR. INSOGNA: Rosemarie, I think I</p> <p>3 can help with this. The binder is each of</p> <p>4 the sources cited as a footnote to</p> <p>5 Dr. Chodosh's supplemental report, it's hard</p> <p>6 copies of those documents.</p> <p>7 BY MS. BOGDAN:</p> <p>8 Q. Are there any notes or highlights that</p> <p>9 you've made on those documents that are in that</p> <p>10 binder?</p> <p>11 A. No. This binder was here, sitting at this</p> <p>12 spot when I came in this morning. It's not</p> <p>13 something that I've had; it's not something that</p> <p>14 I've looked through or made any notes on.</p> <p>15 MS. BOGDAN: The representation by</p> <p>16 Counsel is that that binder only has in it</p> <p>17 hard copies of the documents that are</p> <p>18 referenced in the doctor's supplemental</p> <p>19 report?</p> <p>20 MR. INSOGNA: That's correct.</p> <p>21 THE WITNESS: And if it helps you,</p> <p>22 there are 31 tabs in this binder.</p> <p>23 BY MS. BOGDAN:</p> <p>24 Q. And other than the documents you mentioned</p> <p>25 as well as the binder, is there anything else as you</p>
<p style="text-align: right;">Page 11</p> <p>1 it.</p> <p>2 Q. When you say you "reread materials," you are</p> <p>3 talking about the two reports that you've provided</p> <p>4 in this litigation?</p> <p>5 A. The two reports in this litigation. I</p> <p>6 looked back over the deposition from my original</p> <p>7 report. I looked over Dr. Madigan's report. Those</p> <p>8 were the primary things that I spent time with.</p> <p>9 Q. Do you have any documents with you today</p> <p>10 that you're using during this deposition?</p> <p>11 A. Yes.</p> <p>12 Q. What documents do you have?</p> <p>13 A. Do you want me to go clockwise or</p> <p>14 counterclockwise? I'll go counterclockwise.</p> <p>15 Q. Whichever you prefer, Doctor.</p> <p>16 A. I have a copy of my supplemental report, a</p> <p>17 copy of my original report, there's a binder marked</p> <p>18 "Pleadings Binder," March 10th, 2022, that has a</p> <p>19 bunch of numbers at the top of that that I'm happy</p> <p>20 to read to you if you would like.</p> <p>21 Q. What is in --</p> <p>22 A. It says it's the -- the first page, says</p> <p>23 it's "Lewis Chodosh Supplemental Expert Report</p> <p>24 Binder," and it's a tabbed set of documents.</p> <p>25 Q. Who compiled those documents that are in</p>	<p style="text-align: right;">Page 13</p> <p>1 go counterclockwise around the table?</p> <p>2 A. Yes, and I apologize, I've lost</p> <p>3 counterclockwise clockwise.</p> <p>4 So I have a copy of Dr. Madigan's report</p> <p>5 dated July 7, 2021. I have -- it's entitled</p> <p>6 "Defendant's Responses and Objections to Plaintiffs'</p> <p>7 Notice of Videotaped Deposition of Lewis Chodosh,</p> <p>8 M.D., Ph.D."</p> <p>9 I have a "Notice to Take Videotaped Oral</p> <p>10 Deposition."</p> <p>11 I have what was exhibits -- looks like one</p> <p>12 through five from the last deposition you and I did</p> <p>13 together.</p> <p>14 I have Exhibits 7 and 8 from the last</p> <p>15 deposition we did together.</p> <p>16 And then finally, there is a binder, again,</p> <p>17 that was here when I came in that says "Teva</p> <p>18 Valsartan MM and Class Cert Pleading Binder,</p> <p>19 March 10th, 2022," that appears to have two tabs.</p> <p>20 The first tab is "Plaintiffs' Consolidated Third MM</p> <p>21 Class Action Complaint" and the second tab is</p> <p>22 "Plaintiffs' Motion for Class Certification of</p> <p>23 Consumer TPP and MM Claims," and both of those are</p> <p>24 dated November 1st, 2021.</p> <p>25 MR. INSOGNA: And, Rosemarie, let me</p>

<p style="text-align: right;">Page 14</p> <p>1 just clarify one thing, when Dr. Chodosh 2 referenced the Exhibits 1 through 5 and 7 3 and 8 to the prior deposition, those are the 4 documents Bates labeled Chodosh 001 through 5 008, the calculation tables that you had 6 marked during the last deposition. 7 MS. BOGDAN: Okay. 8 BY MS. BOGDAN: 9 Q. And for that series of documents that you 10 just mentioned, Dr. Chodosh, have you made any notes 11 or highlights on any of those documents? 12 A. No, I have not. 13 Q. Now, you mentioned that you met with the 14 attorneys to prepare for this deposition. 15 How much time did you spend meeting with 16 counsel to prepare for this deposition? 17 A. It was about three hours. 18 Q. Was that all on one occasion or multiple 19 occasions? 20 A. That was one occasion. There may have been 21 a brief phone call that would have been, you know, 22 some other point over the last few days, but that 23 probably would have been less than 15 minutes. 24 MS. BOGDAN: If we could pull the 25 notice to take oral videotaped deposition</p>	<p style="text-align: right;">Page 16</p> <p>1 THE WITNESS: Great. Thank you very 2 much. 3 BY MS. BOGDAN: 4 Q. Doctor, do you -- 5 MS. BOGDAN: Has it been marked, are 6 we all set? 7 THE WITNESS: I'm not sure who you 8 are asking that question. 9 TRIAL TECHNICIAN: It has been 10 marked, yes. It has been marked as 11 Exhibit 1. 12 BY MS. BOGDAN: 13 Q. Doctor, do you recognize this notice? 14 A. Checking it. Yes, I do. 15 Q. And directing your attention to the third 16 page of the notice, Exhibit A? 17 A. Yes, I see. 18 Q. There's a document entitled "Document 19 Requests"? 20 A. Yes, I see that. 21 Q. Were you involved in assembling these 22 documents responsive to the requests in Exhibit A of 23 the notice? 24 A. Was I involved, yes. We walked through the 25 thing so that I could make sure I understood as best</p>
<p style="text-align: right;">Page 15</p> <p>1 and mark that as an exhibit, please. 2 (Document marked for identification 3 as Chodosh Deposition Exhibit No. 1.) 4 MS. BOGDAN: Is Mike there? Please 5 mark that the first exhibit. 6 TRIAL TECHNICIAN: It's on your 7 screen now. Give me one second to mark it 8 in the exhibit folder. Having a brief tech 9 glitch. 10 THE WITNESS: Should I be seeing 11 something in the folder in this window in 12 front of me? 13 TRIAL TECHNICIAN: Doctor, you should 14 have it on the screen in the conference 15 room, correct? 16 THE WITNESS: Yes, but my 17 understanding was that documents would also 18 show up in this window -- 19 TRIAL TECHNICIAN: Yes. 20 THE WITNESS: -- so that I could look 21 at them. 22 TRIAL TECHNICIAN: Yes, that's 23 correct, I'm putting them in right now. And 24 it should -- if you hit refresh you should 25 see Exhibit Number 1.</p>	<p style="text-align: right;">Page 17</p> <p>1 I could what was being requested and whether or not 2 those things existed and to a lesser extent whether 3 there were -- had been objections to any of these 4 things that you all talk about amongst yourselves 5 that I don't understand. 6 MS. BOGDAN: If you could please mark 7 the defendant's responses and objections to 8 the plaintiffs' notice as Exhibit 2, please. 9 TRIAL TECHNICIAN: The document on 10 your screen has been marked as Exhibit 2. 11 (Document marked for identification 12 as Chodosh Deposition Exhibit No. 2.) 13 BY MS. BOGDAN: 14 Q. Doctor, do you recognize this document? 15 A. I have seen it. I have not -- I have not 16 read through it. 17 Q. Okay. I'm going to ask you just a couple 18 follow-up questions with regard to the requests that 19 were made in the notice to take your deposition. 20 A. I'm sorry, are we back to the previous 21 document or the one you have me looking at now? 22 Q. Well, this one has them all repeated in it 23 so we're -- we can use the one that's up on the 24 screen now. 25 So if we -- but actually, we can take -- we</p>

Page 18

1 can take it down, I can just ask you the questions.
2 Have you done any presentations, seminars or
3 classes with regard to the risks or benefits of
4 angiotensin II receptor blockers for nitrosamines?
5 A. Are you reading Number 3?
6 Q. What I'm asking -- I'm not reading Number 3.
7 I'm asking if you have done any PowerPoints
8 or presentations or seminars regarding the risks and
9 benefits of angiotensin receptor blockers or
10 nitrosamines?
11 A. The answer to that is no, and, again, that's
12 Number 3 on the document request.
13 Q. Have you done any presentations, seminars or
14 classes with regard to medical monitoring?
15 MR. INSOGNA: Object to form.
16 THE WITNESS: Depends on how -- how
17 do you define "medical monitoring"?
18 BY MS. BOGDAN:
19 Q. The type of medical care that one would need
20 if they're at a risk of developing cancer.
21 Have you given any types of presentations or
22 seminars or classes with regard to the type of
23 medical treatment one may need if they're at a risk
24 for developing cancer?
25 A. I have not specifically given a presentation

Page 19

1 in the way that you described that. I mean, as a
2 physician and teaching medical students, for
3 example, one might talk about colonoscopy, what are
4 the guidelines for colonoscopy for screening so
5 that's -- that's monitoring. It's not a lecture
6 about colonoscopy, you know, genetic testing for
7 people who have a family history, but it would have
8 been in the general context of, you know, teaching
9 medical students, teaching graduate students, et
10 cetera, about general principles in medicine and
11 cancer biology not a dedicated presentation to, I
12 think, what you are referring to as "medical
13 monitoring."
14 Q. That answers my question. Thank you,
15 Doctor.
16 Have you authored any articles or done any
17 presentations, seminars, classes with regard to
18 hypertension treatments, ARBs or medical monitoring
19 plans?
20 A. I don't think so. It's not clear to me.
21 How is this different than the last question you
22 asked me? So articles so --
23 Q. The last question was medical monitoring.
24 I'm now asking with regard to hypertension,
25 treatments for hypertension or ARBs?

Page 20

1 A. No, I have not.
2 Q. Have you performed any research with regard
3 to angiotensin II receptor blockers?
4 A. No, I have not.
5 Q. Have you performed any research with regard
6 to nitrosamines?
7 MR. INSOGNA: Object to form, vague.
8 THE WITNESS: We -- I believe we had
9 this discussion at the last deposition. I
10 don't have articles that specifically focus
11 on the topic of nitrosamines and cancer, but
12 we have used nitrosamines in research in our
13 laboratory and I believe we talked about
14 that at length in the last deposition from
15 my original report.
16 BY MS. BOGDAN:
17 Q. We did and so my question was more geared
18 and I should have actually posed it this way, since
19 your last deposition with me have you done anything
20 new that you couldn't have testified about last time
21 because it hadn't yet occurred with regard to
22 research regarding nitrosamines?
23 A. No, I have not.
24 Q. Have you ever served as an expert for a
25 medical monitoring cause of action in another

Page 21

1 litigation?
2 A. No, I have not.
3 Q. Since your last deposition, have you done
4 any new research regarding -- or done any research
5 regarding angiotensin blockers -- angio- -- excuse
6 me -- angiotensin II receptor blockers?
7 A. No, I have not.
8 Q. Did you have a new retainer agreement or
9 letter of retention for this medical monitoring
10 cause of action that was separate and distinct from
11 the one that we spoke of at your last deposition?
12 A. To the best of my recollection, no.
13 MS. BOGDAN: If we could pull up
14 Dr. Chodosh's invoices as Exhibit 3, please.
15 (Document marked for identification
16 as Chodosh Deposition Exhibit No. 3.)
17 BY MS. BOGDAN:
18 Q. And, Dr. Chodosh, please let me know once
19 that exhibit is available to you and you are able to
20 see it.
21 A. Yes, it is, I have it.
22 Q. Can you please look through Exhibit 3 and
23 tell me if that is a complete copy of the invoices
24 that you have rendered regarding this matter?
25 A. Yes, I believe it's complete.

<p style="text-align: right;">Page 22</p> <p>1 Q. I see that the invoices stop as far as time 2 as of December 31st, 2021? 3 A. That's correct. 4 Q. Have you spent additional time since 5 December 31st, 2021? 6 A. Yes, I have. 7 Q. And you haven't yet submitted an invoice for 8 that additional time? 9 A. Correct, I have not submitted an additional 10 invoice. 11 Q. How much time have you spent working on this 12 litigation since December 31st, 2021? 13 A. Somewhere in the vicinity of about 65 or 70 14 hours. 15 Q. So the invoices that have been marked as 16 Exhibit 3 total \$336,175. 17 Does that sound right to you? 18 A. That sounds about right. 19 Q. And the 65 to 70 hours that you spent since 20 you last submitted an invoice, at what hourly rate 21 has that work been performed? 22 A. That hourly rate is \$925 an hour. 23 Q. So for an additional 65 hours at \$925 an 24 hour, that would be another \$60,125, approximately? 25 A. That sounds about right. I don't have a</p>	<p style="text-align: right;">Page 24</p> <p>1 go back, please. There we go. All right. 2 BY MS. BOGDAN: 3 Q. You see in the numbered list where it shows 4 an on-site deposition that occurred September 29th 5 and September 30th? It's about three-quarters of 6 the way down. 7 A. Yes. 8 Q. Okay. And then there are a series of 9 entries that begin on October 24th, 2021, and go 10 through December 31st, 2021? 11 A. Yes, I see that. 12 Q. Was that work that you did on the medical 13 monitoring cause of action? 14 A. And the dates, again, that you're asking 15 about are which? 16 Q. October 24th, 2021, through the end of the 17 invoice. 18 A. I actually don't recall because I also 19 recall spending time going through the deposition 20 transcripts from September 29th and September 30th 21 and I can't remember if I had to get those notarized 22 or -- so it's possible that that's what the October 23 dates are. I don't -- I don't specifically recall. 24 Q. Do you have any written record of your 25 activities done in this matter that has more of a</p>
<p style="text-align: right;">Page 23</p> <p>1 calculator in front of me so I don't know. 2 Q. And on the third page of this exhibit -- 3 A. Yes -- oh, third page, sorry. 4 Q. -- third page, which I believe would be with 5 the date January 18th, 2022, at the top? 6 A. That's not my third page. My third page is 7 parking receipts from January 28th, 2022. 8 Q. Okay. How about -- it's probably then your 9 first page. 10 A. What's up on the screen is the one I was 11 just referring to, which is parking receipts. 12 MS. BOGDAN: That's correct. 13 If the tech could please move to the 14 first page of this exhibit, which would be, 15 I believe, with a date -- okay. 16 BY MS. BOGDAN: 17 Q. So you have a different -- here's the first 18 page, which is August 3rd, and the third page of 19 this exhibit should have a date of January 18th at 20 the top? 21 A. That's the fifth page of my exhibit. 22 Q. Okay. 23 MS. BOGDAN: If the tech could please 24 move to the page that begins with 25 January 18th. There we go. Perfect. Oh,</p>	<p style="text-align: right;">Page 25</p> <p>1 description of what you did, other than what's on 2 the invoice? 3 A. No. I could probably figure it out by 4 looking at when the errata for the deposition 5 transcripts were notarized, that would probably give 6 me a clue, but there are no other notes that would 7 give me more information on it. 8 Q. Did you go about recording your time in this 9 invoice in the same -- or for -- in the same manner 10 that you used as you testified to in your prior 11 deposition? 12 MR. INSOGNA: Object to form. 13 THE WITNESS: Yeah, well, no. I 14 mean, I clarified how I did it in the prior 15 deposition since the prior invoice was for a 16 very short period of time, about five weeks. 17 So for things like this that's spread 18 over months, I would typically just put a 19 date and a number for hours spent. 20 BY MS. BOGDAN: 21 Q. And that's what's recorded on the invoice? 22 A. That's what's recorded on the invoice after 23 I fill-in the other things, like the review of 24 medical and scientific materials and making sure 25 that the year is on there and things like that.</p>

<p style="text-align: right;">Page 26</p> <p>1 Q. Is there any written record that would 2 provide more detail as to what medical and 3 scientific literature you reviewed on any particular 4 date? 5 A. No, there is not. 6 MS. BOGDAN: If you could please pull 7 up Dr. Chodosh's supplemental report. And I 8 believe we're on Exhibit 4. 9 THE WITNESS: I don't -- yes. 10 (Document marked for identification 11 as Chodosh Deposition Exhibit No. 4.) 12 BY MS. BOGDAN: 13 Q. Do you recognize that document that's been 14 marked as Exhibit 4? 15 A. Yes, I do. 16 Q. What is that document? 17 A. That is my supplemental report and looks 18 like the appended materials and the exhibits. 19 MS. BOGDAN: If we could please pull 20 up the amended list of materials considered, 21 which is number 5. I think it's entitled 22 "List of Materials Considered." 23 THE WITNESS: Yeah. I can see it on 24 the computer. I don't see it on the screen. 25 MS. BOGDAN: I don't see it on the</p>	<p style="text-align: right;">Page 28</p> <p>1 BY MS. BOGDAN: 2 Q. That's correct. I'm asking if there are any 3 additional materials considered that have been added 4 to this list that were not in the list that we spoke 5 about at your last deposition, that accompanied your 6 first report? 7 A. So there would have been reports from, you 8 know, experts, the -- reports from experts in this 9 matter, in the medical monitoring matter, so 10 obviously I wouldn't have had those back in August. 11 I don't believe there's the -- any differences in 12 scientific materials, you know, publications, things 13 like that, but I would have to go through it line by 14 line to tell you that there isn't anything. 15 Just sitting here today, I don't recall 16 anything that was added. Any other publications 17 that were added, to clarify. 18 Q. Did you review any additional internal 19 documents of the defendants between your last 20 deposition and today? 21 A. Not to the best of my recollection, no. 22 Q. Now, your hourly rate for your continued 23 work on this litigation is \$925 per hour? 24 A. That's correct. 25 Q. And your original rate for your work when</p>
<p style="text-align: right;">Page 27</p> <p>1 screen yet either, Dr. Chodosh. There we 2 go. 3 (Document marked for identification 4 as Chodosh Deposition Exhibit No. 5.) 5 BY MS. BOGDAN: 6 Q. As the document that's been marked 7 Exhibit 5, is that your amended list of materials 8 considered that accompanied your supplemental expert 9 report? 10 A. Yes. 11 Q. And is that a comprehensive list of the 12 materials that you considered? 13 A. Yes, it is. 14 Q. Were there additional materials added to 15 this list that you considered for your supplemental 16 report that were not on the list of materials 17 considered for your original report? 18 MR. INSOGNA: Object to form. 19 THE WITNESS: You're asking me if 20 there are any things in the thing up on the 21 screen, the amended list of materials 22 considered from March 8, you're asking me is 23 there anything on here that wasn't in the 24 original list of materials considered back 25 in whenever that was, August 2021?</p>	<p style="text-align: right;">Page 29</p> <p>1 you were first retained on this litigation was 850 2 per hour; isn't that correct? 3 A. That's correct. Yes, that's correct. 4 Q. When did your hourly rate change? 5 A. January 1st. 6 Q. What percentage of your income comes from 7 litigation work? 8 MR. INSOGNA: Object to form. 9 THE WITNESS: I can't tell you a 10 precise number and for sure it would vary 11 over the years. 12 BY MS. BOGDAN: 13 Q. Can you give me a range? 14 A. Over the years, it would vary from zero or 15 1% to something probably less than half of what I 16 earned in my roles at the University of 17 Pennsylvania, but I can't -- I can't give you any -- 18 any numbers. I've never calculated that. 19 Q. So it depends on -- it varies year to year; 20 is that a fair statement? 21 A. Yes. 22 Q. What question were you asked to answer with 23 regard to your supplemental report? 24 A. As it states on the first page of my 25 supplemental report, I have been asked to "Provide</p>

<p style="text-align: right;">Page 30</p> <p>1 my opinions regarding the scientific and medical 2 basis for the requests for medical monitoring for 3 cancer, as expressed in Plaintiffs' Third Amended 4 Medical Monitoring Class Action Complaint filed 5 November 1st, 2021." 6 Q. Does that statement encompass all that you 7 were asked to do with regard to rendering the 8 opinion that's in your supplemental report? 9 MR. INSOGNA: Objection to form. 10 THE WITNESS: I think that statement 11 adequately covers it to my understanding of 12 it. 13 BY MS. BOGDAN: 14 Q. Now, you reviewed Dr. Dipak Panigraphy's 15 report? 16 A. If you're asking me did I review 17 Dr. Panigraphy's report as he originally filed it 18 back in the summer or whenever that was of 2021, the 19 answer is yes, and my understanding is that it was 20 more or less exactly that same report that was 21 refiled in this medical monitoring matter. 22 Q. And did you review the whole report or just 23 parts of the report? 24 A. I don't recall. 25 Q. Did you review Dr. Panigraphy's deposition</p>	<p style="text-align: right;">Page 32</p> <p>1 A. So that title is familiar, but the titles 2 that are listed in this binder -- so this says 3 "Third Amended Medical Monitoring Class Action 4 Complaint" -- 5 Q. Did you -- 6 A. [Zoom technical malfunction.] 7 Q. It's a different document, but did you 8 review that document the one you just read, the 9 third amended medical monitoring class action 10 complaint? 11 A. Yes, I did and the other, as I said 12 previously, was the plaintiffs' motion for class 13 certification of consumer third-party payor and 14 medical monitoring claims. 15 Q. You read that document? 16 A. Yes, I did. And this is assuming we're not 17 referring to different things or -- yeah. I mean, 18 the titles were -- 19 Q. That's fine, Doctor, you -- 20 [cross-talking] 21 A. I don't think this is the one. 22 Q. When you say you don't think it is the one, 23 are you looking at a document that you don't think 24 you reviewed? 25 A. If it's what's in Tab 2, it actually looks</p>
<p style="text-align: right;">Page 31</p> <p>1 testimony? 2 A. I believe that I read his -- I believe his 3 first deposition. Again, I don't know what the date 4 was from his original report. I don't believe -- I 5 think he was -- there was an additional session that 6 I don't believe I reviewed, but I'm not sure. 7 Q. Did you review Dr. Madigan's expert report? 8 A. Yes, I did. And by which you mean 9 Dr. Madigan's report for the medical monitoring of 10 the -- yeah, the one that I have -- let's see. 11 Q. You can tell me the date of the report, that 12 will -- 13 A. First page for the hard copy I have says 14 "July 7th, 2021." 15 Q. Did you review Dr. Madigan's deposition 16 testimony? 17 A. I'm not -- I don't recall. I'm not sure 18 that I did. 19 Q. Did you review the plaintiffs' memorandum of 20 law in support of the medical monitoring motion for 21 class certification? 22 A. Can you repeat what the title of that was? 23 Q. Plaintiffs' memorandum of law in support of 24 the medical monitoring plaintiffs' motion for class 25 certification?</p>	<p style="text-align: right;">Page 33</p> <p>1 to be something different. This looks like it's 2 economic. 3 Can you -- 4 MR. INSOGNA: Yeah. 5 MS. BOGDAN: My question -- 6 MR. INSOGNA: Yeah, for the record, I 7 think that the hard copy we printed out for 8 Dr. Chodosh this morning may be the wrong 9 document. As he said, he has a different 10 thing in front of him than what is listed on 11 the amended list of -- the list of materials 12 considered. 13 THE WITNESS: So if it helps, just 14 looking at the titles that I put in my 15 report, it was the third amended medical 16 monitoring class action complaint and there 17 was the memorandum of law in support of 18 plaintiffs' motion for class certification. 19 Does that answer your question? 20 Those were the two primary documents that I 21 was reviewing for attorney-generated things. 22 BY MS. BOGDAN: 23 Q. And other than those two attorney-generated 24 documents, did you review for purposes of your 25 report any other attorney-generated documents, and</p>

<p style="text-align: right;">Page 34</p> <p>1 I'm adopting your terminology, or were those the two 2 that you've referenced in your report and you 3 considered when drafting it? 4 A. Those were the two that -- those were the 5 two that I recall. It's possible I was given a 6 document that had things related to economics that 7 I -- if I had opened that, I would not have read 8 through that. 9 Q. Was it important for you to understand 10 Dr. Madigan's opinions in order to provide a medical 11 monitoring opinion in this case? 12 A. Yes, it was. 13 Q. Was it important for you to understand 14 Dr. Panigraphy's opinions in order to provide an 15 opinion in this case? 16 A. Yes. 17 Q. Do you have any experience in actually 18 setting up a medical monitoring program for a cohort 19 of people who are at risk for developing cancer? 20 A. No, I do not. 21 Q. Did you review the medical monitoring plan 22 offered by the plaintiffs in this litigation? 23 A. What I reviewed was what I assume is the 24 reference to that in Dr. Madigan's report. 25 Q. Directing your attention to paragraph 6 of</p>	<p style="text-align: right;">Page 36</p> <p>1 from? 2 A. The language "require additional targeted 3 testing," which is what's quoted, is that what 4 you're referring to? 5 Q. That language and then the description that 6 you have of what that additional targeted testing 7 would be, did you get that from the memorandum of 8 law in support of plaintiffs' motion for class 9 certification? 10 A. I need to look at that material to answer 11 your question. 12 THE WITNESS: So is this the one that 13 I have or is this the one that I don't have, 14 the memorandum of law in support of motion 15 for class certification? 16 MR. INSOGNA: I don't think we have a 17 hard copy in the room. 18 THE WITNESS: Okay. Well, I'm going 19 to need to look at that to know the answer 20 to your question. 21 BY MS. BOGDAN: 22 Q. Okay. Did you cite anything other than the 23 memorandum of law in support of plaintiffs' motion 24 for class certification in that paragraph? 25 A. No, I did not.</p>
<p style="text-align: right;">Page 35</p> <p>1 your report, which is marked I believe -- I believe 2 we marked it four? 3 A. Yes. 4 Q. And can you see that now, Doctor? It just 5 popped up on my screen. 6 A. Yes, I can. 7 Q. And referring you to that part of your 8 paragraph that begins "And that such Plaintiffs 9 "require additional targeted testing" consisting of 10 periodic fecal occult blood testing, low dose CT 11 chest scan, urinalysis, blood smear evaluation, 12 colonoscopy and upper endoscopy and Galleri 13 multi-cancer early detection blood test or similar 14 liquid biopsy." 15 Do you see that? 16 A. I see those words, yes. 17 Q. Did you review the medical monitoring plan 18 that had been submitted by Dr. Kaplan as part of 19 your review in this case? 20 A. I may or may not have glanced at it. I 21 would not have reviewed it in detail. 22 Q. And the language that you have there in 23 paragraph 6, you're citing to the memorandum of law 24 in support of plaintiffs' motion for class 25 certification as to where you got that language</p>	<p style="text-align: right;">Page 37</p> <p>1 Q. Do you recognize that type of additional 2 testing as a physician? 3 MR. INSOGNA: Objection, vague. 4 THE WITNESS: Are you speaking to the 5 portion that begins "Periodic fecal occult 6 blood screening"? 7 BY MS. BOGDAN: 8 Q. Yes, I am. I am referring to the part that 9 begins with "Periodic fecal occult blood testing, 10 low dose CT chest scan, urinalysis, blood smear 11 evaluation, colonoscopy and upper endoscopy and 12 Galleri," if that's how you pronounce it, 13 "multi-cancer early detection blood test or similar 14 liquid biopsy." 15 Do you recognize those types of tests? 16 A. I recognize all of those types of tests, 17 including the liquid biopsy, as vague as that term 18 is, but not -- I'm not familiar with the Galleri -- 19 in any detail, of the Galleri multi-cancer early 20 detection blood test. I can infer based on a -- or 21 similar liquid biopsy that it is a liquid biopsy 22 based method, meaning a blood-based method. 23 Q. Are you offering any opinions here today 24 whether or not those additional tests that are 25 listed in paragraph 6 of your report are appropriate</p>

<p style="text-align: right;">Page 38</p> <p>1 tests for someone who is at risk of developing 2 cancers? 3 MR. INSOGNA: Object to form. 4 THE WITNESS: Could you repeat the 5 question, please? 6 BY MS. BOGDAN: 7 Q. Are you offering any opinion with regard to 8 those specific tests and whether or not they're 9 appropriate tests for someone who is at risk of 10 developing cancers? 11 MR. INSOGNA: Objection, vague. 12 THE WITNESS: If what you're asking 13 me is, was I asked to opine on the 14 appropriateness of those specific tests for 15 this portion of the litigation, no, that's 16 not what I'm offering opinions on, however, 17 I'm a physician so, of course, I would have 18 opinions about those things when asked as a 19 physician. 20 But I was not asked to specifically 21 address those tests and their 22 appropriateness in this litigation, again, 23 other than that is informed by me being a 24 physician. 25 BY MS. BOGDAN:</p>	<p style="text-align: right;">Page 40</p> <p>1 But as a physician, if asked as a 2 physician, I can't remove that part of my 3 brain. 4 BY MS. BOGDAN: 5 Q. I understand your response, Doctor, but what 6 I'm asking is, are you going to as an expert in this 7 litigation offer opinions in those areas? 8 MR. INSOGNA: Objection, vague. 9 BY MS. BOGDAN: 10 Q. Personally, as a physician, if I asked you 11 the questions, but are you offering those opinions 12 in your role as an expert in this litigation? 13 MR. INSOGNA: Objection, vague as to 14 "those opinions." 15 THE WITNESS: I'm sorry that we're 16 going around here. 17 My understanding is that there are 18 other experts involved who are addressing 19 the issues of those specific tests. I can't 20 tell you sitting here now what questions you 21 or some other attorney will ask me in court 22 in my role as a physician. 23 BY MS. BOGDAN: 24 Q. With regard to the first item of additional 25 testing that you list in paragraph 6, "fecal occult</p>
<p style="text-align: right;">Page 39</p> <p>1 Q. And did you not review the report of 2 plaintiffs' expert Edward Kaplan, which set forth 3 the plaintiffs' proposed medical monitoring plan? 4 MR. INSOGNA: Objection, misstates 5 testimony. 6 THE WITNESS: I believe what I said 7 was that I may have glanced at it, I may 8 have skimmed it, but I did not read it in 9 great detail. I don't recall sitting here 10 today. 11 BY MS. BOGDAN: 12 Q. Is -- and just so I'm clear, when you say 13 you were not asked to offer an opinion on the 14 appropriateness of various tests for someone who is 15 at risk of developing cancer, is it my -- is my 16 understanding correct, that you're not going to be 17 offering opinions in this litigation with regard to 18 that issue? 19 MR. INSOGNA: Objection, vague. 20 THE WITNESS: I mean, I think the way 21 I answered it, your last question is 22 accurate and that's my best answer. I was 23 not asked to specifically address those 24 things, nor do I believe they're 25 specifically addressed in my report.</p>	<p style="text-align: right;">Page 41</p> <p>1 blood testing," is that an appropriate test to give 2 a patient who is at risk for developing a certain 3 type of cancer? 4 MR. INSOGNA: Objection, vague. 5 THE WITNESS: Yeah, so you're now -- 6 you're now asking me questions about -- in a 7 medical practice when might one ask a 8 patient to do fecal occult blood testing and 9 I think what I'm trying to explain to you 10 is, I'm not offering opinions on those 11 things, nor would they -- nor were they 12 covered in my report. 13 If somebody asked me as a physician 14 have I ever asked a patient to do that, 15 well, I can answer that, but I'm not 16 offering opinions about, oh, you know, what 17 are the test characteristics of fecal occult 18 blood testing in different populations in 19 the United States. Those aren't my 20 opinions. This is not -- it's not in my 21 report. 22 BY MS. BOGDAN: 23 Q. The same question, then, I would ask with 24 regard to -- I'm assuming that should be "low dose 25 CT chest scan" --</p>

<p style="text-align: right;">Page 42</p> <p>1 A. Yes, it is.</p> <p>2 Q. -- the next item?</p> <p>3 A. Yes.</p> <p>4 Q. Are you offering any opinions with regard to</p> <p>5 the appropriateness of low dose CT chest scans?</p> <p>6 MR. INSOGNA: Objection, vague.</p> <p>7 THE WITNESS: So -- so my</p> <p>8 understanding is the opinions that I am</p> <p>9 being asked, that I was asked to give and</p> <p>10 that I will be asked about in court, to the</p> <p>11 best of my understanding, are the things</p> <p>12 that are in my supplemental report.</p> <p>13 And that if I am asked questions as a</p> <p>14 physician about any of this list of tests,</p> <p>15 well, I can answer in my role as a</p> <p>16 physician, if I was asked about that by you</p> <p>17 or someone else, but that was not the focus</p> <p>18 of my report, nor, I believe, is there a</p> <p>19 discussion of those particular tests in my</p> <p>20 supplemental report.</p> <p>21 BY MS. BOGDAN:</p> <p>22 Q. And likewise, there is no discussion of the</p> <p>23 appropriateness of your analysis, blood smear</p> <p>24 evaluation, colonoscopy and upper endoscopy and</p> <p>25 Galleri multi-cancer early detection blood test or</p>	<p style="text-align: right;">Page 44</p> <p>1 program?</p> <p>2 MR. INSOGNA: So my objection is</p> <p>3 still to the question, vague.</p> <p>4 But you can answer that question.</p> <p>5 THE WITNESS: I -- yeah, my</p> <p>6 apologies, but I feel like I've answered</p> <p>7 this in the best way that I can a couple</p> <p>8 times already, so I'm not -- I'm not sure</p> <p>9 what else I can say that will -- that will</p> <p>10 clarify this.</p> <p>11 I was not asked by defense attorneys</p> <p>12 to offer opinions, that is, to evaluate and</p> <p>13 write opinions in my report about whether</p> <p>14 the tests you are referring to here that</p> <p>15 were proposed for plaintiffs in this</p> <p>16 litigation. I was not asked to evaluate</p> <p>17 whether those tests, those specific tests</p> <p>18 would be appropriate for -- for specific</p> <p>19 plaintiffs.</p> <p>20 What I'm trying to express is that as</p> <p>21 a physician, knowing what those tests are,</p> <p>22 if asked as a physician, I have opinions</p> <p>23 about that insofar as I'm a physician. I</p> <p>24 don't know what questions that you're going</p> <p>25 to ask me in court, but it's not in my --</p>
<p style="text-align: right;">Page 43</p> <p>1 similar liquid biopsies in your report, correct?</p> <p>2 MR. INSOGNA: Objection, vague.</p> <p>3 Rosemarie, I don't want to step on</p> <p>4 your questions and all. I think -- I think</p> <p>5 we're having difficulty with the "at risk of</p> <p>6 cancer" language as opposed to plaintiff</p> <p>7 specifically.</p> <p>8 MS. BOGDAN: Excuse me? You broke up</p> <p>9 a little bit. You said --</p> <p>10 MR. INSOGNA: I'm trying to</p> <p>11 avoid anything that's going to --</p> <p>12 MS. BOGDAN: Yeah, I mean --</p> <p>13 MR. INSOGNA: -- Dr. Chodosh while</p> <p>14 there's a question pending. I think I see</p> <p>15 where the disconnect is in the questioning</p> <p>16 and it's your phrase "people at risk of</p> <p>17 cancer."</p> <p>18 BY MS. BOGDAN:</p> <p>19 Q. All right. But my question -- my question</p> <p>20 stands.</p> <p>21 A. I don't know how else to answer your</p> <p>22 question.</p> <p>23 Q. I mean, is the doctor offering opinions with</p> <p>24 regard to the particular targeted testing that the</p> <p>25 plaintiffs have provided in the medical monitoring</p>	<p style="text-align: right;">Page 45</p> <p>1 it's not in my supplemental report.</p> <p>2 There is no discussion of those</p> <p>3 individual tests in my supplemental report.</p> <p>4 BY MS. BOGDAN:</p> <p>5 Q. But since you've indicated to me now, I</p> <p>6 think, multiple times that you do have opinions as a</p> <p>7 physician and if someone asked you, you would</p> <p>8 comment on your knowledge and evaluation of whether</p> <p>9 those tests would be appropriate tests because you</p> <p>10 have stated that as a physician you have opinions on</p> <p>11 those and if you're asked, you would provide them,</p> <p>12 then, I am going to ask as a physician what those</p> <p>13 opinions are.</p> <p>14 A. Okay.</p> <p>15 Q. Okay. So with regard to the additional</p> <p>16 targeted testing consisting of periodic fecal occult</p> <p>17 blood testing, are you familiar with that test?</p> <p>18 A. Yes, I am.</p> <p>19 Q. And is that test used in cancer detection?</p> <p>20 A. It can be, yes.</p> <p>21 Q. With regard to low dose CT chest scans, are</p> <p>22 you familiar with that test?</p> <p>23 A. Yes, I am.</p> <p>24 Q. Would that test be used in cancer detection?</p> <p>25 A. That test, as I understand it, can be used</p>

<p style="text-align: right;">Page 46</p> <p>1 in cancer screening.</p> <p>2 Q. With regard to urinalysis, are you familiar,</p> <p>3 with that test?</p> <p>4 A. Yes, I am.</p> <p>5 Q. Would that test be used in cancer screening?</p> <p>6 A. For cancer screening, not commonly.</p> <p>7 Q. For cancer diagnosis?</p> <p>8 A. As the word is written, "urinalysis," and as</p> <p>9 the way that I am used to referring to that word, in</p> <p>10 the clinic and in the hospital a urinalysis is not</p> <p>11 the test that would typically be ordered to detect</p> <p>12 cancer.</p> <p>13 Q. With regard to blood -- blood smear</p> <p>14 evaluation -- there was a lot of feedback there so I</p> <p>15 will repeat my question.</p> <p>16 With regard to blood smear evaluation, are</p> <p>17 you familiar with that test?</p> <p>18 A. Yes, I am.</p> <p>19 Q. Is that test used for cancer screening or</p> <p>20 diagnosis?</p> <p>21 A. It is a test that could be used potentially</p> <p>22 to detect cancer.</p> <p>23 Q. With regard to colonoscopy and upper</p> <p>24 endoscopy, are you familiar with those tests?</p> <p>25 A. Yes, I am.</p>	<p style="text-align: right;">Page 48</p> <p>1 paragraph and then it's a fine time to take</p> <p>2 a break.</p> <p>3 BY MS. BOGDAN:</p> <p>4 Q. About the use of similar, you know, liquid</p> <p>5 biopsies or detection blood tests for cancer</p> <p>6 screening, are you familiar with their use for</p> <p>7 cancer screening?</p> <p>8 A. I heard you say "liquid biopsy," but you</p> <p>9 also said something else about blood tests, you were</p> <p>10 breaking up.</p> <p>11 So are you referring to two things or to one</p> <p>12 thing?</p> <p>13 Q. The audio is a little broken, Dr. Chodosh,</p> <p>14 and I'm even hearing myself in bits and pieces so</p> <p>15 let me reask the question.</p> <p>16 Are you familiar with liquid biopsies or</p> <p>17 detection blood tests used as cancer screening</p> <p>18 tests?</p> <p>19 A. In your -- my understanding is based on this</p> <p>20 paragraph, you're using "detection blood test" not</p> <p>21 to refer to a blood smear, but as it is written for</p> <p>22 the Galleri multi-cancer early detection blood test</p> <p>23 or similar liquid biopsy.</p> <p>24 Q. That's correct.</p> <p>25 A. So I am -- as I said, I am familiar with</p>
<p style="text-align: right;">Page 47</p> <p>1 Q. Can those tests be used to screen or</p> <p>2 diagnose cancer?</p> <p>3 A. That is one of the purposes to which those</p> <p>4 tests can be used.</p> <p>5 Q. And with regard to liquid biopsy detection</p> <p>6 blood tests, are you familiar with those types of</p> <p>7 tests?</p> <p>8 A. I am familiar with those types of tests but</p> <p>9 as you can imagine, the term "liquid biopsy," is</p> <p>10 almost a colloquial term. It's a vague term, that</p> <p>11 doesn't specify a particular test, but I believe</p> <p>12 from context, I understand what that is and so your</p> <p>13 question about that is -- could you repeat that?</p> <p>14 Q. My question is could that type of test be</p> <p>15 used to screen or diagnose cancer?</p> <p>16 A. To my understanding, that would only be in</p> <p>17 experimental use, presumably for research purposes.</p> <p>18 I am not aware of that test being used in a standard</p> <p>19 of care practice for the detection of cancer but,</p> <p>20 again, it's a colloquial and vague term, so...</p> <p>21 MR. INSOGNA: Rosemarie, we've been</p> <p>22 going for about an hour since we started, is</p> <p>23 now an okay time for a comfort break?</p> <p>24 MS. BOGDAN: Let me just ask just a</p> <p>25 follow-up question with regard to this</p>	<p style="text-align: right;">Page 49</p> <p>1 liquid biopsy and what types of tests that generally</p> <p>2 refers to. I'm not specifically familiar with the</p> <p>3 Galleri version of that test and I'm just -- I'm</p> <p>4 reading based on context that that test is a similar</p> <p>5 liquid biopsy.</p> <p>6 Q. Are they used for cancer screening or cancer</p> <p>7 diagnosis or both?</p> <p>8 A. So as I said, this is not, to my</p> <p>9 understanding, for the detection of cancer or</p> <p>10 screening. This would not be standard of care. My</p> <p>11 understanding is to the extent that these would be</p> <p>12 used, it would be in an experimental setting for</p> <p>13 research purposes.</p> <p>14 MS. BOGDAN: Okay. Do you want to --</p> <p>15 I think someone asked for a break. I can't</p> <p>16 see who, but I'm assuming it was probably</p> <p>17 Nick.</p> <p>18 MR. INSOGNA: Yes, it was, if we</p> <p>19 could, just five minutes, that would be</p> <p>20 great. Thank you.</p> <p>21 THE VIDEOGRAPHER: Off the record</p> <p>22 10:24.</p> <p>23 (Brief recess.)</p> <p>24 THE VIDEOGRAPHER: We are back on the</p> <p>25 record at 10:33 a.m.</p>

<p style="text-align: right;">Page 50</p> <p>1 MS. BOGDAN: Is Nick ready? I don't 2 see him. 3 MR. INSOGNA: I am. 4 MS. BOGDAN: Okay. 5 MR. INSOGNA: I'm sorry. 6 MS. BOGDAN: Okay. Okay. That's 7 okay. I didn't want to be accused of 8 starting without counsel ready so there we 9 are. All right. 10 BY MS. BOGDAN: 11 Q. Now, Dr. Chodosh, directing you to page 4 of 12 your report, which I believe you have a paper copy 13 of there, right? 14 A. Yes. 15 Q. You have a section title of your report that 16 reads "Plaintiffs proposed approach cannot ascertain 17 actual NDMA or NDEA exposures"? 18 A. That's correct. 19 MS. BOGDAN: You can take down that 20 exhibit. 21 BY MS. BOGDAN: 22 Q. Now, you considered FDA test results of 23 NDMA-contaminated valsartan when researching and 24 investigating this case, correct? 25 A. Can you restate the question?</p>	<p style="text-align: right;">Page 52</p> <p>1 discussing with their patient some type of screening 2 or whether you're talking about medical monitoring 3 programs that have been set up in litigation or for 4 some other purposes. 5 Q. Referring to the latter, which would be a 6 medical monitoring program that's been set up for a 7 litigation or for another matter, which could be a 8 cohort that was exposed, for example, to a 9 carcinogen, an actual program, not an individual 10 patient/doctor decision as to how to monitor a 11 particular patient? 12 A. So based on your question, not for the 13 purposes of litigation but you appended something to 14 that that was like "and other things." I don't know 15 what you are referring to. 16 Q. Meaning, are you familiar with a medical 17 monitoring program that may not be related to 18 litigation, but is a program that is available for 19 any person that might meet the criteria for that 20 cohort to participate in because they were exposed 21 to something environmentally or -- you know, I'm 22 just trying to understand your familiarity with 23 medical monitoring programs. 24 I'm not asking about an individual decision 25 between a doctor and a patient as to a program for</p>
<p style="text-align: right;">Page 51</p> <p>1 Q. Did you, as part of your review of this 2 matter look at the laboratory analysis of valsartan 3 products done by the FDA? 4 A. Yes, I did. 5 Q. Now, is your claim that plaintiffs cannot 6 ascertain actual NDMA or NDEA exposures one of the 7 basis for your opinions that you're rendering? 8 MR. INSOGNA: Object to form. 9 THE WITNESS: That is -- that is one 10 of my critiques of the proposal that has 11 been made, yes. 12 BY MS. BOGDAN: 13 Q. Are you aware of approved medical monitoring 14 programs that have potentially varying levels of 15 individual exposures? 16 A. I'm not sure what you are referring to. 17 Q. Are you familiar with any approved medical 18 monitoring programs for other litigations? 19 A. For other litigations, no. 20 Q. Are you aware of approved medical monitoring 21 programs for any cohort of people that were exposed 22 to a carcinogen? 23 A. When you say "medical monitoring programs," 24 I'm not sure if what you're referring to is what a 25 physician might prescribe for a patient after</p>	<p style="text-align: right;">Page 53</p> <p>1 an individual. I'm asking about medical monitoring 2 programs that are available to a group. 3 A. Well, maybe I can help clarify this by 4 saying -- by giving you an example. So if there's a 5 patient of a certain age with, you know, 150 pack a 6 year smoking history, that would meet certain 7 guidelines for doing low dose chest CT for 8 screening, but that's -- to my understanding, we're 9 not talking about physicians and patients, not what 10 I think you are referring to by "and other things." 11 Is that -- do I have -- am I understanding 12 you correctly? 13 Q. You are understanding me correctly. 14 I'm asking about your familiarity with 15 established programs that if an individual meets the 16 criteria they can participate in a set program, as 17 opposed to an individual screening decided upon by a 18 doctor and their patient? 19 A. So there are certainly research protocols, 20 for instance, the research trials that went into the 21 low dose chest CT scanning and screening for lung 22 cancer. Again, I don't think that's what you're 23 referring to. Maybe if you could give me an example 24 of what you're referring to, that might make it 25 clearer for me. I just -- I don't know what you</p>

<p style="text-align: right;">Page 54</p> <p>1 mean by "program." 2 Q. For example, if there is a group of 3 individuals that were working in a sick building, 4 for example, and were exposed in that building and 5 that the state or the government has set up a 6 screening program, but it's a medical monitoring 7 program for anyone that worked in that building for 8 more than X number of years. 9 Are you familiar with any established 10 medical monitoring programs of that nature? 11 A. Based on your example and your explanation, 12 no, I don't believe so. 13 Q. When there are potential varying levels of 14 exposure can't averages and means and medians and 15 midpoints and ranges be used to assess varying 16 levels? 17 MR. INSOGNA: Objection, vague. 18 THE WITNESS: That's such a -- that's 19 such a general question, I can't even begin 20 to answer it. If you would like to give me 21 an example, I would be happy to comment on 22 it, but I can't answer that question based 23 on the way you phrased it. 24 BY MS. BOGDAN: 25 Q. Okay. If you have a group of people that</p>	<p style="text-align: right;">Page 56</p> <p>1 A. All right. 2 Q. Your supplemental expert report, you don't 3 mention the possibility that plaintiffs can 4 ascertain NDMA or NDEA exposures by using averages 5 or means or medians or midpoints or ranges of 6 exposure, correct? 7 A. I do not recall any discussion in materials 8 that I've read of plaintiffs proposing that and if 9 you could point me to the section where they do 10 that, it might jog my memory, but I don't recall it. 11 Q. I'm asking if you mentioned it in your 12 report? 13 A. If I mentioned what in my report? 14 Q. The possibility that plaintiffs could 15 utilize means, averages, medians or ranges to 16 estimate exposure to NDMA or NDEA in 17 valsartan-containing drugs? 18 A. What I'm trying to say is that my report 19 comments on what plaintiffs did say and what 20 plaintiffs did propose, as I understood it. 21 And I'm telling you, again, I do not recall 22 any point in Dr. Madigan's report or the two 23 documents with names longer than I care to repeat, 24 the amended motion and whatever the other one was, I 25 do not recall any proposal by plaintiffs to use</p>
<p style="text-align: right;">Page 55</p> <p>1 had varying levels of exposure to a carcinogen 2 because they worked in a plant, isn't it possible to 3 use means or medians or averages to determine the 4 levels of exposure? 5 MR. INSOGNA: Same objection. 6 THE WITNESS: Maybe you could give me 7 an example of a carcinogen and a plant. 8 It's just such a general question, I 9 can't -- I don't have enough information to 10 answer you. 11 BY MS. BOGDAN: 12 Q. We'll come back to it actually. I'll just 13 move on at this point. 14 With regard to this particular matter, in 15 your expert report you don't mention the possibility 16 that plaintiffs may have utilized means, medians, 17 midpoints or ranges to estimate plaintiffs' exposure 18 to NDMA in contaminated valsartan-containing drugs, 19 correct? 20 A. Could you restate that? I could not follow 21 that question. 22 Q. I'm asking if in your expert report -- 23 A. You're talking about my original report or 24 the supplemental report? 25 Q. The supplemental report first, all right?</p>	<p style="text-align: right;">Page 57</p> <p>1 midpoints or averages or things like that. 2 If you could point me to that language, it 3 might jog my memory, but I do not recall it. 4 Can you point me to the language? 5 Q. I'm not asking you if plaintiffs proposed 6 it. 7 I'm asking if you commented or considered it 8 in your supplemental report the fact that plaintiffs 9 could rely on means, medians, midpoints or ranges to 10 estimate exposure? 11 A. If you're asking me in writing my 12 supplemental report, did imagine or consider the 13 universe of possibilities of things that plaintiffs 14 might have proposed but did not, I did not consider 15 the universe of possibilities of things that they 16 might have said or might have proposed but didn't. 17 I was focused on what they did say and what they did 18 propose. 19 Q. In your expert report, did you attempt to 20 assess the average or median or midpoint or ranges 21 of NDMA or NDEA associated for each NDC code? 22 MR. INSOGNA: Objection, vague. 23 THE WITNESS: I apologize, that 24 was -- that was a very long question and I 25 followed you right until the end about the</p>

<p style="text-align: right;">Page 58</p> <p>1 NDC code.</p> <p>2 BY MS. BOGDAN:</p> <p>3 Q. In your expert report, did you attempt to</p> <p>4 assess the means, averages, midpoints or range of</p> <p>5 NDMA or NDEA exposure associated for each NDC code</p> <p>6 of valsartan-containing drugs that had</p> <p>7 contamination?</p> <p>8 MR. INSOGNA: Objection to form.</p> <p>9 THE WITNESS: And by "expert report,"</p> <p>10 again, I'm not sure if you're talking about</p> <p>11 the supplemental report or my original</p> <p>12 report, but what I -- what I did was</p> <p>13 estimate the range, which is what was the</p> <p>14 maximum hypothetical exposure based on when</p> <p>15 products from particular manufacturers were</p> <p>16 on the US market, recognizing -- and that</p> <p>17 was -- we talked for a very long time at my</p> <p>18 last deposition about those calculations.</p> <p>19 Those were the maximum possible</p> <p>20 hypothetical exposures based on FDA</p> <p>21 measurements where the minimum would have</p> <p>22 been things that were below the FDA ADI of</p> <p>23 96 nanograms per day so that -- that is that</p> <p>24 range, irrespective of any NDC codes.</p> <p>25 BY MS. BOGDAN:</p>	<p style="text-align: right;">Page 60</p> <p>1 determine a specific exposure.</p> <p>2 And that is why the calculations that</p> <p>3 I did is the maximum hypothetical range</p> <p>4 based on FDA testing under even unrealistic,</p> <p>5 quote/unquote, worst case assumptions.</p> <p>6 BY MS. BOGDAN:</p> <p>7 Q. And you're referring to your reliance on the</p> <p>8 FDA laboratory analysis of valsartan products,</p> <p>9 correct?</p> <p>10 A. When I refer to "FDA testing," yes, that's</p> <p>11 what I'm referring to.</p> <p>12 Q. And the, quote, worst case scenario, to use</p> <p>13 your language, that you mentioned, was the highest</p> <p>14 value found by the FDA in the testing data it</p> <p>15 published with regard to contaminated valsartan</p> <p>16 products, correct?</p> <p>17 MR. INSOGNA: Objection, asked and</p> <p>18 answered. This was all covered in the prior</p> <p>19 deposition.</p> <p>20 THE WITNESS: So, yes, as I have</p> <p>21 testified to previously.</p> <p>22 BY MS. BOGDAN:</p> <p>23 Q. Which finished dose manufacturers use ZHP</p> <p>24 API for their valsartan finished pills?</p> <p>25 A. You cut out at the beginning. Could you</p>
<p style="text-align: right;">Page 59</p> <p>1 Q. I'm asking if you actually researched the</p> <p>2 average levels of NDMA or NDEA contamination</p> <p>3 associated with NDC codes?</p> <p>4 MR. INSOGNA: Objection, asked and</p> <p>5 answered.</p> <p>6 MS. BOGDAN: I don't believe he</p> <p>7 answered the question with regard to whether</p> <p>8 he attempted to ascertain the average or the</p> <p>9 range of NDMA or NDEA exposures associated</p> <p>10 with particular NDC codes.</p> <p>11 MR. INSOGNA: I believe that was --</p> <p>12 MS. BOGDAN: That's my question.</p> <p>13 MR. INSOGNA: I think that was the</p> <p>14 subject of the calculations we discussed in</p> <p>15 the last deposition.</p> <p>16 You can answer the question.</p> <p>17 THE WITNESS: So as we talked about</p> <p>18 in my last deposition, I calculated the</p> <p>19 maximum possible hypothetical range. We've</p> <p>20 talked about what the minimum was, less than</p> <p>21 96 nanograms per dose, and my understanding</p> <p>22 of NDC codes is that while it indicates an</p> <p>23 API manufacturer, that it does not indicate</p> <p>24 a specific lot and, therefore, you could</p> <p>25 not, from an NDC code, to my understanding,</p>	<p style="text-align: right;">Page 61</p> <p>1 repeat that?</p> <p>2 Q. Which finished dose manufacturers used ZHP</p> <p>3 API for valsartan finished pills?</p> <p>4 A. Sitting here now, I don't memorize that. I</p> <p>5 could go back through materials if you would like me</p> <p>6 to do that.</p> <p>7 Q. You don't know the answer, though, to that</p> <p>8 question, sitting here today?</p> <p>9 MR. INSOGNA: Objection to form.</p> <p>10 Asked and answered.</p> <p>11 THE WITNESS: I do not memorize that</p> <p>12 information, no.</p> <p>13 BY MS. BOGDAN:</p> <p>14 Q. Which finished dose manufacturers use Myland</p> <p>15 API for valsartan finished pills?</p> <p>16 MR. INSOGNA: Same objection.</p> <p>17 THE WITNESS: My calculations were</p> <p>18 based on -- these were where the -- yeah, I</p> <p>19 mean, this was Exhibit 7 from the past</p> <p>20 deposition.</p> <p>21 So those were the FDA numbers and</p> <p>22 that was as FDA referred to them and that</p> <p>23 was how I referred to them.</p> <p>24 BY MS. BOGDAN:</p> <p>25 Q. I'm asking, Doctor, if you know which</p>

<p style="text-align: right;">Page 62</p> <p>1 finished dose manufacturers used Myland API for 2 their valsartan finished pills? 3 MR. INSOGNA: Same objection. 4 THE WITNESS: Yeah, as I've said, I 5 have not memorized the correspondence 6 between the finished dose manufacturers and 7 the lots of drug that the FDA tested. 8 BY MS. BOGDAN: 9 Q. Which finished dose manufacturers used 10 Hetero API for valsartan finished dose? 11 MR. INSOGNA: Same objection. Also 12 beyond the scope of his report. 13 You can answer the question. 14 THE WITNESS: My calculations were 15 based on the FDA testing, Hetero Labs, as 16 well as the algorithm that was presented by 17 plaintiffs that also refers to Hetero Labs. 18 BY MS. BOGDAN: 19 Q. Do you know which finished dose 20 manufacturers used Hetero API in their 21 valsartan-containing drugs? 22 MR. INSOGNA: Same objection. 23 THE WITNESS: Again, I do not 24 memorize what that correspondence is. I am 25 referring to data that the FDA published,</p>	<p style="text-align: right;">Page 64</p> <p>1 Q. A Princeton Pharmaceutical product, correct? 2 A. That's correct. 3 Q. And that would be 20,190 nanograms found in 4 that 320-milligram Princeton tablet, correct? 5 A. That's correct. 6 Q. My question that I asked is, have you seen 7 any testing demonstrating that tablets made with ZHP 8 API have no NDMA in them? 9 MS. LOTMAN: Objection to form. 10 THE WITNESS: I don't recall, sitting 11 here today. 12 BY MS. BOGDAN: 13 Q. Have you seen any testing demonstrating that 14 any pills made with ZHP API had less than 15 96 nanograms of NDMA in them? 16 MR. INSOGNA: Same objection. 17 Rosemarie, you spent hours in the 18 last deposition discussing the levels of 19 specific lots. I'll give you a little bit 20 of leeway here, but we're not going to redo 21 that whole set of questioning. 22 MS. BOGDAN: Well, with regard to the 23 supplemental report there is a -- you know, 24 a majority and a big part of the report is, 25 again, discussing levels as it pertains to</p>
<p style="text-align: right;">Page 63</p> <p>1 which are -- is the same nomenclature that 2 is used in the plaintiffs' materials 3 proposing an algorithm by which to derive a 4 lifetime cumulative threshold. 5 BY MS. BOGDAN: 6 Q. For valsartan pills made with ZHP API, have 7 you seen any testing demonstrating that no NDMA was 8 found in those pills? 9 MR. INSOGNA: Objection to form. 10 This was also covered in the prior 11 deposition. 12 THE WITNESS: So in part in answering 13 your question, so as in my report, paragraph 14 21, I refer to Princeton Pharmaceutical 15 corresponding to the ZHP API from the 16 manufactured lot containing the highest 17 level of NDMA measured by the FDA in the 18 320-milligram valsartan product. 19 BY MS. BOGDAN: 20 Q. And what was that level? 21 A. The maximum level measured by the FDA in any 22 valsartan product, 320 milligrams was 23 20.19 micrograms per tablet. 24 Q. And that -- 25 A. And that was the maximum in a specific lot.</p>	<p style="text-align: right;">Page 65</p> <p>1 the plaintiffs' medical monitoring, so I 2 believe I have every right to ask these 3 questions. They are completely cured off 4 the supplemental report and they go towards 5 the medical monitoring class and -- 6 MR. INSOGNA: All of the -- all of 7 the discussion of levels refers back to the 8 prior report, which you deposed him on for 9 ten hours. I think we've more than covered 10 this. 11 I will give you a little bit of 12 leeway, but if it continues to be questions 13 about levels observed and internal testing 14 versus FDA reporting, we're not going to 15 redo those questions. 16 Dr. Chodosh, you can answer this 17 question if you remember it. 18 THE WITNESS: So let me clarify, as 19 it says in my report, "As detailed in this 20 supplemental report, my opinions regarding 21 plaintiffs' request for medical monitoring 22 for cancer follow any straightforward manner 23 from the opinions expressed in my report of 24 August 2nd, 2021, regarding the question of 25 whether ingestion of valsartan products</p>

<p style="text-align: right;">Page 66</p> <p>1 affects the risk of developing cancer, which 2 is attached as Exhibit C. Where applicable, 3 my response to each element of plaintiffs' 4 third amended medical monitoring class 5 action complaint refers to the relevant 6 sections of my report of August 2nd, 2021." 7 Which is to say, in each place in my 8 supplemental report where I am referring to, 9 you know, numbers, calculations, whatever it 10 may be, I cite that paragraph, the section 11 of my original expert report that that is -- 12 that serves as the foundation for that. 13 So the foundation of those things 14 hasn't changed since my original report that 15 we spent a great many hours talking about, 16 the FDA-measured doses and doses measured by 17 manufacturers. 18 BY MS. BOGDAN: 19 Q. For the purposes of the supplemental report 20 that you have now provided, did you review any of 21 the finished dose manufacturers internal documents, 22 which indicate levels of NDMA or NDEA that they 23 found in their products? 24 MR. INSOGNA: Are you asking about 25 subsequent to the prior deposition where he</p>	<p style="text-align: right;">Page 68</p> <p>1 "Other sources show levels as high as 2 60.2 micrograms of NDMA," with footnote 3 number 6, which lists a ZHP number. 4 So that's an internal number and the 5 rest of Dr. Madigan's statement is "and 6 5.4 micrograms of NDEA," with the footnote 7 7 that refers to a "Torrent-related" document. 8 So, again, internal documents and 9 those numbers, those additional numbers that 10 Dr. Madigan is citing in addition to the FDA 11 numbers that he cites, same numbers that I 12 cite, those are -- those are numbers that, 13 as I recall, I've seen before in the 14 original reports from Dr. Panigraphy and 15 others. 16 And those were the things that we 17 discussed back in September at great length. 18 BY MS. BOGDAN: 19 Q. In reviewing Dr. Madigan's report in 20 preparation for your supplemental report that you 21 have now served in this litigation, did you review 22 those underlying documents that Dr. Madigan is 23 citing to in those footnotes 6 and 7 in his report? 24 A. In this case I did not, because I believe I 25 have seen those values referenced by some</p>
<p style="text-align: right;">Page 67</p> <p>1 testified to what he had reviewed? 2 MS. BOGDAN: I'm asking for the 3 purposes of the supplemental medical 4 monitoring report that Dr. Chodosh has 5 issued, if he is relying on and/or reviewed 6 any manufacturers' internal testing data 7 with regard to the levels of contamination 8 that they found in their drugs, product or 9 substance? 10 MR. INSOGNA: Objection, compound and 11 partially asked and answered at the prior 12 deposition. 13 THE WITNESS: So as we spoke about 14 for several hours back in September about my 15 original report, we talked at length about 16 internal testing documents that I had looked 17 at and my choice of FDA evaluations of NDMA 18 and NDEA levels in my calculations. And the 19 only thing subsequent to that deposition 20 would be, for instance, as noted in 21 Dr. Madigan's report, on page 2 of 22 Dr. Madigan's report, where as a footnote he 23 refers to sentences -- well, Dr. Madigan 24 cites the FDA levels, same levels that I 25 have cited, and then he appends to that</p>	<p style="text-align: right;">Page 69</p> <p>1 plaintiffs' experts before, that's number one. So I 2 will take at his word that Dr. Madigan was -- was 3 citing those accurately, especially since those 4 numbers are generally familiar to me. 5 And I also would not have done that because 6 the difference of threefold for NDMA or roughly 7 fourfold for NDEA would not make a difference for my 8 opinions that those levels of exposure are far below 9 what would be associated with an increased risk of 10 cancer. 11 Q. Since your last deposition, have you made 12 inquiries as to how many lots of the finished dose 13 medications were tested for NDMA or NDEA by each of 14 the defendant manufacturers? 15 A. I'm not sure what you're asking me. Are you 16 asking me testing subsequent to some date or 17 products manufactured subsequent? I -- I'm not sure 18 what you're asking me. 19 Q. Since I last deposed you, which was, I 20 believe, in October of 2021 -- 21 A. No, September 29th and September 30th. 22 Q. September. Okay. Right. It was right at 23 the end, okay, so in September of 2021. 24 Have you made any inquiry to ascertain how 25 many lots of the finished dose medications were</p>

<p>Page 70</p> <p>1 tested by the defendant manufacturers for NDMA or 2 NDEA? 3 A. How many lots from when? 4 Q. At any point in time. I'm asking if after 5 the depositions that we had in September, if you 6 made any inquiry as to the number of lots of 7 finished dose medications that were tested by the 8 defendants in this case for NDMA or NDEA? 9 A. If you're referring to the period of time 10 that preceded the final recall, I did not, since 11 that deposition, ask for additional information and 12 nor would it have changed my opinion. 13 Q. Since your last deposition, have you made 14 any inquiry as to how many lots of the API were 15 tested by each of the defendant manufacturers for 16 levels of NDMA or NDEA? 17 A. Since the last deposition, I have not 18 inquired about that type of testing and, again, nor 19 would it have changed my opinion in this matter. 20 MS. BOGDAN: Please pull up 21 exhibit -- I believe, it might be entitled 22 FDA control -- no, it's "Laboratory Analysis 23 of Valsartan Products." 24 TRIAL TECHNICIAN: Counsel, would it 25 be under any other name?</p> <p>Page 71</p> <p>1 MS. BOGDAN: I don't think so. Let's 2 just go off the record so I can just check 3 on this exhibit. 4 THE VIDEOGRAPHER: Off the record at 5 11:11. 6 (Brief recess.) 7 THE VIDEOGRAPHER: We are back on the 8 record at 11:13 a.m. 9 MS. BOGDAN: What exhibit are we up 10 to now? 11 TRIAL TECHNICIAN: This is Exhibit 6. 12 (Document marked for identification 13 as Chodosh Deposition Exhibit No. 6.) 14 BY MS. BOGDAN: 15 Q. Okay, Doctor, let me know once you can see 16 this exhibit. 17 A. Yes, I can see it. 18 Q. Are you familiar with this document? 19 A. Yes, I am. 20 Q. And directing your attention to the second 21 page of the document? 22 A. Yes. 23 Q. And then the third page of the document? 24 A. Yes. 25 Q. Are these the FDA testing levels that you've</p>	<p>Page 72</p> <p>1 been referring to? 2 A. Yes. 3 Q. If we could go back to the second page of 4 the document. 5 With regard to the manufacturer Aurobindo, 6 do you see that on the second page of the document? 7 A. Yes, I do. 8 Q. And there are three rows for Aurobindo right 9 at the top, correct? 10 A. Yes, I see that, yes. 11 Q. FDA is indicating that it tested nine total 12 lots for Aurobindo in those three rows? 13 MR. INSOGNA: Yeah, you asked these 14 exact questions at the last deposition. You 15 went through this document and asked how 16 many lots by each manufacturer were tested. 17 It's page 96 of the September 29th 18 deposition. 19 BY MS. BOGDAN: 20 Q. In lots they're tested? 21 A. You're asking me again? 22 Q. Asking you again because I need it as a lead 23 in, in to my next question. 24 A. For those three rows listed as "Aurobindo 25 Pharma," there are nine lots listed by the FDA as</p> <p>Page 73</p> <p>1 having been tested. 2 Q. Other than those nine test results that are 3 on this FDA document for purposes of your 4 supplemental report, did you rely on any other 5 testing results for Aurobindo product? 6 A. I relied on no other testing results beyond 7 those of the FDA, beyond the fact of my expectation 8 that Dr. Madigan, and both referring to the FDA 9 numbers himself for his report, as well as the ZHP 10 and the Torrent values that he listed that I 11 factored in, that if there had been other levels, 12 I'm confident that plaintiffs' experts would have 13 told me what they were if they were higher. 14 But as I -- we discussed for seemingly hours 15 at my last deposition, the FDA measurements of the 16 lots listed from the companies listed in this 17 document is what I relied upon for the calculations 18 that I presented. Whether those numbers are twofold 19 or threefold or fourfold different, if plaintiffs 20 wanted to propose that that would not change my 21 opinion in this matter that plaintiffs, who had 22 taken such products, would not be at an increased 23 risk of cancer. 24 Q. Okay. 25 MS. BOGDAN: Move to strike the</p>
---	--

Page 74

1 latter part of that.
2 BY MS. BOGDAN:
3 Q. My question was simply, for your
4 supplemental report did you rely on any testing
5 levels for Aurobindo product, other than what are
6 shown in this FDA laboratory analysis of valsartan
7 products that's been marked Exhibit 6?
8 MR. INSOGNA: Objection, asked and
9 answered.
10 THE WITNESS: I just answered you.
11 If you'd like, perhaps, it could be read
12 back.
13 BY MS. BOGDAN:
14 Q. It's a simple question, you know, with
15 regard to what testing levels you have relied on for
16 your supplemental report.
17 And I'm asking this line of questioning to
18 find out if you rely for your supplemental report,
19 on any testing levels other than the FDA levels that
20 are shown on this document for the lots that are
21 shown on this document?
22 MR. INSOGNA: Same objection.
23 You can answer again.
24 THE WITNESS: And as I answered you,
25 I used the FDA information in this document,

Page 75

1 as well as looking at the numbers that
2 Dr. Madigan cited and my expectation that if
3 there had been higher numbers, that your
4 experts felt were important to consider,
5 that I would have seen them, and that the
6 only two numbers that I saw, I factored that
7 into my consideration.
8 And those were from Dr. Madigan's
9 report, they were not in the FDA report.
10 And I factored them in, insofar as I could
11 see those levels compared to the FDA levels
12 and determined that those levels, even if I
13 were to accept those as listed in
14 Dr. Madigan's citations, would not have
15 changed my opinions in this case.
16 BY MS. BOGDAN:
17 Q. Okay. So since your deposition in September
18 that was over two days, you haven't taken into
19 consideration any other testing levels, other than
20 the ones that are shown on what's been marked as
21 Exhibit 6?
22 MR. INSOGNA: Objection, misstates
23 testimony.
24 THE WITNESS: I'm -- this is, I
25 think, the fourth time you've asked this

Page 76

1 exact question. I've given you an answer
2 each of the three previous times. I'm not
3 sure if the issue is you don't understand
4 what I've said, I don't know how to -- I
5 can't give you a different answer than what
6 I gave. I gave you the truthful answer to
7 your question three times.
8 BY MS. BOGDAN:
9 Q. Doctor, I'm not actually trying -- I'm
10 trying to sort of just be able to ask this and move
11 on.
12 We did discuss this at your last deposition
13 and I just want to make sure since your last
14 deposition you haven't taken into consideration any
15 other testing levels, other than what's shown on
16 this document that's been marked as Exhibit 6.
17 I'm asking about anything that you've done
18 since September up until now that would be
19 additional or different than what you did up to the
20 point of your last deposition.
21 MR. INSOGNA: Objection, misstates
22 testimony.
23 THE WITNESS: That is not -- that is
24 not what I -- that was not in the first
25 three answers to my question to you, put the

Page 77

1 way that you summarized it.
2 I was very clear, and I was very
3 clear that what's additional is looking at
4 your expert's reports, and particularly
5 Dr. Madigan, and the numbers that he cited
6 that are not FDA numbers so I could factor
7 that into my overall opinion.
8 And I've given you this answer now
9 four times. There is no other answer to the
10 question.

23 BY MS. BOGDAN:
24 Q. Now, you testified that you did not know
25 what assays that the defendant manufacturers used

Page 93

1 when testing for levels of NDMA and NDEA in their
2 drug substance and drug products, correct?
3 A. I'm sorry, the beginning of your question
4 cut out. Could you repeat your question, please?
5 Q. You have testified that a concern of yours
6 is that you did not know the assay method that was
7 used by the defendant manufacturers in testing their
8 drug substance and drug products, correct?
9 A. Based on my last deposition that was one of
10 the reasons that I brought up why I chose to use FDA
11 testing data of manufactured lots of finished
12 product on the United States market, as opposed to
13 testing data from individual companies where there
14 were many unknowns so that was one of the reasons.
15 Q. Do you have any information that leads you
16 to believe that the defendant manufacturers were not
17 competent at using the FDA prescribed methods to
18 test for NDMA and NDEA in their drug products and
19 drug substance?
20 MR. INSOGNA: Objection, asked and
21 answered at the last deposition. On page
22 110, you asked him if he found reliable the
23 testing the defendants did on their own
24 product. I think we've covered all of this
25 ground.

<p style="text-align: right;">Page 94</p> <p>1 MS. BOGDAN: I think the question is 2 actually different and it's a basis for his 3 medical monitoring opinion and the levels 4 he's relying on. I'm asking if he's learned 5 any information that would cause him to 6 believe that the defendant manufacturers 7 were not competent in using testing methods 8 to detect NDMA and NDEA in their drug 9 substance and product. 10 MR. INSOGNA: You can answer this 11 question. 12 I'm excited to get to his actual 13 opinions in this case, but that's fine. 14 THE WITNESS: So as we talked about 15 for what seemed like hours at my last 16 deposition, we articulated -- I articulated 17 for you the list of reasons why I chose to 18 use FDA data, as opposed to data from 19 manufacturing companies. 20 And parts of those -- some of those 21 reasons, not to be inclusive, were that the 22 testing procedures themselves recommended by 23 the FDA changed over those periods of time, 24 such that I wouldn't know which -- which 25 version or which assay was being used, how</p>	<p style="text-align: right;">Page 96</p> <p>1 that we're still talking about this. 2 BY MS. BOGDAN: 3 Q. I think there was a disconnect with the 4 question that I asked and the answer that I 5 received. 6 My question was: Is in your investigation 7 and research into this case, if you learned any 8 information that the testing results that the 9 manufacturers came to using their testing methods 10 were unreliable or faulty? 11 MR. INSOGNA: Same objection. 12 BY MS. BOGDAN 13 Q. Not why -- not why you chose to use the FDA 14 test results, we have been over that. 15 What I'm asking is, in all of the documents 16 you reviewed in your list of materials considered, 17 et cetera, did you learn any information during your 18 investigation of this case that led you to believe 19 that the manufacturer's testing results were not 20 reliable or accurate? 21 MR. INSOGNA: Same objection. 22 THE WITNESS: And as I have testified 23 to, since I don't know the assay that was 24 used, the calibration methods, the equipment 25 that was used, the time in which the assays</p>
<p style="text-align: right;">Page 95</p> <p>1 familiar the people performing the testing 2 were, how they were calibrating it, what the 3 instruments were that they were performing 4 these on, as well as my experience as a 5 laboratory scientist, that even given 6 exactly the same written protocol when 7 performed by different scientists in 8 different laboratories that more often than 9 not a different answer will be gained. 10 And, therefore, you cannot compare 11 those numbers between manufacturers tested 12 at different sites using I don't know what 13 assays. And as I testified at length in my 14 last deposition, that the fact that the 15 people who developed the protocol, the FDA, 16 had measured many lots of manufactured drugs 17 that were available on the US market and 18 that could be linked up to times when they 19 were on the US market, such that I could 20 calculate highest hypothetical worst case 21 scenarios, those data are far superior, in 22 my opinion, to make a determination of 23 exposures. 24 We went through all of this ad 25 nauseam and I have to say it's disappointing</p>	<p style="text-align: right;">Page 97</p> <p>1 were performed or any standard sets of NDMA 2 or NDEA reference samples that were shared, 3 I have every expectation, based on all of my 4 scientific experience for the past 45 years, 5 that those numbers would not be comparable 6 to other manufacturers and I have no way to 7 assess whether they were done in a reliable 8 fashion using a reliable assay. 9 BY MS. BOGDAN: 10 Q. And that's true even if they were using a 11 validated method, is that your opinion? 12 MR. INSOGNA: Same objection. That 13 exact question was answered. 14 THE WITNESS: I don't know what you 15 mean by "a validated method." 16 BY MS. BOGDAN: 17 Q. A method that has been scientifically tested 18 and determined to be accurate through validation 19 procedures that are done at the laboratory? 20 A. I'm sorry, that -- the way that you've asked 21 that question is too vague for me to give you an 22 answer. 23 Q. Let's go to your report, which is Exhibit 4, 24 to paragraph 26. 25 A. Yes.</p>

<p style="text-align: right;">Page 98</p> <p>1 Q. In that paragraph you are providing the 2 maximum periods of time that valsartan products 3 potentially containing NDMA and NDEA were available 4 on the US market, correct? 5 A. That's correct. 6 Q. Okay. And so you are stating there were 51 7 months for potentially containing NDMA product on 8 the market, correct? 9 A. That's correct. 10 Q. Seventy-five months for valsartan products 11 potentially containing NDEA on the market? 12 A. Yes, that's correct, as I wrote in my 13 original report and as I testified to during our 14 prior deposition on this. 15 Q. So if we take the highest level of 16 contamination that was found by the FDA in its 17 laboratory analysis for NDMA, that would be 18 20.19 micrograms, correct? 19 MR. INSOGNA: Objection. 20 THE WITNESS: 20.19 micrograms was 21 the highest level measured by the FDA. The 22 highest level of NDMA measured in an FDA -- 23 in a manufactured product, in a 24 320-milligram valsartan product. 25 BY MS. BOGDAN:</p>	<p style="text-align: right;">Page 100</p> <p>1 about medical -- 2 THE WITNESS: Do you have Exhibit 8? 3 Do you have Exhibit 8 from the prior 4 deposition? 5 MR. INSOGNA: The document Bates 6 labeled Chodosh 008, I forget what number it 7 was marked as. I can tell you what number. 8 It was Exhibit 18 of the September 29th 9 deposition, I believe. 10 MS. BOGDAN: I'm sorry, what? 11 MR. INSOGNA: Exhibit 18 of the 12 September 29 deposition, which are 13 Dr. Chodosh's calculations. 14 MS. BOGDAN: Nick? 15 MR. INSOGNA: It was Exhibit Number 16 18. 17 MS. BOGDAN: Exhibit 18? 18 MR. INSOGNA: Eighteen, 1-8, yes, 19 Bates labeled Chodosh 008. 20 BY MS. BOGDAN: 21 Q. Yes I -- I pulled that exhibit back up and 22 my question is, which I do not believe is answered 23 on this exhibit, is if a patient took a valsartan 24 320-milligram tablet with approximately 25 20 micrograms of NDMA for 51 months, that would</p>
<p style="text-align: right;">Page 99</p> <p>1 Q. So, hypothetically, if a plaintiff took a 2 20.19-microgram contaminated 320-milligram valsartan 3 tablet for the 51 month time period that you 4 indicated the valsartan products potentially 5 containing NDMA were on the market, what would be 6 the total cumulative exposure to NDMA? 7 MR. INSOGNA: Objection, 8 mischaracterizes the document. 9 THE WITNESS: So the -- so these 10 calculations were calculations that we 11 discussed at my last deposition and that are 12 described in detail in my original report in 13 this matter. 14 So are we going back to that now? 15 BY MS. BOGDAN: 16 Q. Well, let me just -- so, you know, if a 17 patient took a 300-milligram valsartan tablet with 18 approximately 20 micrograms of NDMA in it for 51 19 months, that would equal 30,600 micrograms of total 20 NDMA, correct? 21 MR. INSOGNA: Object to form. 22 Mischaracterizes the document and asked and 23 answered at the prior deposition. 24 MS. BOGDAN: I do not believe that 25 this was. And since we're talking</p>	<p style="text-align: right;">Page 101</p> <p>1 equal over 30,000 micrograms of NDMA, correct? 2 Now, I don't see that calculation on this 3 exhibit and I'm using the FDA number, which is what 4 the doctor has said he's relied on and the number of 5 months that the doctor has represented in paragraph 6 26 of his supplemental report that the valsartan 7 products potentially containing NDMA were available 8 on the US market. 9 MR. INSOGNA: Objection, that 10 mischaracterizes his calculation. 11 But you can answer that question, 12 Dr. Chodosh. 13 THE WITNESS: So if you want to 14 understand the calculation, let's go to my 15 original report -- 16 BY MS. BOGDAN: 17 Q. I don't understand the calculation, no. 18 A. That's what the calculation is. 19 Q. I'm sorry? 20 A. I calculated the maximum theoretical amount 21 of -- that a person taking the highest available 22 dose of a valsartan product for the 1611 days, I 23 believe it was, what that amount would be. And then 24 on my original report, paragraphs 136 and following, 25 I did a calculation based on -- let me find it.</p>

<p style="text-align: right;">Page 102</p> <p>1 Q. And what was that total exposure of --</p> <p>2 A. Sorry, I wasn't finished my answer. I</p> <p>3 apologize for the pause.</p> <p>4 Did a calculation based on the albeit</p> <p>5 unrealistic assumption of what the theoretical</p> <p>6 maximum total amount of NDMA to which plaintiffs</p> <p>7 could conceivably have been exposed from any</p> <p>8 valsartan product produced by any combination of</p> <p>9 manufacturers where I assume that on any given day a</p> <p>10 theoretical plaintiff took the valsartan product</p> <p>11 available on the market.</p> <p>12 MR. INSOGNA: Rosemarie, can you --</p> <p>13 MS. BOGDAN: That's not me.</p> <p>14 MR. INSOGNA: Sorry. For the</p> <p>15 feedback. Our room just lost power.</p> <p>16 THE VIDEOGRAPHER: Off the record --</p> <p>17 off the record at 12:15.</p> <p>18 (Luncheon recess.)</p> <p>19 THE VIDEOGRAPHER: We are back on the</p> <p>20 record at 1:06 p.m.</p> <p>21 BY MS. BOGDAN:</p> <p>22 Q. Good afternoon, Doctor.</p> <p>23 A. Good afternoon.</p> <p>24 Q. Can you hear my audio okay? I'm just</p> <p>25 checking that you can hear me --</p>	<p style="text-align: right;">Page 104</p> <p>1 I think before we took the break because the</p> <p>2 power went out, we were -- you were looking back on</p> <p>3 your previous report and one thing that I just want</p> <p>4 to make clear, a lot of the questions I'm asking are</p> <p>5 attempting to find out if you have done anything</p> <p>6 different or looked at more documents or changed</p> <p>7 what you're basing your opinion on since I last</p> <p>8 deposed you, all right?</p> <p>9 So when I'm asking you these questions,</p> <p>10 that's what I'm trying to get to, if there's</p> <p>11 something additional you did after the last time I</p> <p>12 deposed you on these issues. I can read the report,</p> <p>13 but if there was some other activity or data you</p> <p>14 looked at or something you considered, then that's</p> <p>15 what I'm trying to glean by my questions, okay?</p> <p>16 So while we had this break, I went and</p> <p>17 pulled up your first report and in that report in</p> <p>18 paragraphs 137, you do a calculation for NDMA, a</p> <p>19 hypothetical scenario that corresponds to the</p> <p>20 theoretical maximum total NDMA exposure.</p> <p>21 Do you see that in your first report?</p> <p>22 A. Yes, I do.</p> <p>23 Q. Is that the calculation that you were</p> <p>24 referring to before the power went out as far as --</p> <p>25 A. That is the section of the report where I</p>
<p style="text-align: right;">Page 103</p> <p>1 A. It's very --</p> <p>2 Q. -- and I can hear you.</p> <p>3 A. It's a very loud and it's a bit choppy. Are</p> <p>4 we able to just -- how about now?</p> <p>5 MR. INSOGNA: Rosemarie, do you want</p> <p>6 to try to just say something for us and test</p> <p>7 the volume?</p> <p>8 MS. BOGDAN: Yeah, I'm just lowering</p> <p>9 my volume a little bit because it is a</p> <p>10 different dynamic.</p> <p>11 Does that help at all?</p> <p>12 MR. INSOGNA: It sounds a little bit</p> <p>13 garbled.</p> <p>14 THE WITNESS: Yeah, it's a little</p> <p>15 garbled and like metallic, like tinny.</p> <p>16 THE VIDEOGRAPHER: Would you like to</p> <p>17 go off the record?</p> <p>18 MS. BOGDAN: Sure.</p> <p>19 THE VIDEOGRAPHER: Off the record at</p> <p>20 1:07.</p> <p>21 (Pause.)</p> <p>22 THE VIDEOGRAPHER: We are back on the</p> <p>23 record at 1:09 p.m.</p> <p>24 BY MS. BOGDAN:</p> <p>25 Q. Dr. Chodosh -- okay.</p>	<p style="text-align: right;">Page 105</p> <p>1 walk through for NDMA and for NDEA separately, I</p> <p>2 walked through two scenarios for each, one related</p> <p>3 to Teva products and the maximum -- yeah, for</p> <p>4 products available during that period potentially</p> <p>5 contaminated with NDMA and then I walked through it</p> <p>6 with any valsartan product so that's, as I recall,</p> <p>7 what I was referring to.</p> <p>8 Q. Okay. And so -- I'm sorry, were you</p> <p>9 speaking? There was feedback going on.</p> <p>10 A. I started to speak, but I'll just wait for</p> <p>11 your next question.</p> <p>12 Q. Okay. I didn't mean -- the audio is a</p> <p>13 little delayed and funky so, hopefully, we can get</p> <p>14 through this and...</p> <p>15 So in paragraph 137 of your previous report,</p> <p>16 is -- does that paragraph have the maximum</p> <p>17 hypothetical scenario that corresponds to the</p> <p>18 theoretical maximum of total NDMA exposure?</p> <p>19 A. Yes, it does and I'm -- I am -- ah, okay.</p> <p>20 So, first, in answer to your question, yes,</p> <p>21 it is; and, second, and this is maybe why I'm so</p> <p>22 puzzled is that my supplemental report very</p> <p>23 specifically refers to these paragraphs and the</p> <p>24 calculation.</p> <p>25 So I wasn't -- my supplemental report, I</p>

<p style="text-align: right;">Page 106</p> <p>1 think, is pretty clear, and, again, in my paragraph 2 36, "As discussed in detail in my report of August 3 2nd, 2021," and then at the end of that I reference 4 paragraphs 132 to 137, 142, 148 to 153. 5 Similarly, with the next paragraph that I 6 felt that I was very clear in my supplemental report 7 that there was nothing new about those calculations, 8 those were presented in my original report, you 9 deposed me on those and I was simply referring to 10 them. And in that same way, that was the intention 11 of my statement when I said that my opinions follow 12 in a straightforward manner from the opinions 13 expressed in my report of August 2nd. 14 So there are no -- there aren't -- I didn't 15 redo calculations. This is predicated on the 16 original report and those calculations. 17 Q. So for the purpose of the medical monitoring 18 claim, the theoretical maximum total exposure to 19 NDMA which a plaintiff could conceivably have been 20 exposed to is 26,635 micrograms? 21 MR. INSOGNA: Object to form. 22 THE WITNESS: 26,635 micrograms 23 refers to the hypothetical, if the 24 completely unrealistic set of assumptions 25 that somehow a theoretical plaintiff managed</p>	<p style="text-align: right;">Page 108</p> <p>1 it does not change my opinion that it's 2 still not capable of increasing cancer risk. 3 BY MS. BOGDAN: 4 Q. In your opinion what cumulative exposure to 5 NDMA would increase a person's cancer risk? 6 A. So we talked about this as well at length in 7 my original deposition for a period of time and so 8 I'm -- if you want to revisit that, I'm happy to 9 revisit that. 10 Q. Let me ask the question another way. 11 What cumulative exposure to NDMA with regard 12 to the medical monitoring claim is it your opinion 13 would increase the risk to warrant medical 14 monitoring? 15 MR. INSOGNA: Objection to form. 16 THE WITNESS: So I've answered before 17 that what I was asked to evaluate was 18 whether the doses of NDMA or NDEA to which 19 plaintiffs could conceivably have been 20 exposed as a consequence of ingesting 21 valsartan products is not within orders of 22 magnitude, not within orders of magnitude of 23 what might be associated with an increased 24 risk. 25 So as I testified in my original</p>
<p style="text-align: right;">Page 107</p> <p>1 to take the valsartan product on the market 2 on that day that had the highest amount of 3 NDMA, which I layout, I think, very clearly 4 in my report. 5 I do not consider those to be 6 realistic assumptions. It is presented 7 merely as an example that even if that takes 8 the unrealistic scenario that I've just laid 9 out, that that would be the amount. And I 10 believe as I have also said both in my 11 report and in my testimony at my last 12 deposition and, I believe, in the 13 supplemental report that whether one changes 14 it -- well, I've already said it today. 15 If one changes that number to twofold 16 or threefold or fourfold, it does not make a 17 difference in terms of risk and, therefore, 18 does not change my opinion that those values 19 are so far below any doses of NDMA ever 20 shown to cause cancer in any system, no 21 matter how sensitive. They're so far below 22 it that whether you're, you know, that 23 level, the 26635, which I already believe is 24 a gross overestimate, even if one were 25 looking at twofold or threefold or fourfold,</p>	<p style="text-align: right;">Page 109</p> <p>1 deposition, I was not asked nor did I opine 2 on what is -- what is the dose of NDMA that 3 might theoretically increase risk, that is 4 not the question that I opined on. I opined 5 on the question of the amounts that people 6 conceivably could have been exposed to. 7 And even erring with extremely 8 conservative estimates that the conclusion 9 that that is not within orders of magnitude 10 of what could be associated with an 11 increased risk. 12 BY MS. BOGDAN: 13 Q. With regard to providing your opinions 14 regarding the scientific and medical basis for 15 requests for medical monitoring for cancer, have you 16 formed an opinion as to what the cumulative exposure 17 to NDMA or NDEA would need to be in order to justify 18 medical monitoring? 19 MR. INSOGNA: Objection, asked and 20 answered. 21 THE WITNESS: So the answer I just 22 gave you would be the exact same answer. 23 BY MS. BOGDAN: 24 Q. And the reason I asked the question again is 25 I asked you with regard to NDEA as well.</p>

<p style="text-align: right;">Page 110</p> <p>1 A. Oh, I apologize then. Can you restate the 2 question? I did not pick that up. 3 Q. With regard to being asked to provide your 4 opinions regarding the scientific and medical basis 5 for the requests for medical monitoring, did you 6 determine a cumulative dose of NDEA that would 7 warrant medical monitoring? 8 A. For NDEA my answer is precisely analogous to 9 my opinion regarding NDMA, which was I was asked to 10 opine on whether the maximum hypothetical doses of 11 NDEA that plaintiffs could have been exposed to, 12 even using unrealistic, overly conservative 13 assumptions, are not within orders of magnitude of 14 doses that would be capable of causing cancer. 15 I was not opining on trying to determine a 16 specific level of NDEA at which even hypothetically 17 there might have been an increased risk. 18 Q. So for the medical monitoring opinion that 19 you're offering, you have not determined any 20 particular exposure that results in increased risk 21 of cancer? 22 MR. INSOGNA: Objection, asked and 23 answered. 24 THE WITNESS: What I determined was 25 that the maximum theoretical cumulative</p>	<p style="text-align: right;">Page 112</p> <p>1 that these things are capable of causing cancer in 2 human beings. But to the extent that there were 3 estimates, I have presented the maximum hypothetical 4 amounts both in relation to normal dietary intake, 5 exposures from food, air and water relative to 6 potential endogenous exposures and then relative to 7 the lowest dose of NDMA or NDEA that could cause 8 cancer in the most sensitive animal species in the 9 most sensitive tissue within that species. 10 And so recognizing that the cumulative 11 amounts in this litigation that have been alleged if 12 they are not within a hundredfold, a thousandfold, 13 10,000-fold of that level, that's what I mean by 14 "nowhere in the vicinity." 15 Q. And when you're speaking to that are you 16 referring to your medical monitoring report, 17 paragraph 41, where you're talking about the dosage 18 in rats that would correspond to an exposure of 19 60,850,650 micrograms over a 70-year lifetime for a 20 70-kilogram person? 21 A. So it is paragraph 41 of my supplemental 22 report, which references my original report from 23 August 2nd, 2021, for paragraphs 132 to 137, 142, 24 and 154 to 156. So there's, of course, a forward 25 explication of where those numbers come from in my</p>
<p style="text-align: right;">Page 111</p> <p>1 exposures using worst case assumptions and 2 overly conservative assumptions, were that 3 those values, those cumulative amounts of 4 NDMA or NDEA are nowhere vaguely in the 5 vicinity of a dose that could cause cancer 6 in a human being or a mammal for that 7 matter. 8 BY MS. BOGDAN: 9 Q. When you say they're not the doses in -- in 10 the vicinity of the doses that would increase risk 11 to warrant medical monitoring, can you provide a 12 range or any type of quantitative analysis as to how 13 much NDMA or NDEA that would be? 14 A. So with the proviso, I believe, that the 15 answers I have given you are my best and most 16 truthful answers. The values derived that -- that 17 the -- if you will, that the FDA uses for linear 18 low-dose extrapolation that I included in my 19 calculations. 20 And they're in both my original report, 21 they're in my supplemental report, that effectively 22 says that given a dose -- well, let me start -- let 23 me take one step back. 24 Neither NDMA nor NDEA is a known human 25 carcinogen, so there's no -- there's no evidence</p>	<p style="text-align: right;">Page 113</p> <p>1 original report that we spent quite a bit of time 2 talking about back in September. 3 Q. With regard to the medical monitoring claim, 4 do you -- and I recognize that you're citing to your 5 previous report -- you are using the same analysis 6 to the dosage in rats and converting that to a human 7 dose in order to come up with the orders of 8 magnitude that you're speaking of? 9 MR. INSOGNA: Object to form. 10 THE WITNESS: My sense is your 11 description of paragraph 41 is largely 12 correct. I would only say that, yes, I have 13 done that in the same way that the FDA and 14 EMA and Health Canada has done that, that 15 is, converting the dose in milligrams per 16 kilogram from the Peto 1991 study or studies 17 to what a human dose -- a human equivalent 18 to that would be. 19 MS. BOGDAN: Have we marked 20 Dr. Madigan's report as an exhibit yet? I 21 don't believe we have. 22 TRIAL TECHNICIAN: Just the 23 supplemental report. 24 MS. BOGDAN: All right. Could you 25 please mark Dr. Madigan's report as an</p>

<p style="text-align: right;">Page 114</p> <p>1 exhibit. And if you could, remind me what 2 number we're on. I believe it's number 34 3 in order in the repository. 4 TRIAL TECHNICIAN: That's Exhibit 10. 5 MS. BOGDAN: If we could go to the 6 first page of the actual report. I don't 7 know, Doctor, if this is available for you 8 to see it yet, but... 9 THE WITNESS: Yes, it is. I can see 10 it. 11 (Document marked for identification 12 as Chodosh Deposition Exhibit No. 10.) 13 BY MS. BOGDAN: 14 Q. Is this the report of Dr. Madigan that you 15 reviewed and comment on in your medical monitoring 16 report? 17 A. I believe it is. The only reason that I'm 18 pausing is that the hard copy that I have has a date 19 under the signature and so -- but other than that, 20 let me just make sure that this is -- 21 Q. That looks like it's really faint on there. 22 Looks like it might be July 7th, 2021? 23 A. Yes. Oh, okay. Yeah, I can't see that. 24 Yes, I believe it is the same report. 25 Q. And did you thoroughly review this report as</p>	<p style="text-align: right;">Page 116</p> <p>1 Q. Based on your review of the studies and the 2 table, you didn't find any inaccuracies to your 3 knowledge, correct? 4 A. If by "inaccuracies" you mean do I believe 5 he misrepresented one of the numbers? No, but, 6 again, with the proviso that I couldn't always find 7 what the particular number was that he found. And 8 I'll also say that there were, you know, instances 9 in which while the number that he selected from the 10 paper versus the number that I saw, you know, I did 11 not -- in those instances, I was largely writing my 12 opinions to say if -- if he has represented this 13 correctly, what would it actually say about risk, 14 because he notes in his report that there were 15 instances in which he's done his own calculations. 16 And so, therefore, not everything -- it's 17 not simply that he identified a number in a report, 18 that there were instances in which he was indicating 19 that he was doing his own calculations. 20 (Zoom interruption.) 21 MS. BOGDAN: Are we still on the 22 record and everybody can hear? 23 THE VIDEOGRAPHER: We are still on 24 the record. Please continue. 25 BY MS. BOGDAN:</p>
<p style="text-align: right;">Page 115</p> <p>1 part of your preparation for your medical monitoring 2 supplemental report? 3 A. Yes, I did. And I think as is evident in my 4 supplemental report, I reference Dr. Madigan's 5 wording throughout. 6 Q. Now, turning your attention to Table 1, 7 which is on page 7 of the report. 8 A. Yes. 9 Q. And did you review this table? 10 A. Yes, I did. And as I've said, I think 11 there's a discussion of data from this table in my 12 supplemental report. 13 Q. And did you review the underlying studies to 14 see where Dr. Madigan was getting the values that 15 are in Table 1 on page 7 of his report? 16 A. So for the great majority of these, yes 17 there were, I believe, instances in which I had a 18 bit more of a challenge in figuring out exactly 19 which number from the paper that he had taken and 20 for those I made the assumption that he is 21 accurately representing data. 22 Q. And upon your review you didn't find any 23 misrepresentations of the data based on your review 24 of the studies and review of the table, correct? 25 A. Could you say that again, please?</p>	<p style="text-align: right;">Page 117</p> <p>1 Q. Now, do you see the column in Table 1 of 2 LCE? 3 A. Yes, I do. 4 Q. What do you understand that to represent? 5 A. That stands for "Lifetime Cumulative 6 Exposure." 7 Q. And the lifetime cumulative exposures in 8 that column are associated with particular studies, 9 correct? 10 A. Yes. "Associated with," meaning they were 11 derived in some way from the study on the same row 12 of that table; is that what you mean? 13 Q. Yes. 14 A. Yes. 15 Q. And those values range from a low of 3,343 16 on the table, you see that or actually there's -- 17 strike that. Let me ask this another way. 18 In the plaintiffs' medical monitoring plan 19 it lists a level of exposure of cumulative NDMA of 20 1,962 micrograms; is that your understanding? 21 A. I'm sorry, can you say that again? 22 Q. In the plaintiffs' proposed medical 23 monitoring plan it lists a cumulative exposure of 24 1,962 micrograms of NDMA as the value that 25 significantly raises the risk of cancer and warrants</p>

<p>Page 118</p> <p>1 lifetime medical monitoring. 2 Are you aware of that? 3 A. Could you point me to that? Could you point 4 me to that, please, what you are referring to? 5 Q. I'm referring to paragraph 28. 6 A. So I'm looking at paragraph 28 and I believe 7 the sentence that you're referring to, please 8 correct me if I'm wrong, "Consequently, it is 9 difficult to reconcile the FDA's assessment that 10 lifetime cumulative exposure to 2,454 micrograms of 11 NDMA is safe (an assessment with which Plaintiffs' 12 expert Dr. Madigan agrees) with Plaintiffs' claim 13 that lifetime cumulative exposure to 14 1,962 micrograms of NDMA significantly raises the 15 risk of cancer and warrants lifetime medical 16 monitoring for cancer." 17 So is that what you're referring to? 18 Q. What I'm referring to is the value of 19 Dr. Madigan's of 1,962 and your understanding of 20 what study that comes from? 21 A. I understand what study that number came 22 from, which -- hold on one second -- is Larsson but, 23 of course, it only appears as a footnote to his 24 table. He did not include it in the table proper. 25 Q. Okay. And in the footnote to the table it</p>	<p>Page 120</p> <p>1 cumulative figures that are listed by Dr. Madigan in 2 Table 1, correct? 3 A. If you are asking me is the total cumulative 4 hypothetical maximum exposure that I calculated 5 under all of the various overly conservative and 6 unrealistic assumptions, if you're asking me is that 7 number greater than some of the numbers in this 8 table, yes, that is correct. 9 However, given that Dr. Madigan's opinion is 10 internally contradictory, I have a very hard time 11 assigning a great deal of meaning to that. But if 12 what you are asking about is one number larger than 13 another number, yes, one number is larger than 14 several of the other numbers. I don't think it has 15 biological significance and apparently neither does 16 Dr. Madigan. 17 Q. Well, you can't testify to Dr. Madigan's 18 opinion. 19 But my question is, you calculated that to 20 be 26,640 micrograms, correct? 21 A. I'm sorry, I disagree with the premise. I 22 can testify to what is in Dr. Madigan's report. And 23 he says very clearly that the FDA ADI, he agrees, is 24 a safe level. And yet, the figure of 25 1,962 micrograms, is lower than what Dr. Madigan</p>
<p>Page 119</p> <p>1 notes that the "Larsson study is also significant 2 for the third quintile to first quintile contrast"? 3 A. You've read that correctly, yes. 4 Q. And LCE of 1,962 micrograms, correct? 5 A. Yes. 6 Q. Now, given your calculations of the 7 potential exposure that patients taking contaminated 8 valsartan with NDMA, isn't it possible that 9 plaintiffs can reach the LCEs that are shown in 10 Table 1, associated with the studies that have a 11 statistically significant increased risk? 12 MR. INSOGNA: Objection to form. 13 THE WITNESS: I guess I'm not 14 understanding your question. 15 BY MS. BOGDAN: 16 Q. Well, part of your analysis with regard to 17 the medical monitoring claim was to calculate what 18 plaintiffs' potential exposure could be to NDMA from 19 their valsartan-containing drugs, correct? 20 A. Yes, that's correct. 21 Q. And part of that analysis would be 22 determining the potential levels of exposure. 23 And so my question is, the potential levels 24 of exposure that you have calculated for plaintiffs 25 taking valsartan to NDMA exceed the lifetime</p>	<p>Page 121</p> <p>1 says is a safe level. 2 So I can testify to the internal 3 contradiction in Dr. Madigan's own report. 4 Q. Back to the question I was asking and then 5 we will get to that, but the potential worst case 6 scenario exposure to NDMA you calculated was 7 26,640 micrograms, correct? 8 A. That is -- excuse me -- that is what I 9 calculated labeled, quote/unquote, worst case 10 scenario, which was a -- very explicitly a 11 hypothetical based on a series of assumptions that 12 would have to be met. 13 And as I stated in my report and in my 14 supplemental report, it's very unlikely that anyone 15 actually ever reached that level. 16 Q. That number of 26,640 micrograms is 17 significantly higher than the LCE listed for the 18 Palli study, which is with the first study in the 19 chart, correct? 20 A. Yes. 21 Q. And it's significantly higher than the 22 DeStefani study, which is the second study in the 23 chart, correct? 24 A. Yes, as I've already answered in response to 25 your questions, that number 26,000 -- 26,635 is</p>

<p style="text-align: right;">Page 122</p> <p>1 higher than nearly all of the numbers in this 2 dietary epidemiology table. So as a matter of math, 3 is number A bigger than number B, yes, I agree with 4 that number is bigger. I do not believe it has 5 biological significance. 6 Q. And with regard to Dr. Madigan's notation of 7 "SS?"; do you see that as a column heading? 8 A. Yes, I see that column heading. 9 Q. Do you know what that stands for? 10 A. My recollection is that that stands for 11 "Statistically Significant," question mark, but I 12 would have to go back and look to be sure. 13 Q. I will represent to you it stands for -- you 14 are correct -- statistical significance. 15 And Dr. Madigan noted several of these 16 studies in Table 1 that have statistically 17 significant results; isn't that true? 18 A. One second. So of the -- by my count, at 19 least, of the 25 studies listed here half or list 20 than half are statistically significant. 21 So, yes, some of them are statistically 22 significant. 23 Q. You reviewed those statistically significant 24 studies as part of your investigation into this 25 matter for purposes of the medical monitoring,</p>	<p style="text-align: right;">Page 124</p> <p>1 Did I read that correctly? 2 A. Yes, you did. 3 Q. And is part of your opinion in that regard 4 for medical monitoring based on exogenous dietary 5 exposure to NDMA? 6 A. Yes, that is one of the types of exposures 7 that I discuss in this section. 8 Q. And in your medical monitoring report you 9 speak to that in paragraphs 30, 31 and 32? 10 A. Yes. 11 Q. You rely in footnote 10 and in the text of 12 your medical monitoring report itself on the Liteplo 13 WHO 2002 Nitrosodimethylamine "Concise International 14 Chemical Assessment Document," correct? 15 A. That is the reference in paragraph 32, which 16 also cites -- I'll take a look -- paragraph 91 of my 17 original report. 18 Q. And you specifically mentioned that study in 19 paragraph 32 of your medical monitoring report, 20 correct? 21 A. I do and there are other -- so, yes, I do, 22 there are other estimates of dietary exposures 23 beyond Liteplo that are cited in the supplementary 24 report and were cited in my original report. 25 Q. Footnote 4, which is Tricker; footnote 5,</p>
<p style="text-align: right;">Page 123</p> <p>1 correct? 2 MR. INSOGNA: Object to form. 3 THE WITNESS: As I have said -- 4 BY MS. BOGDAN: 5 Q. You are offering your medical monitoring 6 opinion, I'm sorry. 7 There's a -- 8 A. I'm sorry, we're cutting in and cutting out. 9 Could you just repeat your question one more 10 time? 11 Q. I'll rephrase it. I think the audio got 12 dropped a little bit. 13 For purposes of rendering your medical 14 monitoring opinion, you reviewed those studies as 15 noted in Dr. Madigan's Table 1 that had 16 statistically significant increased risk findings, 17 correct? 18 A. Yes, as I've said, I've looked at the vast 19 majority of these studies. 20 Q. According to your medical monitoring report 21 page 8, section titled "Plaintiffs' claimed 22 dose/duration/API thresholds for medical monitoring 23 for cancers are orders of magnitude lower than 24 levels of NDMA, NDEA and other nitrosamines to which 25 humans beings are routinely exposed."</p>	<p style="text-align: right;">Page 125</p> <p>1 Biaudet; footnote 6, Dich; footnote 7, Fristachi; 2 footnote 3, Hrudey or Hrudey, if that's how it's 3 pronounced, correct? 4 A. Yes, remind me which -- or could you tell me 5 which paragraph you are looking at? Is that the 6 supplemental report? 7 Q. Yes, it's all in your supplemental report 8 and I'm referring -- I was just referring to the 9 references that you have specifically listed on your 10 supplemental report and I believe they're references 11 3 through 9. 12 A. Okay, but I asked you -- I was asking you if 13 you could just point me to which paragraph of my 14 supplemental report. 15 Q. Oh, I was reading -- 16 A. Is it paragraph 30? 17 Q. -- from 30 is where it starts. 18 A. Yeah, okay. 19 Q. And then it goes through like 33 in my 20 estimation and in paragraph 30 of your supplemental 21 report, is where you have the majority of the 22 footnotes 3 through 9 in the first sentence of 23 paragraph 30 in your report. 24 A. Yes, thank you. 25 Q. So referring to the -- you pronounce it</p>

<p style="text-align: right;">Page 126</p> <p>1 Liteplo, Liteplo study?</p> <p>2 A. I pronounce it Liteplo, but I have no idea</p> <p>3 how it's actually pronounced.</p> <p>4 MS. BOGDAN: Okay. Liteplo study, if</p> <p>5 we could pull that up, please, number 18.</p> <p>6 Plaintiffs' number 18 in the document</p> <p>7 repository.</p> <p>8 TRIAL TECHNICIAN: Got it. Thank</p> <p>9 you.</p> <p>10 (Document marked for identification</p> <p>11 as Chodosh Deposition Exhibit No. 11.)</p> <p>12 BY MS. BOGDAN:</p> <p>13 Q. Doctor, just let me know when you have the</p> <p>14 document.</p> <p>15 A. Yes, I do.</p> <p>16 Q. So you cite to this document, actually, as a</p> <p>17 reference to your medical monitoring report. I'd</p> <p>18 like you to direct your attention to page 4 of the</p> <p>19 document. Actually number 4, not Roman numeral IV.</p> <p>20 Thank you. All right.</p> <p>21 And in the second column, third paragraph</p> <p>22 down it reads, "Based upon laboratory studies in</p> <p>23 which tumors have been induced in all species</p> <p>24 examined at relatively low doses, NDMA is clearly</p> <p>25 carcinogenic."</p>	<p style="text-align: right;">Page 128</p> <p>1 with the statement. I understand you are</p> <p>2 adding the qualifier about medical monitor</p> <p>3 and I'm not going to instruct him not to</p> <p>4 answer.</p> <p>5 MS. BOGDAN: Okay.</p> <p>6 THE WITNESS: My opinions remain the</p> <p>7 same. Again, the phrase "relatively low</p> <p>8 levels of exposure" has no meaning as</p> <p>9 written since we measure levels of exposure.</p> <p>10 And since the levels of exposure that are</p> <p>11 alleged in this litigation are so many</p> <p>12 orders of magnitude lower than the doses to</p> <p>13 which Liteplo is referring, I -- no, I do</p> <p>14 not agree with that, nor do I believe that</p> <p>15 the author would agree with that if you</p> <p>16 actually used the quantitative number.</p> <p>17 "Relatively low levels of exposure,"</p> <p>18 does not have meaning here.</p> <p>19 BY MS. BOGDAN:</p> <p>20 Q. All right. If we can move to page 12 of the</p> <p>21 document, please, and in your medical monitoring</p> <p>22 report at paragraph 32, you refer to this study for</p> <p>23 "reasonable worst-case estimates" for daily intake</p> <p>24 of NDMA from food, water and outdoor air?</p> <p>25 A. That's correct.</p>
<p style="text-align: right;">Page 127</p> <p>1 Dr. Chodosh, do you agree with that</p> <p>2 statement?</p> <p>3 MR. INSOGNA: Objection, Rosemarie,</p> <p>4 asked and answered at his September</p> <p>5 deposition, that exact question.</p> <p>6 THE WITNESS: So NDMA is clearly not</p> <p>7 carcinogenic in human beings and "relatively</p> <p>8 low dose" has no scientific meaning.</p> <p>9 So I can't agree or disagree with</p> <p>10 that statement as it is.</p> <p>11 BY MS. BOGDAN:</p> <p>12 Q. And is it your opinion for medical</p> <p>13 monitoring with regard to the last statement in that</p> <p>14 same paragraph, "Qualitatively, the mechanism of</p> <p>15 NDMA appears to be similar in humans and animals; as</p> <p>16 a result, it is considered highly likely that NDMA</p> <p>17 is carcinogenic to humans, potentially at relatively</p> <p>18 low levels of exposure."</p> <p>19 Is it still your opinion with regard to the</p> <p>20 medical monitoring cause of action that you disagree</p> <p>21 with that statement?</p> <p>22 MR. INSOGNA: Same objection. In the</p> <p>23 September deposition at pages 380 to 396, is</p> <p>24 where you read statements from Liteplo and</p> <p>25 asked him whether he agreed or disagreed</p>	<p style="text-align: right;">Page 129</p> <p>1 Q. And the -- that you have in your medical</p> <p>2 monitoring report is from Section 6.2 and Table 2 of</p> <p>3 the study, which is on page -- the next page, page</p> <p>4 13; is that correct?</p> <p>5 A. That would appear to be correct looking at</p> <p>6 the column labeled "20 to 59 years" and the row</p> <p>7 labeled "Subtotals," that that amount is .005 to</p> <p>8 .016 micrograms per kilogram body weight per day and</p> <p>9 that corresponds to the numbers in paragraph 32 that</p> <p>10 you are referring to.</p> <p>11 Q. Okay.</p> <p>12 MS. BOGDAN: If the tech could please</p> <p>13 just move the exhibit to page 13. Okay.</p> <p>14 BY MS. BOGDAN:</p> <p>15 Q. Okay. And now that we have the exhibit up</p> <p>16 on the screen, you're referring to the values that</p> <p>17 are under the "20 to 59 year" category?</p> <p>18 A. Yes, as I just stated.</p> <p>19 Q. Yeah, we just didn't -- the technology</p> <p>20 wasn't keeping up with you, Dr. Chodosh.</p> <p>21 So -- and you derived the value for your</p> <p>22 report from the subtotal category that's "0.005</p> <p>23 through 0.016," which is the fourth category down</p> <p>24 under "20 to 59 years"?</p> <p>25 A. That's correct.</p>

<p style="text-align: right;">Page 130</p> <p>1 Q. Now, a whole section of this study and this 2 table are "reasonable worst-case estimates," 3 correct? 4 A. That is how it is labeled, yes. 5 Q. Okay. And in the footnotes under the table, 6 the authors expand on the conditions and where 7 they're getting these estimates from, correct? 8 A. That appears to be correct. 9 Q. And in the section of the report that 10 precedes this table and the section that references 11 this table that it's included in, if we could just 12 go back to page 12, in the second paragraph on the 13 right-hand side of the page, about two-thirds of the 14 way down that paragraph, it reads -- 15 MS. BOGDAN: Got to go a little 16 further than that. All right. There we go. 17 All right. 18 BY MS. BOGDAN: 19 Q. "Based on the assumptions underlying the 20 reasonable worst-case estimates, most of the daily 21 intake could be attributed to consumption of food 22 contaminated with NDMA during processing, 23 preservation and/or preparation." 24 Did I read that correctly? 25 A. Yes, you read it correctly.</p>	<p style="text-align: right;">Page 132</p> <p>1 so that as far as I can tell, most of the dietary 2 studies use very similar and older databases of 3 food. 4 And I dealt with this at length in my 5 original report, as well as reference to it in my 6 supplemental report. 7 Q. Are you aware that the food industry, in 8 general, has tried to lower the amount of nitrites 9 in processed foods in the last 20 years? 10 MR. INSOGNA: Object to form. 11 THE WITNESS: What I am aware of are 12 discussions of efforts to reduce amounts in 13 some foods, but I have not seen any 14 substantial body of data indicating that 15 that has happened or that just other things 16 haven't been substituted. 17 So the -- my -- the issues -- the 18 shortcomings of dietary studies and what 19 Dr. Madigan relies upon for his LCE 20 estimates, I do not accept those dietary 21 studies as a reliable basis to demonstrate 22 or determine or guess at a threshold of NDMA 23 exposure that might be associated in a human 24 being with increased risk. 25 So they're all subject to the same</p>
<p style="text-align: right;">Page 131</p> <p>1 Q. And then the authors go on to say, "It 2 should be noted, though, that the data on which the 3 estimates in food are based may not be 4 representative of the situation today, due to the 5 impact of subsequent introduction of changes in food 6 processing and controls to limit formation in food." 7 Did I read that correctly? 8 A. You read that correctly. 9 Q. So the authors are acknowledging that these 10 reasonable worst case estimates may not be 11 applicable to the situation today and the 12 publication of this study that was in 2002, correct? 13 A. The publication of this study was in 2002 14 and I spent some amount of time in my original 15 report and, I believe, referenced to in my 16 supplemental report, dealing with precisely this 17 issue of the uncertainty around dietary estimates of 18 NDMA content, how they are never a measurement in 19 any of the studies that Dr. Madigan refers to, they 20 are never a measurement of actual NDMA. 21 We've discussed that those are the best 22 estimates that are out there and while there is some 23 reason to believe that levels may have declined over 24 time in food stuffs, there are exceedingly few 25 measurements to actually demonstrate that, so much</p>	<p style="text-align: right;">Page 133</p> <p>1 uncertainties and the same lack of 2 measurement. 3 BY MS. BOGDAN: 4 Q. But you're relying on dietary studies to 5 support your opinion with regard to the amount of 6 exogenous exposure to NDMA through a person's diet, 7 correct? 8 MR. INSOGNA: Objection to form. 9 THE WITNESS: So I dealt with this 10 very specifically in my original report, 11 paragraph 86, "Precise quantification of 12 dietary exposures to pre-formed NDMA and 13 other nitrosamines in food is extremely 14 difficult, in part, because concentrations 15 of NDMA and other nitrosamines in different 16 foods change over time, can differ by 17 geographic region and are affected by 18 numerous variables, including the method of 19 preparation or preservation. In addition, 20 the types of foods consumed, as well as 21 serving sizes, vary widely between 22 individuals and data derived from 23 self-reporting and dietary questionnaires 24 are notoriously inaccurate. It is also 25 reasonable to note, that dietary exposures</p>

<p>Page 134</p> <p>1 relative to cancer development likely 2 occurred decades prior to cancer diagnosis." 3 And then here's the key that 4 references your question, paragraph 87, 5 "With these caveats in mind, reasonable 6 estimates of daily dietary intake of NDMA 7 can be made." 8 And then I go on to cite the numbers 9 that we are now talking about. 10 So I think I was exceedingly clear in 11 my report and as referenced from my 12 supplementary report of what the uncertainty 13 is around these numbers. And as an example, 14 I have used these numbers to point out how 15 extraordinarily low these exposures to NDMA 16 are in relationship to doses of NDMA that 17 are capable of causing cancer in a mammal, 18 in even the most sensitive mammal and the 19 most sensitive tissue. 20 BY MS. BOGDAN: 21 Q. Doctor, with all due respect, my question 22 was, will you rely on dietary studies to support 23 your opinion with regard to the amount of exogenous 24 NDMA people are exposed to through their diet? That 25 was the question, do you cite those reports as</p> <p>Page 135</p> <p>1 references for your section on endogenous formation 2 of -- excuse me -- exogenous exposure to NDMA? 3 MR. INSOGNA: Objection. 4 THE WITNESS: I apologize, but I did 5 not follow the question. 6 BY MS. BOGDAN: 7 Q. Okay. My -- and I'll reask it. 8 So my question was simply, in your medical 9 monitoring report with regard to your section that 10 addresses peoples' exposure to NDMA through their 11 diet, you reference in that section dietary studies 12 to support your opinion as to the levels of exposure 13 through the diet, correct? 14 A. I have cited to the studies that we've been 15 discussing and Liteplo, or as summarized in Liteplo, 16 to provide a rough estimate of what likely exposures 17 are from food, air and water and while detailing the 18 caveats surrounding how imprecise those estimates 19 are. 20 Q. So going back to the Liteplo study and the 21 incorporation in your report in paragraph 32 of the 22 "Reasonable worst-case estimates" that you derive 23 from Table 2, which is on page 13. 24 Would you agree that worst case estimates of 25 daily intake of NDMA are not indicative of average?</p>	<p>Page 136</p> <p>1 A. Yeah, I don't have enough information to 2 answer your question. The range given there is 3 8,950 to 28,600 micrograms of exposure to NDMA over 4 a 70-year lifetime for 70-kilogram person based on 5 food, air and water, which is roughly in the 6 ballpark of the numbers given in the previous 7 paragraph of dietary intake ranging from 4,190 to 8 19,700-microgram. 9 Q. In paragraph 33 of your report, if we could 10 now, I guess, pull your report back up, which is 11 Exhibit 4. I would like to take paragraph 32 and 33 12 if we could. 13 So in paragraph 32 you are citing to the 14 Liteplo study and the table that we've already 15 discussed to get the values ranging from .005 to 16 .016 micrograms per kilogram per day, correct? 17 A. Yes, you've read those numbers correctly. 18 Q. And that's from the table that's entitled 19 "Reasonable worst-case estimates," correct? 20 A. I don't remember the title of the table. 21 Yes, that is in -- that is in the name of that 22 title. 23 Q. And then in paragraph 32 you go on to say 24 that "This would correspond to an 8,950 to 25 28,600 micrograms of exposure to NDMA over a 70-year</p> <p>Page 137</p> <p>1 lifetime for a 70-kilogram person," correct? 2 A. Yes, you've read that correctly. 3 Q. Okay. Then if we go to paragraph 33, right, 4 As above, in light of the estimates of lifetime 5 cumulative exposure to NDMA attributable to food, 6 air, water ranging from again 8,950 to 7 28,600 micrograms, correct? 8 A. Yes, you've read that correctly. 9 Q. But those lifetime cumulative exposures as 10 referenced in the Liteplo study are "reasonable 11 worst-case estimates," correct? 12 A. That is the label that Liteplo, et al., 13 gave. But, of course, if you look at Dr. Madigan's 14 table, Table 1, you can see we're on the same order 15 of magnitude of what the levels are where his are 16 just dealing with food. And if you look in the 17 previous paragraph, paragraph 31, I give a dietary 18 range from 4,190 to 19,700. 19 And I'm looking at Dr. Madigan's Table 1, 20 and what I'm seeing are values that go up to 31,000 21 and go down into the 3,343. So the ranges that 22 Dr. Madigan is citing in Table 1, in those dietary 23 studies are the same ranges that I am citing in my 24 report. 25 Q. Yeah, Dr. Madigan -- Dr. Chodos, I wasn't</p>
---	---

<p>Page 138</p> <p>1 asking you about what Dr. Madigan cited. If you 2 could just please answer the question that I asked. 3 What I asked was, that in 33 you're quoting 4 8,950 to 28,600 micrograms of -- as an estimate of 5 the lifetime cumulative exposure to NDMA and you're 6 getting those values from a study that has those 7 values, but they're stating they are "Reasonable 8 worst-case estimates" of the daily intake; isn't 9 that correct? 10 MR. INSOGNA: Objection to form. 11 THE WITNESS: I guess the -- the way 12 I'm trying to answer your question is that 13 what you keep referring to as "Reasonable 14 worst-case estimates," that's language that 15 those authors used. And since that's a 16 completely relative term, I'm pointing out 17 that what those authors called "Reasonable 18 worst-case estimates," are in the same 19 vicinity both in what is in my report and 20 what is in Dr. Madigan's table of study 21 after study after study. 22 So what Liteplo et al., may have 23 referred to as "Reasonable worst-case 24 estimates," what I'm saying is, are not 25 terribly different since we're talking about</p>	<p>Page 140</p> <p>1 increased risk of cancer and that would be the 2 DeStefani study, the Pobel study, the LaVecchia 3 study, the Larsson study, the Keszle study, the 4 Zheng study, the DeStefani study, the Goodman study, 5 the Knekt study, the Loh-Rectal study and the Zhu 6 study. 7 MR. INSOGNA: Objection to form. 8 THE WITNESS: I'm sorry, was there a 9 question? If there was a question, I 10 apologize, I missed the question. 11 BY MS. BOGDAN: 12 Q. Doctor, you keep referencing that the levels 13 that you put in paragraph 33 of your medical 14 monitoring report are in the ballpark or similar to 15 what Dr. Madigan has as his lifetime cumulative 16 exposure estimates in Table 1, correct? 17 A. No, no, incorrect. Dr. Madigan's tables are 18 dietary studies. My understanding is that that's 19 diet and not food, air and water, which is what you 20 are referring to in Liteplo. The data that I 21 included about diet or as I've been trying to point 22 out to you in paragraph 30, that would be the apples 23 to apples comparison, I believe. 24 Paragraph 30, "As detailed in my report, 25 estimates of dietary intake of NDMA (excluding beer</p>
<p>Page 139</p> <p>1 apples and oranges here, diet versus food, 2 air and water. You know, if you look right 3 at -- look right around -- we're talking 4 about maybe a factor of two. 5 BY MS. BOGDAN: 6 Q. But you're taking values that are in the 7 study that the authors are calling "Reasonable 8 worst-case estimates," and then you, in paragraph 9 33, are adopting those as estimates of lifetime 10 cumulative exposure to NDMA; am I correct? 11 A. No, I'm sorry. I don't -- I disagree with 12 your premise. I am not -- what is the word you 13 used, "adopting those"? I'm not adopting those. 14 This is but one piece of evidence that I provided in 15 this report of various estimates of dietary intake, 16 of intake from food, air and water and how they 17 compare to estimates that Dr. Madigan is listing as 18 an LCE. 19 So if you're asking me was this one piece of 20 evidence that I considered in arriving at my 21 opinions, yes, it was one piece of evidence. 22 Q. So -- but I would point out as you are 23 referencing the LCEs that are in Dr. Madigan's 24 report that many of those LCEs as referenced in his 25 report come with a statistically significant</p>	<p>Page 141</p> <p>1 and tobacco) from seven studies yield an average 2 cumulative exposure of 4,190 micrograms over a 3 70-year lifetime for a 70-kilogram person." 4 Q. Yes, I see that in your report and, 5 similarly, that 4,190-microgram over a 70-year 6 lifetime for a 70-kilogram person is in the range of 7 several of the studies that show statistically 8 significant increased risk of cancer that are 9 indicated on Madigan's chart? 10 A. If your question is, is the number 4,190 in 11 a similar range as a number of the numbers in 12 Dr. Madigan's Table 1, my answer to that is, yes, 13 that's correct, mathematically. It still has no 14 biological significance for determining a threshold 15 of risk. 16 Q. Did you do a risk assessment with regard to 17 the exposure of NDMA that would cause cancer? 18 MR. INSOGNA: Objection, that exact 19 question was asked and answered in the prior 20 deposition. 21 BY MS. BOGDAN: 22 Q. Did you do a risk assessment -- 23 MS. BOGDAN: Let me -- well, my 24 questions are going to what the doctor did 25 between his deposition at the end of</p>

<p style="text-align: right;">Page 142</p> <p>1 September and now as we're sitting here in 2 March. 3 BY MS. BOGDAN: 4 Q. So when I ask that question with regard to 5 the medical monitoring claim, did you perform a risk 6 assessment? 7 A. Between the last time that you and I met on 8 September 29th and September 30th, I have not done a 9 different analysis of really any of the numbers in 10 this and this is why this supplemental report states 11 on page 1, that my conclusions "follow in a 12 straightforward manner" from my original report. 13 MR. INSOGNA: Rosemarie, if you're 14 done with the Liteplo study, I'm sure Peg 15 would appreciate a quick break. 16 MS. BOGDAN: Or if you want to take 17 five minutes, that would be fine. 18 MR. INSOGNA: I think five minutes 19 would be fine. 20 THE VIDEOGRAPHER: Off the record at 21 2:24. 22 (Brief recess.) 23 THE VIDEOGRAPHER: We're back on the 24 record at 2:32. 25 BY MS. BOGDAN:</p>	<p style="text-align: right;">Page 144</p> <p>1 actually. Let's take this one down. 2 Let's go to the Biaudet study, number 3 21. 4 TRIAL TECHNICIAN: And do you want to 5 make this Exhibit 12 or just remove Exhibit 6 11 and make this 11? 7 MS. BOGDAN: Your choice. 8 TRIAL TECHNICIAN: This will be 9 Exhibit 12 then. 10 MS. BOGDAN: Okay. 11 THE WITNESS: I have the old one. 12 This is -- 13 TRIAL TECHNICIAN: Excuse me, this is 14 Exhibit 13, I misspoke. 15 MS. BOGDAN: Okay. 16 (Document marked for identification 17 as Chodosh Deposition Exhibit No. 13.) 18 BY MS. BOGDAN: 19 Q. Doctor, do you see the "Mean Daily Intake of 20 N-Nitrosodimethylamines From Foods and Beverages in 21 France" study? 22 A. Yes, I do. 23 Q. Okay. And that's one of the studies that 24 you actually put as a reference cited in your 25 medical monitoring report, correct?</p>
<p style="text-align: right;">Page 143</p> <p>1 Q. Okay. Doctor, let's look at a couple of the 2 dietary studies that you cite in your medical 3 monitoring report as references. 4 MS. BOGDAN: If we could pull up the 5 Tricker study, please? 6 TRIAL TECHNICIAN: Counselor, I have 7 two Tricker studies. Could you be a little 8 more descriptive? 9 MS. BOGDAN: Sure. The number 20, 10 "Mean Daily Intake Of Volatile 11 N-Nitrosamines From Foods And Beverages in 12 West Germany." 13 TRIAL TECHNICIAN: Okay. This will 14 be marked as Exhibit 12. 15 (Document marked for identification 16 as Chodosh Deposition Exhibit No. 12.) 17 BY MS. BOGDAN: 18 Q. Okay, Doctor, let me know when you can see 19 that exhibit, please. 20 A. Yes, I can see it. 21 Q. Is this one of the studies that you -- 22 THE COURT REPORTER: Lost that last 23 word there, Counsel. 24 MS. BOGDAN: Actually, I don't -- I 25 think we have the wrong Tricker study</p>	<p style="text-align: right;">Page 145</p> <p>1 A. Yes. And, I believe, it is cited in 2 Liteplo, as well, as many other papers on dietary 3 studies. 4 Q. Directing your attention to the second 5 paragraph under "Introduction," which reads, "To 6 date, the carcinogenic properties of the 7 nitrosamines have been tested in 39 different animal 8 species: These included rats, mice, guinea pigs, 9 hamsters, dogs, rabbits, pigs, birds, amphibians, 10 fish and also five species of primate. None of 11 these species showed resistance to the action of 12 these compounds, and there is no reason why humans 13 should be an exception." 14 Do you agree with that statement in the 15 study? 16 A. I disagree with that statement for the same 17 reason I believe your plaintiffs' experts would, 18 which is dose. It is all about dose. Human beings 19 are never exposed to the levels of NDMA that were 20 administered to these 39 different animal species. 21 Q. Now, this study was done in France, correct, 22 in the late '80s, early '90s? 23 A. That's correct, 1987 to 1992. 24 Q. Are there different diets that populations 25 have in different countries? Is there variability</p>

<p>Page 146</p> <p>1 in diets in countries?</p> <p>2 A. I -- yes, there is variability across</p> <p>3 countries. There is variability within countries;</p> <p>4 there's variability across time; there's variability</p> <p>5 from person-to-person. Those were the quotes that I</p> <p>6 read to you before from my report.</p> <p>7 Q. Do you agree with me on that?</p> <p>8 A. I agree with you that what?</p> <p>9 Q. Diets vary country-to-country?</p> <p>10 A. Yes, I think that's fair to say.</p> <p>11 Q. And this study is also dealing with diets</p> <p>12 that predated 1992, correct?</p> <p>13 A. That's correct.</p> <p>14 Q. And diets change over time as well, correct?</p> <p>15 A. Yes, they do.</p> <p>16 MS. BOGDAN: If we could pull up the</p> <p>17 Dich study, it's number 22. That's not it.</p> <p>18 Actually, it's Dich, et al., "Dietary</p> <p>19 Intakes of Nitrate, Nitrite and NDMA in the</p> <p>20 Finnish." The last name of the author is</p> <p>21 D-I-C-H. That's not the right study either.</p> <p>22 Yeah, let's try another one. Set</p> <p>23 that aside.</p> <p>24 How about Fristachi,</p> <p>25 F-R-I-S-T-A-C-H-I, "Estimation of the total</p>	<p>Page 148</p> <p>1 and not getting it.</p> <p>2 MR. INSOGNA: Yeah, he still has the</p> <p>3 M7.</p> <p>4 MS. BOGDAN: Okay.</p> <p>5 TRIAL TECHNICIAN: Okay. One moment.</p> <p>6 I'll diagnose it.</p> <p>7 Try Exhibit 14 and if that doesn't</p> <p>8 work I'll make it 14A.</p> <p>9 THE WITNESS: Yes, now that's worked.</p> <p>10 BY MS. BOGDAN:</p> <p>11 Q. Do you recognize that study, Doctor, as one</p> <p>12 of the studies that you referenced in your medical</p> <p>13 monitoring report?</p> <p>14 A. Yes.</p> <p>15 Q. And this is a study regarding the NDMA</p> <p>16 attributable to drinking water, correct?</p> <p>17 A. Correct.</p> <p>18 Q. And why did you cite this report?</p> <p>19 A. Because if you look at Table 1, for</p> <p>20 instance, "Ingestion rates for selected foods and</p> <p>21 drinking water," this is solely not about drinking</p> <p>22 water. So cereal, dairy, fish, meat, vegetables,</p> <p>23 beer, formula, water, this -- yeah, or page 347,</p> <p>24 "NDMA concentrations in foods," "NDMA concentrations</p> <p>25 in powdered infant formula."</p>
<p>Page 147</p> <p>1 oral intake of NDMA."</p> <p>2 Do you see that study yet, Doctor?</p> <p>3 THE WITNESS: No, I do not.</p> <p>4 TRIAL TECHNICIAN: If you click</p> <p>5 refresh this will Exhibit 14.</p> <p>6 (Document marked for identification</p> <p>7 as Chodosh Deposition Exhibit No. 14.)</p> <p>8 THE WITNESS: Yeah, what I have is</p> <p>9 "M7R1 assessment and control of DNA reactive</p> <p>10 mutagenic impurities in pharmaceuticals to</p> <p>11 limit potential carcinogenic risk, which is</p> <p>12 a guidance for industry." I don't think</p> <p>13 that's the one.</p> <p>14 MS. BOGDAN: That's not it. That's</p> <p>15 not it. This is a study that you cited in</p> <p>16 your medical monitoring report. That's</p> <p>17 supposed to be up on the screen.</p> <p>18 THE WITNESS: Well, I can see it on</p> <p>19 the screen. I don't have it on my -- and</p> <p>20 this folder has not shown up yet.</p> <p>21 TRIAL TECHNICIAN: Doctor, click</p> <p>22 refresh and there will be a new Exhibit 14</p> <p>23 and that should be the same exhibit as you</p> <p>24 see on the screen.</p> <p>25 THE WITNESS: No, I'm refreshing it</p>	<p>Page 149</p> <p>1 So there are data in this paper not solely</p> <p>2 due to drinking water. Although, of course,</p> <p>3 drinking water factors into total exposure and if</p> <p>4 one looks at -- here we go, Table 4, "Average daily</p> <p>5 dose micrograms per kilograms day and proportional</p> <p>6 oral intake estimates for NDMA in foods and drinking</p> <p>7 water calculated from a generated sample of 10,000."</p> <p>8 So the -- I cited this because it deals with</p> <p>9 concentrations -- estimated concentrations of NDMA</p> <p>10 in foods and it's frequently cited by many studies</p> <p>11 that look at dietary epidemiology of NDMA.</p> <p>12 And I'm fairly confident it's also cited by</p> <p>13 Liteplo in the WHO2002 paper that you were</p> <p>14 discussing earlier.</p> <p>15 Q. Directing your attention to the third page</p> <p>16 of the document, which I believe has page number</p> <p>17 3343 in the upper left-hand corner, but it's very</p> <p>18 difficult to read.</p> <p>19 A. Yes.</p> <p>20 Q. That's the right page.</p> <p>21 All right. So directing your attention to</p> <p>22 the right-hand column, second paragraph down from</p> <p>23 the top that begins, "Although the chemistry and</p> <p>24 kinetics of in vivo NDMA formation are understood."</p> <p>25 Do you see that?</p>

<p>Page 150</p> <p>1 A. Yes, I do.</p> <p>2 Q. Do you believe the chemistry and kinetics of</p> <p>3 in vivo NDMA formation are understood?</p> <p>4 A. I believe it's reasonably well understood.</p> <p>5 Q. And what do you understand the chemistry and</p> <p>6 kinetics of in vivo NDMA formation to be?</p> <p>7 MR. INSOGNA: Objection to form.</p> <p>8 THE WITNESS: I have no idea based on</p> <p>9 that question what you're asking me.</p> <p>10 BY MS. BOGDAN:</p> <p>11 Q. Would you describe the chemistry and</p> <p>12 kinetics of in vivo NDMA formation?</p> <p>13 A. NDMA is formed endogenously as a consequence</p> <p>14 of normal physiological metabolism in many cells at</p> <p>15 very high levels compared to anything that we are</p> <p>16 exposed to in the diet. It is metabolized by a</p> <p>17 cytochrome P450 enzymes CYP2E1, which is present in</p> <p>18 a variety of tissues, but with principal metabolism</p> <p>19 within the liver due to delivery through the portal</p> <p>20 circulation from the stomach, if it's something that</p> <p>21 was ingested, or created by metabolic processes</p> <p>22 within cells.</p> <p>23 When metabolized by CYP2E1 and other</p> <p>24 enzymes, eventually, from some NDMA molecules a</p> <p>25 methyldiazonium ion will be created and the</p> <p>Page 151</p> <p>1 half-life of that methyldiazonium ion is</p> <p>2 relatively -- well, it's actually quite short.</p> <p>3 There is a small fraction of the total pool</p> <p>4 of NDMA that people are exposed to due to endogenous</p> <p>5 processes that is excreted as NDMA in a detectable</p> <p>6 form in the urine. There are estimates that I have</p> <p>7 referenced in my report, in both of my reports, of</p> <p>8 endogenous production based on a variety of</p> <p>9 parameters considered in modeling given the fact</p> <p>10 that one can actually detect the DNA adducts that</p> <p>11 form as a consequence of endogenous NDMA production.</p> <p>12 I don't know what your -- is there more</p> <p>13 information you would like?</p> <p>14 Q. So the -- you mentioned that NDMA has a --</p> <p>15 not NDMA, the methyldiazonium ion has a short</p> <p>16 half-life?</p> <p>17 A. That's correct.</p> <p>18 Q. Okay. What -- when you say "short</p> <p>19 half-life," what is the half-life or range for the</p> <p>20 half-life?</p> <p>21 A. My understanding of the approximate</p> <p>22 half-life of a methyldiazonium ion is probably less</p> <p>23 than a second.</p> <p>24 Q. And how would you describe the rate at which</p> <p>25 NDMA is metabolized in the body?</p>	<p>Page 152</p> <p>1 A. I missed a word. You were a little bit</p> <p>2 garbled. Can you repeat the question, please?</p> <p>3 Q. How would you describe the rate in which</p> <p>4 NDMA is metabolized in the body?</p> <p>5 A. The way you've -- I can't answer that</p> <p>6 question the way you've asked it. If you could</p> <p>7 clarify what you're asking, that would -- that would</p> <p>8 be helpful and I would be glad to try to answer.</p> <p>9 Q. Is NDMA rapidly metabolized?</p> <p>10 A. I don't know what you mean by "metabolism."</p> <p>11 Q. When I say "metabolism," I mean conversion</p> <p>12 into its reactive form, which would be the</p> <p>13 methyldiazonium ion?</p> <p>14 A. The rates of -- I can't give you -- off the</p> <p>15 top of my head, I can't give you a rate constant or</p> <p>16 the rate at which NDMA is metabolized through its</p> <p>17 pathways to generate formaldehyde or</p> <p>18 methyldiazonium. I can't give you a precise</p> <p>19 half-life for that off the top of my head sitting</p> <p>20 here today.</p> <p>21 Q. Once NDMA is metabolized into its reactive</p> <p>22 form, then the NDMA itself ceases to exist, correct?</p> <p>23 MR. INSOGNA: Objection to form. The</p> <p>24 exact question was asked and answered in the</p> <p>25 prior deposition.</p> <p>Page 153</p> <p>1 THE WITNESS: Yes, once a molecule of</p> <p>2 NDMA is metabolized, that original molecule</p> <p>3 of NDMA is no longer there.</p> <p>4 BY MS. BOGDAN:</p> <p>5 Q. And where do CYP2E enzymes exist in the</p> <p>6 body?</p> <p>7 A. When looking at cytochrome P450 enzymes,</p> <p>8 which are, sort of, the body's way of dealing with</p> <p>9 most chemical compounds, whether from within the</p> <p>10 body or outside the body, the liver is the organ</p> <p>11 that is principally responsible for metabolism of</p> <p>12 most things, but the CYP2E1 enzyme itself is</p> <p>13 expressed in a variety of tissues.</p> <p>14 I can't speak to the precise levels in each</p> <p>15 tissue that it might be expressed in.</p> <p>16 Q. Going back to that second paragraph in the</p> <p>17 right-hand column, the next part of that sentence</p> <p>18 is, "Inadequate data exists to accurately estimate</p> <p>19 the quantities of NDMA formed endogenously in</p> <p>20 humans."</p> <p>21 Do you agree with that statement?</p> <p>22 A. I disagree with that statement.</p> <p>23 Q. What is the basis for you disagreeing with</p> <p>24 that statement?</p> <p>25 MR. INSOGNA: Objection, that</p>
--	---

<p style="text-align: right;">Page 154</p> <p>1 question was asked and answered at page 375</p> <p>2 of the prior deposition.</p> <p>3 You can answer it again.</p> <p>4 THE WITNESS: So if you look at my</p> <p>5 original report, paragraph 95, paragraph 96,</p> <p>6 paragraph 97, paragraph 98. So I would be</p> <p>7 glad to read those into the record, but that</p> <p>8 would be my, I think, reasonably detailed</p> <p>9 explication of what the basis for my</p> <p>10 opinions are about endogenous NDMA and the</p> <p>11 ability to measure it, since it references</p> <p>12 publications that have done just that and</p> <p>13 we've talked about them at some length.</p> <p>14 BY MS. BOGDAN:</p> <p>15 Q. For purposes of the medical monitoring cause</p> <p>16 of action, have you discovered any additional basis</p> <p>17 for your opinion with regard to disagreeing with the</p> <p>18 statement, "Inadequate data exists to accurately</p> <p>19 estimate the quantities of NDMA formed endogenously</p> <p>20 in humans"?</p> <p>21 A. In any other thing -- I have to go back and</p> <p>22 look exactly what I referenced in these sections,</p> <p>23 which I would be glad to do now, if you'd like. But</p> <p>24 otherwise, the basis would be within the same set of</p> <p>25 materials considered that were provided with my</p>	<p style="text-align: right;">Page 156</p> <p>1 if my voice cut out. See if I can find that</p> <p>2 sheet here. Number 19 in the document</p> <p>3 repository. There you go.</p> <p>4 TRIAL TECHNICIAN: This will be</p> <p>5 available as Exhibit 15.</p> <p>6 MS. BOGDAN: Thank you.</p> <p>7 (Document marked for identification</p> <p>8 as Chodosh Deposition Exhibit No. 15.)</p> <p>9 THE WITNESS: Okay. I can see it.</p> <p>10 BY MS. BOGDAN:</p> <p>11 Q. Now, this is a study that you cite as one of</p> <p>12 your references in your medical monitoring report,</p> <p>13 correct?</p> <p>14 A. Yes, it is and was cited in my original</p> <p>15 report as well.</p> <p>16 Q. And it's one of the bases of your opinion</p> <p>17 with regard to medical monitoring?</p> <p>18 A. If that's a question, yes. Is this one</p> <p>19 paper part of my opinions on medical monitoring,</p> <p>20 yes, this paper is a part of my opinion.</p> <p>21 Q. Now, in the what I would call "Abstract,"</p> <p>22 which is the summary right on that first page, it</p> <p>23 mentions that the "Analysis of ingested NDMA from</p> <p>24 food and water based on Monte Carlo modeling."</p> <p>25 Do you see that?</p>
<p style="text-align: right;">Page 155</p> <p>1 original report.</p> <p>2 I just can't tell you sitting here right now</p> <p>3 without going back and cross-checking whether or not</p> <p>4 I've referenced every one of those in the paragraphs</p> <p>5 that I just referred you to regarding endogenous</p> <p>6 NDMA formation.</p> <p>7 Q. My question is with regard to your opinion</p> <p>8 that you're offering for medical monitoring, is</p> <p>9 there anything in addition that you now have to</p> <p>10 support your testimony that you disagree with that</p> <p>11 statement aside from what you have in your</p> <p>12 supplemental report, your -- or your original</p> <p>13 report.</p> <p>14 Is there something new?</p> <p>15 MR. INSOGNA: Object to form, asked</p> <p>16 and answered.</p> <p>17 You can answer.</p> <p>18 THE WITNESS: As I just said, all of</p> <p>19 the data are on my materials considered list</p> <p>20 or lists. There's no new data since you</p> <p>21 deposed me at the end of September that I</p> <p>22 have -- that I am relying upon for this</p> <p>23 opinion.</p> <p>24 MS. BOGDAN: If we could now pull up</p> <p>25 the Hruday study, H-R-U-D-E-Y. H-R-U-D-E-Y,</p>	<p style="text-align: right;">Page 157</p> <p>1 A. If you give me a moment, I would like just</p> <p>2 to reread the abstract for myself since you are</p> <p>3 starting in the middle.</p> <p>4 Okay.</p> <p>5 Q. Okay. Do you see where it references a</p> <p>6 "Monte Carlo modeling" analysis?</p> <p>7 A. Yes, I do.</p> <p>8 Q. My question is, what is a Monte Carlo</p> <p>9 modeling analysis?</p> <p>10 MR. INSOGNA: Objection, outside the</p> <p>11 scope of his opinion.</p> <p>12 THE WITNESS: Monte Carlo analysis,</p> <p>13 to my understanding, is essentially a</p> <p>14 statistical approach taken to modeling data,</p> <p>15 but I can't speak more specifically about</p> <p>16 it.</p> <p>17 BY MS. BOGDAN:</p> <p>18 Q. Do you know how it's actually performed?</p> <p>19 MR. INSOGNA: Same objection.</p> <p>20 Dr. Chodosh is not here offering statistics</p> <p>21 opinions.</p> <p>22 THE COURT REPORTER: I'm sorry, Nick.</p> <p>23 I could not hear that objection.</p> <p>24 MR. INSOGNA: Sorry. I said,</p> <p>25 Dr. Chodosh is not offering statistics</p>

<p>Page 158</p> <p>1 opinions. He is not a statistician.</p> <p>2 BY MS. BOGDAN:</p> <p>3 Q. Other than it being a statistical analysis</p> <p>4 that's done, do you have any further, more specific</p> <p>5 idea as to how such Monte Carlo analysis is</p> <p>6 performed?</p> <p>7 A. My recollection is if given a large set of</p> <p>8 data, items of data that a Monte Carlo analysis can</p> <p>9 run multiple permutations of those data, dividing</p> <p>10 them in -- sequentially in different ways to compare</p> <p>11 what the result is for each iteration of that, but</p> <p>12 that's as much as I can tell you sitting here today.</p> <p>13 Q. Do you know why the authors of this study</p> <p>14 employed a Monte Carlo analysis?</p> <p>15 MR. INSOGNA: Object to the form,</p> <p>16 calls for speculation.</p> <p>17 THE WITNESS: The authors use three</p> <p>18 different types of data to estimate</p> <p>19 endogenous NDMA formation in humans and they</p> <p>20 presented what those estimates are for each</p> <p>21 of those three different methods, each of</p> <p>22 which were based on measurements. One of</p> <p>23 them -- one of them is based on NDMA levels</p> <p>24 in blood samples, so that's just a chemical</p> <p>25 measurement taken in combination with blood</p> <p>Page 159</p> <p>1 clearance rates.</p> <p>2 And the other looks at</p> <p>3 06-methylguanine levels in DNA from human</p> <p>4 blood cells. And then the third is based on</p> <p>5 urinary excretion. So for each of those</p> <p>6 very different approaches to estimating</p> <p>7 endogenous NDMA levels, there are</p> <p>8 mathematical models that need to be employed</p> <p>9 in order to estimate the thing you're trying</p> <p>10 to estimate, which in this case is how many</p> <p>11 micrograms of NDMA are produced in a human</p> <p>12 being everyday.</p> <p>13 So in the same way that for a patient</p> <p>14 who has a PET scan looking at radioactive</p> <p>15 glucose uptake, that -- those results are</p> <p>16 all based on modeling, on compartmental</p> <p>17 modeling, which is in some ways similar to</p> <p>18 this. You have to measure the rate at which</p> <p>19 something is entering the system and the</p> <p>20 rate at which something is leaving the</p> <p>21 system in order to calculate production</p> <p>22 rates, if that makes sense.</p> <p>23 BY MS. BOGDAN:</p> <p>24 Q. And modeling was used in this study in order</p> <p>25 to attempt to predict endogenous formation in</p>	<p>Page 160</p> <p>1 humans, correct?</p> <p>2 A. No, I would not agree with that</p> <p>3 characterization.</p> <p>4 Q. Why wouldn't you agree with that</p> <p>5 characterization?</p> <p>6 A. They weren't predicting concentrations, they</p> <p>7 were estimating concentrations based on three</p> <p>8 different methods. Those methods involve modeling,</p> <p>9 as does the great majority of things that are</p> <p>10 measured in human beings or in clinical practice.</p> <p>11 So they weren't predicting it, they were</p> <p>12 measuring it.</p> <p>13 Q. And is that because you can't actually</p> <p>14 measure NDMA forming in a person, meaning able to</p> <p>15 actually catch it as it forms and quantify it?</p> <p>16 MR. INSOGNA: Objection to form.</p> <p>17 THE WITNESS: There are most</p> <p>18 certainly studies that measure levels of</p> <p>19 NDMA. It's absolutely possible to measure</p> <p>20 that. The issue is you're not talking about</p> <p>21 steady state levels as in how much NDMA is</p> <p>22 there per milliliter of blood. The measure</p> <p>23 that these authors are after is how much is</p> <p>24 generated in a person per day, that's a</p> <p>25 rate, not a level. And so to get you a rate</p> <p>Page 161</p> <p>1 from a level, that that requires some</p> <p>2 modeling.</p> <p>3 And, I believe, when we talked about</p> <p>4 this in my deposition in September, I may</p> <p>5 have given the example of a bucket. And you</p> <p>6 have a bucket that has some level of water</p> <p>7 in it and water leaves that bucket at some</p> <p>8 rate and water enters that bucket at some</p> <p>9 rate. And if the level of water in that</p> <p>10 bucket stays the same and you can measure</p> <p>11 the amount that's leaving then you know the</p> <p>12 amount that's being added to the bucket.</p> <p>13 So that's just an example of what</p> <p>14 would be referred to as "modeling," but</p> <p>15 which, in fact, is done routinely in</p> <p>16 clinical medicine and human physiology, as</p> <p>17 well as in animals.</p> <p>18 BY MS. BOGDAN:</p> <p>19 Q. And that's because NDMA is forming, NDMA can</p> <p>20 be metabolized and then cease to exist, more can</p> <p>21 form and it's a dynamic system, correct?</p> <p>22 A. Correct, in that all things in human beings</p> <p>23 are dynamic. So sodium level in your bloodstream is</p> <p>24 actually dynamic. You don't have the same number of</p> <p>25 sodium molecules of -- ping-pong around in your body.</p>
--	---

<p>Page 162</p> <p>1 There's stuff getting added and there's stuff that's 2 leaving, so it's the same for most physiological 3 things in a human being. 4 Q. Directing you to page 2186, the first 5 sentence in the first full paragraph on the left 6 side of the page where it says "The clearance rate 7 of NDMA has not been study directly in humans." 8 Is that true to your knowledge? 9 MR. INSOGNA: Object to form. 10 THE WITNESS: Give me a moment to let 11 me read -- look at the context. 12 Number one, so this was in 2013, so 13 in -- I would need to go back and look at 14 some more recent studies. 15 BY MS. BOGDAN: 16 Q. Right. 17 A. Including those from -- there were certainly 18 more recent studies on NDMA, so I can't speak to 19 whether or not a clearance rate in human being has 20 been directly studied. 21 But what this paragraph describes is that 22 the clearance rate of systemically applied NDMA has 23 been studied across species and that NDMA clearance 24 scales across those species as a function of body 25 weight. And as it says "Given a blood concentration</p> <p>Page 163</p> <p>1 and evidence that the concentration represents a 2 steady state, this clearance rate is a basis for 3 estimating a rate of endogenous formation of NDMA 4 using conventional pharmacokinetic models," which 5 just emphasizes that these -- the models that you're 6 referring to, this is standard fare for looking at 7 the flux of things in a human being, looking at the 8 flux of chemical compounds in a human being. 9 Q. Are you familiar with those Gombar studies 10 that are in that paragraph you just read? 11 A. I believe I have -- let's see what their 12 paper referenced. 13 Yeah, so in my materials considered list in 14 my original report, I list five different studies 15 from Gombar. Two in 1990, one in 1988, one in 1987 16 and another in 1988. I would be happy to read you 17 the titles of those. 18 So I have looked at those and these are 19 studies that are -- have been referred to in a 20 number of places throughout the literature, I'm 21 looking at NDMA levels in human beings. 22 Q. So the answer is you are familiar with the 23 studies? 24 A. I -- they're on my materials considered. I 25 believe, I have looked at those studies. I am not</p>	<p>Page 164</p> <p>1 intimately familiar with those nor have I committed 2 them to memory. 3 Q. Same page but down a little further, please. 4 Section -- 5 A. Can you tell me which page? I was going to 6 the references to look at the Gombar, what the 7 reference was. 8 So can you tell me what page again? 9 Q. 2186. 10 A. Okay. 11 Q. And the section numbered 2.3.5? 12 A. Yes. 13 Q. Which reads "Estimating endogenous rates of 14 N-Nitrosamine formation from their daily excretion 15 in urine is less certain as the amount eliminated in 16 urine is a very small fraction of that which is 17 ingested or formed endogenously." 18 Do you agree with that statement? 19 MR. INSOGNA: Object to form. 20 THE WITNESS: I generally do agree 21 with that statement and as Hrudey, et al., 22 state that their estimates -- this was the 23 third approach that they took to estimating 24 endogenous production levels, that the range 25 for this estimate based on urine</p> <p>Page 165</p> <p>1 concentrations that range was quite a bit 2 broader and for the first two methods, which 3 agreed quite well with each other. 4 And so I think they're referring to 5 that back in 2013, however, that being said, 6 for instance, current studies even in the 7 past year from FDA scientists, it's possible 8 to very accurately measure amounts of NDMA 9 in urine and the approximate concentrations 10 or what -- if you will, what fractions of 11 endogenous NDMA is excreted in the urine. 12 There are reasonably consistent 13 estimates of that and the technology for 14 measuring NDMA is far beyond now what it was 15 and what Hrudey is referring to back in 16 2013. 17 BY MS. BOGDAN: 18 Q. So the Florian study of 2021? 19 A. That is one of the studies. 20 Q. Jumping to page 2187, second column on the 21 right, starts with "Five studies," but the sentence 22 that I'm interested in reads -- it's about a third 23 of the way down, "Therefore, it seems reasonable 24 that these data indicate significant variation among 25 populations in the nature of endogenous</p>
--	--

<p style="text-align: right;">Page 166</p> <p>1 N-nitrosamine formation."</p> <p>2 And then the next sentence is, "These</p> <p>3 geographic differences may be explained by many</p> <p>4 factors; genetic differences in the processes</p> <p>5 involved in either nitrosamine formation or</p> <p>6 metabolism, pre-existing disease processes,</p> <p>7 differences in diet or lifestyle, even the presence</p> <p>8 of trihalomethanes in drinking water because they</p> <p>9 are inhibitors/inducers of CYP2E1."</p> <p>10 Do you agree with those two sentences?</p> <p>11 A. I do not agree that those conclusions can be</p> <p>12 reached by the data presented here and specifically</p> <p>13 because they're discussing urinary excretion of NDMA</p> <p>14 in humans, which the same authors had pointed out</p> <p>15 that of the three methods that they used, that of</p> <p>16 those three methods, urinary excretion using</p> <p>17 technology available at those points in time was the</p> <p>18 least precise.</p> <p>19 So to me, the first two methods that they</p> <p>20 use which are not based on urinary excretion are the</p> <p>21 ones that enable an assessment of this issue. And</p> <p>22 my reading of the literature, would be that much in</p> <p>23 the metabolism of NDMA, whether across species, the</p> <p>24 enzymes involved, the levels of O6-methylguanine</p> <p>25 adducts or N7-methyl adducts are quite similar, even</p>	<p style="text-align: right;">Page 168</p> <p>1 So I just don't think based on these</p> <p>2 data that that would be a conclusion that I</p> <p>3 would have reached or think you can reach</p> <p>4 based on the data.</p> <p>5 BY MS. BOGDAN:</p> <p>6 Q. Does a person's diet influence the amount of</p> <p>7 endogenous formation of NDMA?</p> <p>8 A. Yes, it is influenced by diet.</p> <p>9 Q. Okay. If we could go to page 2197, please,</p> <p>10 the section entitled "Dietary Intake." The study</p> <p>11 actually estimate the daily dietary intake of NDMA</p> <p>12 in the US population.</p> <p>13 Do you see that in Section 5.2?</p> <p>14 A. Yes, I do.</p> <p>15 Q. And what do they estimate the daily dietary</p> <p>16 intake of NDMA in the US population to be?</p> <p>17 A. Yeah. So I believe that what is referenced</p> <p>18 in this paragraph for -- so Hrudey, et al., are</p> <p>19 providing their estimate of dietary intake and then</p> <p>20 they are pointing out that the intake that others</p> <p>21 have reported.</p> <p>22 And I believe that several of those are</p> <p>23 actually the references that I alluded to before.</p> <p>24 Q. In this study the authors are saying that</p> <p>25 the estimate of daily dietary intake of NDMA in the</p>
<p style="text-align: right;">Page 167</p> <p>1 going across species.</p> <p>2 So estimates -- well, I'll just leave it at</p> <p>3 that. So I think -- you don't use -- from my -- in</p> <p>4 my opinion, you don't use the least accurate</p> <p>5 measurement approach to draw conclusion about</p> <p>6 variation across a population.</p> <p>7 So I disagree with that statement for those</p> <p>8 reasons, among others.</p> <p>9 Q. Significant variation among populations due</p> <p>10 to diet regarding the level of endogenous NDMA that</p> <p>11 forms?</p> <p>12 MR. INSOGNA: Object to form.</p> <p>13 THE WITNESS: My point is that -- the</p> <p>14 way I'm trying to address your question, my</p> <p>15 point is, is that if you take an assay and</p> <p>16 approach to measuring a level and that's</p> <p>17 your least precise way to measure it and it</p> <p>18 intrinsically, just based on the nature of</p> <p>19 the assay, gives you a very broad range.</p> <p>20 They're -- in my opinion, if you then</p> <p>21 ask -- in different samples when I see</p> <p>22 variation in the levels, I do not think it</p> <p>23 is easily discernible whether that is due to</p> <p>24 the assay itself or whether that is due to</p> <p>25 some intrinsic aspect of the population.</p>	<p style="text-align: right;">Page 169</p> <p>1 US population ranges from 0.03 to 0.06 micrograms</p> <p>2 per day, depending on age, with adults aged 20 to 49</p> <p>3 years experiencing an exposure of 0.06 micrograms</p> <p>4 per day or 0.08 micrograms per day, if beer is</p> <p>5 included.</p> <p>6 MR. INSOGNA: Is that a question?</p> <p>7 BY MS. BOGDAN:</p> <p>8 Q. There's estimate?</p> <p>9 A. Yes, I wasn't sure if that was -- are you</p> <p>10 saying did you read that correctly, those numbers?</p> <p>11 Q. I'm saying the authors estimate, that's what</p> <p>12 my question was, did the authors estimate that the</p> <p>13 daily dietary intake of NDMA in the US population</p> <p>14 ranges from 0.03 to 0.06 micrograms per day</p> <p>15 depending on age with adults aged 20 to 49 years</p> <p>16 experiencing exposure of 0.06 micrograms per day or</p> <p>17 0.08 micrograms per day when beer is included?</p> <p>18 A. So you read that correctly and my</p> <p>19 recollection is that their estimate of .03 to</p> <p>20 .06 micrograms per day was one of the -- I believe,</p> <p>21 the six or seven values that I included in the</p> <p>22 average dietary intake, also including several of</p> <p>23 the other studies that they listed in this same</p> <p>24 paragraph, in order to arrive at an average estimate</p> <p>25 across these different dietary studies in different</p>

Page 170

1 countries, including the United States, in part to
2 reflect the fact that the majority of dietary
3 epidemiology studies of NDMA in cancer are not
4 performed in the United States, they are by and
5 large in other countries as is evident by looking at
6 Table 1 of Dr. Madigan's report.
7 So I viewed that as a representative then --
8 a set of dietary studies from similar countries as
9 they're being represented by the dietary
10 epidemiology studies.
11 Q. But this study unlike the others where we
12 have estimates in the German population or the
13 Finnish population or the French population, they
14 date back into the '80s or the '90s.
15 This study which is a 2013 study actually
16 provides an estimate of the dietary intake of the US
17 population, correct?
18 MR. INSOGNA: Object to form.
19 THE WITNESS: I would have to spend
20 more time going back through this to be able
21 to answer your question accurately.
22 BY MS. BOGDAN:
23 Q. Well, using the 0.06 micrograms per day,
24 which is the estimate that they provide for adults
25 aged 20 to 49 years, 0.06 micrograms a day would be

Page 171

1 60 nanograms per day, correct?
2 A. I'm sorry, can you say that again?
3 Q. 0.06 micrograms per day is the same as
4 60 nanograms per day, correct?
5 A. That's correct. That's correct.
6 Q. So if we take that 60 nanograms and we want
7 to know the total dietary intake over a 70-year
8 lifetime, we would take that 60, we would multiply
9 it by 365 days and then by 70 years, correct?
10 A. Predicated on the assumption that those
11 estimates are reasonably accurate estimates.
12 Q. And when we do that, we get a total dietary
13 intake over a 70-year lifetime of 1,533 micrograms?
14 A. If what you're saying is that instead of
15 surveying an average of dietary levels that have
16 been cited in the literature representing the
17 dietary epidemiology study, that instead of doing
18 that you cherry-pick one number, do you get a
19 different number than you do from the average, yes,
20 you do.
21 Q. I'm asking if we -- if we calculate the
22 total dietary intake over a 70-year lifetime using
23 the values that are now highlighted on the screen in
24 Hruday, we end up with a total dietary intake over a
25 70-year lifetime of 1,533 micrograms?

Page 172

1 A. From this one figure in this one paper the
2 math sounds grossly correct. That is not a number
3 that I would rely on.
4 Q. And that 1,533 micrograms of total dietary
5 intake over a 70-year lifetime is lower than the
6 value that the FDA provides based on their
7 96 nanograms per day, which results in a lifetime
8 cumulative exposure of 2,454 micrograms, correct?
9 A. If you're --
10 MR. INSOGNA: Object to form.
11 THE WITNESS: If you're asking me
12 does the FDA acceptable daily intake due to
13 pharmaceutical products of 96 nanograms per
14 day, you're asking me is that 70-year
15 cumulative total -- I believe, it's
16 2454 micrograms -- if you're asking me is
17 that different than this one number that
18 you're pointing to in this paper if you
19 calculate it out, yes, that is larger than
20 this one number.
21 BY MS. BOGDAN:
22 Q. Do you in your medical monitoring report
23 include a narrative description of this estimate in
24 the Hruday study that speaks to the US population?
25 MR. INSOGNA: Object -- objection to

Page 173

1 form.
2 THE WITNESS: Yeah, can you say that
3 again?
4 BY MS. BOGDAN:
5 Q. In your medical monitoring report did you
6 include in the narrative a specific mention to these
7 values in the Hruday study that estimate daily
8 dietary intake of NDMA in the US population?
9 MR. INSOGNA: Same objection.
10 THE WITNESS: Let me look. Yes, I
11 do.
12 BY MS. BOGDAN:
13 Q. And where do you mention this in your
14 medical monitoring report?
15 A. Paragraph 30, "As detailed in my report,
16 estimated dietary intake of NDMA (excluding beer and
17 tobacco) from seven studies yield an average
18 cumulative exposure of," blah, blah, blah. The
19 citation to the seven studies are references 3
20 through 9. Reference 3 is exactly the paper that
21 we're talking about.
22 Q. I asked if in the narrative of your report
23 you specifically mention the values that the Hruday
24 study estimates as the daily dietary intake of US --
25 of NDMA in the US population, which ranges from

<p style="text-align: right;">Page 174</p> <p>1 30 nanograms to 60 nanograms per day, if you 2 actually mention the values in your narrative? 3 MR. INSOGNA: Object to form. 4 THE WITNESS: So of the seven studies 5 that I cite, I do not cite the specific 6 values for any of those individual seven 7 studies. What I cited was the average level 8 from those seven studies, which I consider 9 to be a more reliable number to base an 10 opinion on, but they are included by 11 citation. 12 So if I were to include every number 13 from every paper that I read we would have a 14 10,000-page report. So I'm confident that 15 any scientist or physician reading that 16 statement, can see what it is based on and 17 what studies it refers to and encompasses. 18 BY MS. BOGDAN: 19 Q. This averaging that you did across these 20 seven studies, did you do the figuring on a separate 21 calculation sheet? 22 A. My recollection is I did on an Excel 23 spreadsheet when I was writing my original report 24 back in -- back over the summer. 25 Q. You have a similar spreadsheet like the one</p>	<p style="text-align: right;">Page 176</p> <p>1 purposes of arriving at the numbers, but as I said 2 sitting here right now, I don't recall if there is a 3 spreadsheet or not. 4 Q. If you locate such a spreadsheet I would ask 5 that you continue to maintain it. 6 A. Certainly. 7 Q. If you can go to page -- not page, to 8 paragraph 62 of your medical monitoring report. 9 A. Yes. 10 Q. The second sentence that you have in that 11 paragraph begins, Notwithstanding the above 12 conclusion that seven of the nine claimed cancer 13 associations with NDMA lack reliable scientific 14 support from dietary epidemiological studies. 15 Do you see that? 16 A. Yes, I do. 17 Q. What are the two cancers that you're not 18 referring to in that statement? 19 A. What that statement is referring to is -- 20 since this is specifically in reference to 21 Dr. Madigan's Table 1 and this is also predicated on 22 my very explicit statement in the supplemental 23 report paragraph 47, "Second, for the many reasons 24 described at length in my report, dietary 25 epidemiology studies are an unreliable basis for</p>
<p style="text-align: right;">Page 175</p> <p>1 that was marked, I believe, as Exhibit 18 in the 2 previous deposition -- 3 A. There's nothing that is -- 4 Q. -- calculating -- 5 A. -- that -- I'm sorry, is labeled number 6 what? 7 Q. You said you used the spreadsheet in the 8 previous deposition that was involving your 9 calculations of the different potential exposures 10 from the contaminated valsartan medication. 11 And I'm asking if you have a similar 12 spreadsheet for your averaging of those seven 13 studies to come up with the cumulative exposure 14 average of 4,190 micrograms over a 70-year lifetime, 15 as stated in paragraph 30 of your medical monitoring 16 report? 17 A. Sitting here right now, I don't recall if I 18 had a spreadsheet back in the summer. I believe 19 that I did. Sitting here right now, I can't point 20 to it. There's certainly the exhibit that you're 21 discussing -- yeah, this is labeled in a way that 22 hopefully anyone involved in this litigation can 23 look at it and have it be intuitively obvious. 24 That isn't the way that I would do a 25 spreadsheet or a calculation for myself for the</p>	<p style="text-align: right;">Page 177</p> <p>1 identifying an amount of NDMA or NDEA associated 2 with an increased risk of cancer in human beings." 3 And I raise that because the context of the 4 statement that you just had me read is, of course, 5 encompassed within that original one. I don't 6 accept that any of these numbers, statistically 7 significant or not, are a reliable basis to identify 8 a threshold associated with increased risk. 9 And, in fact your own experts have 10 contradicted themselves and said there is no 11 threshold. But the -- I believe that -- 12 MS. BOGDAN: You can take that down, 13 please. Thank you. I couldn't see you, 14 Dr. Chodos. I had... 15 THE WITNESS: Consider yourself 16 lucky. 17 BY MS. BOGDAN: 18 Q. Well, you know, I consider myself lucky that 19 you can hear me and I can hear you, so... 20 A. Thank goodness for small favors. 21 So the way -- in the discussion in my 22 supplemental report, is I went through the tissue 23 cites that Dr. Madigan refers to. 24 Q. I'm just asking you say "seven of the nine"? 25 A. I know what you're asking me and I'm -- and</p>

<p style="text-align: right;">Page 178</p> <p>1 so the answer is right in my report. So we're 2 starting from nine, so paragraph 53 and following. 3 We're starting with nine cancers of which, 4 basically, seven are addressed by dietary 5 epidemiology studies, okay, three of those seven -- 6 so there's only seven being addressed at all, but 7 three of those seven, bladder cancer, prostate 8 cancer, pancreas cancer, there's no statistically 9 significant increased risk associated with NDMA 10 dietary lifetime cumulative exposures was shown in 11 any study that Dr. Madigan lists. So those three 12 are off the board. So let's take them away. 13 "In addition, for gastric cancer and 14 esophageal cancer, the majority of studies listed by 15 Dr. Madigan did not show a statistically significant 16 increased risk of cancer associated with dietary 17 lifetime cumulative exposure to NDMA (gastric 18 cancer: Five of nine studies not statistically 19 significant; esophageal cancer: Three of four 20 studies not statistically significant.)" 21 And mind you, these are the studies he's 22 referring to, to establish his threshold. There's 23 also -- there's no statistically significant 24 increased risk for liver cancer, even though that's 25 supposed to be the most sensitive cite.</p>	<p style="text-align: right;">Page 180</p> <p>1 and several of which -- that are presented with -- 2 where there are no significant findings. 3 So I think this Table 1 underscores the 4 points made in my supplemental report, I believe. 5 Q. So the two cancers that are not in the seven 6 of the nine claimed are lung and colorectal; is that 7 the answer? 8 A. Of the dietary studies, yes. 9 Q. Okay. Thank you. 10 Did you consider the Song meta-analysis of 11 the gastric studies? 12 A. I have looked at the Song meta-analysis. 13 Q. What is the purpose of the meta-analysis? 14 A. The purpose of the meta-analysis is to 15 attempt to take multiple published studies and to 16 attempt to combine them in some way that increases 17 power without sacrificing validity by combining 18 things that were actually done by different people 19 at different times in different populations using 20 different methods. 21 Q. Increasing the power of a study, in general, 22 is that a positive thing? 23 A. I apologize, but I feel that you didn't -- 24 maybe I didn't make myself clear. 25 So in aggregate, if you have increased power</p>
<p style="text-align: right;">Page 179</p> <p>1 So even when considering only two of the 2 seven cancers that Dr. Madigan evaluated in Table 1, 3 for which at least half of the studies showed a 4 statistically significant association with dietary 5 lifetime cumulative exposure to NDMA, these values 6 ranged from 6,114 to 16,363 micrograms for lung 7 cancer, so an average of 11,238 micrograms, and 8 3,343 to 27,628 micrograms for colon -- colorectal 9 cancer. 10 Q. So the answer to my -- 11 A. So of the table that you present -- 12 Q. Sorry. 13 A. -- of the table that he presents for dietary 14 epidemiology studies the only two for which there's 15 a majority of studies that are statistically 16 significant are lung and colorectal. 17 And as I point out in my report, if I'm 18 looking at 25 studies selected by plaintiffs' expert 19 to make the argument that there is a reliable 20 threshold for lifetime cumulative exposure that 21 could be identified and I see that right from the 22 get-go half of those studies aren't even 23 statistically significant and that there's multiple 24 cancers that either aren't even addressed by dietary 25 epidemiology as in there are no significant findings</p>	<p style="text-align: right;">Page 181</p> <p>1 and everything else stays the same -- if I could 2 have one set of investigators have a -- of 3 essentially a similar population have a much larger 4 number of cases, that might be associated with 5 increased power. 6 But just referring to a meta-analysis as -- 7 well, all it's really doing is increasing power 8 because you're aggregating studies, what my prior 9 answer was trying to get across was that would be a 10 mischaracterization of what a meta-analysis is. 11 So by increasing the number of cases, you 12 are decreasing the accuracy because you are 13 combining things that are dissimilar. 14 Q. If you have -- are combining things that are 15 similar, right, is increasing the power usually a 16 good thing, if there is a homogeneous blending of 17 studies? 18 A. So my accurate answer to you is there is no 19 such thing as either similar or -- you know, every 20 epidemiological study has strengths and limitations. 21 They're performed by different people in different 22 populations using different methods. And I think 23 many people would say that meta-analyses are fraught 24 with problems, for exactly that reason that when you 25 start combining things that were done in very</p>

<p style="text-align: right;">Page 182</p> <p>1 different ways and very different people, very hard 2 to know whether the answer that you get is, you 3 know, accurate, if you will. 4 And, in fact, I was -- well, I'll leave it 5 at that. 6 Q. So in your opinion you don't favor 7 meta-analysis, is that what I'm gleaning from you? 8 A. No, that's not what you're hearing from me 9 and I apologize for not being clear. 10 It's going to depend on the study and the 11 studies that are aggregated and the methods by which 12 it is done, so I can't answer that in the abstract. 13 I've tried to outline for you what some of the 14 potential problems are that one could run into, but 15 I can't answer it in the abstract. 16 Q. Okay. In speaking of the potential 17 problems, were you mentioning those in reference to 18 the Song meta-analysis or just mentioning them in 19 general? 20 A. You -- I lost like the first five or six 21 words of what you said. 22 Q. I said when you were referencing those 23 limitations of a meta-analysis study, were you 24 speaking in terms of the Song meta-analysis study or 25 were you just speaking to meta-analysis studies in</p>	<p style="text-align: right;">Page 184</p> <p>1 gastric cancer and yielded a relative risk, which 2 they said -- they said, "There was, however, 3 considerable between-study heterogeneity LCE's 4 across the component studies ranged from 5 1,412 micrograms to 6,607 micrograms." And then the 6 very next sentence is Dr. Madigan saying "I note 7 that Loh, et al., reported a stomach cancer hazard 8 ratio of 1.13 adding Loh to the Song meta-analysis 9 yields a estimate of 1.32." 10 And so when we talk about the problems with 11 meta-analyses, which is what I'm answering, one of 12 the problems is what studies people choose to 13 include. And the fact that Dr. Madigan decided that 14 he would add one on his own to a published 15 meta-analysis is quite striking to me. 16 Q. That's your analysis of what Dr. Madigan 17 did, which is not what I was asking. 18 What I was asking is if you, one, when I 19 asked the question to begin with, I wasn't sure if 20 you were answering just in general or with regard to 21 your analysis of Song. 22 But what I'm asking is did you, Dr. Chodosh, 23 do your own independent analysis of the Song 24 meta-analysis? 25 A. I did not do an -- and by an "independent</p>
<p style="text-align: right;">Page 183</p> <p>1 general? 2 A. I believe that those -- those would be some 3 of the general potential limitations of 4 meta-analyses. And, again, you would have to look 5 at the individual, the particular meta-analysis and 6 the studies that it was attempting to aggregate 7 where one of those -- you know, yet another of those 8 limitations is which studies do authors decide to 9 include or exclude. 10 And in that respect, if I recall, Dr. 11 Madigan, I believe, takes at least one 12 meta-analysis, possibly two, where he indicates that 13 while the authors -- he noticed that they didn't 14 include a study that he might have thought was 15 interesting and that are -- here. 16 So paragraph 10 of Dr. Madigan's report -- 17 Q. I'm sorry, I'm not -- I'm sorry, Doctor. 18 I'm not asking what Dr. Madigan did. My -- 19 A. No, I'm answering your question. And if I 20 could finish my answer, I would be grateful. 21 Q. Okay, I'll let -- this is -- 22 A. This is literally what you are talking 23 about. Paragraph 9 is the 2015 meta-analysis by 24 Song, et al. that's what we're talking about. 25 Paragraph 9, it included 11 studies concerning NDMA</p>	<p style="text-align: right;">Page 185</p> <p>1 analysis," are you asking me did I try to obtain the 2 raw data from Song et al., and perform a 3 statistic -- a statistical analysis of my own? 4 Q. Or did you look for additional dietary 5 studies as Dr. Madigan did that you would feel would 6 be properly included in that meta-analysis or did 7 you yourself look at the Song meta-analysis and come 8 up with your own critique of its strengths and 9 limitations? 10 MR. INSOGNA: Objection, compound. 11 THE WITNESS: So the meta-analysis by 12 Song is subject to the same types of 13 limitations that I outlined for you as being 14 common limitations of meta-analyses. 15 Fundamentally, given the statement in my 16 report that dietary epidemiology studies 17 fundamentally are not a reliable basis for 18 establishing an LCE associated with human 19 cancer risk. 20 You can aggregate as many as you like 21 and you're still left with the collection of 22 studies that are an unreliable basis to 23 establish a threshold for risk. 24 MR. INSOGNA: Rosemarie, -- 25</p>

<p>Page 186</p> <p>1 BY MS. BOGDAN:</p> <p>2 Q. And that would be your opinion, correct?</p> <p>3 THE WITNESS: I'm sorry, Peg.</p> <p>4 THE COURT REPORTER: Can you repeat</p> <p>5 that question, please, Rosemarie?</p> <p>6 BY MS. BOGDAN:</p> <p>7 Q. I said, and that would be your opinion,</p> <p>8 correct?</p> <p>9 A. Yes, it's a paragraph in a document labeled</p> <p>10 "Opinions of Lewis A. Chodosh, M.D., Ph.D," so, yes,</p> <p>11 I think that's what we're here to talk about is my</p> <p>12 opinions.</p> <p>13 MR. INSOGNA: Rosemarie, when you are</p> <p>14 at a transition point to take a break, a</p> <p>15 short break.</p> <p>16 MS. BOGDAN: Sure. Now would be</p> <p>17 fine. I had just finished with the Song</p> <p>18 meta-analysis unless you would like to hear</p> <p>19 about that some more.</p> <p>20 MR. INSOGNA: You are finished with</p> <p>21 Song?</p> <p>22 MS. BOGDAN: I am finished with Song.</p> <p>23 MR. INSOGNA: Yeah, okay. That's</p> <p>24 what I thought.</p> <p>25 MS. BOGDAN: I'm just saying, we</p>	<p>Page 188</p> <p>1 A. Okay. Hang on. That's which Exhibit?</p> <p>2 Q. It was marked, I believe, as Exhibit 6.</p> <p>3 A. Okay.</p> <p>4 Q. My question is: Were you aware that the FDA</p> <p>5 published an NDMA estimated risk associated with the</p> <p>6 recalled valsartan?</p> <p>7 A. So I am aware and as I recall, you and I</p> <p>8 talked about it to some extent at my last</p> <p>9 deposition.</p> <p>10 Q. Okay. My question is for this medical</p> <p>11 monitoring cause of action, did you compare the FDA</p> <p>12 estimated NDMA additional risk of cancer with the</p> <p>13 risks associated with the plaintiffs' proposed</p> <p>14 medical monitoring plan?</p> <p>15 A. Can you say that again?</p> <p>16 Q. Sure.</p> <p>17 For this medical monitoring cause of action,</p> <p>18 did you do any type of comparison of the FDA's</p> <p>19 estimated NDMA risk, cancer risk, to any cancer</p> <p>20 risks associated with the plaintiffs' proposed</p> <p>21 medical monitoring plan?</p> <p>22 A. Well, so those two things you are</p> <p>23 referencing, the FDA estimate that you are referring</p> <p>24 to says "there may be one additional case of</p> <p>25 cancer," so it doesn't say there will be or there</p>
<p>Page 187</p> <p>1 could all breakout in song, maybe, you know,</p> <p>2 that would take -- but if you would like to</p> <p>3 take a break right now, then that's fine.</p> <p>4 MR. INSOGNA: Thank you. I would</p> <p>5 like to.</p> <p>6 THE WITNESS: I would like to hear</p> <p>7 what the song is.</p> <p>8 THE VIDEOGRAPHER: Off the record at</p> <p>9 3:54.</p> <p>10 (Brief recess.)</p> <p>11 THE VIDEOGRAPHER: We are back on the</p> <p>12 record at 4:06 p.m.</p> <p>13 BY MS. BOGDAN:</p> <p>14 Q. Dr. Chodosh, are you aware that the FDA</p> <p>15 published an NDMA estimated risk with this</p> <p>16 laboratory analysis of valsartan products?</p> <p>17 MR. INSOGNA: Object to form.</p> <p>18 THE WITNESS: You want to point me</p> <p>19 specifically to what your reference is.</p> <p>20 MS. BOGDAN: Could we pull up the</p> <p>21 laboratory analysis of valsartan products</p> <p>22 that was marked as Exhibit 6 today.</p> <p>23 BY MS. BOGDAN:</p> <p>24 Q. And it's, Dr. Chodosh, right on the first</p> <p>25 page of this where it says "NDMA estimated risk"?</p>	<p>Page 189</p> <p>1 would be or we expect there would be. It says</p> <p>2 "there may be," as in it's a possibility, which is</p> <p>3 based on linear low-dose extrapolation.</p> <p>4 And for the plaintiffs, boy, I don't --</p> <p>5 maybe you can point me to some numbers, because I</p> <p>6 read your complaint and it's -- it simply lists a</p> <p>7 certain number of months of duration of exposure to</p> <p>8 APIs from different manufacturers.</p> <p>9 So that was part of what made this quite</p> <p>10 challenging is that I don't see you having committed</p> <p>11 to any numbers or risks.</p> <p>12 Q. I was referring to the risks associated with</p> <p>13 the actual medical treatment that is proposed in the</p> <p>14 medical monitoring plan, the things that we went</p> <p>15 through and -- earlier which were the specialized</p> <p>16 testing, the lab tests, the blood smears, the --</p> <p>17 those things.</p> <p>18 Did you do any type of risk analysis with</p> <p>19 regard to the cancer risk versus the risks to the</p> <p>20 patient of undergoing the monitoring procedures that</p> <p>21 the plaintiffs have put forth in the plan?</p> <p>22 MR. INSOGNA: Objection, vague.</p> <p>23 THE WITNESS: So as a physician in</p> <p>24 reading an estimated -- the FDA estimated</p> <p>25 risk of one in 8,000 people might get</p>

Page 190

1 cancer. From first principles as a
2 physician, I would say there's no way that
3 you could justify medical monitoring given
4 that almost 50% of people ultimately develop
5 cancer.
6 So a risk of trying to find the one
7 person in 8,000, if -- that's even assuming
8 it is that, that there isn't a screening
9 program, as a physician, that I understand
10 where you say, Ah, the risk is one in 8,000
11 of cancer, should we go do this procedure?
12 That's me speaking as a physician.
13 As part of my supplemental report,
14 that was not a focus of my opinions, other
15 than I believe my report points out that
16 risks on the order of, you know, one in
17 10,000, one in 100,000, you know, one in
18 100,000 being the 96 nanogram per day, that
19 even if one were to accept that those are
20 actual risks, which I don't believe they
21 are, even if one were to accept that those
22 are actual risks, they are minuscule
23 compared to the risks we all have of getting
24 cancer as one gets older. That's extremely
25 rare, compared to the disease that's

Page 191

1 occurring throughout the population, namely
2 cancer.
3 BY MS. BOGDAN:
4 Q. Do you have an opinion with regard to one
5 out of how many number of people risk is necessary
6 to warrant medical monitoring?
7 MR. INSOGNA: Objection to form.
8 THE WITNESS: So I'm not here to
9 opine on at what point -- at what point does
10 risk justify or outweigh the potential harm
11 from specific screening procedures. My
12 opinion as I've laid out is that none of the
13 plaintiffs at the maximum possible
14 hypothetical exposures to NDMA or NDEA would
15 be at an increased risk for cancer.
16 And, therefore, if you have a
17 population that has the same risk, namely
18 people who took these valsartan products
19 have the same risk of cancer as everybody
20 else in the country, that does not warrant
21 medical monitoring.
22 You know, that's my opinion. They're
23 not at increased risk so why would you take
24 on potential harm from the medical
25 monitoring tests that are proposed.

Page 192

1 BY MS. BOGDAN:
2 Q. You refer to the language that's highlighted
3 here for NDMA estimated risk, the FDA statement
4 reads, "FDA estimated that if 8,000 people took the
5 highest valsartan dose (320 milligrams) containing
6 NDMA from the recalled batches daily for four years,
7 there may be one additional case of cancer over the
8 lifetimes of the 8,000 people."
9 So they're talking about additional cancer
10 above and beyond the background rate?
11 A. I'm sorry, was that a question? I
12 couldn't -- you cut out for a few words. Was that a
13 question?
14 Q. Right, so I'm just -- do you see in the
15 language from the FDA how they -- how they speak
16 specifically about not there's one case of cancer in
17 8,000 people, but they're referring to there may be
18 one additional case of cancer?
19 A. Oh, yes, I understand that, that's how I was
20 answering that question, that out of those 8,000
21 people over the course of their lifetime nearly
22 4,000 of those people will develop cancer. And what
23 this FDA statement says is instead of 4,000 people
24 getting cancer in their lifetime it might be 4,001
25 with the emphasis on "may be," because the FDA risk

Page 193

1 estimate is based on linear low-dose extrapolation
2 as you and I have talked about, and as is written
3 extensively in my report.
4 So that assumes that there is no threshold
5 and that one molecule of NDMA will increase risk,
6 which I think as we've talked about is a ludicrous
7 proposition.
8 Q. Isn't it also true that the FDA is basing
9 that risk assessment on the highest dose of
10 valsartan based upon their testing is
11 20.19 micrograms of NDMA in a 320 tablet?
12 MR. INSOGNA: Objection to form.
13 THE WITNESS: So that's how that
14 sentence reads and given the context in this
15 document laboratory analysis of valsartan
16 products, that's what I assume. [REDACTED]
17 [REDACTED]
18 [REDACTED]
19 [REDACTED]
20 [REDACTED]
21 [REDACTED]
22 So I think it's the same number
23 either way and almost certainly the
24 exposures were substantially less than that
25 just given the realities of the assumptions

Page 194

1 that are made.

2 But, of course, the most important

3 assumption in this sentence that you have

4 highlighted is the "may be" and the

5 recognition that this is based on the

6 assumption that there is no threshold

7 because you're dealing with doses that

8 were -- in effect could not be measured in

9 human beings or in animals.

10 BY MS. BOGDAN:

11 Q. Is it your understanding when the NDMA --

12 when FDA did the NDMA estimated risk that it used an

13 average amount of contamination in the tablets or

14 when it does an estimated risk calculation, like the

15 one you see highlighted on the screen, it uses the

16 highest amount found in the tablets?

17 MR. INSOGNA: Objection to form.

18 THE WITNESS: It -- as it stated

19 there, it used the highest amount and your

20 question was -- to me was, do I recognize

21 that that was the highest amount that the

22 FDA measured with the implication being that

23 there are other measurements that might be

24 higher.

25 And my point was that the average of

Page 195

1 the other measurements that you showed me,

2 as I'm sitting here trying to recall that

3 table, was just about that same level as

4 what the FDA measured and based this risk

5 estimate on.

6 BY MS. BOGDAN:

7 Q. Yes. [REDACTED]

8 [REDACTED]

9 [REDACTED]

10 [REDACTED]

11 MR. INSOGNA: Objection to form.

12 THE WITNESS: So the difference

13 between -- that you're not within, you know,

14 several thousandfold of the dose that would

15 be needed to cause cancer or the doses of

16 endogenous exposure that we all have,

17 whether that's 3,000 or 1,000 doesn't

18 matter, you're still far below any threshold

19 where you would expect to see any increase

20 in risk.

21 And I think a calculation, if talking

22 about is it that 4,000 people will get

23 cancer or will 4,001 people get cancer

24 emphasizes that this is, even with their --

25 the FDA's conservative assumptions, which

Page 196

1 are intended for regulatory purposes for

2 precautionary reasons, that even by that

3 measure it is a very small risk.

4 But I do not -- as I have articulated

5 in my report, I do not believe that there is

6 any increased risk at all and nor is the FDA

7 stating that there is.

8 BY MS. BOGDAN:

9 Q. Let's move on to some of the studies that

10 you cited in your medical monitoring report

11 regarding endogenous formation of NDMA.

12 MS. BOGDAN: Can we pull up, I almost

13 hate to say, the Tricker study, "Urinary

14 excretion of nitrite, nitrate."

15 TRIAL TECHNICIAN: Counsel, do you

16 have a number assigned to that one?

17 MS. BOGDAN: I'm looking at my cheat

18 sheet with regard to the numbers. Just a

19 second. Let me see if I can locate it.

20 It's called "Urinary excretion of nitrite,

21 nitrate and N-nitroso compounds."

22 TRIAL TECHNICIAN: I have two Tricker

23 studies and neither one of those contains

24 those words in the title.

25 MS. BOGDAN: Okay. Let me run to

Page 197

1 another study. How about Tricker

2 Spiegelhalder urinary excretion, you

3 don't -- that's the one you can't find,

4 right?

5 How about Tricker, "N-nitroso

6 compounds and man"?

7 TRIAL TECHNICIAN: Yes, coming up.

8 MS. BOGDAN: Thank you.

9 BY MS. BOGDAN:

10 Q. Dr. Chodosh, this is one of the references

11 that you cite in your medical monitoring report?

12 A. I don't have it yet.

13 Q. Okay. Sorry.

14 (Document marked for identification

15 as Chodosh Deposition Exhibit No. 16.)

16 TRIAL TECHNICIAN: You should now see

17 Exhibit 16 if you hit refresh.

18 THE WITNESS: Okay. Thank you.

19 Okay. I see the paper.

20 BY MS. BOGDAN:

21 Q. That paper is speaking of endogenous

22 formation of N-nitrosamines, in general, correct?

23 A. Well, I see both exogenous -- it's dealing

24 with exogenous and endogenous.

25 Q. But it's dealing with N-nitrosamines as a

<p style="text-align: right;">Page 198</p> <p>1 group, correct, not NDMA?</p> <p>2 A. That's correct. Well, I mean, they're</p> <p>3 certainly talking about NDMA. They're also talking</p> <p>4 more broadly about N-nitrosamines.</p> <p>5 MS. BOGDAN: If we could pull up the</p> <p>6 Jakszyn study.</p> <p>7 THE WITNESS: Are we -- I'm sorry,</p> <p>8 are we done with this study?</p> <p>9 MS. BOGDAN: We're done.</p> <p>10 THE WITNESS: Study, yeah.</p> <p>11 TRIAL TECHNICIAN: I'm sorry, was</p> <p>12 that Jaiswal, J-A-I-S-W-A-L?</p> <p>13 MS. BOGDAN: No. It was Jakszyn,</p> <p>14 J-A-K-S-Z-Y-N.</p> <p>15 TRIAL TECHNICIAN: Sorry, I don't</p> <p>16 have anything with Jakszyn.</p> <p>17 Is there more to the title?</p> <p>18 MS. BOGDAN: It's J-A-K-S-Z-Y-N, you</p> <p>19 don't have that?</p> <p>20 TRIAL TECHNICIAN: No, I'm sorry.</p> <p>21 MS. BOGDAN: Okay.</p> <p>22 How about Holtrop, H-O-L-T-R-O-P.</p> <p>23 It's called "Diet composition is associated</p> <p>24 with endogenous formation."</p> <p>25 TRIAL TECHNICIAN: No, I'm sorry.</p>	<p style="text-align: right;">Page 200</p> <p>1 Q. I believe it is. I think it's the --</p> <p>2 A. If you can -- I mean, the paper is familiar.</p> <p>3 I can't remember where specifically it's referenced.</p> <p>4 Can you point me to where it's referenced?</p> <p>5 Q. Yes, I believe it's your reference number</p> <p>6 12.</p> <p>7 A. And is there a paragraph with my</p> <p>8 supplemental report? And I'm happy to look for it,</p> <p>9 but if you know what the paragraph is...</p> <p>10 Q. I believe it's paragraph 34, where you</p> <p>11 string cite and it's one of the studies that you</p> <p>12 have after the sentence that reads, "Indeed, NDMA</p> <p>13 and other nitrosamines are formed endogenously</p> <p>14 within the body as a consequence of normal human</p> <p>15 physiology." And you cite to reference three and</p> <p>16 then 11 through 16 and this reference is number 12.</p> <p>17 And I was just going to ask you a general</p> <p>18 question as to why you referenced this particular</p> <p>19 study, which is focused on bladder cancer patients</p> <p>20 that have -- I don't know how you pronounce this</p> <p>21 condition, schistosomiasis.</p> <p>22 A. Schistosomiasis.</p> <p>23 Q. Schistosomiasis?</p> <p>24 A. Correct.</p> <p>25 Q. Did I do it better the second time.</p>
<p style="text-align: right;">Page 199</p> <p>1 MS. BOGDAN: Okay. Why don't we</p> <p>2 just -- I think there are some documents</p> <p>3 that might have gotten stuck in hyperspace</p> <p>4 here, so I've just run into a series of them</p> <p>5 now that aren't in the portal. So let's</p> <p>6 just take a three-minute break and I can see</p> <p>7 if something didn't quite upload, okay.</p> <p>8 THE VIDEOGRAPHER: Off the record at</p> <p>9 4:26.</p> <p>10 (Brief recess.)</p> <p>11 THE VIDEOGRAPHER: We are back on the</p> <p>12 record at 4:32 p.m.</p> <p>13 MS. BOGDAN: Which study did you say,</p> <p>14 Mike, that you had identified that you can</p> <p>15 put up?</p> <p>16 TRIAL TECHNICIAN: I will mark</p> <p>17 Tricker as Exhibit 17.</p> <p>18 (Document marked for identification</p> <p>19 as Chodosh Deposition Exhibit No. 17.)</p> <p>20 MS. BOGDAN: Which Tricker? We'll</p> <p>21 see.</p> <p>22 BY MS. BOGDAN:</p> <p>23 Q. Is this one of the studies, Doctor, that you</p> <p>24 cited in your medical monitoring report?</p> <p>25 A. Hang on, yeah.</p>	<p style="text-align: right;">Page 201</p> <p>1 A. Perfect.</p> <p>2 Q. What is schistosomiasis?</p> <p>3 A. Schistosomiasis is a parasitic disease and</p> <p>4 it's very common in certain parts of the world</p> <p>5 caused by trematodes.</p> <p>6 Q. Is that something that's common here in the</p> <p>7 US? I've never heard of it.</p> <p>8 A. Schistosomiasis in the United States would</p> <p>9 typically -- would be one of the things that medical</p> <p>10 students read about and get tested about and are</p> <p>11 unlikely to see unless they were in a tertiary</p> <p>12 academic medical center. Endemic in other parts of</p> <p>13 the world, not in the United States.</p> <p>14 Q. Sounds like the medical equivalent of the</p> <p>15 rule against perpetuities.</p> <p>16 A. Okay. I have more than that so...</p> <p>17 Q. Does the cite to this just show that there</p> <p>18 could be physiological conditions that happen in the</p> <p>19 human body that influence endogenous formation of</p> <p>20 nitrosamines?</p> <p>21 A. I think what it's saying is that since</p> <p>22 there's a control group in this paper that people</p> <p>23 make -- you know, there are endogenous amounts of</p> <p>24 NDMA that get excreted in the urine.</p> <p>25 Q. And you are referring to the control group,</p>

<p style="text-align: right;">Page 202</p> <p>1 not the group that has this infectious condition?</p> <p>2 A. Well, for -- for instance, if one looks at</p> <p>3 Table 2, the heading "Concentrations microgram per</p> <p>4 day of volatile nitrosamines in urines," there are</p> <p>5 German controls that has NDMA levels of .2. There</p> <p>6 are Egyptian controls that have an average level</p> <p>7 that's like a .27 and then you have patients who</p> <p>8 have schistosomiasis.</p> <p>9 Q. Which have higher levels, correct?</p> <p>10 A. Yes, associated with that infection, that's</p> <p>11 correct.</p> <p>12 MS. BOGDAN: Well, now maybe we will</p> <p>13 have success in pulling up the Jakszyn</p> <p>14 paper, J-A-K-S-Z-Y-N.</p> <p>15 TRIAL TECHNICIAN: This will be</p> <p>16 Exhibit 18. It's available on the link and</p> <p>17 I will have it on your screen momentarily.</p> <p>18 MS. BOGDAN: And this is cited in</p> <p>19 your medical monitoring report as reference</p> <p>20 Number 13.</p> <p>21 (Document marked for identification</p> <p>22 as Chodosh Deposition Exhibit No. 18.)</p> <p>23 BY MS. BOGDAN:</p> <p>24 Q. Which, again, is in that same paragraph</p> <p>25 number 34.</p>	<p style="text-align: right;">Page 204</p> <p>1 Q. All right. My overarching question,</p> <p>2 Dr. Chodosh, is just does this study provide any</p> <p>3 estimate of the endogenous formation of NDMA?</p> <p>4 A. So, in general, NDMA is the most abundant of</p> <p>5 nitrosamines, so they're N-nitrosamines. And the</p> <p>6 point of the paper is that endogenous nitrosamines</p> <p>7 formation is about 100 times greater than NDMA</p> <p>8 exposure from the diet and that the cancer risk</p> <p>9 association in the stomach does not correlate with</p> <p>10 NDMA intake, it correlates with endogenous</p> <p>11 nitrosamines, arguing that it is endogenous</p> <p>12 N-nitrosamines, which are more important in</p> <p>13 determining cancer risk and not NDMA exposures, in</p> <p>14 this case, that would be dietary exposures.</p> <p>15 Q. How many compounds are there in the</p> <p>16 nitrosamine family?</p> <p>17 A. There are -- my recollection -- I can't</p> <p>18 remember whether it's 100 or -- there are a broad</p> <p>19 number of N-nitrosamines of which NDMA is -- in the</p> <p>20 setting of diet, my understanding is, is one of the</p> <p>21 more abundant, if not the most abundant. It's</p> <p>22 certainly the best studied of N-nitrosamines.</p> <p>23 Q. Are the N-nitrosamines in the family equally</p> <p>24 genotoxic?</p> <p>25 A. I'm sorry, you cut out right at the</p>
<p style="text-align: right;">Page 203</p> <p>1 A. One second. Yes, that's correct.</p> <p>2 TRIAL TECHNICIAN: Rosemarie, for the</p> <p>3 record, I just wanted to let you that</p> <p>4 Bob Kum from Duane Morris also just joined</p> <p>5 us in the room now.</p> <p>6 MS. BOGDAN: Okay. Bob from</p> <p>7 Duane Morris.</p> <p>8 BY MS. BOGDAN:</p> <p>9 Q. Now, this study is focused on N-nitroso</p> <p>10 compounds, in general, correct?</p> <p>11 A. That's correct.</p> <p>12 Q. Does this study estimate an amount of</p> <p>13 endogenous NDMA that forms, as opposed to</p> <p>14 nitrosamines in general?</p> <p>15 A. If you look at Table 1, there is --</p> <p>16 endogenous nitrosamines is listed and NDMA is listed</p> <p>17 as a standalone below it and then if you look at</p> <p>18 Table 2 --</p> <p>19 Q. Well, let me just ask a question about</p> <p>20 Table 1.</p> <p>21 Is the NDMA listed, though, in Table 1, the</p> <p>22 NDMA that someone would get exogenously from diet or</p> <p>23 air or water?</p> <p>24 A. Give me a moment. I need to check back.</p> <p>25 (Witness reviews document.)</p>	<p style="text-align: right;">Page 205</p> <p>1 beginning.</p> <p>2 Q. I'll ask it a different way.</p> <p>3 Are there varying degrees of potency of the</p> <p>4 various compounds that are in the N-nitrosamines</p> <p>5 group?</p> <p>6 A. Yeah, so potency is a chemical compound</p> <p>7 specific analysis. And my recollection is ten or</p> <p>8 15 percent of N-nitrosamines are not considered be</p> <p>9 to be carcinogenic when tested in animals, so there</p> <p>10 clearly is variability across the family, as you</p> <p>11 would expect, given that they each have different</p> <p>12 chemical structures.</p> <p>13 MS. BOGDAN: If we could pull up the</p> <p>14 Holtrop study, H-O-L-T-R-O-P.</p> <p>15 (Document marked for identification</p> <p>16 as Chodosh Deposition Exhibit No. 19.)</p> <p>17 BY MS. BOGDAN:</p> <p>18 Q. Now, this study is another one that you</p> <p>19 specifically reference in your medical monitoring</p> <p>20 report as reference number 15.</p> <p>21 A. If you could just give me a moment to</p> <p>22 refresh my memory.</p> <p>23 Q. Sure.</p> <p>24 A. (Witness reviews document.)</p> <p>25 Q. Which, again, is footnoted in paragraph 34.</p>

<p style="text-align: right;">Page 206</p> <p>1 A. Okay.</p> <p>2 Q. And asking the same question again, is this</p> <p>3 a study of endogenous formation of N-nitroso</p> <p>4 compounds in general, meaning the whole group, as</p> <p>5 opposed to NDMA specifically?</p> <p>6 A. Give me one moment.</p> <p>7 (Witness reviews document.)</p> <p>8 So I believe that this is N-nitroso</p> <p>9 compounds in general. Although, again, my</p> <p>10 understanding is that NDMA is typically the most</p> <p>11 abundant in that class of endogenous N-nitrosamines.</p> <p>12 Q. Turning your attention to page 1657 of this</p> <p>13 study, directing your attention to the left-hand</p> <p>14 side of that paragraph which reads, "The ultimate</p> <p>15 link between diet, endogenously formed NOC, and</p> <p>16 causation and prevention of DNA damage in animals</p> <p>17 and humans is still missing."</p> <p>18 A. Let me just read this paragraph for context</p> <p>19 so I can try to get a better idea what they're</p> <p>20 talking about.</p> <p>21 Q. That was going to be my question, do you</p> <p>22 have an understanding of what the authors are</p> <p>23 talking about?</p> <p>24 A. (Witness reviews document.)</p> <p>25 So if I look at the sentence immediately</p>	<p style="text-align: right;">Page 208</p> <p>1 linked to NOC formation." I think they're looking</p> <p>2 at the effects of diet composition and in particular</p> <p>3 of protein composition and how that is related to</p> <p>4 endogenous NOC formation.</p> <p>5 So it's the same thing in my report, in both</p> <p>6 of my reports. And the same thing that was</p> <p>7 basically in Jakszyn that red meat in particular is</p> <p>8 a known source of NDMA and endogenous nitrosamines.</p> <p>9 Q. But this study, again, is looking at NOCs,</p> <p>10 nitrosamines in general, correct?</p> <p>11 A. Yes, that's correct.</p> <p>12 MS. BOGDAN: If we could pull up the</p> <p>13 Vermeer study, V-E-R-M-E-E-R.</p> <p>14 (Document marked for identification</p> <p>15 as Chodosh Deposition Exhibit No. 20.)</p> <p>16 BY MS. BOGDAN:</p> <p>17 Q. And this is reference number 14 in your</p> <p>18 medical monitoring report.</p> <p>19 TRIAL TECHNICIAN: This will be</p> <p>20 Exhibit 20. It's available through the</p> <p>21 marked exhibit link and will be up on your</p> <p>22 screen momentarily.</p> <p>23 THE WITNESS: And if I could just</p> <p>24 have one second to refresh my memory.</p> <p>25 (Witness reviews document.)</p>
<p style="text-align: right;">Page 207</p> <p>1 preceding the one you asked me about, which is a</p> <p>2 summation sentence, it says, "Even though NOC" --</p> <p>3 nitrosamines compounds -- "even though NOC</p> <p>4 concentrations were not determined in these studies,</p> <p>5 they provide a cause of the DNA adducts that are</p> <p>6 specific to DNA methylating agents such as NOC. The</p> <p>7 ultimate link between diet, endogenously formed NOC,</p> <p>8 and causation and prevention of DNA damage to humans</p> <p>9 and animals is still missing."</p> <p>10 My interpretation, given that this is in a</p> <p>11 discussion and based on context, is they're saying,</p> <p>12 in fact, there is endogenous DNA damage and the</p> <p>13 formation of promutagenic DNA adducts and that that</p> <p>14 is higher in the setting of a high protein or a high</p> <p>15 red meat diet. So as in endogenous causes of</p> <p>16 nitrosamine formation damaging DNA is, you know, a</p> <p>17 major issue, for lack of a better phrase, and that</p> <p>18 that last sentence essentially says, we haven't</p> <p>19 figured out every last thing. We don't know every</p> <p>20 piece of the puzzle.</p> <p>21 Q. And they're looking for basically a link</p> <p>22 between red meat intake and endogenous NOCs,</p> <p>23 correct?</p> <p>24 A. Well, as it says in the abstract, "Red meat</p> <p>25 is considered the most important dietary component</p>	<p style="text-align: right;">Page 209</p> <p>1 Okay.</p> <p>2 BY MS. BOGDAN:</p> <p>3 Q. The purpose of this study was to look at</p> <p>4 NDMA formation with a high amine rich diet, correct?</p> <p>5 A. From my reading it looks like that is at</p> <p>6 least one -- [Zoom glitch].</p> <p>7 MS. BOGDAN: Oh, the audio cut out.</p> <p>8 Oh, please tell me that the audio is</p> <p>9 working, please. It's not working?</p> <p>10 THE VIDEOGRAPHER: Excuse me, Doctor,</p> <p>11 can you hear me? Mr. Insogna, can you hear</p> <p>12 me?</p> <p>13 Going off the record at 4:54.</p> <p>14 (Brief recess.)</p> <p>15 THE VIDEOGRAPHER: We are back on the</p> <p>16 record at 4:58.</p> <p>17 BY MS. BOGDAN:</p> <p>18 Q. So, Doctor, before we lost the audio, I</p> <p>19 believe, I was asking you if the purpose of the</p> <p>20 Vermeer study is to look at nitrosamine formation</p> <p>21 associated with amine rich diets? And they use</p> <p>22 different types of fish in the study to study that</p> <p>23 phenomenon.</p> <p>24 A. Well, it's looking at intake of nitrate and</p> <p>25 what the impact might be on endogenous</p>

<p>Page 210</p> <p>1 N-nitrosamines and it's in the setting of as in 2 combination with an amine rich diet. 3 But they're each variables that are being 4 tested here, both the nitrate and the amines. 5 Q. And the nitrate without the amines, how is 6 that impacting NDMA formation? 7 A. When you say "without the amines," I don't 8 understand what you mean. 9 Q. They test the nitrate as a control without 10 the amine rich foods as well? 11 A. Which part of this study are you referring 12 to because you can't get rid of amines in food 13 unless there are no proteins whatsoever. 14 Q. Right. I'm asking you if they just tried 15 nitrate rich foods alone without any type of protein 16 or if the nitrate that you're referring to was 17 always being put on board, so to speak, with the 18 amine rich? 19 A. Yeah, I don't -- my memory of this paper is 20 not so detailed that I recall that immediately 21 evident to me, looking at it, what the -- if you 22 will, what the baseline diet is. But, right, pretty 23 much -- I mean, all diets are going to have some 24 protein in it, which means that there's going to be 25 amines in it.</p>	<p>Page 212</p> <p>1 of volatile nitrosamines formed in the stomach are 2 probably much higher than the amounts excreted in 3 urine," and then it refers to Spiegelhalter and 4 co-workers showing that between 0.5 and 2.4% of an 5 ingested NDMA dose is excreted or metabolized in 6 urine. 7 Or less than 0.5 in the absence of alcohol, 8 so that's actually -- that's an important number 9 because that comes into play in Hrudey and a number 10 of other things. 11 But then in the next sentence it says 12 "Assuming that 0.5% of the NDMA is excreted in 13 urine, the volunteers in this study may have formed 14 174 micrograms of NDMA per day or 2.9 micrograms per 15 kilogram body weight per day during days 1-3 of the 16 test week." 17 And they're making the point of how does 18 that compare with carcinogenic doses in the rat. 19 And, yeah, granted this is what, 1990 something, but 20 this is one of the estimates of endogenous NDMA 21 production. I reference that actually in the table 22 that we were talking about because this is -- this 23 is the low end of the estimate, so for completeness 24 I included this endogenous estimate, whereas the 25 Hrudey estimates were six, seven, eight, nine times</p>
<p>Page 211</p> <p>1 So they're saying there's no such thing -- 2 you're not able to do a study or I don't think this 3 is a study of what's the effect of nitrate in the 4 absence of any amines, but I would have to spend 5 more time with the paper to refresh my memory about 6 the details. 7 Q. What was your purpose in citing it in your 8 medical monitoring report as a reference? 9 A. Well, so, currently you can get at it from 10 the first sentence so "Formation of nitrites from 11 ingested nitrate, can result in several adverse 12 health effects and implies a genotoxic risk as an 13 consequence of endogenous formation of carcinogenic 14 N-nitroso compounds." 15 So partly this is another piece of the 16 puzzle that arrives at the conclusion that 17 endogenous formation of N-nitrosamines is -- is 18 biologically important and then this is also, as I 19 recall, this was the body of data that were also 20 employed to make estimates or one of the estimates 21 of endogenous formation of NDMA. 22 But, again, I'd have to go back through this 23 paper. It's a pretty detailed paper, but -- so it 24 says -- go to page 462, to the far column on the 25 right, to the paragraph that begins "Absolute levels</p>	<p>Page 213</p> <p>1 higher than this. And I did calculations, as you 2 may recall, that looked both at the levels of 3 endogenous NDMA production predicted by this paper 4 and the levels of endogenous production estimated -- 5 I should say "estimated" not "predicted" -- 6 estimated by Hrudey, et al., by two of the three 7 methods that they used, each of which makes the same 8 point that these levels of endogenous production of 9 NDMA that have been estimated are substantially 10 higher than what is generally accepted as amounts in 11 the diet. That is, amounts of pre-formed NDMA in 12 the diet. 13 And, of course, if one were to accept -- I 14 believe, you were making the point that while the -- 15 Hrudey gave an estimate for the United States 16 population of preformed NDMA dietary intake. Well, 17 in fact, that would just mean that the endogenous 18 formation is an even greater multiple of what's in 19 the diet. They all make the same point that 20 endogenous NDMA production, endogenous 21 N-nitrosamines production, that's the thing driving 22 the biology. That's the endogenous mutagen or one 23 of the endogenous mutagens, I should say. 24 Q. In the case of the contaminated valsartan 25 with NDMA or NDEA, each patient that is taking</p>

<p style="text-align: right;">Page 214</p> <p>1 valsartan would have a background amount of NDMA 2 exposure in their diet, correct? And the amount in 3 the contaminated medication would be in addition to 4 their background? 5 A. Yes, in a medication, if there's NDMA in a 6 medication, that will be added to whatever NDMA is 7 in the diet. 8 But the point of these papers that you're 9 citing -- that your -- we're talking about right now 10 are that those amounts are quite low compared to 11 endogenous production of NDMA and, therefore, the 12 DNA repair systems that have evolved to repair that 13 specific type of DNA damage caused by that, that's 14 the point of these. 15 MS. BOGDAN: If you could please pull 16 up the next exhibit, the Krul study, 17 K-R-U-L. 18 (Document marked for identification 19 as Chodosh Deposition Exhibit No. 21.) 20 BY MS. BOGDAN: 21 Q. This study, Dr. Chodosh, is in your amended 22 list of materials considered that was provided to 23 our office with the medical monitoring. 24 A. Yes, may I have a moment to refresh my 25 memory.</p>	<p style="text-align: right;">Page 216</p> <p>1 looking at dynamic changes as best I can refresh my 2 memory, as a function of time and as a function of 3 how nitrites are added. But I think as has been 4 apparent in recent publications of both Bronstein 5 and Gau [ph.], that the conditions in which such 6 experiments are done have a dramatic influence on 7 what the results are, number one. And that, number 8 two, things that authors describe as "physiological" 9 very often are not. 10 So I would have to spend more time with this 11 to actually see what are the -- what are the ranges 12 here, especially of nitrite and how those 13 correspond. 14 Q. From the abstract, assuming that there's a 15 hyphen between the 2.3 and the 422 and the 1.8 and 16 the 42.7, the study indicates that there could be a 17 wide range, right, of NDMA forming under the 18 conditions in the study, correct? 19 A. Well, that's -- so, yes, but that's circular 20 and it may be that -- in that wide range that none 21 of it overlaps with what happens with human beings. 22 That's my point. 23 Q. Right, I get it. I get it. 24 A. In their in vitro system that they have set 25 up that's what they're reporting and the real</p>
<p style="text-align: right;">Page 215</p> <p>1 Q. Sure. 2 A. (Witness reviews document.) 3 Q. The question I'm going to ask you, Doctor, 4 is in the abstract itself. 5 A. Okay. Why don't you ask it and then I'll 6 see if I can answer it based on -- about this paper. 7 Q. In the abstract, does the study indicate 8 that under these conditions the cumulative amounts 9 of NDMA formed were 2.3 to 422 micrograms of NDMA 10 and 1.8 to 42.7 micrograms of NDMA at a rapid and 11 slow gastric PH decrease respectively? 12 A. I -- two things, one, I don't see a hyphen 13 there. I see "2.3" and then I see a space and I see 14 "422." So with that paper, I don't -- that isn't 15 how I would write a range. 16 Is it -- do you see it there? 17 Q. There is a hyphen on the paper copy I'm 18 looking at. I'm thinking that happened in the 19 upload and the translation on to the screen. I 20 don't see it on the screen, but the one that I have 21 has the hyphen there between the 2.3 and the 422 and 22 between the 1.8 and the 42.7? 23 A. Yeah. And, I guess, the overall point is 24 really this is -- this is an in vitro model of 25 simulated conditions in the stomach where they're</p>	<p style="text-align: right;">Page 217</p> <p>1 question, of course, is how good a model is this for 2 what happens in human beings. 3 Q. Turning to page to 53 of the study, which is 4 the third page. 5 A. I'm sorry, which page? 6 Q. Page 53 and in the study right before 7 "Materials and Methods"? 8 A. Yeah. 9 Q. They're indicating that "Experiments with 10 respect to the inhibition of NDMA formation were 11 formed with two inhibitors, orange juice as a source 12 of ascorbic acid and black tea, which contains large 13 amounts of polyphenols"? 14 A. Yes, I see where you read that. 15 Q. Do you know those to be inhibitors of NDMA 16 formation? 17 A. As a general matter or at specific 18 concentrations and specific context? 19 Q. As a general matter. 20 A. I don't know as a general matter. As a 21 biochemist, basically, I would believe has to be on 22 the concentration of either of those components and 23 the overall conditions of the experiment like PH and 24 everything else that's present. And, in fact, just 25 scanning through this on the next page, page 54 on</p>

<p style="text-align: right;">Page 218</p> <p>1 the right-hand column it says "To investigate 2 whether the formation of NDMA can occur under the 3 experimental conditions of the in vitro model. The 4 gastric compartment was loaded with 300 milliliters 5 of 0.1 molar setting citrate buffer (pH 6.8) 6 containing 5-millimolar DMA and 5-millimolar sodium 7 nitrite." 8 Q. Yeah, I understand, Doctor, that you would 9 want to look at the study further to determine the 10 different -- 11 A. I'm sorry, I wasn't done. 12 What my point is, 5-millimolar study of 13 nitrite is to my recollection wildly 14 nonphysiological. So this is back to the original 15 point that I made that people -- if you're modeling 16 something in vitro, it's critical that you're 17 actually modeling something that has physiological 18 conditions and just looking at that one number, 19 that's not vague. 20 To the best of my recollection, I believe 21 that number is multiples, many multiples of 22 physiological, of the upper range of physiological. 23 I could be wrong, but that's my best recollection. 24 Q. Not to interrupt you, Dr. Chodosh, but my 25 question right now on the table had to do with</p>	<p style="text-align: right;">Page 220</p> <p>1 I... 2 THE WITNESS: I have it back. Okay. 3 MS. BOGDAN: Okay. 4 THE WITNESS: Is this 22? 5 TRIAL TECHNICIAN: That's correct. 6 This is Exhibit 22. 7 BY MS. BOGDAN: 8 Q. Doctor, and you're familiar with this study 9 as it's cited to in your report? 10 A. Yes. 11 Q. And directing your attention to the 12 participants. This was a study that involved 5,150 13 Danish patients with no history of cancer, correct, 14 aged 40 years or older using valsartan at the 1st of 15 January 2012, or initiating use between the 1st of 16 January 2012, and the 30th of June 2017, correct? 17 A. Yes, you read that correctly. 18 Q. And this study was actually ended on 19 June 30th, 2018. 20 Do you see that? 21 A. Yes. 22 Q. And there were actually various recalls of 23 valsartan that occurred after this study closed. 24 Are you aware of that? 25 A. Yes.</p>
<p style="text-align: right;">Page 219</p> <p>1 whether or not orange juice and black tea can 2 inhibit NDMA formation, that's the last question I 3 asked you. 4 A. I answered you. I said as a biochemist that 5 has got to be dependent on the concentration of each 6 of the components of the system. That's the answer 7 to your question. 8 Q. Okay. 9 MS. BOGDAN: Let's pull up Pottegard, 10 please. 11 MR. INSOGNA: You lost your exhibits 12 window. 13 THE WITNESS: I lost my exhibits 14 window. 15 (Document marked for identification 16 as Chodosh Deposition Exhibit No. 22.) 17 BY MS. BOGDAN: 18 Q. Doctor, this is another one of the studies 19 that you specifically cited as a reference in your 20 medical monitoring report. 21 MR. INSOGNA: Rosemarie, one second. 22 Dr. Chodosh lost the exhibits window. We're 23 just reopening that right now. 24 MS. BOGDAN: Okay. I don't have much 25 more, but with the different drops like that</p>	<p style="text-align: right;">Page 221</p> <p>1 Q. Would you consider that to be a limitation 2 of the study that the full extent of the 3 contaminated medication wasn't known at the time 4 that the study period closed? 5 A. Say that again, please. 6 Q. Would you consider that to be a limitation 7 of the study, in that the full amount of the 8 contaminated valsartan wasn't known as of the time 9 the study closed, which would prevent proper 10 identification of patients that had taken 11 contaminated valsartan versus not contaminated 12 valsartan? 13 MR. INSOGNA: Objection to form. 14 THE WITNESS: I don't think I'm 15 following your logic. I apologize, maybe 16 it's just late in the day. But I see where 17 it says when the end of the study period 18 was, 30 June 2018, and I know that there 19 were additional recalls that happened later 20 that year, at the end of that year, but I'm 21 not -- I'm not following what your argument 22 is. 23 BY MS. BOGDAN: 24 Q. Okay. There's a "Conclusion" section on 25 that first page of the study?</p>

<p style="text-align: right;">Page 222</p> <p>1 A. Yes.</p> <p>2 Q. It mentions that "The results do not imply a</p> <p>3 markedly increased short term overall risk of cancer</p> <p>4 in users of valsartan contaminated with NDMA.</p> <p>5 However, uncertainty persists about single cancer</p> <p>6 outcomes and studies with longer follow-up are</p> <p>7 needed to assess long term cancer risk."</p> <p>8 Do you see that conclusion?</p> <p>9 A. I see where you've read that and you've read</p> <p>10 it correctly.</p> <p>11 Q. Okay. What was the follow-up period for</p> <p>12 this study, do you know?</p> <p>13 A. (Witness reviews document.)</p> <p>14 It says "Participants were followed until</p> <p>15 cancer outcome, death, migration or end of the study</p> <p>16 period, whichever occurred first." But I'm looking</p> <p>17 for what the overall follow-up time was.</p> <p>18 Q. I direct you to the "Results" section on</p> <p>19 page 3.</p> <p>20 A. It says "A median of 4.6 years of follow-up</p> <p>21 interquartile range 2.0-5.5 years."</p> <p>22 Q. Would you consider only having a median of</p> <p>23 4.6 years of follow-up in a study with a cancer</p> <p>24 endpoint to be a limitation of the study?</p> <p>25 A. Well, yes and no. The -- what's notable to</p>	<p style="text-align: right;">Page 224</p> <p>1 follow people who have been exposed to valsartan</p> <p>2 products in that period of time for as long as you</p> <p>3 want. The point is that their exposures are so far</p> <p>4 below any dose that could conceivably cause cancer</p> <p>5 you're going to get the same result.</p> <p>6 But you can't have it both ways. You can't</p> <p>7 both claim that valsartan exposure causes cancer in</p> <p>8 the short term and at the very same time turn around</p> <p>9 and say, Oh, but you would never see it unless you</p> <p>10 looked at very long intervals of time. It's just</p> <p>11 internally contradictory, like much of the evidence</p> <p>12 that your experts have presented.</p> <p>13 MS. BOGDAN: Let's move to the Gomm</p> <p>14 study, please, G-O-M-M.</p> <p>15 (Document marked for identification</p> <p>16 as Chodosh Deposition Exhibit No. 23.)</p> <p>17 BY MS. BOGDAN:</p> <p>18 Q. And this is another one of the studies that</p> <p>19 you cited in your references to your medical</p> <p>20 monitoring report?</p> <p>21 A. That's correct. Since these were -- well --</p> <p>22 Q. Yes?</p> <p>23 A. -- I believe these are studies of</p> <p>24 populations exposed to product at issue in this</p> <p>25 litigation so that they're perfectly ignored.</p>
<p style="text-align: right;">Page 223</p> <p>1 me about this study is that this time frame</p> <p>2 corresponds quite closely to what your experts have</p> <p>3 claimed that NDMA can cause cancer in human beings.</p> <p>4 So while I believe that opinion,</p> <p>5 particularly from Dr. Panigraphy, is utterly</p> <p>6 unsupported by available scientific evidence and, in</p> <p>7 fact, contradicted by a battleship of medical and</p> <p>8 scientific evidence. It's the plaintiffs who have</p> <p>9 claimed that cancers can arise within this general</p> <p>10 period of time and people exposed to valsartan</p> <p>11 products containing NDMA or NDEA.</p> <p>12 So to some extent this is -- well, this</p> <p>13 would be a logical test of your expert's predictions</p> <p>14 and it says their predictions are wrong.</p> <p>15 Q. I'm asking if you consider a 4.6 follow-up</p> <p>16 period for a study with cancer as the endpoint a</p> <p>17 sufficient period of time?</p> <p>18 MR. INSOGNA: Objection to form.</p> <p>19 THE WITNESS: A sufficient period of</p> <p>20 what?</p> <p>21 BY MS. BOGDAN:</p> <p>22 Q. Can you see that as a limitation of the</p> <p>23 study?</p> <p>24 A. In general, longer follow-up is better for</p> <p>25 cancer outcomes. However, in this case, you could</p>	<p style="text-align: right;">Page 225</p> <p>1 Q. And in the Gomm study a statistically</p> <p>2 significant association was found between exposure</p> <p>3 to NDMA contaminated valsartan and hepatic cancer;</p> <p>4 isn't that correct?</p> <p>5 A. You've read the conclusion correctly.</p> <p>6 However, as I believe I noted in my -- in both of my</p> <p>7 reports that there was no dose response effect for</p> <p>8 the liver as would be expected and that the multiple</p> <p>9 testing adjustment was not made and so the absence</p> <p>10 of those two things -- I do not put a great deal of</p> <p>11 weight on that particular finding.</p> <p>12 And, in fact, the study that we just looked</p> <p>13 in Pottgard, I don't think they saw any liver</p> <p>14 cancer so that's -- for first principles you have a</p> <p>15 marginal -- at best a marginal association that was</p> <p>16 not seen in another study so that is sort of the</p> <p>17 opposite of a robust or a consistent finding, so I</p> <p>18 put very little weight on that.</p> <p>19 Q. But the authors of the Gomm study did find a</p> <p>20 statistically significant association between</p> <p>21 exposure to NDMA-contaminated valsartan and hepatic</p> <p>22 cancer, correct?</p> <p>23 A. As it says it's associated with a slightly</p> <p>24 increased risk of hepatic cancer, no association</p> <p>25 with risk of cancer overall. And as I've said, it</p>

<p>Page 226</p> <p>1 may have been nominally marginally significant, but 2 the fact that, to my recollection, was not adjusted 3 overall in the study and the fact that there's no 4 dose response and the fact that another study of 5 patients exposed to the same products there's no 6 liver cancer that tells me this is not a consistent 7 finding. 8 Q. All right. 9 If you could please look at the results on 10 the first page of the study and it says on the 11 results "A total of 780,871 persons who had filed a 12 prescription for valsartan between 2012 and 2017 13 were included in the study," correct? 14 A. Correct. 15 Q. And that would make this a larger study size 16 than the Pottegard study, correct? 17 A. Larger does not mean better. 18 Q. I didn't ask better, I asked if it was 19 larger? 20 A. I don't recall what the number was in 21 Pottegard. 22 Q. The number in Pottegard was 5,150 Danish 23 patients. The Pottegard had 5,150 patients and this 24 study had 780,000-plus patients and then the results 25 read as follows: "There was no association between</p>	<p>Page 228</p> <p>1 Q. On the very first page of the study, Doctor, 2 under the summary? 3 A. Okay, so not in the "Results" section in the 4 "Results" section of the summary. Okay. 5 Q. Right, that's right. 6 So I'll ask my question one more time since 7 now we're oriented to where I was reading from. 8 The last sentence of the "Results" section 9 in the summary of the study reads, "A statistically 10 significant association was found, however, between 11 exposure to NDMA-contaminated valsartan and hepatic 12 cancer"; isn't that true? 13 A. You read those words correctly. And so, for 14 instance, it also says in this paper, "We cannot 15 rule out residual confounding." 16 Q. Oh. 17 A. So, for instance, they did not adjust for 18 factors that might have influenced risk factors for 19 liver cancer. And this drug is being given to a 20 population of people with hypertension, in general, 21 who to my understanding of liver cancer risk factors 22 are going to have an increased risk of liver cancer. 23 So when you have findings that are not 24 adjusted for multiple testing, do not show a dose 25 response, are very close to 1.0 and have not been</p>
<p>Page 227</p> <p>1 the exposure to NDMA-contaminated valsartan and the 2 overall risk of cancer" -- 3 A. I'm sorry, where are you reading? 4 Q. I'm reading from -- 5 A. Is that the beginning of the "Results" 6 section or where is that? Okay, got it. 7 Q. That is in the "Results" section. I first 8 read -- I'm reading the whole section. 9 A. Yes, just -- years are not accessible so I 10 just have a little icon of a table, but I can't 11 actually see that table. 12 Q. I'm sorry, and the audio isn't great either. 13 But my last question is does the "Results" 14 section say in the final sentence in the "Results" 15 section "A statistically significant association was 16 found, however, between exposure to 17 NDMA-contaminated valsartan and hepatic cancer"? 18 A. I'm sorry, where are you reading? 19 Q. I read the last sentence of the "Results" 20 section? 21 MR. INSOGNA: On the first page. 22 THE WITNESS: I'm looking at the end 23 of the "Results" section and that isn't the 24 end of the "Results" section, so... 25 BY MS. BOGDAN:</p>	<p>Page 229</p> <p>1 adjusted for risk factors for the disease, that 2 is -- in my opinion, that's extraordinarily weak 3 evidence. 4 Q. And from your -- 5 MS. BOGDAN: You can pull that down. 6 BY MS. BOGDAN: 7 Q. With regard to the contamination of -- 8 contaminated valsartan, do the higher milligram 9 doses of valsartan always have a higher amount of 10 NDMA compared to the lower doses of valsartan or 11 does it vary by manufacturer, different lots, 12 et cetera? 13 A. It varies by manufacturer and by different 14 lots. 15 MS. BOGDAN: Those are all the 16 questions I have. 17 MR. INSOGNA: Rosemarie, I will have 18 some follow-up questions. I'm anticipating 19 they will be pretty limited. I would like 20 to take maybe ten minutes to look through my 21 notes and get that together. 22 THE VIDEOGRAPHER: Off the record at 23 5:36. 24 (Brief recess.) 25 THE VIDEOGRAPHER: We are back on the</p>

<p style="text-align: right;">Page 230</p> <p>1 record at 5:53. 2 BY MR. INSOGNA: 3 Q. All right. Dr. Chodosh, I appreciate you 4 bearing with us today. I have just a few follow-up 5 questions based on Counsel's questions as to earlier 6 today. 7 The first question for you, did you read the 8 plaintiffs' medical monitoring complaint in this 9 case? 10 A. Yes, I did. 11 Q. And did you read their memorandum of law in 12 support of their motion to certify a class for 13 medical monitoring? 14 A. Yes, I did. 15 Q. In those documents, did you see a reference 16 to a specific numerical lifetime cumulative exposure 17 threshold for NDMA or NDEA that would qualify a 18 plaintiff for membership in their proposed class? 19 A. No, I did not. The algorithm appears to be 20 predicated entirely on how many months of a 21 particular manufacturer's product one took. There 22 are no numbers in there that would translate to an 23 NDMA/NDEA level. 24 Q. And is that an opinion that you have set 25 forth in your report in this case?</p>	<p style="text-align: right;">Page 232</p> <p>1 bit higher, it's irrelevant because on a ratio basis 2 they're tiny compared to endogenous production and 3 the levels needed to generate cancer. 4 And the second point I just have to 5 underscore is the language of those papers is 6 talking about NDMA levels, but in none of those 7 papers, to my knowledge, are NDMA levels ever 8 measured in the food that any participant, was 9 exposed to in any of these studies. These are 10 estimates based on, you know, old food tables, so 11 they're not even measuring the thing that is -- they 12 are attempting to associate with a cancer outcome. 13 Q. And I think I understand your point there 14 about the measuring in the dietary studies. 15 Just so our record is clear, what is the 16 significance to your opinions about that lack of 17 measuring of NDMA levels in food? 18 A. So if you don't actually measure the NDMA 19 levels in the food that participants took you can't 20 possibly know what their exposures actually were. 21 You're estimating based on, you know, a series of 22 food charts and self-reported eating behaviors and 23 lots of things that are notoriously unreliable. 24 And in addition to that, there are thousands 25 of things in the food not being measured, so dietary</p>
<p style="text-align: right;">Page 231</p> <p>1 A. Yes, it is. It's set forth in my opinion 2 that there is no way to go from that algorithm to 3 determine a specific exposure of a plaintiff to NDMA 4 or NDEA. 5 Q. And in the sections of your supplemental 6 report that discuss those opinions about that 7 algorithm, have you set forth the basis for your 8 opinions and the details surrounding those opinions? 9 A. Yes, I have. 10 Q. Earlier today Counsel asked you a number of 11 questions about studies of dietary exposure to NDMA. 12 Do you generally recall that questioning? 13 A. Yes, I do. 14 Q. Does dietary exposure to NDMA or NDEA factor 15 into the opinions that you've offered in this case? 16 A. It factors into from the standpoint that I'm 17 trying to factor in all the information that I can 18 get. So from that standpoint, yes, but the critical 19 aspect or the two critical aspects of diet are that 20 the estimates of dietary intake are minuscule 21 compared to endogenous exposures and are minuscule 22 compared to the lowest dose that has ever been shown 23 to cause cancer in any animal. 24 So whether those dietary levels that are 25 estimated of NDMA are a little bit lower or a little</p>	<p style="text-align: right;">Page 233</p> <p>1 studies are infamously subject to all sorts of 2 inaccuracy. And that's just one of the reasons why, 3 as set forth in my report, they are an unreliable 4 basis to determine a threshold for increased risk 5 due to exposure to NDMA. 6 Q. Now, a few responses ago or maybe your prior 7 response, you mentioned that on a ratio basis the 8 levels estimated in these dietary studies are 9 minuscule compared to endogenous NDMA formation. 10 Is there also set forth in your report an 11 opinion about the ratio basis of potential exposure 12 to NDMA or NDEA through valsartan and endogenous 13 production? 14 A. Yes, there are opinions in my report and it 15 is similar to diet. They are very low exposures 16 compared to endogenous exposures to NDMA and 17 certainly -- well, compared to the lowest possible 18 dose of NDMA that could cause cancer in laboratory 19 animals. 20 Q. And just so I make sure that I'm clear on 21 that. 22 The level of potential exposure to NDMA or 23 NDEA through valsartan is are you saying lower -- 24 you tell me, as compared against endogenous and then 25 also as compared against the lowest level shown to</p>

<p>Page 234</p> <p>1 cause any cancer in any mammal species.</p> <p>2 A. So endogenous levels of NDMA production as</p> <p>3 it has been estimated are up to a thousand times</p> <p>4 higher than the levels of likely exposure to</p> <p>5 plaintiffs who took valsartan products that might</p> <p>6 have had NDMA or NDEA and they are -- and the level</p> <p>7 of NDMA exposure required to generate cancers in an</p> <p>8 animal are even higher than the endogenous levels.</p> <p>9 So there's just an enormous gulf between the</p> <p>10 lowest dose of NDMA that would cause cancer in even</p> <p>11 the most sensitive animal and the greatest amount of</p> <p>12 NDMA or NDEA that a plaintiff could have been</p> <p>13 exposed to as a consequence of taking valsartan</p> <p>14 products.</p> <p>15 Q. Okay, I understand that. Thank you.</p> <p>16 I'm going to go back to something that we</p> <p>17 talked about very early in the day, so forgive me.</p> <p>18 But Counsel asked you whether you were</p> <p>19 offering any opinions about whether any of the</p> <p>20 specific tests in plaintiffs' medical monitoring</p> <p>21 plan were appropriate for people who are at risk of</p> <p>22 cancer.</p> <p>23 Do you remember generally those questions?</p> <p>24 A. I do.</p> <p>25 Q. Okay. So, first, let me ask you, are you</p>	<p>Page 236</p> <p>1 involves?</p> <p>2 A. Yes, I do have an opinion.</p> <p>3 Q. What is that opinion?</p> <p>4 A. They should not.</p> <p>5 Q. Okay. And why is that?</p> <p>6 A. Because for the many reasons articulated in</p> <p>7 my original report and my supplemental report the</p> <p>8 exposures are far, far too low to conceivably</p> <p>9 elevate risk for cancer. So the risk of cancer of</p> <p>10 the population of people who took valsartan products</p> <p>11 during this period of time, is effectively the same</p> <p>12 risk of cancer as everybody else in the country.</p> <p>13 So if you're not elevated risk compared to</p> <p>14 other people, then you get no benefit from some</p> <p>15 additional kind of screening. And what you get is</p> <p>16 the additional risk of harm that comes from doing</p> <p>17 screening procedures that basically are not</p> <p>18 indicated in this population.</p> <p>19 Q. Okay. And I understand that was sort of an</p> <p>20 encapsulation of your report.</p> <p>21 Are those opinions that you just summarized</p> <p>22 for us set forth in detail in your original and</p> <p>23 supplemental reports in this litigation?</p> <p>24 A. Yes, they are.</p> <p>25 Q. And do you set forth each of the bases for</p>
<p>Page 235</p> <p>1 aware whether there are cancer-screening protocols</p> <p>2 in place for the general population of Americans?</p> <p>3 A. There are screening protocols that are</p> <p>4 recommended for people that -- as implemented by</p> <p>5 physicians talking to their patients, yes.</p> <p>6 Q. Now, Counsel's questions were about whether</p> <p>7 specific tests were appropriate for people who are</p> <p>8 at risk of cancer.</p> <p>9 Let me ask you, generally speaking, who is</p> <p>10 at risk of cancer?</p> <p>11 A. All human beings are at risk of cancer.</p> <p>12 Q. And over the course of a lifetime, what is</p> <p>13 the cancer risk in the general population?</p> <p>14 A. A lifetime cancer risk in this country</p> <p>15 approaches one out of two people.</p> <p>16 Q. Now, when you were answering those questions</p> <p>17 about the specific tests and testing protocol put</p> <p>18 forth by plaintiffs, did I understand correctly that</p> <p>19 you're not offering any opinions about whether any</p> <p>20 specific test would be appropriate for any plaintiff</p> <p>21 in this litigation?</p> <p>22 A. That's correct.</p> <p>23 Q. Do you have any opinion about whether any of</p> <p>24 the plaintiffs should undergo any screening program</p> <p>25 regardless of which tests the proposed program</p>	<p>Page 237</p> <p>1 each of the opinions that you offered in your</p> <p>2 report?</p> <p>3 A. Yes, I do.</p> <p>4 Q. And do you identify the sources that you</p> <p>5 considered in forming those opinions?</p> <p>6 A. Yes, I did.</p> <p>7 MR. INSOGNA: I don't have any</p> <p>8 further questions subject to anything that</p> <p>9 Counsel may ask you.</p> <p>10 BY MS. BOGDAN:</p> <p>11 Q. So you cite extensively in your medical</p> <p>12 monitoring report to the Liteplo 2002 study about</p> <p>13 N-Nitrosodimethylamine, correct?</p> <p>14 MR. INSOGNA: I'm going to object.</p> <p>15 That's beyond the scope of what I just asked</p> <p>16 him about.</p> <p>17 BY MS. BOGDAN:</p> <p>18 Q. Well, I'm going to get right to it then.</p> <p>19 You just testified on redirect regarding the</p> <p>20 scaling of doses of NDMA between animals and humans,</p> <p>21 right, are you aware that the Liteplo study which</p> <p>22 you cite extensively in your report reads "Scaling</p> <p>23 for variations in the ratio of surface area to body</p> <p>24 weight between rodent species and humans was not</p> <p>25 considered appropriate for the measures of exposure</p>

<p>Page 238</p> <p>1 response developed on the basis of experimental data</p> <p>2 in animals, since it is highly probable that the</p> <p>3 carcinogenicity of NDMA is mediated primarily</p> <p>4 through the generation of an active metabolite,</p> <p>5 i.e., the methyldiazonium ion."</p> <p>6 MR. INSOGNA: So --</p> <p>7 BY MS. BOGDAN:</p> <p>8 Q. Are you aware that that study says that?</p> <p>9 MR. INSOGNA: I'm going to make the</p> <p>10 same objection and just point out that you</p> <p>11 asked him extensively about what's in the</p> <p>12 Liteplo or Liteplo study and this is not</p> <p>13 something that I covered in my redirect and</p> <p>14 it's something that you certainly could have</p> <p>15 asked him about before. I won't instruct</p> <p>16 Dr. Chodosh not to answer, though.</p> <p>17 THE WITNESS: I'm happy to answer it</p> <p>18 because you made my point for me, so thank</p> <p>19 you very much.</p> <p>20 I did not do any scaling based on</p> <p>21 surface area. So the very statement that</p> <p>22 you read that says "Scaling by surface area</p> <p>23 is not appropriate," I didn't scale by</p> <p>24 surface area. I scaled by weight, which is</p> <p>25 exactly what the FDA does and exactly what</p> <p>Page 239</p> <p>1 EMA does and exactly what Health Canada</p> <p>2 does, so you've made my point for me, thank</p> <p>3 you.</p> <p>4 BY MS. BOGDAN:</p> <p>5 Q. You scaled between the weight of the rodent</p> <p>6 and the weight of a person, correct?</p> <p>7 A. Milligrams --</p> <p>8 MR. INSOGNA: Same objections.</p> <p>9 THE WITNESS: Milligrams per</p> <p>10 kilogram, that is not surface area.</p> <p>11 BY MS. BOGDAN:</p> <p>12 Q. The species scale between a rodent and a</p> <p>13 human, correct?</p> <p>14 A. I didn't hear the question. Could you</p> <p>15 repeat it?</p> <p>16 Q. You scaled between a rodent and a human,</p> <p>17 correct?</p> <p>18 A. I scaled between a rodent and human as we've</p> <p>19 talked about many times, both now and in September,</p> <p>20 based on milligram per kilogram exposure which is,</p> <p>21 number one, exactly what the FDA does and the risk</p> <p>22 assessment that you showed to me, as well as EMA, as</p> <p>23 well as Health Canada.</p> <p>24 And I did not use a surface area scaling</p> <p>25 factor, which is what you just read what Liteplo</p>	<p>Page 240</p> <p>1 says is inappropriate. And I agree, it's not what I</p> <p>2 did, so please don't mischaracterize what I did.</p> <p>3 MS. BOGDAN: The study speaks for</p> <p>4 itself, but I don't have any further</p> <p>5 questions.</p> <p>6 MR. INSOGNA: I don't either.</p> <p>7 THE VIDEOGRAPHER: Okay. Hearing no</p> <p>8 further questions, that concludes today's</p> <p>9 deposition and the time is 6:08 p.m.</p> <p>10 (Witness excused.)</p> <p>11 ---</p> <p>12</p> <p>13</p> <p>14</p> <p>15</p> <p>16</p> <p>17</p> <p>18</p> <p>19</p> <p>20</p> <p>21</p> <p>22</p> <p>23</p> <p>24</p> <p>25</p> <p>Page 241</p> <p>1 C E R T I F I C A T I O N</p> <p>2 I, MARGARET M. My name is Alex</p> <p>5 Jandrow, I'm a videographer for Golkow</p> <p>6 Litigation Services.</p> <p>7 Today's date is March 10, 2022,</p> <p>8 and the time is 9:19 a.m.</p> <p>9 This video deposition is being</p> <p>10 held in Duane Morris LLP of Boston</p> <p>11 Massachusetts in the matter of</p> <p>12 Valsartan, Losartan, and Irbesartan</p> <p>13 Products Liability Litigation, MDL</p> <p>14 Number 2875, for the United States</p> <p>15 District Court, District of New</p> <p>16 Jersey.</p> <p>17 The deponent is Punam Keller,</p> <p>18 MD.</p> <p>19 And the court reporter is</p> <p>20 Maureen O'Connor Pollard.</p> <p>21 Counsel will now introduce</p> <p>22 themselves for the record.</p> <p>23 MR. DAVIS: John Davis and</p> <p>24 Ruben Honik for the plaintiffs.</p>	<p style="text-align: right;">Page 12</p> <p>1 Q. Okay. Let me start just with</p> <p>2 some background questions for you.</p> <p>3 When were you engaged as an</p> <p>4 expert in this case?</p> <p>5 A. In -- at the end of last year.</p> <p>6 Q. Okay. So November, December?</p> <p>7 A. Yes, that period.</p> <p>8 Q. Okay. Have you given testimony</p> <p>9 under oath before?</p> <p>10 A. Yes.</p> <p>11 Q. Okay. About how many times?</p> <p>12 A. Three, including this one.</p> <p>13 Q. Okay. So two prior times.</p> <p>14 Would that have been in the</p> <p>15 capacity as an expert witness?</p> <p>16 A. Yes.</p> <p>17 Q. Your CV, I believe, lists two</p> <p>18 Johnson & Johnson pelvic mesh cases. Is that</p> <p>19 what you're referring to for your past</p> <p>20 testimony?</p> <p>21 A. Yes.</p> <p>22 Q. Okay. Have you offered an</p> <p>23 expert report in a case where you have not</p> <p>24 been deposed under oath?</p>
<p style="text-align: right;">Page 11</p> <p>1 MR. GOLDBERG: Seth Goldberg on</p> <p>2 behalf of the ZHP defendants and</p> <p>3 defendants.</p> <p>4 MR. SMOLIJ: Alek Smolij on</p> <p>5 behalf of the ZHP defendants.</p> <p>6 MS. ANDRAS: Tiffany Andras on</p> <p>7 behalf of Teva and Actavis</p> <p>8 Pharmaceuticals.</p> <p>9 MR. DAVIS: Good morning,</p> <p>10 Dr. Keller. How are you today?</p> <p>11 ///</p> <p>12 PUNAM ANAND KELLER, Ph.D.,</p> <p>13 having been duly identified and sworn, was</p> <p>14 examined and testified as follows:</p> <p>15 ///</p> <p>16 THE WITNESS: And the first</p> <p>17 thing I want to do is, it's not MD,</p> <p>18 it's Ph.D.</p> <p>19 EXAMINATION</p> <p>20 BY MR. DAVIS:</p> <p>21 Q. Okay. Let me try that again.</p> <p>22 Good morning, Dr. Keller. How</p> <p>23 are you this morning?</p> <p>24 A. Good. How are you?</p>	<p style="text-align: right;">Page 13</p> <p>1 A. Yes.</p> <p>2 Q. About how many times?</p> <p>3 A. Three.</p> <p>4 Q. Okay. And the -- going back to</p> <p>5 the J&J pelvic mesh cases, on whose behalf</p> <p>6 did you submit an expert report?</p> <p>7 A. Defendants.</p> <p>8 Q. That would be the Johnson &</p> <p>9 Johnson defendants?</p> <p>10 A. Johnson & Johnson/Ethicon.</p> <p>11 Q. Which is a subsidiary of</p> <p>12 Johnson & Johnson?</p> <p>13 A. Yes.</p> <p>14 Q. To the best of your</p> <p>15 recollection, what did those expert opinions</p> <p>16 relate to?</p> <p>17 A. They related to my expertise on</p> <p>18 consumer decision-making.</p> <p>19 Q. In the context of evaluating</p> <p>20 Ethicon/J&J's marketing of their pelvic mesh</p> <p>21 products?</p> <p>22 A. Could you repeat that question?</p> <p>23 Q. Sure.</p> <p>24 Would that have been in the</p>

<p style="text-align: right;">Page 14</p> <p>1 context of J&J and Ethicon's marketing and 2 promotion of their pelvic mesh products? 3 A. Could you be more specific? 4 Q. Well, sure. 5 Why don't you tell me what 6 your -- what you were evaluating from a 7 consumer decision-making standpoint regarding 8 Ethicon's pelvic mesh products. 9 A. I was providing opinions on how 10 consumers -- the range of consumer responses 11 to Ethicon's marketing communication for the 12 pelvic mesh. 13 Q. You mentioned Ethicon's 14 marketing communications. Can you describe 15 to me what those included? 16 A. It's been a while. So to the 17 best of my recollection, it was brochures, 18 and I don't remember anything else. 19 Q. Okay. Brochures like the 20 product labeling, or handouts to physicians? 21 A. I don't recall. 22 Q. Okay. Did you do any kind of 23 empirical study, like a survey, in that case? 24 A. That was not my -- no, that was</p>	<p style="text-align: right;">Page 16</p> <p>1 walk me through briefly your educational 2 background, if you don't mind. 3 A. I have a bachelor's in -- from 4 -- it used to be called Bombay University, 5 because that was the name of the city, it's 6 now been changed to Mumbai, but it was first 7 Bombay University. And I majored in 8 economics and statistics, and -- major in 9 economics, minor in statistics. 10 And then I got an MBA with a 11 major in marketing also from Bombay. The 12 name of the school also has been changed a 13 little bit, but it used to be called, in 14 short, JBIMS. 15 And then I came to get a Ph.D 16 in marketing from Northwestern University in 17 the Kellogg school of management. 18 Q. Thank you. 19 So your postgraduate degrees, 20 meaning your MBA and Ph.D, those are in the 21 field of marketing? 22 A. Yes. 23 Q. Okay. 24 A. I'd like to just add with, my</p>
<p style="text-align: right;">Page 15</p> <p>1 not my task. 2 Q. Okay. Have you ever done a 3 damages analysis as an expert in a 4 litigation? 5 A. Define what you mean by 6 "analysis." 7 Q. Have you ever been tasked, for 8 example, with calculating the amount of 9 litigation damages in a case? 10 A. No. 11 Q. Okay. Have you -- I believe 12 you may have answered this indirectly, but 13 you said you did not do a survey or other 14 empirical study of any kind in the J&J case. 15 Have you ever done a survey or empirical 16 study of any kind in litigation in an expert 17 capacity at all? 18 A. No. 19 Q. Okay. Have you ever conducted 20 a survey or some other kind of empirical 21 study outside the context of litigation? 22 A. Yes, frequently. 23 Q. Frequently. 24 Okay. Describe for me, just</p>	<p style="text-align: right;">Page 17</p> <p>1 specialization is consumer behavior. 2 Q. Okay. I've seen that variously 3 referred to as consumer psychology. Similar 4 concept? 5 A. Yes. 6 Q. Okay. Did you go straight to 7 academia after obtaining your postgraduate 8 degrees? 9 A. Yes. 10 Q. Okay. Walk me through just 11 very briefly that history, if you don't mind, 12 and conclude with what you're doing 13 currently. 14 A. I -- upon graduation from the 15 Ph.D program, I have held marketing positions 16 in multiple institutions. 17 Do you need a list of all the 18 institutions? 19 Q. I don't believe so, but let me 20 clarify. 21 You said "marketing positions." 22 You mean like faculty? 23 A. Yes, I was a marketing 24 professor.</p>

<p style="text-align: right;">Page 18</p> <p>1 Q. Marketing professors.</p> <p>2 Okay. And you're currently a</p> <p>3 professor of marketing at Dartmouth?</p> <p>4 A. At the Tuck School of Business</p> <p>5 at Dartmouth.</p> <p>6 Q. Do you teach undergrad or</p> <p>7 graduate students there?</p> <p>8 A. Both.</p> <p>9 Q. Both. Okay.</p> <p>10 All marketing classes?</p> <p>11 A. All related to marketing.</p> <p>12 Q. Okay. My next question was</p> <p>13 what's your research focus, but I believe you</p> <p>14 answered that by telling me it's consumer</p> <p>15 behavior and consumer psychology. Is that</p> <p>16 how you would describe your research focus?</p> <p>17 A. That would be the broadest</p> <p>18 description. A more specific description</p> <p>19 would be with an emphasis on how consumers</p> <p>20 process information, form attitudes and</p> <p>21 beliefs, intentions to purchase, and purchase</p> <p>22 products and services. And the two contexts</p> <p>23 that I study are health and financial</p> <p>24 well-being.</p>	<p style="text-align: right;">Page 20</p> <p>1 there. Did you draft that and provide that</p> <p>2 to them?</p> <p>3 A. I don't recall.</p> <p>4 Q. Okay. But you did say you</p> <p>5 approved the content, I suppose, right?</p> <p>6 A. Yes.</p> <p>7 Q. Okay. It says that "Professor</p> <p>8 Keller is an expert in consumer information</p> <p>9 processing and choice behavior. She studies</p> <p>10 the application of social marketing</p> <p>11 principles and behavioral theory in consumer</p> <p>12 and employee contexts, with a focus on</p> <p>13 designing and implementing consumer</p> <p>14 communication programs."</p> <p>15 Did I read that correctly?</p> <p>16 A. Yes.</p> <p>17 Q. Do you agree with that</p> <p>18 description of your expertise?</p> <p>19 A. It's a subset of my expertise,</p> <p>20 yes.</p> <p>21 Q. When you say "a subset," what</p> <p>22 do you mean by that?</p> <p>23 A. I just shared, you know, I have</p> <p>24 broad expertise that goes beyond how</p>
<p style="text-align: right;">Page 19</p> <p>1 MR. DAVIS: Okay. I'm going to</p> <p>2 mark Keller Exhibit 1, which I'm</p> <p>3 handing to the reporter.</p> <p>4 A. Thank you.</p> <p>5 (Whereupon, Keller Exhibit</p> <p>6 Number 1 was marked for</p> <p>7 identification.)</p> <p>8 BY MR. DAVIS:</p> <p>9 Q. Do you recognize that as a web</p> <p>10 bio for you, Dr. Keller, from the Analysis</p> <p>11 Group website?</p> <p>12 A. I have actually not seen this</p> <p>13 on the website before, but, okay.</p> <p>14 Q. So your testimony is you've</p> <p>15 never seen this bio for you that's on the</p> <p>16 Analysis Group website?</p> <p>17 A. No, I didn't say that. I know</p> <p>18 that they sought approval for putting my bio</p> <p>19 on their website, and they asked me for some</p> <p>20 information, and my recall is that I approved</p> <p>21 it. But I didn't actually see it on the</p> <p>22 website.</p> <p>23 Q. Okay. So under -- there's a</p> <p>24 paragraph under "Summary of Experience"</p>	<p style="text-align: right;">Page 21</p> <p>1 consumers process information. It also</p> <p>2 includes how consumers form attitudes and</p> <p>3 beliefs, intentions to purchase, and purchase</p> <p>4 behavior of products and services.</p> <p>5 Q. Okay. So this -- you would say</p> <p>6 that this description that I just read you</p> <p>7 from your Analysis Group bio would be sort of</p> <p>8 a subset, as you say, of your broader</p> <p>9 expertise in the field of consumer behavior?</p> <p>10 A. Yes. I view it as a summary.</p> <p>11 Like any summary bio, it is not going to be</p> <p>12 exhaustive.</p> <p>13 Q. Have you ever taught an</p> <p>14 economics class, Dr. Keller?</p> <p>15 A. No.</p> <p>16 Q. Do you have any postgraduate</p> <p>17 degrees in economics?</p> <p>18 A. No.</p> <p>19 Q. Do you research in the field of</p> <p>20 economics?</p> <p>21 A. Please be more specific.</p> <p>22 Q. Well, does any of your</p> <p>23 research -- would you characterize any of the</p> <p>24 research that you've done or publications</p>

<p style="text-align: right;">Page 22</p> <p>1 that you've authored, have they been in the 2 field of economics? 3 A. Yes, in the field of behavioral 4 economics. 5 Q. Explain what you mean by 6 "behavioral economics." 7 A. So -- and I'm going to try to 8 simplify things, and just for the purposes of 9 comparison. 10 By no means do I want to say 11 that what I'm saying is an exhaustive 12 description of both fields because that would 13 take us many, many days. 14 From my point of view, and many 15 others, economics -- when economists, or in 16 the field of economics, when they study 17 consumers they use utility theory, and the 18 field of behavioral economics was formed 19 because utility theory was inadequate to 20 explain consumer behavior. 21 To the best of my recollection, 22 there are at least four Nobel Prize winners 23 in the four economic sciences, the Nobel 24 Prize in economic sciences that work on</p>	<p style="text-align: right;">Page 24</p> <p>1 sociology, economics, and anthropology. 2 Q. Can you think of any other 3 journals, or is that the one? 4 A. So Journal of Consumer 5 Psychology is similar. Many of the journals 6 are multidisciplinary, and so it's hard for 7 me to separate the disciplines. 8 Q. You said that there were 9 multiple subdisciplines, for example, for the 10 Journal of Consumer Research. Was your -- 11 and I think you said you were an area editor? 12 A. Correct. 13 Q. Okay. What do you mean by 14 "area editor"? 15 A. So the review process varies 16 for different journals, but a common review 17 process is when a paper is submitted for 18 review for possible publication in the 19 journal, the editor works with the area 20 editor to determine who those reviewers will 21 be, and after the reviews are -- after the 22 reviews do their peer reviews, the area 23 editor gets all of the reviews and makes a 24 recommendation to the editor for the</p>
<p style="text-align: right;">Page 23</p> <p>1 behavioral economics. 2 Q. Okay. But I guess if I'm 3 understanding you correctly, and keeping it 4 high level, when you say "behavioral 5 economics," you're still -- that still falls 6 within the field of consumer behavior, 7 correct? 8 A. It is, and beyond. So I have 9 co-authors that are behavioral economists 10 that are in the economics department. 11 Q. But your focus would be on the 12 behavioral aspect of it, correct? 13 A. In large part, yes. 14 Q. Okay. Are you on any review 15 boards, editorial boards, or do you have any 16 peer-review duties for any economics-related 17 journal? 18 A. Yes. And I want to give you an 19 example. The Journal of Consumer Research, 20 for which in the past I was an area editor, 21 which is even higher than an editorial board 22 member, and have been on the editorial board 23 for many years until recently, is made up of 24 multiple subdisciplines such as psychology,</p>	<p style="text-align: right;">Page 25</p> <p>1 progression of that manuscript for maybe a 2 revision, rejection, acceptance, etcetera. 3 Q. So by "area editor," is that by 4 -- sort of by discipline? "Area" means sort 5 of discipline, and you would assign out -- 6 you would, as the area editor, say you got a 7 manuscript in, you would review the 8 manuscript and say, Oh, well, this pertains 9 mostly to the psychological subdiscipline, so 10 I'm going to send it over to this particular 11 reviewer? Is that sort of how it works? 12 A. It's quite close, yes. 13 Q. Okay. 14 A. You try to find reviewers who 15 are experts in the subject matter of the 16 article -- sorry, of the paper, not an 17 article yet, so that they can provide an 18 expert opinion. 19 Q. Okay. So as the area editor, 20 you would not have been doing the peer 21 reviewing yourself, you would have been 22 assigning it out to peer reviewers based on 23 their area of expertise? 24 A. I write a separate report, and</p>

<p style="text-align: right;">Page 26</p> <p>1 that also in that report includes my own 2 review of the article. And it's, I would 3 say, similar to what I would do as a reviewer 4 on the editorial review board. 5 Q. Okay. Putting aside your 6 behavioral economics, you wouldn't hold 7 yourself out as an expert in economic theory, 8 would you? 9 A. Please define what you mean by 10 "economic theory." 11 Q. Well, sure. I mean, would you 12 agree that the field of economics, like 13 there's, for example -- let me strike that. 14 There's an economics department 15 at Dartmouth, for example, correct? 16 A. Yes. 17 Q. Okay. And you said you've 18 never taught an economics class there? 19 A. Correct. 20 Q. Okay. Or anywhere, correct? 21 A. Correct. 22 Q. Okay. For any of the course 23 subject matter that would be subject to a 24 Ph.D in economics, you wouldn't characterize</p>	<p style="text-align: right;">Page 28</p> <p>1 Q. Sure. I don't disagree with 2 you that there's some level of crossover, but 3 do you agree that economics is a separate and 4 distinct discipline from marketing? 5 A. I do not. Marketing is really 6 a combination of multiple disciplines, which 7 is why the premier journal, the Journal of 8 Consumer Research, has in their description 9 of why the journal was formed was to 10 encourage researchers from multiple 11 disciplines, including economics, to study 12 the intersection between consumer research 13 and economics, because we're talking about 14 economics, it's true also for psychology, 15 anthropology, etcetera. 16 So it is very difficult for me 17 to say that as a consumer researcher that I 18 don't have any knowledge of economics. 19 Q. I'm not saying that you don't 20 have any knowledge of economics. I'm just 21 asking if you would agree that it's a 22 separate discipline. 23 A. Is there a separate degree in 24 economics, yes.</p>
<p style="text-align: right;">Page 27</p> <p>1 yourself as an expert on any of that, would 2 you? 3 A. I'm sorry, what do you mean by 4 "any of that"? 5 Q. Well, any -- let me reframe. 6 So you had to do quite a bit of 7 work to get your Ph.D in marketing, correct? 8 A. Yes. 9 Q. Okay. Would you imagine that 10 there's -- to get a Ph.D in economics, you 11 have to also do quite a bit of work that's 12 different? 13 A. Yes. And I'm sure there's some 14 overlap as well. 15 For example, in a Ph.D program, 16 and I was in a Ph.D program in the business 17 school where people were getting their Ph.Ds 18 with different specializations, and we all 19 had to take core classes, so our core classes 20 overlapped. And then we had what you might 21 call elective, so they're not called that in 22 a Ph.D program. So we all had core classes, 23 and then elective classes for our 24 specialization. Yeah.</p>	<p style="text-align: right;">Page 29</p> <p>1 Q. Okay. And, for example, at 2 Dartmouth there's a separate department of 3 economics that has a separate faculty of 4 professors and Ph.Ds who teach economics, 5 correct? 6 A. Yes. And since the time that 7 I've been at the Tuck School of Business at 8 Dartmouth, three of the faculty members from 9 the department of economics at Dartmouth 10 College in the college of arts and sciences 11 are now faculty members in the Tuck School of 12 Business. 13 Q. Okay. Faculty members of what 14 exactly? 15 A. We are all faculty members of 16 management with subspecialties. 17 Q. Okay. And their subspecialty, 18 for example, would be the economics side of 19 what you would study to get an MBA from Tuck, 20 correct? 21 A. Yes. 22 Q. Okay. Do you have any what I 23 would call -- well, are you familiar with the 24 prescription drug approval process in the</p>

Page 30	Page 32
<p>1 United States?</p> <p>2 A. I am not an expert, and don't</p> <p>3 have an opinion on that.</p> <p>4 Q. Okay. You do some</p> <p>5 health-related messaging initiatives, though,</p> <p>6 don't you? And you study -- I believe you</p> <p>7 said one of your consumer behavior sort of</p> <p>8 sub-research interest was health choices,</p> <p>9 correct?</p> <p>10 A. Yes.</p> <p>11 Q. Okay. So does that -- do you</p> <p>12 have some level of knowledge of how</p> <p>13 prescription drugs are approved in the US?</p> <p>14 A. I am an expert on how consumers</p> <p>15 make health-related decisions. I am not an</p> <p>16 expert on the approval process for health</p> <p>17 products and services.</p> <p>18 Q. Okay. Do you know what an NDA</p> <p>19 is, for example?</p> <p>20 A. No.</p> <p>21 Q. What about an ANDA?</p> <p>22 A. No.</p> <p>23 Q. Okay. Do you at least have an</p> <p>24 understanding that prescription drugs can't</p>	<p>1 MR. HONIK: You can stay on.</p> <p>2 It will just take a second, right?</p> <p>3 Thank you.</p> <p>4 Sorry for the interruption.</p> <p>5 (Pause.)</p> <p>6 BY MR. DAVIS:</p> <p>7 Q. Okay. So just to clarify my</p> <p>8 last question, you do understand that</p> <p>9 prescription drugs have to be pre-approved in</p> <p>10 the US, but I think your testimony is that</p> <p>11 you don't know much beyond just that fact, is</p> <p>12 that right?</p> <p>13 MR. GOLDBERG: Objection to</p> <p>14 form.</p> <p>15 A. That is not what I said. You</p> <p>16 asked me the question, and I answered it.</p> <p>17 And you did not ask me about anything beyond</p> <p>18 that, because that is vague, I don't know</p> <p>19 what beyond that means.</p> <p>20 BY MR. DAVIS:</p> <p>21 Q. Okay. So, well, let me</p> <p>22 rephrase it.</p> <p>23 What you're saying is you're</p> <p>24 generally familiar with the fact that</p>
Page 31	Page 33
<p>1 just simply be sold in the United States,</p> <p>2 that they actually have to go through a</p> <p>3 pre-approval process?</p> <p>4 A. Yes.</p> <p>5 Q. You shrugged a little bit</p> <p>6 there. Is there some level of confusion</p> <p>7 or...</p> <p>8 A. I shrugged because there were</p> <p>9 two questions, but I decided to answer</p> <p>10 because it was approval and pre-approval.</p> <p>11 And that's okay.</p> <p>12 Q. Sure. And if any of my</p> <p>13 questions are unclear, just ask me for</p> <p>14 clarification.</p> <p>15 A. Thank you.</p> <p>16 MR. HONIK: Before you proceed.</p> <p>17 Maureen, I have an e-mail from someone</p> <p>18 saying they're waiting to get in. I</p> <p>19 don't know who is letting people into</p> <p>20 the Zoom.</p> <p>21 THE WITNESS: Clearly I'm not.</p> <p>22 THE VIDEOGRAPHER: Do you want</p> <p>23 to go off the record so I can let them</p> <p>24 in?</p>	<p>1 prescription drugs have to be pre-approved in</p> <p>2 the US, but you are not familiar with the</p> <p>3 details of how that happens?</p> <p>4 A. I am not an expert on the</p> <p>5 pre-approval or the approval process --</p> <p>6 Q. Okay.</p> <p>7 A. -- for prescription drugs.</p> <p>8 Q. And likewise, is it your</p> <p>9 testimony that you would not have any</p> <p>10 expertise in FDA regulations regarding</p> <p>11 prescription pharmaceuticals after the point</p> <p>12 of approval?</p> <p>13 A. Could you repeat that?</p> <p>14 Q. Sure.</p> <p>15 Would it likewise be your</p> <p>16 testimony that you don't have any particular</p> <p>17 expertise regarding FDA regulations of</p> <p>18 prescription pharmaceuticals after the point</p> <p>19 of approval?</p> <p>20 A. I don't understand the</p> <p>21 question.</p> <p>22 Q. Sure.</p> <p>23 Do you understand that there</p> <p>24 are FDA regulations of approved prescription</p>

Page 34	Page 36
<p>1 pharmaceuticals?</p> <p>2 A. Yes.</p> <p>3 Q. Okay. Have you studied them in</p> <p>4 any detail?</p> <p>5 A. You would have to be more</p> <p>6 specific.</p> <p>7 Q. Have you studied those FDA</p> <p>8 regulations that you just testified existed</p> <p>9 in any detail?</p> <p>10 A. What does it mean "in any</p> <p>11 detail"?</p> <p>12 Q. Have you looked at the -- for</p> <p>13 example, have you looked at Title 21 of the</p> <p>14 Code of Federal Regulations?</p> <p>15 A. No.</p> <p>16 Q. Okay. Have you looked at any</p> <p>17 FDA regulations regarding prescription</p> <p>18 pharmaceuticals?</p> <p>19 A. You would need to be more</p> <p>20 specific.</p> <p>21 Q. Sure.</p> <p>22 You testified you were retained</p> <p>23 in this case in, I think, November or</p> <p>24 December of last year you said, correct?</p>	<p>1 at what the FDA regulations are regarding</p> <p>2 cGMPs?</p> <p>3 A. I am not an expert on</p> <p>4 manufacturing processes. I'm an expert on</p> <p>5 consumer decision-making.</p> <p>6 Q. Okay. Have you reviewed any</p> <p>7 FDA or congressional definitions of</p> <p>8 adulteration and misbranding of drugs?</p> <p>9 A. First, those were multiple</p> <p>10 questions. Could you ask, and be specific.</p> <p>11 Q. Sure, I'll break it down.</p> <p>12 Have you reviewed any FDA or</p> <p>13 congressional definitions of "adulteration"?</p> <p>14 A. No.</p> <p>15 Q. Okay. Same question for</p> <p>16 "misbranding."</p> <p>17 A. No.</p> <p>18 Q. You don't have any expertise in</p> <p>19 chemistry, do you?</p> <p>20 A. Please define "expertise in</p> <p>21 chemistry."</p> <p>22 Q. Have you studied chemistry</p> <p>23 ever?</p> <p>24 A. Only in school, high school.</p>
Page 35	Page 37
<p>1 A. Yes.</p> <p>2 Q. Since that time, do you recall</p> <p>3 looking at, as part of your work on this</p> <p>4 case, any FDA regulations regarding</p> <p>5 prescription pharmaceuticals?</p> <p>6 A. As is outlined in my report, I</p> <p>7 looked at some FDA-sourced material related</p> <p>8 to the valsartan recall.</p> <p>9 Q. That would be FDA announcements</p> <p>10 and the like specifically related to</p> <p>11 valsartan, correct?</p> <p>12 A. To the best of my recall, yes.</p> <p>13 Q. Okay. Do you recall looking at</p> <p>14 any FDA regulations of general applicability</p> <p>15 to prescription pharmaceuticals as part of</p> <p>16 your work in this case?</p> <p>17 A. Not that I recall.</p> <p>18 Q. Do you know what cGMPs are?</p> <p>19 A. I know what the acronym stands</p> <p>20 for.</p> <p>21 Q. Okay. What is that?</p> <p>22 A. Current manufacturing -- sorry,</p> <p>23 current good manufacturing practices.</p> <p>24 Q. Okay. Have you actually looked</p>	<p>1 Q. Okay. So you would not call</p> <p>2 yourself an expert chemist?</p> <p>3 A. No.</p> <p>4 Q. How about toxicology?</p> <p>5 A. I would not consider myself an</p> <p>6 expert in toxicology.</p> <p>7 Q. I'm going to mark your report,</p> <p>8 Dr. Keller, as Exhibit 2.</p> <p>9 (Whereupon, Keller Exhibit</p> <p>10 Number 2 was marked for</p> <p>11 identification.)</p> <p>12 MR. GOLDBERG: She has a copy</p> <p>13 of it.</p> <p>14 A. A copy of my report, yes. It's</p> <p>15 okay, I'm happy to use yours.</p> <p>16 BY MR. DAVIS:</p> <p>17 Q. You can keep mine, the marked</p> <p>18 copy, but if you feel more comfortable</p> <p>19 reviewing yours, that's fine.</p> <p>20 A. No, I'm fine with either copy.</p> <p>21 MR. DAVIS: Do you want a copy,</p> <p>22 Seth?</p> <p>23 MR. GOLDBERG: I'll take it</p> <p>24 just for recordkeeping purposes.</p>

Page 38

1 Thank you.
2 BY MR. DAVIS:
3 Q. Do you recognize what I've
4 handed to you as your expert report in this
5 case?
6 A. Yes.
7 Q. Okay. In drafting that expert
8 report, did you familiarize yourself at all
9 with Federal Rule of Civil Procedure 26 which
10 governs the use of an expert report in
11 federal court litigation?
12 A. No, I did not do it for this
13 case, but I did in the past when I had to
14 create an expert witness report.
15 Q. I'm going to read a statement
16 from that rule, and I'm going to ask you if
17 you feel your report complies with that. It
18 says, "The report must contain a complete
19 statement of all opinions the witness will
20 express, and the basis and reasons for them."
21 Do you feel that your report
22 complies with that provision of Rule 26?
23 A. Yes.
24 Q. Okay. Thank you.

Page 39

1 So there are no opinions that
2 you would be seeking to offer in this case
3 that are not in your report, is that correct?
4 A. Yes.
5 Q. And you've cited everything
6 that -- to the best of your ability, you've
7 cited everything that would support your
8 opinions in that report?
9 A. No, I cannot cite everything
10 that would support my opinions. This is a
11 subset of citations that would support my
12 opinions.
13 Q. Sure. Let me reframe the
14 question.
15 Are there any cites that are
16 out there that you intended to put in your
17 report that didn't make it in, to the best of
18 your memory and knowledge?
19 MR. GOLDBERG: Objection to
20 form.
21 A. Yeah, I don't know how to
22 answer the question.
23 BY MR. DAVIS:
24 Q. Well, I'm just asking, and

Page 40

1 maybe I should rephrase it, is, are there any
2 citations out there to anything that you
3 neglected to put in your report that you want
4 to tell me about today?
5 A. Well, I did not cite many of my
6 own publications because I felt that my
7 experience and my opinions reflected that
8 research expertise.
9 Q. Okay. So with the exception of
10 your research in publications, is there any
11 citation that's not in your report that you'd
12 like to tell me about today?
13 A. No.
14 Q. Okay. I believe your report is
15 signed January 12, 2022, is that right? I
16 believe that would be on the last page of
17 your report.
18 A. Yes.
19 Q. Do you recognize that as your
20 signature?
21 A. This one isn't signed.
22 MR. DAVIS: Seth, do you know
23 why that would be?
24 MR. GOLDBERG: I don't. I

Page 41

1 don't know how you would have a not
2 signed copy. That's interesting.
3 Can I see what you have there?
4 THE WITNESS: (Handing).
5 MR. DAVIS: It looks like it's
6 a digital signature. Perhaps it just
7 got -- when it got printed, that got
8 removed from the printing.
9 A. My copy is signed.
10 BY MR. DAVIS:
11 Q. My electronic copy is also
12 signed, so it must be a printing error.
13 Okay. So looking at --
14 A. Can I have --
15 MR. HONIK: Here's one with a
16 signature if you want it.
17 MR. DAVIS: Should we trade
18 out?
19 MR. GOLDBERG: Sure. We can do
20 that later.
21 BY MR. DAVIS:
22 Q. So when you signed your report
23 on January 12, 2022, did you feel that you
24 had set forth your complete statement of your

<p>Page 42</p> <p>1 opinions and the basis and reasons for them?</p> <p>2 A. Yes.</p> <p>3 Q. Okay. You didn't do any kind</p> <p>4 of survey or empirical study as part of your</p> <p>5 assignment in this case, did you?</p> <p>6 A. No, because I felt that there</p> <p>7 was evidence from consumers as well as</p> <p>8 literature from consumers that were</p> <p>9 sufficient to support my opinions.</p> <p>10 Q. We'll get into that a little</p> <p>11 bit later.</p> <p>12 But your answer is no, you did</p> <p>13 not do a survey or any kind of empirical</p> <p>14 study as part of your assignment in this</p> <p>15 case?</p> <p>16 A. Yes.</p> <p>17 Q. Okay. Have you been asked to</p> <p>18 at some point in the future?</p> <p>19 A. No.</p> <p>20 Q. I think you said earlier that</p> <p>21 you've done some consumer messaging in the</p> <p>22 field of healthcare, is that correct?</p> <p>23 A. Yes.</p> <p>24 Q. Okay. Can you describe that</p> <p>Page 43</p>	<p>Page 44</p> <p>1 or service valuation. And the messages</p> <p>2 contain information on the benefits and the</p> <p>3 costs of the advocated action to help</p> <p>4 consumers make the value determination.</p> <p>5 Q. Well, let's move away from the</p> <p>6 theoretical for a moment.</p> <p>7 And on the specific sort of</p> <p>8 messaging that you've designed for healthcare</p> <p>9 consumers, can you give me some examples of</p> <p>10 what the substance of those messages conveyed</p> <p>11 to them were?</p> <p>12 A. So first I object to it being</p> <p>13 characterized as "theoretical," because it is</p> <p>14 also very practical.</p> <p>15 And an example of the message</p> <p>16 would be, you know, here are the benefits of</p> <p>17 following -- in the message, there's a</p> <p>18 portion of the message that would focus on,</p> <p>19 Here are the benefits of following the</p> <p>20 advocated recommendations.</p> <p>21 Q. Let me --</p> <p>22 A. For example --</p> <p>23 Q. I didn't mean to cut you off.</p> <p>24 A. For example, one of my studies</p> <p>Page 45</p>
<p>1 work generally to me?</p> <p>2 A. I use my expertise in consumer</p> <p>3 decision-making to design communications that</p> <p>4 would create value for consumers.</p> <p>5 Q. And I think -- so is it fair to</p> <p>6 say that that messaging is directed to</p> <p>7 consumers specifically?</p> <p>8 A. In large part. I have also</p> <p>9 done work to design health communication to</p> <p>10 physicians to help them create value for</p> <p>11 consumers.</p> <p>12 Q. What was -- let's start with</p> <p>13 the messaging to consumers that you</p> <p>14 described. What would be the substance of</p> <p>15 those messaging campaigns that you've</p> <p>16 designed?</p> <p>17 A. As I've stated in my report,</p> <p>18 message factors are part of one of my</p> <p>19 frameworks, acronym MICI -- that stands for</p> <p>20 message-individual-contextual factors and the</p> <p>21 interaction between those -- are very</p> <p>22 important, so the message part of that is</p> <p>23 very important for consumers to consider as</p> <p>24 inputs when they are making a health product</p>	<p>1 is on encouraging women to get a -- to get</p> <p>2 screened regularly for mammograms, and so,</p> <p>3 you know, I would list the benefits of</p> <p>4 getting a mammogram, and then also try to</p> <p>5 anticipate some of the costs from a consumer</p> <p>6 point of view and try to overcome those.</p> <p>7 So, for example, a potential</p> <p>8 cost for a consumer might be the discomfort</p> <p>9 or pain from the mammogram testing procedure,</p> <p>10 and in my message I might include some coping</p> <p>11 methods for that, including managing</p> <p>12 expectations and maybe, you know, asking them</p> <p>13 to check to see if they can take pain</p> <p>14 medication and the like.</p> <p>15 Q. Okay. So you've given me an</p> <p>16 example, I believe, of an advocated</p> <p>17 recommendation, I believe that's the term you</p> <p>18 used, and that's getting screened for a</p> <p>19 mammogram. That would be an example of an</p> <p>20 advocated recommendation --</p> <p>21 A. Yes.</p> <p>22 Q. -- is that correct?</p> <p>23 For mammograms, let's run with</p> <p>24 that example. For a mammogram, are there any</p>

Page 46

1 sort of guidances or anything similar to that
 2 about when and how often individuals should
 3 get screened?
 4 A. Yes.
 5 Q. Okay. Would some of the
 6 content that's conveyed with that advocated
 7 recommendation, for example, cite to those
 8 guidances around compliance and the like?
 9 A. In the mammogram example,
 10 because there are multiple guidelines -- and
 11 this again supports my MICI framework because
 12 based on some individual differences such as
 13 your age, your health status, for example, or
 14 history of breast cancer, or cancer as
 15 another example, contexts in which the
 16 decision is made, you know, whether it is --
 17 whether one has a relationship with a primary
 18 care physician or specialist, all of those
 19 factors are considered in the design of -- in
 20 my research, in the design of multiple
 21 communication that is tailored to different
 22 audiences.
 23 Q. So I believe you said that
 24 there was -- there were some guidances, for

Page 47

1 example, about when and how often to get
 2 screened for a mammogram, correct?
 3 A. Yes.
 4 Q. Okay. Who issues those
 5 guidances?
 6 A. I don't know. I work with
 7 physicians, or someone from the medical
 8 community, that gives me the information, and
 9 I use that information in the messages.
 10 When I have to do an experiment
 11 where it's a hypothetical situation, I
 12 don't -- you know, I go through a human
 13 subject review committee.
 14 When it's in a practical
 15 context, there are other reviewers.
 16 Q. So I believe you said you did
 17 use that information regarding when and how
 18 often to get screened in the messages you
 19 designed, for example, in this instance for
 20 mammograms, correct?
 21 A. Yes.
 22 Q. Okay. Have you done any
 23 similar messaging for pharmaceutical
 24 products?

Page 48

1 A. Yes.
 2 Q. Does the messages supporting
 3 the advocated recommendation for
 4 pharmaceuticals often center around
 5 compliance?
 6 A. Sorry, I don't understand the
 7 question.
 8 Q. Sure.
 9 For pharmaceuticals that you've
 10 given advocated recommendations for, has the
 11 messaging accompanying the advocated
 12 recommendation often incorporated messaging
 13 around patient compliance, i.e., you know,
 14 staying on schedule with the drug and
 15 following -- you know, taking it as
 16 prescribed, etcetera?
 17 A. The study that's coming to my
 18 mind now as I answer your question, so the
 19 answer is yes, and I'm going to qualify it.
 20 It's for a diabetes medication,
 21 and my messaging is text messaging, and there
 22 are over 60 different types of text messages
 23 to remind -- in different formats to remind
 24 people to not only stay on schedule for their

Page 49

1 medication, but also diet and exercise and
 2 screening.
 3 Q. Okay. Thank you for that.
 4 I see that you've also designed
 5 some messaging around COVID vaccine
 6 hesitancy, correct?
 7 A. I'm sorry, what are you
 8 referring to so I can make sure I understand
 9 the context?
 10 Q. Are you on some kind of panel
 11 related to designing messaging to tackle
 12 COVID vaccine hesitancy?
 13 A. I am -- I would not
 14 characterize it as a panel. I would say that
 15 I am a member of a team that -- of multiple
 16 teams. One of the teams, yes.
 17 Q. Sorry.
 18 A. I apologize, I started to
 19 explain. You didn't ask that. You just
 20 asked am I a member of panel, and it's not a
 21 panel, it was a team, and I started
 22 describing it, but you may not need that.
 23 Q. Sure. I mean, that was going
 24 to be my next question, is, describe to me

<p style="text-align: right;">Page 50</p> <p>1 what it is and what your involvement with it 2 is. 3 A. So I'm on multiple ones. 4 Starting with the research that I'm doing is 5 to, and this is gathering primary data, is to 6 encourage those with COVID-19 vaccine 7 hesitancies to either get vaccinated or to 8 get boosted. It's actually in Massachusetts. 9 Q. Okay. 10 A. The second study I'm thinking 11 about is on a team to understand how 12 behavioral economics -- how behavioral 13 economic principles have worked during the 14 pandemic to reduce vaccine hesitancy and to 15 encourage vaccination and COVID-19 booster 16 shots. 17 And the third one is on a large 18 team organized by the Get the Medication 19 Right X, GTMRx, and that study, or that 20 publication/paper, it is not a peer-reviewed 21 paper, but that paper that is put out by that 22 institution, I was part of a team to think 23 about structural issues, process issues, 24 system issues related to -- and this is why I</p>	<p style="text-align: right;">Page 52</p> <p>1 to encourage people to get vaccinated; should 2 we frame the message positively or 3 negatively; should we say here's what you 4 gain if you get the vaccine, here's what you 5 lose if you don't get the vaccine. So those 6 are just examples, okay, just to give you a 7 few. 8 And so, you know, how well 9 have -- and there's a variety of principles, 10 how well have those -- sometimes they call 11 them nudges, a lot of the times behavioral 12 economists call them nudges, the 13 interventions that they use to nudge 14 consumers to take the recommended or 15 advocated actions. But those are examples. 16 And in the first study that I 17 was describing where I'm actually doing the 18 study here in the State of Massachusetts, we 19 are looking at -- and I'm with a team that is 20 funded -- that sits in the Mass 21 General/Brigham Young Hospital and the 22 Harvard Medical School, and it's a center 23 for -- that's related to use of behavioral 24 economics to improve medication adherence.</p>
<p style="text-align: right;">Page 51</p> <p>1 was invited as an expert -- related to MICI, 2 the messaging, individual differences, and 3 the context, and how we might improve those 4 to not only address the current pandemic, but 5 any future pandemics. 6 Q. Let's take the second one for a 7 moment, and this might be a fruitful example 8 to help me understand what you mean by 9 "behavioral economics." 10 So I guess draw the connection 11 for me between overcoming COVID vaccine 12 hesitancy and how behavioral economics shaped 13 into that. 14 A. Right. And I can do that, and 15 actually will also give you insight on the 16 first study, which is based on behavioral 17 economic principles as well. 18 So one example -- and there are 19 many, many behavioral economists out there 20 and, as I said, made up of people with 21 multiple disciplinary backgrounds, and they 22 have tried different things such as, should 23 we pay people to get vaccinated is one 24 example; should we create a lottery, right,</p>	<p style="text-align: right;">Page 53</p> <p>1 Q. Okay. 2 A. And -- okay. And this 3 particular -- I'm doing the study with that 4 group, with a subset of that group, and we 5 are looking at some eligible patients or 6 consumers get -- why one should get the 7 vaccine. Some get a message on how to get 8 the vaccine, and that includes the booster. 9 And the third arm is usual care. 10 And then we track and see which 11 message is the most effective compared to 12 each other, one arm to the other, in a 13 randomized control trial. 14 Q. Okay. Let me try and see if I 15 understand this. 16 So I think you mentioned that 17 some of these nudges, for example, for 18 behavioral economics might have been a 19 lottery or to pay people to get vaccinated or 20 what they might gain or lose, for example, 21 losing a job, or something like that? 22 A. No, gain or loss, sorry, I 23 refer to in a framed message. 24 Q. Okay. Understood.</p>

<p style="text-align: right;">Page 54</p> <p>1 So it seems like the baseline 2 for all of that is that it's like a monetary 3 incentive, is that -- 4 A. That is incorrect. Monetary 5 incentives are a subset of the -- as nudges 6 used in behavioral economics. For example, I 7 mentioned frames, you know, you're focused on 8 the benefits or the gains versus the losses 9 are a very popular behavioral economics 10 messaging, not related to money, messaging 11 nudge, and, in fact, the foundation for that 12 is prospect theory, and to prominent 13 economists Kahneman and Tversky, both Nobel 14 Prize laureates, who created the foundation 15 for these and other nudges. 16 Q. So -- and perhaps monetary 17 incentives could be a subset, I suppose, is 18 what you're saying? 19 A. Yes. 20 Q. Okay. Gotcha. 21 So it's any kind of reward or 22 disincentive, sort of, that affects behavior, 23 I suppose. Is that a more accurate, 24 wholistic way of capturing the idea?</p>	<p style="text-align: right;">Page 56</p> <p>1 you're saying there that the -- in ranking -- 2 there's empirical evidence out there that in 3 ranking topics of importance for medical 4 therapy, that consumers and physicians place 5 safety and efficacy routinely at the top of 6 those priorities? 7 A. So because you are referencing 8 a specific paper, I will say that in this 9 particular paper they look at -- so, for 10 example, there are about 108 consumers, and 11 about 115 or so, a little higher, physicians, 12 that 33 consumers rated safety as the most 13 important topic, the topic of importance for 14 them during initiation of medical therapy. 15 So it's very important to get the details. 16 And what that means is 17 basically 70-plus consumers did not rate 18 safety as the most important topic during the 19 initiation of medical therapy. 20 So I just want to make sure 21 that this data is understood correctly, that 22 it will be a range of -- even in the study, a 23 range of consumer responses as to the 24 importance of specific features and the</p>
<p style="text-align: right;">Page 55</p> <p>1 A. I would prefer to rephrase that 2 in terms of benefits and costs. If you think 3 about rewards as benefits, there's some 4 overlap, but not perfect overlap. 5 And by costs, I am not just 6 referring to monetary costs. There are 7 switching costs, transaction costs, 8 convenience costs. So just want to clarify 9 that we are talking about value as a function 10 of costs and benefits, and those benefits 11 could be a range of benefits. 12 Q. So, and I'm happy to adopt your 13 terminology there. 14 It's essentially cost benefit 15 for behavioral economics; what are the 16 benefits of the behavior, what are the costs 17 of the behavior, is that right? 18 A. (Nodding in the affirmative). 19 Q. Okay. Flip, if you don't mind, 20 in your report, which is Exhibit 2, to 21 page 17, and that's footnote 36 specifically. 22 That footnote reads -- let me 23 paraphrase it, I guess. I don't want to read 24 the whole thing. But essentially is what</p>	<p style="text-align: right;">Page 57</p> <p>1 weight -- sorry, their -- yeah, weight on 2 those features, and that, as I say in my 3 report, is likely to change during the 4 consumers' and the physicians' experience 5 with the consumer taking the drug over time. 6 Q. Okay. But to -- but what 7 you're saying is the results of that survey 8 show that numerically the most common answer 9 was safety number one, efficacy number two? 10 A. During the -- topic of 11 importance during the initiation of medical 12 therapy. 13 Q. Okay. And did you look at the 14 survey design and read the article in citing 15 it in this paper? 16 A. Yes. 17 Q. Okay. All right. Thank you. 18 Do you feel like it was a 19 well-designed survey? 20 MR. GOLDBERG: Objection to 21 form. 22 A. I -- it was well designed. It 23 was a good survey. Are there things that 24 could have been -- could have been done</p>

<p style="text-align: right;">Page 58</p> <p>1 differently? Yes.</p> <p>2 BY MR. DAVIS:</p> <p>3 Q. Okay. Well, would you agree it</p> <p>4 was reliable enough for you to cite it in</p> <p>5 your report?</p> <p>6 A. Yes. I mean, you know, it's --</p> <p>7 yes.</p> <p>8 Q. You wouldn't cite any kind of</p> <p>9 study or survey or piece of literature in</p> <p>10 your report that you thought had significant</p> <p>11 reliability issues, would you?</p> <p>12 A. No. The quality of the report</p> <p>13 is the most important.</p> <p>14 Q. So back to your messaging</p> <p>15 campaigns that you've done, and maybe let's</p> <p>16 stick with COVID as the example. In the</p> <p>17 COVID messaging -- vaccine messaging</p> <p>18 campaigns, how were concerns about safety and</p> <p>19 efficacy addressed in the communications that</p> <p>20 supported the advocated recommendation, which</p> <p>21 was to get vaxed or boosted?</p> <p>22 A. I mentioned multiple studies,</p> <p>23 but I will talk about the question -- I can</p> <p>24 answer the question for one of those, which</p>	<p style="text-align: right;">Page 60</p> <p>1 to be shown as effective for mitigating the</p> <p>2 risk associated with the COVID-19 virus.</p> <p>3 Q. Is part of the messaging that</p> <p>4 the vaccines have gone through an approval</p> <p>5 process that demonstrated, for example, their</p> <p>6 efficacy and safety?</p> <p>7 A. I'm sorry, can you repeat that?</p> <p>8 Q. Was one of the messages that</p> <p>9 you designed, was the content of one of those</p> <p>10 messages, did that emphasize the fact that</p> <p>11 the vaccines had gone through an approval</p> <p>12 process to demonstrate scientifically their</p> <p>13 safety and efficacy?</p> <p>14 A. I don't recall.</p> <p>15 Q. Okay. You sit on the COVID</p> <p>16 vaccine hesitancy task force, right?</p> <p>17 A. One of them, yes.</p> <p>18 Q. Let me just mark something as</p> <p>19 an exhibit then.</p> <p>20 MR. DAVIS: This is being</p> <p>21 handed to the reporter to be marked as</p> <p>22 Keller 3.</p> <p>23 (Whereupon, Keller Exhibit</p> <p>24 Number 3 was marked for</p>
<p style="text-align: right;">Page 59</p> <p>1 is the three arms of how and why and usual</p> <p>2 care messaging.</p> <p>3 So the messaging goes to people</p> <p>4 who are eligible for the vaccine or the</p> <p>5 booster, and I rely on the hospital system</p> <p>6 and the electronic database, health record</p> <p>7 database. I am not involved with actually</p> <p>8 sending out these messages, I only design the</p> <p>9 messages, but they -- the rest of the team</p> <p>10 works on the eligibility of the participants.</p> <p>11 Q. Okay. So, and you said you</p> <p>12 were responsible for designing the content of</p> <p>13 the message, correct?</p> <p>14 A. The letter that goes to the</p> <p>15 patients, yeah.</p> <p>16 Q. So what sort of -- in terms of</p> <p>17 the content of the messages that you</p> <p>18 designed, what sort of content did you</p> <p>19 include to address safety or efficacy</p> <p>20 concerns that may exist amongst the un- or</p> <p>21 undervaccinated?</p> <p>22 A. In these particular messages,</p> <p>23 to the best of my recall, we use language</p> <p>24 that the vaccine is -- has been demonstrated</p>	<p style="text-align: right;">Page 61</p> <p>1 identification.)</p> <p>2 MS. ANDRAS: Since we don't</p> <p>3 have electronic exhibits, could you</p> <p>4 for the record and counsel who don't</p> <p>5 have copies, introduce the exhibit</p> <p>6 with a little more specificity?</p> <p>7 MR. DAVIS: Sure. And I'll do</p> <p>8 that on the record when I'm going</p> <p>9 through it with the witness.</p> <p>10 BY MR. DAVIS:</p> <p>11 Q. For the record, this Exhibit 3</p> <p>12 is a -- the cover page to it is a report to</p> <p>13 the GTR -- GTMRx National Task Force, and</p> <p>14 it's titled "Background and Resources to</p> <p>15 Build Vaccine Confidence in the Health</p> <p>16 Neighborhood" dated March 2021.</p> <p>17 Do you see that, Dr. Keller?</p> <p>18 A. Yes.</p> <p>19 Q. And if you flip to the -- if</p> <p>20 you go one, two, three, four pages in, do you</p> <p>21 see your name under "Task Force Participants"</p> <p>22 there?</p> <p>23 A. Yes.</p> <p>24 MR. GOLDBERG: John, let me</p>

Page 62

1 just say, if you're going to ask about
2 the document, I do think the witness
3 should be able to take a chance to
4 review it.
5 MR. DAVIS: I mean, I have very
6 limited questions regarding it.
7 BY MR. DAVIS:
8 Q. Why don't I ask them, and if
9 you feel like you want to review it, then we
10 can go off the record and you can take a look
11 at it.
12 A. Can I just stop you for a
13 moment?
14 Q. Sure.
15 A. I'm going to ask you to review
16 it regardless of the question you ask, so I
17 don't want you to think that --
18 Q. Sure.
19 MR. DAVIS: Why don't we go off
20 the record, then, and you can review
21 it.
22 MR. GOLDBERG: I think we're
23 going to stay on the record. You can
24 review it. If it takes more than a

Page 63

1 few minutes, then we can go off the
2 record. That's the rule in this case.
3 The rule is that we start
4 reviewing, if it's going to take a
5 long time, then we'll go off the
6 record. But that's what we do in this
7 case.
8 (Witness reviewing document.)
9 A. Okay.
10 BY MR. DAVIS:
11 Q. And I promise I don't have
12 detailed questions for you on this.
13 A. Thank you. I --
14 MR. GOLDBERG: There's not a
15 question pending. Just let counsel
16 ask a question.
17 BY MR. DAVIS:
18 Q. So you saw on the first page
19 that this is dated March 2021, correct?
20 A. Yes.
21 Q. At the time of March 2021,
22 COVID vaccines were operating under an
23 emergency use authorization, correct, or a
24 EUA?

Page 64

1 A. I'm not sure.
2 Q. Why don't you flip to page,
3 what's numbered as page 6 in the bottom left
4 corner. You'll see some numbering in the
5 bottom left corner, there's a page 6.
6 Do you see there's a third
7 block bullet, a blue block? Do you see that?
8 Actually yours is black and white. Sorry.
9 There's a third block there
10 that says, "COVID-19 vaccines have been
11 approved under emergency use authorization."
12 Do you see that?
13 A. Yes.
14 Q. Okay. These vaccines now have
15 full approval, correct, full FDA approval?
16 Is that your understanding?
17 A. I'm not sure.
18 Q. Okay. Do you see that there's
19 a third bullet under that bullet I pointed
20 out to you, a smaller bullet that says,
21 "Others warn that EUAs exacerbate the
22 deterioration of the public's confidence in
23 science"?
24 Do you see that?

Page 65

1 A. I need a moment to just look at
2 the context.
3 (Witness reviewing document.)
4 A. Okay.
5 Q. Was that one of the findings of
6 this task force that's in this report that
7 you sat on, was that among the vaccine
8 hesitant there was -- some of that was
9 related to the fact at the time of this
10 report that the vaccines had not undergone a
11 full approval process?
12 MR. GOLDBERG: Objection to
13 form. Vague, mischaracterizes the
14 document.
15 A. Could you please be more
16 specific?
17 BY MR. DAVIS:
18 Q. Did you assist in drafting this
19 report?
20 A. I was a member of the task
21 force that reviewed certain sections of the
22 document, and participated in discussions on
23 the creation of the document.
24 Q. Let me just tell you where I'm

<p style="text-align: right;">Page 66</p> <p>1 going with this, which is that, would you 2 agree -- and maybe we can bypass all of this. 3 Would you agree that consumers and physicians 4 look at approval by the regulator as an 5 important piece of information to consider in 6 making a consumer choice? 7 A. You need to be more specific. 8 Those are two questions. 9 Q. What are the two questions in 10 there? 11 A. You said "consumers and 12 physicians." 13 Q. Okay. Well, let's take it from 14 the consumers first. So the same question, 15 just for consumers. 16 A. Could you repeat the question? 17 Q. Sure. 18 Would you agree that consumers 19 in making choices regarding medications or 20 medical therapy view approval by the 21 regulator as an important piece of 22 information? 23 A. There is a range of consumer 24 responses, as I have explained in my report,</p>	<p style="text-align: right;">Page 68</p> <p>1 other words, approved as safe and effective 2 by the FDA? Is that part of the messaging? 3 A. I do not recall. My task in 4 this project is to focus on the how versus 5 why components of that message. There are 6 other team members that are focused on other 7 aspects of who gets the message and the 8 context in which they get the message. 9 Q. Okay. Let's transition. 10 MR. GOLDBERG: John, if we are 11 transitioning, can we take a break? 12 MR. DAVIS: Sure. Yeah, that's 13 fine. 14 THE VIDEOGRAPHER: Off the 15 record at 10:43. 16 (Whereupon, a recess was 17 taken.) 18 THE VIDEOGRAPHER: Back on the 19 record at 11:04. 20 BY MR. DAVIS: 21 Q. Do you have any understanding 22 of how generic drugs specifically get 23 approved in the US? 24 A. No.</p>
<p style="text-align: right;">Page 67</p> <p>1 in various section -- subsections of Section 2 IV in my report, such as IV.B, that using 3 different decision rules, compensatory and 4 non-compensatory, some may and some may not. 5 Same with the MICI factors in 6 Section IV.C of my report, some consumers may 7 pay attention to the information or approval 8 from the FDA as part of the messaging that 9 they consider, and some may not. 10 For example, they may pay much 11 more attention to their individual health 12 status or the context such as their 13 relationship with the physician, rely on the 14 physician to give them guidance. 15 Q. Let's take it back to the COVID 16 vaccines for a second. 17 You're currently, I think you 18 testified, doing some messaging encouraging 19 vaccination and boosting, correct? 20 A. Yes. 21 Q. Okay. Is part of the substance 22 of that message that's being conveyed now 23 that these vaccines have full safety and 24 efficacy endorsement by the FDA; they're, in</p>	<p style="text-align: right;">Page 69</p> <p>1 Q. Do you have any understanding 2 of what -- how generic drugs are supposed to 3 compare to their brand counterparts? 4 MR. GOLDBERG: Objection to 5 form. Vague. 6 A. Please clarify. 7 BY MR. DAVIS: 8 Q. Sure. 9 What is a generic drug, can you 10 tell me that? 11 A. From a marketing perspective, a 12 generic drug is an unbranded drug. 13 Q. And compared to branded drugs, 14 what are unbranded drugs supposed to be in 15 comparison to them? 16 A. One thing they're supposed to 17 be is cheaper. 18 Q. Okay. Do you understand that 19 they're supposed to be therapeutically 20 equivalent? 21 A. In a prescription drug context, 22 yes. 23 Q. In fact, would you agree that 24 many aspects of our healthcare system rely on</p>

Page 70

1 an assumption that generic drugs are
2 therapeutically equivalent to their brand
3 counterparts?
4 A. Could you please repeat?
5 MR. DAVIS: Could you repeat
6 the question?
7 (Whereupon, the reporter read
8 back the question:
9 QUESTION: In fact, would you
10 agree that many aspects of our
11 healthcare system rely on an
12 assumption that generic drugs are
13 therapeutically equivalent to their
14 brand counterparts?)
15 MR. GOLDBERG: Objection.
16 Vague.
17 A. Many aspects of our healthcare
18 system, it's too -- it's not specific enough
19 for me.
20 BY MR. DAVIS:
21 Q. Okay. Are you familiar with
22 automatic generic substitution at the
23 pharmacy level as a concept?
24 A. Could you repeat that?

Page 71

1 Q. Are you familiar with automatic
2 generic substitution at the pharmacy level as
3 a concept?
4 A. What do you mean "as a
5 concept"?
6 Q. Well, let's take that off.
7 Are you familiar with automatic
8 generic substitution at the pharmacy level?
9 A. I know that -- I don't know who
10 does it, but I know that sometimes when
11 you -- as a consumer when you expect a
12 branded drug you are given a generic.
13 Q. Well, it's regardless of
14 whether a consumer expects a branded drug or
15 not, the substitution occurs, does it not?
16 MR. GOLDBERG: Objection to
17 form.
18 A. I don't know.
19 BY MR. DAVIS:
20 Q. Okay. Do you have any
21 familiarity with how reimbursement or
22 formulary decisions are made in response to
23 the market entry of a generic vis-à-vis the
24 brand?

Page 72

1 A. No, I am not an expert on that.
2 Q. Okay. Are you familiar with
3 the fact that when a physician writes a
4 prescription on a prescription pad, even if
5 the physician writes the brand name, that
6 oftentimes if there's a generic, the generic
7 will be dispensed because of generic
8 substitution laws?
9 A. I don't have an opinion on
10 that.
11 Q. And I believe you said you
12 don't know what generic manufacturers have to
13 demonstrate to the FDA to get their generic
14 drugs approved for sale in the US, correct?
15 A. I do not recall saying that.
16 Q. Okay. Well, then, let me ask
17 it then.
18 Are you aware --
19 A. Can you please repeat it?
20 Q. Are you aware of what generic
21 drug manufacturers have to demonstrate to the
22 FDA in order to get their generic drugs
23 approved for marketing and sale in the US?
24 A. I am not an expert. I don't

Page 73

1 have an opinion.
2 Q. Well, the question is do you
3 know.
4 A. No.
5 Q. Are you familiar with the fact
6 that generic pharmaceutical manufacturers do
7 not routinely engage in promotional
8 activities for their drugs?
9 A. I do not know.
10 Q. When I refer to FDA-approved
11 labeling, do you know what that means?
12 A. Could you be more specific?
13 Q. Sure.
14 Do you know what an
15 FDA-approved label is?
16 A. No.
17 Q. Have you looked at any
18 FDA-approved labeling for any of the generic
19 valsartan products at issue in this case?
20 A. I have looked at some labels of
21 valsartan. I do not know if they are
22 FDA-approved or not.
23 Q. In general terms, the labels
24 that you looked at, what kind of information

<p style="text-align: right;">Page 74</p> <p>1 did they contain?</p> <p>2 A. To the best of my recall, they</p> <p>3 contained the name of the drug, the dosage,</p> <p>4 the manufacturer, and the country of</p> <p>5 manufacture.</p> <p>6 Q. Did you see any section in</p> <p>7 those labels that had warnings or</p> <p>8 contraindications or side effect information,</p> <p>9 anything like that?</p> <p>10 A. I do not recall.</p> <p>11 Q. Okay. What about a listing of</p> <p>12 ingredients?</p> <p>13 A. I do not recall.</p> <p>14 Q. Would you agree that the</p> <p>15 purpose of those labels that you reviewed was</p> <p>16 to provide information regarding the drug?</p> <p>17 A. Please define "information."</p> <p>18 Q. Well, sure. I mean, you</p> <p>19 mentioned what it is, who manufactures it,</p> <p>20 things like that. Would that in your mind</p> <p>21 constitute information regarding the drug?</p> <p>22 A. In my mind it would constitute</p> <p>23 some information regarding the drug. There</p> <p>24 could be other information regarding the drug</p>	<p style="text-align: right;">Page 76</p> <p>1 A. No.</p> <p>2 Q. Have you ever studied health</p> <p>3 messaging to consumers or physicians</p> <p>4 regarding generic drugs vis-à-vis brand</p> <p>5 drugs?</p> <p>6 MR. GOLDBERG: Objection to</p> <p>7 form. Ambiguous.</p> <p>8 A. Could you repeat that, please?</p> <p>9 BY MR. DAVIS:</p> <p>10 Q. Sure.</p> <p>11 Have you ever studied any kind</p> <p>12 of health messaging to consumers or</p> <p>13 physicians regarding generic drugs?</p> <p>14 A. Not that I recall.</p> <p>15 Q. Okay. Not in your work in this</p> <p>16 case, and not ever, is that your testimony?</p> <p>17 A. I don't understand the</p> <p>18 question.</p> <p>19 Q. Sure. I'm trying to clarify</p> <p>20 whether your answer is you haven't looked at</p> <p>21 that in this case or you haven't looked at</p> <p>22 that at all ever.</p> <p>23 A. Okay. So can you repeat the</p> <p>24 question again so I understand the context?</p>
<p style="text-align: right;">Page 75</p> <p>1 that is not on the label or that I do not</p> <p>2 recall was on the label.</p> <p>3 Q. If the purpose of FDA-approved</p> <p>4 labeling was to provide information to</p> <p>5 consumers and physicians regarding the drug,</p> <p>6 what's in it, potential side effects,</p> <p>7 etcetera, would you disagree with that?</p> <p>8 A. Please repeat the question.</p> <p>9 Q. Would you disagree with the</p> <p>10 proposition that FDA-approved labeling is</p> <p>11 designed to provide to consumers and</p> <p>12 physicians certain information regarding the</p> <p>13 drug?</p> <p>14 MR. GOLDBERG: Objection to</p> <p>15 form. Foundation.</p> <p>16 A. I cannot answer that question.</p> <p>17 BY MR. DAVIS:</p> <p>18 Q. So you don't know the purpose</p> <p>19 of FDA-approved labeling?</p> <p>20 A. That was not the question you</p> <p>21 asked, but is that the question you're asking</p> <p>22 now?</p> <p>23 Q. Well, that's my new question,</p> <p>24 yes.</p>	<p style="text-align: right;">Page 77</p> <p>1 Q. Sure.</p> <p>2 The question that you said "no"</p> <p>3 to was whether you had had any occasion to</p> <p>4 look at health messaging to consumers or</p> <p>5 physicians regarding generic drugs, and I</p> <p>6 believe you said "no" to that, right?</p> <p>7 A. I'm going to qualify. If by</p> <p>8 "health messaging" you are also including</p> <p>9 what the FDA said about generic valsartan,</p> <p>10 then I did have a chance to look at that for</p> <p>11 this case.</p> <p>12 Q. I'm talking about from a</p> <p>13 general proposition, so regarding generic</p> <p>14 drugs generally, their uses, their benefits,</p> <p>15 what they are, etcetera.</p> <p>16 Have you ever looked at any</p> <p>17 generalized messaging to physicians or</p> <p>18 consumers regarding generic drugs as a</p> <p>19 therapeutic sort of class?</p> <p>20 A. Not that I recall.</p> <p>21 Q. Okay. Not in this case?</p> <p>22 A. I can't answer the question.</p> <p>23 Could you repeat the question?</p> <p>24 MR. DAVIS: Could you repeat</p>

<p style="text-align: right;">Page 78</p> <p>1 the question?</p> <p>2 (Whereupon, the reporter read</p> <p>3 back the following:</p> <p>4 QUESTION: I'm talking about</p> <p>5 from a general proposition, so</p> <p>6 regarding generic drugs generally,</p> <p>7 their uses, their benefits, what they</p> <p>8 are, etcetera.</p> <p>9 Have you ever looked at any</p> <p>10 generalized messaging to physicians or</p> <p>11 consumers regarding generic drugs as a</p> <p>12 therapeutic sort of class?</p> <p>13 THE WITNESS: Not that I</p> <p>14 recall.</p> <p>15 QUESTION: Okay. Not in this</p> <p>16 case?)</p> <p>17 A. So the challenge I'm facing is</p> <p>18 you asked about as a general proposition, and</p> <p>19 I answered, and then now you're saying "not</p> <p>20 in this case," and so I'm just trying to make</p> <p>21 sure I understand the question, which is a</p> <p>22 very specific proposition.</p> <p>23 BY MR. DAVIS:</p> <p>24 Q. Okay. So let me just try it</p>	<p style="text-align: right;">Page 80</p> <p>1 MR. DAVIS: Sure. For the</p> <p>2 record, this is an FDA resource from</p> <p>3 the FDA's website titled "Generic</p> <p>4 Drugs: Questions and Answers."</p> <p>5 BY MR. DAVIS:</p> <p>6 Q. Have you ever seen this</p> <p>7 document before, or this content on the FDA</p> <p>8 website?</p> <p>9 A. I would like to check my</p> <p>10 report. It looks familiar, but I'm not sure.</p> <p>11 Q. Sure. If you want to check</p> <p>12 your report, that's fine.</p> <p>13 (Witness reviewing document.)</p> <p>14 A. Okay. Thank you.</p> <p>15 Q. You don't see it in your</p> <p>16 report, do you?</p> <p>17 A. I do not.</p> <p>18 Q. Okay. And is it your testimony</p> <p>19 that you've never seen this before or</p> <p>20 reviewed it on the FDA's website?</p> <p>21 A. Correct, yes.</p> <p>22 Q. Okay. This, Dr. Keller, is an</p> <p>23 example of, like you asked for, of what I'm</p> <p>24 talking about here. Do you see that this is</p>
<p style="text-align: right;">Page 79</p> <p>1 again.</p> <p>2 In this case, have you looked</p> <p>3 at any generalized messaging to physicians or</p> <p>4 consumers regarding generic drugs generally</p> <p>5 as a therapeutic option or class?</p> <p>6 MR. GOLDBERG: Objection to</p> <p>7 form. Ambiguous.</p> <p>8 A. Can you give me an example of</p> <p>9 what that messaging would look like so I'm</p> <p>10 better able to understand?</p> <p>11 BY MR. DAVIS:</p> <p>12 Q. Sure.</p> <p>13 MR. DAVIS: I'm handing to be</p> <p>14 marked as Exhibit 4 a 14-page</p> <p>15 document.</p> <p>16 (Whereupon, Keller Exhibit</p> <p>17 Number 4 was marked for</p> <p>18 identification.)</p> <p>19 MR. HONIK: Is this 16, John?</p> <p>20 MR. DAVIS: Yes.</p> <p>21 MS. ANDRAS: Can you describe</p> <p>22 for the record for counsel who do not</p> <p>23 have copies of these what document</p> <p>24 you've marked?</p>	<p style="text-align: right;">Page 81</p> <p>1 a sort of general resource put out by the FDA</p> <p>2 titled "Generic Drugs: Questions & Answers"?</p> <p>3 A. That's what the title says,</p> <p>4 yes.</p> <p>5 Q. And it has some subsections</p> <p>6 like, "What are generic drugs? How does the</p> <p>7 FDA ensure generic medicines work the same as</p> <p>8 brand-name medicines?"</p> <p>9 Do you see that?</p> <p>10 A. I see that on the first page,</p> <p>11 but I have not had a chance to review this</p> <p>12 document, so...</p> <p>13 Q. Well, I only provided this as</p> <p>14 an example.</p> <p>15 So as an example of what I was</p> <p>16 talking about prior to showing you this</p> <p>17 document, have you reviewed or had any</p> <p>18 occasion to review any kind of general</p> <p>19 resources similar to the one that I've marked</p> <p>20 as Exhibit 4 that have to do with generic</p> <p>21 drugs generally?</p> <p>22 A. I cannot answer that question</p> <p>23 about how -- whether I've reviewed anything</p> <p>24 similar without knowing what this is to make</p>

<p style="text-align: right;">Page 82</p> <p>1 that comparison. I need time to review this 2 document. 3 Q. Okay. 4 (Witness reviewing document.) 5 MR. GOLDBERG: Dr. Keller, if 6 you're going to go further, we can go 7 off the record for a minute until you 8 finish, okay? That's fine. 9 Can we go off the record? 10 THE VIDEOGRAPHER: Off record 11 at 11:25. 12 (Off the record.) 13 THE VIDEOGRAPHER: Back on the 14 record at 11:30. 15 BY MR. DAVIS: 16 Q. Okay. Dr. Keller, you had a 17 chance to flip through every page of that 18 document, correct? 19 A. Yes. 20 Q. Okay. And you read it, you 21 didn't just flip the pages? 22 A. I, I'm going to use the word 23 surveyed, or looked broadly over would be a 24 better term for it. I tried -- it was not a</p>	<p style="text-align: right;">Page 84</p> <p>1 now, would you agree that the basic message 2 that's being put out by the FDA is that 3 generic drugs are just as safe, effective, 4 and high quality as their brand name 5 counterparts? 6 MR. DAVIS: Could you repeat 7 the question? 8 (Whereupon, the reporter read 9 back the following: 10 QUESTION: Having looked at it 11 now, would you agree that the basic 12 message that's being put out by the 13 FDA is that generic drugs are just as 14 safe, effective, and high quality as 15 their brand name counterparts?) 16 A. Yes, from -- more true, yes, 17 from the FDA's perspective. No, that would 18 not be my uniform takeaway from a consumer 19 perspective. 20 BY MR. DAVIS: 21 Q. Well, what's unclear about the 22 first page, the little graphic that the FDA 23 provides, where it says "Generic, Safe, 24 Effective, High-Quality" all with checkmarks,</p>
<p style="text-align: right;">Page 83</p> <p>1 lot of time. I tried to look at it as 2 carefully as I could. 3 Q. Okay. Have you ever seen a -- 4 you see that this is a Q&A titled "Generic 5 Drugs: Questions & Answers"? 6 A. Yes. 7 Q. Have you ever seen a Q&A or an 8 FAQ document in any context? 9 A. Yes. 10 Q. And this is an example of one 11 of those, but for generic drugs, put out by 12 the FDA, correct? 13 A. Yes. 14 Q. Okay. Would you characterize 15 this as an educational resource having looked 16 at it? 17 A. You need to be more specific. 18 What does "educational resource" mean? 19 Q. Well, for example, did you -- 20 in reading it, were you able to educate 21 yourself a little bit on generic drugs? 22 A. Yes. 23 Q. Okay. Thank you. 24 Is the -- having looked at it</p>	<p style="text-align: right;">Page 85</p> <p>1 "Brand-Name, Safe, Effective, High-Quality," 2 all with checkmarks? 3 Do you see that? 4 A. Yes. 5 Q. Okay. And the message that the 6 FDA is trying to convey is that generic drugs 7 are just as safe, effective, and high quality 8 as their brand name counterparts. Is that 9 not the message the FDA is trying to convey 10 here? 11 A. You are correct that those 12 checkmarks appear on the first page. But 13 when I read the information on subsequent 14 pages, as I read information such as The 15 generic may act differently from the brand 16 name, for example, in absorption. 17 Q. So you disagree that the FDA is 18 attempting to convey a message here that 19 generic drugs and brand name drugs are 20 interchangeable? 21 A. No. 22 MR. GOLDBERG: Objection to 23 form. 24 A. Please specify.</p>

<p style="text-align: right;">Page 86</p> <p>1 BY MR. DAVIS:</p> <p>2 Q. Okay. Well, let's start with</p> <p>3 my prior question.</p> <p>4 You agree, yes, that the FDA's</p> <p>5 intended message with this document, and</p> <p>6 specifically with this graphic on the first</p> <p>7 page, is that generic drugs are just as safe,</p> <p>8 effective, and high quality as their brand</p> <p>9 name counterparts?</p> <p>10 A. Incorrect. I said that the</p> <p>11 graphic displays that. But if you said the</p> <p>12 document, which I'm assuming you're referring</p> <p>13 to the document before me, that that has</p> <p>14 information in there, and I gave you only one</p> <p>15 example from my quick read or survey of the</p> <p>16 information that led me to believe that they</p> <p>17 are not the same.</p> <p>18 For example, on effectiveness,</p> <p>19 I just told you that I read that the</p> <p>20 absorption for generics may be different from</p> <p>21 brand products, brand name products.</p> <p>22 Q. Do you know what "absorption"</p> <p>23 means?</p> <p>24 A. Again, I need to look at the</p>	<p style="text-align: right;">Page 88</p> <p>1 Q. And then it reads further down</p> <p>2 that part of that is ensuring, last two</p> <p>3 lines, "that every generic drug is safe,</p> <p>4 effective, high quality, and substitutable to</p> <p>5 the brand name drug."</p> <p>6 Do you see that?</p> <p>7 A. I do not, sorry. Where is</p> <p>8 that?</p> <p>9 Q. That would be the last two</p> <p>10 lines of the first paragraph.</p> <p>11 A. Oh, the last two lines, okay.</p> <p>12 I went to the bottom of the page.</p> <p>13 Yes, I see that.</p> <p>14 Q. Okay. And so the FDA is</p> <p>15 essentially stating in text there what it</p> <p>16 stated in the graphic on the first page,</p> <p>17 correct?</p> <p>18 A. I do not view them the same.</p> <p>19 Q. What's different to you?</p> <p>20 A. So for me, when I see a graphic</p> <p>21 with the checkmarks, the checkmarks look the</p> <p>22 same, and it appears to be the same for</p> <p>23 generic and brand name.</p> <p>24 But when I look at the text</p>
<p style="text-align: right;">Page 87</p> <p>1 document.</p> <p>2 Q. Well, why don't I take you to</p> <p>3 page 12 of the document. Do you see the</p> <p>4 heading "How Does FDA monitor side effects or</p> <p>5 safety issues with generic medicines?" Do</p> <p>6 you see that heading on page 12?</p> <p>7 A. Before I answer that, can I</p> <p>8 assume when you ask a different question</p> <p>9 without my answering the previous one that</p> <p>10 you are striking it?</p> <p>11 Q. Sure. Yeah. I'm moving on.</p> <p>12 A. Okay.</p> <p>13 Q. I might come back to it.</p> <p>14 So do you see the header there</p> <p>15 on page 12?</p> <p>16 A. "How Does FDA monitor side</p> <p>17 effects or safety issues with generic</p> <p>18 medicines?"</p> <p>19 Q. It says there that the "FDA</p> <p>20 takes several actions to ensure safety and</p> <p>21 quality before and after a new or generic</p> <p>22 medicine is approved."</p> <p>23 Do you see that?</p> <p>24 A. Yes.</p>	<p style="text-align: right;">Page 89</p> <p>1 here, the text that you asked -- that you</p> <p>2 referred to for this question, when it says</p> <p>3 that the word "to ensure" is not telling --</p> <p>4 they're saying they're trying their best,</p> <p>5 that's my interpretation of "ensure," but</p> <p>6 that does not mean that they are, for</p> <p>7 example, in a marketing context doing</p> <p>8 something more, like saying it is the same.</p> <p>9 Q. Well, they're not saying</p> <p>10 anything about trying their best here,</p> <p>11 they're saying that they "ensure that every</p> <p>12 generic drug is safe, effective, high</p> <p>13 quality, and substitutable to the brand name</p> <p>14 drug." They say that right there, correct?</p> <p>15 A. They say that. You asked me</p> <p>16 why I didn't think it was the same in the</p> <p>17 graphic and the document, and I'm telling you</p> <p>18 that it appears to me to be the same, brand</p> <p>19 and generic on those three features in the</p> <p>20 graphic, but not in the document.</p> <p>21 And the reason it is not for me</p> <p>22 the same in the document is because of the</p> <p>23 language that is used here, specifically in</p> <p>24 this particular case in the sentence you</p>

<p>Page 90</p> <p>1 asked me to read on ensure, that makes me</p> <p>2 believe that it may not be the same, or that</p> <p>3 FDA is doing something to ensure that it is</p> <p>4 the same, but it's not saying it is the same.</p> <p>5 Q. Okay. Do you know what would</p> <p>6 happen, for example, if the FDA, despite</p> <p>7 their best efforts, found out that a generic</p> <p>8 drug was not safe, not effective, or not high</p> <p>9 quality? Do you know what would happen in</p> <p>10 that case?</p> <p>11 A. I'm not an expert. I cannot</p> <p>12 tell you for sure.</p> <p>13 Q. Okay. Go to page 2 of the</p> <p>14 document, if you don't mind.</p> <p>15 A. The same document?</p> <p>16 Q. Same document. Exhibit 4 for</p> <p>17 the record.</p> <p>18 That first question there that</p> <p>19 appears in this Q&A is, "What are generic</p> <p>20 drugs?"</p> <p>21 Do you see that?</p> <p>22 A. Yes.</p> <p>23 Q. And it says, "A generic drug is</p> <p>24 a medication created to be the same as an</p>	<p>Page 92</p> <p>1 So you're referring to the last</p> <p>2 sentence, "In other words, you can take a" --</p> <p>3 yes, I see that, yes.</p> <p>4 Q. And the "you" there is the</p> <p>5 patient, correct, the consumer?</p> <p>6 A. The consumer for whom this</p> <p>7 medicine is applicable, right.</p> <p>8 Q. And to borrow some terminology</p> <p>9 you used before, this would be the advocated</p> <p>10 recommendation, correct, by the FDA regarding</p> <p>11 generic drugs?</p> <p>12 A. Yes and no. Yes if this</p> <p>13 document was defined as a communication</p> <p>14 message to consumers; no because it's not</p> <p>15 clear to me what the specific advocated</p> <p>16 action is.</p> <p>17 Q. What makes you think that this</p> <p>18 might not be a document directed to</p> <p>19 consumers?</p> <p>20 A. I don't know. I don't know the</p> <p>21 context in which this was created, or when it</p> <p>22 was created, and for whom it was intended. I</p> <p>23 don't have that information.</p> <p>24 Q. You can't derive that from</p>
<p>Page 91</p> <p>1 already marketed brand-name drug in dosage</p> <p>2 form, safety, strength, route of</p> <p>3 administration, quality, performance</p> <p>4 characteristics, and intended use."</p> <p>5 And then if you go down to the</p> <p>6 last sentence you'll see, "In other words,</p> <p>7 you can take a generic medicine as an equal</p> <p>8 substitute for its brand-name counterpart."</p> <p>9 Do you see that?</p> <p>10 A. Yes.</p> <p>11 Q. Okay. Who is the "you" there</p> <p>12 in this document? Who do you imagine the FDA</p> <p>13 is referring to as "you" here?</p> <p>14 A. Whoever is reading the message.</p> <p>15 Q. Or whoever is taking the</p> <p>16 generic medicine, as they say, correct? "You</p> <p>17 can take a generic medicine."</p> <p>18 A. No. It says you can take it.</p> <p>19 It doesn't mean they're taking it.</p> <p>20 Q. Do you read "you" here as being</p> <p>21 directed to the consumer, the person who</p> <p>22 takes the generic medicine?</p> <p>23 A. I need to look at the document</p> <p>24 again.</p>	<p>Page 93</p> <p>1 having just read this?</p> <p>2 A. As a health communication</p> <p>3 expert, I would not like to make that</p> <p>4 determination.</p> <p>5 Q. Okay. Well, you did agree with</p> <p>6 me earlier that the "you" in that sentence</p> <p>7 was directed towards the consumer or patient,</p> <p>8 correct?</p> <p>9 A. I said that it was directed at</p> <p>10 a person for whom a decision about a generic</p> <p>11 or brand name selection was applicable.</p> <p>12 Q. And that would be a consumer or</p> <p>13 a patient, correct?</p> <p>14 A. If a consumer was considering</p> <p>15 whether -- what the difference was, they</p> <p>16 might or might not seek this information.</p> <p>17 There would be a range.</p> <p>18 Q. And that advocated</p> <p>19 recommendation there that we read, "you can</p> <p>20 take a generic medicine as an equal</p> <p>21 substitute for its brand-name counterpart,"</p> <p>22 that's founded on the assumption that the</p> <p>23 generic drug and the brand-name drug are both</p> <p>24 safe, effective, and high quality, and</p>

<p>Page 94</p> <p>1 substitutable as we saw on page 12 that we 2 just read, correct? 3 MR. GOLDBERG: Objection to 4 form. Foundation. 5 A. That is not how I interpret 6 that. 7 BY MR. DAVIS: 8 Q. What's incorrect about my 9 interpretation? 10 A. I'll highlight one. 11 Q. Sure. 12 A. First, very simply, this 13 information appears before page 12, so I 14 don't know whether this was based on what is 15 in page 12, especially if it appears before. 16 I'll stop there. 17 Q. Okay. Well, I mean, what about 18 what appears just before the sentence on 19 page 2, "A generic drug is a medication that 20 is created to be the same as an already 21 marketed brand-name drug in dosage form, 22 safety, strength, route of administration, 23 quality, performance characteristics, 24 intended use," those various things, do you</p> <p>Page 95</p> <p>1 think safety, efficacy, and high quality are 2 encompassed by those terms in that sentence? 3 A. No. 4 Q. You don't? 5 A. No. 6 Q. Okay. Explain to me why not. 7 A. From -- as a consumer expert, 8 consumer health decision-making expert, one 9 example would be that for me, efficacy is 10 broken down into self efficacy and response 11 efficacy. 12 Response efficacy is, you know, 13 does the drug do what it's supposed to do; 14 self efficacy is, you know, will the drug 15 work for me. 16 Q. Okay. You testified earlier 17 that you have very little knowledge of what's 18 required for drug approval in the US, 19 correct? 20 A. Yes. 21 Q. Okay. So you really don't know 22 what the FDA means by "efficacy" in terms of 23 approval of a brand or generic drug, is that 24 correct?</p>	<p>Page 96</p> <p>1 A. Actually please repeat that 2 question. 3 MR. DAVIS: Can you read the 4 question back? 5 (Whereupon, the reporter read 6 back the question: 7 QUESTION: Okay. So you really 8 don't know what the FDA means by 9 "efficacy" in terms of approval of a 10 brand or generic drug, is that 11 correct?) 12 A. I'm not going to form an 13 opinion on that. 14 BY MR. DAVIS: 15 Q. Okay. You're a health 16 communication expert, correct? 17 A. I'm an expert on consumer 18 decision-making with a focus on health. 19 Q. In fact, you testified today 20 that you've designed some of the content of 21 the messages to consumers, correct? 22 A. The content of some of the 23 health communication to consumers. 24 Q. Correct.</p> <p>Page 97</p> <p>1 And having just leafed through 2 this document here, Exhibit 4, using your -- 3 you know, relying on your expertise as 4 someone who does this for a living, what is 5 the message that the FDA is trying to impart 6 with this Q&A document that's Exhibit 4? 7 A. There's a lot of information 8 here. I would not be comfortable telling you 9 what the FDA's intentions are or what they 10 are trying to impart. 11 Q. You don't think they're trying 12 to impart to a consumer or patient that they 13 can take a generic medicine as an equal 14 substitute for its brand-name counterpart? 15 A. I've tried to answer that 16 question. As a communication expert, I'm 17 leery of any sentence that starts with "in 18 other words." 19 Q. Aren't they -- I mean, the in 20 other words to me is the FDA trying to take a 21 complex regulatory system of drug approval 22 and put it in simple terms for a patient or 23 consumer. Do you not read it that way? 24 A. I do not, because I'm putting</p>
---	--

<p style="text-align: right;">Page 98</p> <p>1 on my consumer hat, and I see a lot of things 2 here that -- route of administration, 3 etcetera -- that are not -- may not be 4 familiar to some consumers, they may be 5 familiar to other consumers, but I'm going to 6 predict a range of what consumers take away 7 from that message. 8 Q. Flip to page 6. You'll see 9 some pagination in the bottom right corner of 10 page 6 of 14. The header there is "What 11 standards must generic medicines meet to 12 receive FDA approval?" 13 Do you see that? 14 A. Yes. 15 Q. Okay. And I think you 16 testified earlier that you didn't know what 17 an ANDA was. I'll represent to you that an 18 ANDA is an Abbreviated New Drug Application, 19 which is what a generic manufacturer submits 20 to the FDA for approval of its proposed 21 generic medicine to be marketed in the US. 22 Do you understand that? 23 A. I see here it says "drug 24 companies," it does not say "generic</p>	<p style="text-align: right;">Page 100</p> <p>1 that that was a requirement for ANDA approval 2 of a generic drug to be marketed in the US? 3 A. I saw that in Dr. Conti's 4 report. 5 Q. Do you have any reason to 6 disagree with what's in this bullet point 7 here -- 8 A. NO. 9 Q. -- on page 7? 10 Let's say that the FDA, that 11 you've worked -- strike that. 12 You've worked with regulatory 13 bodies in the US, correct, like, for example, 14 the CDC? 15 A. Yes. 16 Q. Okay. Let's say that the FDA 17 came to you and said, Dr. Keller, we've 18 noticed that consumers/patients in the US, 19 there's a distrust for generic medicines, we 20 want you to design a messaging campaign to 21 advocate -- to create an advocated 22 recommendation that patients can trust their 23 generic drugs. 24 Are you following me?</p>
<p style="text-align: right;">Page 99</p> <p>1 manufacturers." But I see the rest. 2 Q. Well, I'll represent to you 3 that an ANDA, or A-N-D-A, Abbreviated New 4 Drug Application is what a generic 5 manufacturer submits to market a generic 6 drug, okay? And then it says below that, "An 7 ANDA must show the generic medicine is 8 equivalent to the brand in the following 9 ways:" 10 Do you see that? 11 A. Yes. 12 Q. And then there's some bullet 13 points that start on 6, go down to 7 and 8, 14 and conclude on page 9, I believe. 15 Do you see that? 16 A. Yes. 17 Q. Okay. If you flip to page 7, 18 you'll see that the last bullet point there 19 says that "It" -- being the generic drug -- 20 "is manufactured under the same strict 21 standards as the brand-name medicine." 22 Do you see that? 23 A. Yes. 24 Q. Okay. Did you have any idea</p>	<p style="text-align: right;">Page 101</p> <p>1 A. Mm-hmm. 2 Q. Okay. Would not one of the 3 messages you would include in that advocated 4 recommendation to patients, would not one of 5 those messages be exactly what the FDA is 6 emphasizing here, which is that generic drugs 7 are subject to -- are substitutable as we saw 8 on page 12, that they are safe, effective, 9 high quality as we saw on page 1, and that 10 they are manufactured under the same strict 11 standards as the brand-name medication as we 12 see on page 7? 13 Would those not be messages you 14 might want to include in your communication 15 to patients to overcome that objection to 16 generic drugs? 17 MR. GOLDBERG: Objection. 18 Ambiguous, compound. 19 A. I don't know how -- I stopped 20 counting how many questions there were in 21 that question. Could you please break it 22 down? 23 BY MR. DAVIS: 24 Q. I mean, I thought it was quite</p>

<p style="text-align: right;">Page 102</p> <p>1 clear, to be honest.</p> <p>2 Would you not want to include</p> <p>3 those messages that we've called out and read</p> <p>4 in this document in your advocated</p> <p>5 recommendation to consumers that the FDA in</p> <p>6 this hypothetical assignment is giving you?</p> <p>7 MR. GOLDBERG: Same objection.</p> <p>8 A. I cannot answer that question.</p> <p>9 I was even flipping pages, and I'm on</p> <p>10 page 12, and I cannot in my quick survey even</p> <p>11 find the word "substitutable," so I cannot</p> <p>12 answer that question.</p> <p>13 BY MR. DAVIS:</p> <p>14 Q. We read it. It's the last</p> <p>15 sentence of the first paragraph there.</p> <p>16 "Ensure that every generic drug is safe,</p> <p>17 effective, high quality, and substitutable to</p> <p>18 the brand-name drug."</p> <p>19 A. Thank you.</p> <p>20 Q. Would you not want to include</p> <p>21 those messages that we've read in this</p> <p>22 document just now in your communication to</p> <p>23 consumers/patients in this hypothetical</p> <p>24 assignment from the FDA?</p>	<p style="text-align: right;">Page 104</p> <p>1 communication and what kind of costs I need</p> <p>2 to address or overcome in the communication.</p> <p>3 My research shows that these</p> <p>4 factors vary across individuals, and all of</p> <p>5 my work and my report supports, along with</p> <p>6 many, many others, the need to get this</p> <p>7 information in order to tailor this</p> <p>8 communication so that I can understand how</p> <p>9 consumers would evaluate my advocated</p> <p>10 recommendation, "my" as in my task.</p> <p>11 Q. Do you think there's a single</p> <p>12 consumer out there in the US who if they went</p> <p>13 to the pharmacy and got dispensed a generic</p> <p>14 drug, that they would not want that generic</p> <p>15 drug to be substitutable to the brand-name</p> <p>16 drug?</p> <p>17 A. As a consumer behavior expert,</p> <p>18 you never want to make an assumption about</p> <p>19 uniformity on consumer reactions or</p> <p>20 valuations of work.</p> <p>21 Q. So are you saying that you</p> <p>22 think it's a possibility that there are</p> <p>23 consumers out there who, when they went to</p> <p>24 the pharmacy to fill a prescription and they</p>
<p style="text-align: right;">Page 103</p> <p>1 A. If the FDA came to me with this</p> <p>2 assignment, I would need a lot of information</p> <p>3 on consumers to make a decision about the</p> <p>4 different types of effective -- the different</p> <p>5 types of messages that may be effective for</p> <p>6 different types of consumers based on -- I'll</p> <p>7 just give you examples because it was a long</p> <p>8 question -- where and how and from whom they</p> <p>9 would trust the message, or message factors,</p> <p>10 I'm using MICI, their individual differences,</p> <p>11 for example education level, language</p> <p>12 fluency, etcetera; the context in which they</p> <p>13 were making this decision, for example with a</p> <p>14 trusted physician or a new physician; and the</p> <p>15 interaction of those factors.</p> <p>16 I would also want to know</p> <p>17 information on the features that patients</p> <p>18 take into account when they're making such a</p> <p>19 decision.</p> <p>20 I testified earlier about</p> <p>21 the -- how I create communication to create</p> <p>22 and communicate value to consumers, so I</p> <p>23 would need to know what kind of benefits</p> <p>24 different consumers are seeking in the</p>	<p style="text-align: right;">Page 105</p> <p>1 got dispensed the generic drug, that they</p> <p>2 would not want that generic drug to be</p> <p>3 substitutable to the brand-name drug?</p> <p>4 A. I'm going to say yes and no.</p> <p>5 I will say yes, they will</p> <p>6 expect that they are getting something from</p> <p>7 the pharmacy that the pharmacist or someone</p> <p>8 else who made the decision believes is</p> <p>9 similar.</p> <p>10 No as in they don't know</p> <p>11 whether it would be similar for them because</p> <p>12 they don't -- they have more information and</p> <p>13 agency on what has worked for them in the</p> <p>14 past, what has not worked for them in the</p> <p>15 past, the individual factors that I'm talking</p> <p>16 about, how they take their medication, you</p> <p>17 can't make an assumption, you know, are they</p> <p>18 used to taking it once a day, multiple times</p> <p>19 a day, whether they take it with food,</p> <p>20 without food.</p> <p>21 There are so many additional</p> <p>22 factors where they would have questions about</p> <p>23 similarity or substitutability, because from</p> <p>24 a consumer behavior perspective it's not what</p>

Page 106

1 someone else is saying is similar, it's how
2 they're experiencing similarity, or if their
3 experience is the same.
4 Q. If a generic drug were not
5 substitutable to the brand-name drug, do you
6 have any idea whether that would be a
7 non-approved drug?
8 A. I am not familiar with the FDA
9 regulations, so I cannot answer that
10 question.
11 Q. Have you ever designed any kind
12 of messaging to consumers or physicians that
13 advocated that they take or prescribe
14 unapproved medications?
15 A. No.
16 Q. Have you ever designed any kind
17 of messaging to consumers or physicians that
18 they take or prescribe adulterated
19 medications?
20 A. Not to my knowledge.
21 Q. Misbranded medications?
22 A. Please define "misbranded."
23 Q. Do you know what misbranded
24 means?

Page 107

1 A. From Dr. Conti's report I have
2 a general understanding.
3 Q. And what's that understanding?
4 A. That the -- what is in the
5 brand -- in the product is not the same as
6 what is on the description.
7 Q. Right. That the label is false
8 or misleading in any particular, correct?
9 A. Well, no, I will not go that
10 far. I will not say the label is false or
11 misleading. That will vary by the consumer.
12 Q. Well, you don't know whether
13 that's, in fact, the definition that congress
14 provides for misbranding.
15 A. Agreed, I'm not an expert.
16 Q. Okay. Have you ever designed
17 any kind of communication or messaging to
18 physicians or consumers that they take or use
19 any kind of medication that was illegally
20 sold or distributed to them?
21 A. Not that I'm aware of.
22 MR. DAVIS: I'm at a transition
23 point. Do we want to take lunch, or
24 do you want to keep going?

Page 108

1 MR. GOLDBERG: Up to you. I
2 know lunch is here.
3 THE WITNESS: I'm indifferent.
4 MR. DAVIS: Why don't we go off
5 the record for a second.
6 THE VIDEOGRAPHER: Off the
7 record at 12:01.
8 (Whereupon, a luncheon recess
9 was taken.)

1 AFTERNOON SESSION
2
3 THE VIDEOGRAPHER: Back on the
4 record at 12:40.
5 BY MR. DAVIS:
6 Q. Okay. Dr. Keller, your report,
7 Exhibit 2, would you mind pulling that out?
8 I want to ask you --
9 A. You mean Appendix B?
10 Q. No, no, just your report, which
11 is -- I've marked as Exhibit 2.
12 A. I'm so sorry. I misunderstood.
13 Q. Not a problem.
14 So I just want to ask a
15 clarifying question regarding your assignment
16 on paragraph 1, which is on the first page.
17 You say, "I have been asked by
18 counsel for Defendants to review health care
19 decision-making and how valuation of VCDs
20 should be viewed in light of the voluntary
21 recall of VCDs in 2018 and '19."
22 Are you with me there?
23 A. Yes.
24 Q. Okay. I'm just trying to

<p style="text-align: right;">Page 110</p> <p>1 understand the word "and" there. Is that two 2 assignments, or is that one assignment? 3 A. I'd say that the assignments 4 are connected. 5 Q. Okay. And what do you mean by 6 that? 7 A. That I reviewed the healthcare 8 decision-making literature to help inform my 9 opinion on how consumers -- the range of 10 consumer responses for those taking the VCDs, 11 how they might respond, if at all, to the 12 recall of the VCDs in 2018 and 2019. 13 Q. Okay. So when you say 14 healthcare decision-making there, you're 15 referring to the portion of your report 16 discussing and setting forth compensatory 17 decision analysis and noncompensatory, and 18 non-MICI, that acronym, that's what you mean 19 by healthcare decision-making? 20 A. Could you please repeat that 21 question? 22 Q. Sure. I'm just trying to 23 connect your assignment to the substance of 24 your report.</p>	<p style="text-align: right;">Page 112</p> <p>1 assignment to what's in your report. 2 And so you reviewed healthcare 3 decision-making as a general proposition from 4 a consumer and physician standpoint, correct? 5 A. Yes. 6 Q. Okay. And that's discussed in 7 sort of your general outline of compensatory 8 and noncompensatory decision rules and MICI, 9 correct? 10 A. Yes. 11 Q. Okay. And then you applied 12 that framework to the facts of this case, or 13 attempted to, correct? 14 A. No, to perform my task that you 15 just highlighted in the first paragraph. 16 Q. So are you telling me you did 17 not apply that framework to -- or attempt to 18 apply that framework to the facts of this 19 case? 20 A. I didn't say that. I think I 21 said just the opposite. 22 Q. Well, that's what I was asking 23 you to confirm, and you wouldn't confirm it. 24 A. Yes.</p>
<p style="text-align: right;">Page 111</p> <p>1 So when you say you've been 2 asked by counsel for defendants to review 3 healthcare decision-making, am I to 4 understand the healthcare decision-making 5 there to refer to the portion of your report 6 that discusses the compensatory decision rule 7 and noncompensatory decision rule that you 8 explain in your report, as well as the MICI 9 factors? 10 A. Yes and no. The yes is that I 11 have reviewed the literature on the 12 compensatory/noncompensatory decision rules, 13 and reported a subset of that literature as 14 well as the MICI framework, but not just for 15 the -- how consumers might react to the 16 recall of the VCDs in question, because 17 there's a second part of the paragraph, which 18 I also reviewed the literature to evaluate 19 from a consumer's perspective Dr. Conti's 20 claim, in particular that the VCDs at issue 21 were worthless to consumers as a result of 22 the recall. 23 Q. Well, and I'm -- we'll get to 24 that. I'm just trying to connect your</p>	<p style="text-align: right;">Page 113</p> <p>1 Q. So let me rephrase it so we're 2 on the same page. 3 You then applied the 4 compensatory/noncompensatory decision rule 5 analysis and MICI to the facts of this case, 6 correct? 7 A. I would not go so far as to the 8 facts of this case. There are many facts of 9 this case that I -- that are not part of my 10 task. 11 Q. So are you saying you did not 12 apply -- what did you -- let me ask it this 13 way. 14 What did you apply those 15 healthcare decision-making concepts that you 16 outlined? What did you apply those to? 17 A. The 18 compensatory/noncompensatory rules for how 19 consumers make a value judgment based on the 20 alternatives they consider, the weights of 21 the different attributes they consider, and 22 the ratings that they give to those 23 attributes in different combinations, and the 24 MICI factors were used by me or applied by me</p>

Page 114

1 to make an assessment of how consumers might
 2 respond to the recall -- to the recall VCDs,
 3 and to answer the question would all
 4 consumers uniformly believe that the recall
 5 VCDs were worthless.
 6 Q. You're not a physician, are
 7 you?
 8 A. No.
 9 Q. Okay. And you're not a public
 10 health official?
 11 A. Define "public health
 12 official."
 13 Q. Like you don't work for the FDA
 14 or the CDC, or you're not a public health
 15 official, are you?
 16 A. I am not a full-time employee
 17 of a government agency.
 18 Q. Okay. And you wouldn't hold
 19 yourself out as being an expert on the
 20 substance of any medical decisions,
 21 treatments, that a physician might make or
 22 the FDA might recommend, correct?
 23 A. Please define "substance."
 24 Q. Sure.

Page 115

1 You wouldn't be -- you wouldn't
 2 step into the role of a physician and say --
 3 to tell consumers do this or don't do this
 4 from a medical standpoint, would you?
 5 A. Please define "from a medical
 6 standpoint."
 7 Q. Exactly what physicians do
 8 every day when they talk to their patients,
 9 you wouldn't step into that role, would you?
 10 A. As shown in my report, and one
 11 recent project comes to mind, I provide
 12 communication strategies for physicians to
 13 tailor their messages and recommendations to
 14 their patients.
 15 Q. But you wouldn't come up with
 16 the recommendation itself; you're coming up
 17 with the messaging around that
 18 recommendation, correct?
 19 A. I'm having a hard time
 20 separating some of those, or trying to
 21 understand what you're getting at.
 22 Q. It's a simple question.
 23 You don't practice medicine, do
 24 you?

Page 116

1 A. No.
 2 Q. And as far as the medical
 3 substance of medical care, you don't step
 4 into the role of the physician and actually
 5 advocate of your own accord treatment
 6 decisions, do you?
 7 A. No.
 8 Q. Okay. And same thing for --
 9 same question for public health officials,
 10 you don't substitute your judgment for that
 11 of the regulator, for example the FDA, in any
 12 of the decisions that are within its
 13 regulatory ambit, do you?
 14 MR. GOLDBERG: Objection to
 15 form. Ambiguous.
 16 A. I'm not clear on the question.
 17 BY MR. DAVIS:
 18 Q. Okay. I mean, I asked a
 19 variation of that question right before
 20 lunch, which was, you would never advocate in
 21 any message that physicians take or a
 22 patient -- physicians prescribe or patients
 23 take unapproved medications, for example,
 24 would you?

Page 117

1 A. I do not recall that question,
 2 so...
 3 Q. Well, let me ask that question
 4 again.
 5 Would you ever advocate in any
 6 kind of health communication messaging that a
 7 physician prescribe an unapproved medication?
 8 MR. GOLDBERG: Objection to
 9 form.
 10 A. Please repeat that.
 11 MR. DAVIS: Can you read the
 12 question back?
 13 (Whereupon, the reporter read
 14 back the question:
 15 QUESTION: Would you ever
 16 advocate in any kind of health
 17 communication messaging that a
 18 physician prescribe an unapproved
 19 medication?)
 20 MR. GOLDBERG: Objection to
 21 form. Ambiguous.
 22 A. Unapproved by?
 23 BY MR. DAVIS:
 24 Q. You understand that drugs have

Page 118

1 to be pre-approved, correct?

2 A. So I just want to make sure

3 that this is not unapproved by the physician

4 or somebody else. I just want to be clear.

5 Q. Yes. When I say "unapproved

6 medication," I'm talking about FDA approval

7 that's required for all drug products in the

8 US.

9 So the question is, would you

10 ever in any of your health communication

11 messaging advocate for the use of an

12 unapproved medication?

13 A. In this particular case I have

14 reviewed and included in my report materials

15 where physicians continued to ask -- to

16 recommend to their patients that they take a

17 VCD that was recalled.

18 Q. That's not answering my

19 question.

20 A. So if I -- you said are there

21 any circumstances. So just like your

22 previous hypothetical that if the FDA asked

23 me to create a communication, if a physician

24 asked me to create a communication I would

Page 119

1 not -- I would try to say no, I'm not going

2 to do that because the FDA has not approved

3 this communication. And that's why I gave

4 you the example I did.

5 If there is some understanding

6 that they should continue to take the

7 medication, then I would help them do that.

8 Q. Well, I'm not -- you're not

9 following the thrust of my question. I'm

10 asking you about --

11 A. Sorry.

12 Q. -- a drug that was never

13 approved.

14 A. Oh, I'm sorry, I didn't hear

15 never approved.

16 Q. That's what I mean by

17 "unapproved medication," something that

18 wasn't approved.

19 So would you ever advocate --

20 and this gets to my broader question about

21 you not substituting your judgment or making

22 any kind of public health judgments that are

23 preserved for the regulator, correct? And

24 the question is, would you ever advocate for

Page 120

1 the use of an unapproved drug? And by that I

2 mean something that was never approved by the

3 FDA.

4 MR. GOLDBERG: Objection to

5 form. Ambiguous, speculative.

6 A. I don't ask those questions.

7 There is a review process for the work that I

8 do, and I leave it to others to make those

9 determinations.

10 I have a very specific role

11 that I play in designing the message

12 communication, and that role does not require

13 any expertise or knowledge on my part on

14 regulatory approval or unapproved or anything

15 of that spectrum.

16 Q. Right. And that's simply my

17 question, is you rely on those people to do

18 their job, right? You rely on the FDA to do

19 the business of public health regulation,

20 correct?

21 A. That is not what I said. You

22 asked me in my projects, in all my previous

23 work, you know, do I -- this is my

24 understanding of what you asked me, do I

Page 121

1 ensure, or do I seek information or -- sorry,

2 I'm sorry, it was dinging away and I

3 didn't --

4 MR. GOLDBERG: Can we just go

5 off the record for a second?

6 THE VIDEOGRAPHER: Off record

7 at 12:54.

8 (Off the record.)

9 THE VIDEOGRAPHER: Back on at

10 12:54.

11 A. So I agree that that was not my

12 job on these projects. I'm not agreeing that

13 it's the FDA's job. I'm saying, depending on

14 the project, I don't know who takes care of

15 different aspects of the job.

16 BY MR. DAVIS:

17 Q. Let me ask it this way.

18 Have you ever designed any kind

19 of messaging that's health-related to

20 consumers or physicians that you knew was

21 inconsistent with what the FDA's position was

22 on that very subject?

23 A. I have never checked to see

24 whether what I'm designing a message -- a

<p style="text-align: right;">Page 122</p> <p>1 health message for has or has not been 2 approved by the FDA. 3 Q. Well, I'm not saying approved 4 by the FDA. I'm saying, have you ever done 5 that, have you ever designed a message 6 related to healthcare that goes out to a 7 consumer or physician that you knew was 8 inconsistent with the FDA's position on that 9 very same subject matter? 10 A. I'm not an expert on the FDA, 11 and that is not something that I would seek 12 or look for information on before I designed 13 the message. 14 Q. Okay. You wouldn't hold 15 yourself out as an expert on how to 16 appropriately address from a medical care 17 standpoint a patient who was taking 18 nitrosamine-contaminated VCDs, would you? 19 A. Please repeat that question. 20 Q. You wouldn't hold yourself out 21 as an expert on the medical care decisions 22 that a physician and patient may want to make 23 in response to a patient's exposure to 24 nitrosamines in their valsartan, would you?</p>	<p style="text-align: right;">Page 124</p> <p>1 form. Ambiguous. 2 A. I don't know what those 3 structural elements are, and I'm not an 4 expert on what congress and the FDA have -- 5 the system that they've created, and I'm not 6 going to give you an opinion on that. 7 BY MR. DAVIS: 8 Q. Right. 9 And you're not taking any issue 10 with any of that is my question, correct? 11 A. I'm -- if I'm not an expert on 12 it and I'm not giving an opinion on it, I 13 should not be interpreted as taking issue 14 with it. I have nothing to say about it. 15 Q. Okay. You -- continuing in 16 that assignment paragraph, you say you've 17 been tasked with evaluating certain 18 assertions from Dr. Conti, particularly her 19 claim that VCDs in this case were worthless. 20 Do you see that? 21 A. Yes. 22 Q. And you call her -- you call 23 her analysis -- you basically say that she's 24 applying a non -- uniform noncompensatory</p>
<p style="text-align: right;">Page 123</p> <p>1 A. I'm not an expert in that. I 2 would not have an opinion. 3 Q. Okay. And when you discuss 4 healthcare decision-making, for example in 5 paragraph 1 of your report that we just read 6 in your assignment, you're not discussing the 7 decisions of congress and the FDA regarding 8 structural aspects of our healthcare system, 9 are you? That healthcare decision-making 10 you're focused on here is related to 11 physicians' and consumers' choices, correct? 12 A. It's more specific. It's 13 related to how consumers, sometimes on their 14 own and sometimes in conjunction with their 15 physicians, would assess the worthiness or 16 value of a drug, and in this particular case 17 the recalled VCDs. 18 Q. Okay. Let's stick with my 19 question, which is, you're not critiquing or 20 in any way discussing in your discussion of 21 healthcare decision-making the structural 22 aspects of our healthcare system that 23 congress and the FDA have set up, are you? 24 MR. GOLDBERG: Objection to</p>	<p style="text-align: right;">Page 125</p> <p>1 decision rule, do you not? 2 A. I do not say that. 3 Q. Take a look at paragraph 9 of 4 your report, first bullet point. You say in 5 the middle of that bullet point, "In doing 6 so, Dr. Conti's analysis implicitly relies on 7 a uniform noncompensatory decision-rule for 8 calculating damages." 9 Do you see that? 10 A. Yes. 11 Q. So you are saying that she's 12 applying a uniform noncompensatory decision 13 rule, do you not? 14 A. You forgot a critical word. 15 No, I did not say that, I said she is 16 implicitly applying. 17 Q. How is that different from her 18 applying, which is my question? 19 A. The different between an 20 explicit and an implicit application. She 21 does not mention a noncompensatory decision 22 rule, but her assertions are consistent with 23 a noncompensatory decision rule, which is why 24 I said she implicitly applies a</p>

Page 126

1 noncompensatory decision rule.
 2 Q. Okay. Thank you for that.
 3 That was going to be my next question, is
 4 Dr. Conti never uses that term in her report,
 5 does she?
 6 A. No.
 7 Q. Thank you.
 8 That's a term -- compensatory
 9 decision rules, noncompensatory decision
 10 rules, those are terms that are borne out of
 11 the field of sort of behavioral science,
 12 right? Consumer behavior, consumer
 13 psychology, your field of expertise, correct?
 14 A. As I mentioned in my testimony
 15 earlier, the foundation for some of this work
 16 on compensatory/noncompensatory decision
 17 rules came from economists, and I mentioned
 18 several, Simon, Tversky, Kahneman, amongst
 19 others.
 20 Simon actually was the first
 21 one that came up, from what I know, or is at
 22 least given credit for the first
 23 noncompensatory rule satisfying. This is
 24 Herbert Simon, he's an economist.

Page 127

1 Q. This is behavioral economics,
 2 correct?
 3 A. At that time it was not defined
 4 as such, but he's an economist, and now it is
 5 commonly adopted in behavioral economics as
 6 well.
 7 Q. Let's go to paragraphs 21
 8 through 28 of your report. And this is where
 9 you set forth some discussion and definitions
 10 of what you mean by compensatory decision
 11 rules and noncompensatory decision rules, is
 12 that correct?
 13 A. Yes.
 14 Q. For example, in paragraph 22
 15 you state that "The compensatory
 16 decision-rule involves physicians and
 17 consumers placing a higher value of one drug
 18 feature to compensate for a lesser value of
 19 another feature," correct?
 20 A. Yes.
 21 Q. There's an assumption there, is
 22 there not, that the information regarding
 23 those features is available for them to
 24 actually weigh, correct?

Page 128

1 A. No.
 2 Q. Explain to me how that could
 3 not be.
 4 A. Some consumers use their
 5 experiences to make judgments about which
 6 features are important, what weights they
 7 want to put on those features, and how they
 8 would evaluate those features even if they
 9 did not have any external information.
 10 Q. So what you're saying is that
 11 even if -- the consumers may make, you know,
 12 make -- draw conclusions without the
 13 information, correct?
 14 A. Yes.
 15 Q. Okay. But to actually weigh
 16 the benefits, the costs and benefits of a
 17 particular feature, that feature has to be
 18 disclosed to them, does it not?
 19 A. Explain what you mean by
 20 "disclosed."
 21 Q. How can someone weigh the costs
 22 and benefits of a particular feature of a
 23 medicine, for example, if the feature itself
 24 is not known to them?

Page 129

1 A. Well, I think you're making an
 2 assumption that the feature is not known to
 3 them unless someone else gives them the
 4 information.
 5 If they have no information on
 6 the feature regardless of the source, I agree
 7 with you, then they would probably not
 8 include it in their decision-making and their
 9 valuation. But they can get information from
 10 a variety of sources and decide which source
 11 they want to include, which source they don't
 12 want to include, and make the deliberation
 13 accordingly.
 14 Q. There's also an assumption here
 15 in this paragraph 22 that the drug, like the
 16 hypothetical drug you discuss here, you say,
 17 "placing a higher value of one drug feature
 18 to compensate for a lesser value of another
 19 feature," right? So you're discussing this
 20 in the context of a pharmaceutical drug
 21 product, correct?
 22 A. I don't believe a chewable
 23 multivitamin is a pharmaceutical drug
 24 product, but maybe it is.

Page 130

1 Q. Well, I'm not asking about
 2 chewable multivitamins. I'm asking about the
 3 first sentence of paragraph 22, "The
 4 compensatory decision-rule involves
 5 physicians and consumers placing a higher
 6 value of one drug feature to compensate for a
 7 lesser value of another feature."
 8 Do you see that?
 9 A. Yes.
 10 Q. Okay. And by "drug" there you
 11 mean a prescription drug, because you're
 12 saying physicians as well as consumers,
 13 correct?
 14 A. That is incorrect.
 15 Q. Okay. Well, it could
 16 include -- when you say "drug," what do you
 17 mean there?
 18 A. It could mean any kind of drug,
 19 over-the-counter, prescription, any kind of
 20 drug.
 21 Q. Okay. So that term "drug" does
 22 include prescription drugs?
 23 A. Yes.
 24 Q. Okay. Thank you.

Page 131

1 There's an assumption in there
 2 that that drug is actually available to them,
 3 correct, for them to be able to engage in
 4 some kind of meaningful compensatory decision
 5 rule, correct?
 6 A. Incorrect.
 7 Q. How could that be?
 8 A. As a consumer, I could think
 9 about, even if I -- something was available
 10 but not accessible to me, or not available
 11 because it was in short supply, or for some
 12 other reason, I could think about what the
 13 drug would -- how much value I would place on
 14 the drug if it were available, for example.
 15 Q. Okay. But you're not going to
 16 end up paying anything for it, correct,
 17 because it's not available regardless of what
 18 the outcome of the decision is, right?
 19 A. I mean, if there's no product
 20 or service, in this case a drug to pay for,
 21 I'm not going to pay for nothing.
 22 Q. Right. Exactly.
 23 A. Yes.
 24 Q. Let's take -- are you familiar

Page 132

1 with the drug Fen-Phen? Do you remember
 2 Fen-Phen?
 3 A. It sounds familiar, but I don't
 4 remember any details.
 5 Q. Okay. Fen-Phen was a weight
 6 loss drug that was widely used, and then
 7 pulled from the market in the late '90s due
 8 to severe side effects, so it's not available
 9 today.
 10 Do you understand that?
 11 A. I'll take your word for it.
 12 Q. Okay. Can a physician in --
 13 let's say a consumer patient goes in to their
 14 doctor today and says, I want you to
 15 prescribe me Fen-Phen.
 16 Do you follow me?
 17 A. Yes.
 18 Q. And the drug has been withdrawn
 19 from the market, it's not available.
 20 Do you follow me there?
 21 A. Yes.
 22 Q. Okay. What would -- the result
 23 of that discussion, no matter how much the
 24 patient wanted Fen-Phen, is that the patient

Page 133

1 is not going to get Fen-Phen, right?
 2 A. I will say that the physician
 3 cannot prescribe Fen-Phen.
 4 Q. Right. And the patient will
 5 not be able to lawfully get Fen-Phen,
 6 correct?
 7 MR. GOLDBERG: Objection to
 8 form.
 9 A. I don't want to make any
 10 assumptions here. So, for example, they
 11 could go to another country and lawfully get
 12 Fen-Phen. I don't want to make an
 13 assumption.
 14 BY MR. DAVIS:
 15 Q. Okay. I'm talking --
 16 everything we're talking about today, I'm
 17 talking about in the US.
 18 A. Okay.
 19 Q. In the US, a patient really
 20 wants Fen-Phen, they go in to their doctor
 21 and ask for it, they're not going to be able
 22 to get it here because of the way our
 23 prescription drug system works, right? You
 24 need a prescription from a doctor to get

Page 134

1 Fen-Phen, and it needs to be available,
 2 approved, and able to be marketed, correct?
 3 A. If Fen-Phen was a prescription
 4 drug, yes.
 5 Q. So whatever the decision
 6 analysis that the consumer, you know, arrived
 7 at based on what they wanted out of Fen-Phen,
 8 the serious side effects that ultimately made
 9 it unavailable, the outcome of that is going
 10 to be they're not going to get Fen-Phen in
 11 the US, correct?
 12 A. In your hypothetical example,
 13 yes.
 14 Q. Right.
 15 And therefore, they're not
 16 going to pay anything for Fen-Phen, correct?
 17 A. Again, there's an assumption
 18 there. There are some consumers who would
 19 have had to pay nothing even if Fen-Phen was
 20 available, so yes.
 21 Q. Okay. Right. They're not
 22 going to pay for it, correct?
 23 A. Right. I'm just clarifying
 24 that they may not have had to pay for it even

Page 135

1 if it were available in some circumstances.
 2 Q. I'll grant you that.
 3 But the outcome is going to be
 4 they're not going to pay for it, right?
 5 A. Correct.
 6 Q. You mentioned your multivitamin
 7 example, I believe that's in
 8 paragraph twenty -- yeah, paragraph 22,
 9 sorry, just on the next page, and then
 10 spilling over into paragraph 23, right?
 11 A. Right.
 12 Q. Do you know whether
 13 multivitamins are subject to the same
 14 approval framework as prescription drugs?
 15 A. No.
 16 Q. Okay. Do you know whether any
 17 generic multivitamin must demonstrate that
 18 it's somehow equivalent to some brand
 19 multivitamin in order to be marketed?
 20 A. No.
 21 Q. Another example you provide is
 22 Accutane.
 23 Do you recall that?
 24 A. Yes.

Page 136

1 Q. Okay. And that appears around
 2 paragraphs 38 and 39 of your report, right?
 3 A. Right.
 4 Q. Okay. What's the point you're
 5 trying to make with this Accutane example
 6 here?
 7 A. The general point I'm trying to
 8 make is as a consumer behavior expert, I want
 9 to emphasize that consumers have agency, and
 10 that they can and do make choices even when
 11 they may know about negative side effects to
 12 others and even to themselves.
 13 Q. Okay. Those side effects you
 14 mention, those are all inherent to the drug
 15 itself, correct?
 16 MR. GOLDBERG: Objection to
 17 form. Vague and ambiguous.
 18 A. I don't understand.
 19 BY MR. DAVIS:
 20 Q. Sure.
 21 Is there some version of
 22 Accutane out there that you're aware of that
 23 does not carry those side effects?
 24 A. I cannot speak to that.

Page 137

1 Q. You haven't investigated that
 2 one way or the other?
 3 A. No.
 4 Q. Can't you deduce that if a
 5 generic drug like we've talked about has to
 6 show that it's the same as the brand drug in
 7 a lot of ways, can't you deduce that Accutane
 8 and its generic equivalents out there would
 9 all carry the same risk of these various side
 10 effects?
 11 A. No.
 12 Q. You can't deduce that?
 13 A. No.
 14 Q. Okay. Do you know whether the
 15 FDA label -- have you looked at the FDA label
 16 for Accutane?
 17 A. No.
 18 Q. Okay. That's -- do you
 19 understand that the FDA label would be
 20 exactly where those side effects are
 21 disclosed regarding Accutane?
 22 A. I'm not an expert. I'll take
 23 your word for it.
 24 Q. Okay. And do you have any

Page 138

1 understanding of whether the generic label
 2 for generic Accutane has to read exactly the
 3 same way with regard to those side effects as
 4 brand Accutane's label?
 5 A. Not an expert. I'll take your
 6 word for it.
 7 Q. And you don't understand why
 8 the FDA requires that that label be read the
 9 same way, do you?
 10 A. Not an expert on the FDA
 11 processes. I'm not going to form an opinion.
 12 MR. DAVIS: I'm handing
 13 Exhibit 5 to be marked.
 14 (Whereupon, Keller Exhibit
 15 Number 5 was marked for
 16 identification.)
 17 BY MR. DAVIS:
 18 Q. I'm not going to burden you
 19 with reading the entire Accutane label here.
 20 Did you -- I guess just answer me this.
 21 Did you, in coming up with your
 22 Accutane example in your report, did you look
 23 at the label for the drug? I think you said
 24 no, right?

Page 139

1 A. No.
 2 MR. GOLDBERG: Objection.
 3 Asked and answered.
 4 BY MR. DAVIS:
 5 Q. In your report on paragraph 38
 6 you mention that Accutane "has a number of
 7 potentially serious side effects, including:
 8 eye irritation; skin infection; bone
 9 tenderness; vision loss; birth defects (in
 10 pregnant women); skin inflammation."
 11 Do you see that?
 12 A. Yes.
 13 Q. Where did you get that
 14 information from?
 15 A. Footnote 62, and it's in
 16 Appendix B of my report.
 17 Q. Okay. So that is -- that
 18 appears to be the label, so you did --
 19 A. I didn't know that's what the
 20 label was. Thank you.
 21 Q. Yes. So this is the label. So
 22 you have looked at this?
 23 A. Yes.
 24 Q. And that's how you pulled out

Page 140

1 for example, these potential side effects,
 2 was from looking at what's been marked as
 3 Exhibit 5, correct?
 4 A. Sorry, can you repeat the
 5 question? What has been -- sorry, can you
 6 ask the question again?
 7 Q. Sure.
 8 The way you came to understand
 9 that Accutane carries the risk of these side
 10 effects that you discuss in paragraph 38 is
 11 because, as you cite in footnote 62, you
 12 actually went and looked at the label for the
 13 drug, correct?
 14 A. That's right.
 15 Q. Okay. And that's where those
 16 side effects were disclosed?
 17 A. I'm sure -- there may be more,
 18 but that's where the ones I've listed were
 19 disclosed, yes.
 20 Q. So essentially what happened
 21 here is the FDA approved Accutane, correct?
 22 The FDA granted approval for Accutane to be
 23 marketed to Roche, which was the brand
 24 company as you see there.

Page 141

1 Do you understand that?
 2 A. I take your word for it.
 3 Q. And they approved Accutane
 4 despite the drug carrying these disclosed
 5 side effects, correct?
 6 A. I'll take your word for it.
 7 Q. And left it up to physicians
 8 and consumers to weigh the costs and benefits
 9 of taking the medicine with those -- with the
 10 knowledge of those disclosed side effects in
 11 the label, right?
 12 A. Yes.
 13 Q. Okay. Let me ask you, how do
 14 you think users of --
 15 A. Should I put this away?
 16 Q. Sure, if you want to.
 17 How do you think users of
 18 generic Accutane manufactured by Ranbaxy
 19 weighed the fact that that generic Accutane
 20 was contaminated?
 21 A. Could you please repeat the
 22 question?
 23 Q. Sure.
 24 Are you familiar with a company

Page 142

1 called Ranbaxy?
2 A. No.
3 Q. Okay. Let me mark something
4 else for you.
5 MR. DAVIS: I'm handing
6 Exhibit 6 to the reporter to be
7 marked.
8 (Whereupon, Keller Exhibit
9 Number 6 was marked for
10 identification.)
11 BY MR. DAVIS:
12 Q. Okay. I'm handing you a --
13 Exhibit 6, for the record, is a US Department
14 of Justice press release titled "Generic Drug
15 Manufacturer Ranbaxy Pleads Guilty and Agrees
16 to Pay \$500 Million to Resolve False Claims
17 Allegations, cGMP Violations and False
18 Statements to the FDA."
19 Do you see that?
20 A. I see it.
21 Q. That's dated May 13, 2013?
22 A. I see.
23 Q. Okay. So, in fact, if you --
24 just to orient you, if you go back to

Page 143

1 Exhibit 5 just for a moment, which is the
2 Roche label for Accutane, do you see what the
3 generic name for that drug is?
4 A. Exhibit -- where? It's a big
5 document.
6 Q. Well, actually it's in your
7 report at paragraph 38, "As an example,
8 Accutane, or isotretinoin."
9 A. Yes.
10 Q. Do you know that Accutane's
11 generic name is isotretinoin?
12 A. Yes.
13 Q. Okay. I'm going to direct your
14 attention to page 2 of Exhibit 6, which is
15 this DOJ announcement.
16 A. Okay.
17 Q. And you'll see in the second
18 paragraph on that page, "Ranbaxy USA admitted
19 to introducing into interstate commerce
20 certain batches of adulterated drugs that
21 were produced at Paonta Sahib in 2005 and '6,
22 including Sotret, gabapentin, and
23 ciprofloxacin."
24 And then it says, "Sotret is

Page 144

1 Ranbaxy's branded generic form of
2 isotretinoin," which is Accutane, correct?
3 A. Is the generic form.
4 Q. Right.
5 A. Yes.
6 Q. So do you see there that
7 Ranbaxy admitted that in 2005 and '6 that
8 they distributed adulterated isotretinoin?
9 A. According to this statement,
10 yes.
11 Q. Okay. So my question is, how
12 do you think consumers of Ranbaxy's Sotret or
13 isotretinoin manufactured by them who got
14 that drug in 2005 and 2006 were able to weigh
15 at the moment they went to the pharmacy and
16 got it the fact that it was adulterated?
17 MR. GOLDBERG: Objection to
18 form.
19 I think it would be fair to
20 allow the witness to review the
21 document, given the question.
22 BY MR. DAVIS:
23 Q. You don't need to review the
24 document to answer the question. I'm asking

Page 145

1 you what I think is a pretty simple question.
2 How do you think consumers of
3 Ranbaxy's Sotret, which is, as we've seen,
4 generic Accutane, how do you think those
5 consumers in 2005 and '6 were able to weigh
6 the fact that it was adulterated when it was
7 dispensed to them at the time they purchased
8 the drug?
9 MR. GOLDBERG: I'm going to
10 place the same objection. I think the
11 witness can read the document, that
12 statement that you're asking her about
13 into context. You're sort of showing
14 her a document --
15 MR. DAVIS: This is
16 filibustering.
17 MR. GOLDBERG: It is not.
18 BY MR. DAVIS:
19 Q. Feel free, Dr. Keller, if you
20 want --
21 MR. GOLDBERG: You placed a
22 document in front of the witness, you
23 didn't give her a chance to review it.
24 Let her review the document, and let

Page 146

1 her answer the question.
2 BY MR. DAVIS:
3 Q. I'm not sure how helping the
4 document is going -- or reviewing the
5 document is going to help you answer the
6 question. I've set forth a fact that was
7 admitted to by Ranbaxy, which is that they
8 distributed in 2005 and 2006 certain
9 adulterated batches of isotretinoin.
10 You see that in the document,
11 do you not?
12 A. Yes.
13 Q. Okay. And you have no reason
14 to dispute what Ranbaxy is admitting there,
15 correct, that they did that?
16 A. Right.
17 Q. Okay. So my question to you
18 is, how do you think consumers who purchased
19 those adulterated isotretinoin prescriptions
20 in 2005 and 2006 were able to weigh the fact
21 that they were adulterated in 2005 and '6
22 when they actually bought the drugs?
23 A. This is the reason for wanting
24 to read the document, to see if there is any

Page 147

1 context that would help me answer the
2 question more accurately.
3 Q. The fact is they couldn't,
4 right? The answer is no, they can't weigh
5 that information, right, because they didn't
6 know it, right?
7 MR. GOLDBERG: Objection to
8 form.
9 A. Again, I don't know that. I
10 accepted what you said earlier when you
11 pointed to where I -- where that was in the
12 report. If you let me read this report, I'll
13 see if that same statement is made in the
14 report, and then you can ask me the question
15 again whether I have any reason to doubt it.
16 BY MR. DAVIS:
17 Q. Okay. Take a few moments.
18 MR. DAVIS: Let's go off the
19 record.
20 MR. GOLDBERG: No, let's not go
21 off the record. The document is a
22 couple of pages. Under the rules in
23 this case, the witness gets to read
24 the document for a few minutes, if

Page 148

1 it's going to take longer we'll go off
2 the record. But we don't go off the
3 record automatically just because a
4 document is presented. That's how it
5 goes.
6 BY MR. DAVIS:
7 Q. Feel free to give the document
8 a cursory review.
9 A. I'm sorry, I'm going to
10 undertake my task so that I can answer your
11 question to the best of my ability.
12 Q. Sure. Okay.
13 A. Thank you.
14 Q. Review the document.
15 A. Thank you.
16 (Witness reviewing document.)
17 A. Thank you.
18 Q. Sure. So let's start with the
19 portion of the document that I called out to
20 you.
21 You agree that Ranbaxy admitted
22 to distributing in 2005 and 2006 certain
23 batches of adulterated isotretinoin, which is
24 generic Accutane, correct?

Page 149

1 A. Yes.
2 Q. Okay. So my question is, how
3 can consumers who purchased those drugs in
4 2005 and '6 have weighed the fact that they
5 were adulterated at the time that they
6 purchased them?
7 A. You are making an assumption
8 that consumers uniformly would have wanted to
9 weigh that fact.
10 Q. No, that's not my question, and
11 you're not answering my question.
12 My question is, how could they
13 have weighed that information when it wasn't
14 disclosed to them?
15 A. But the assumption is that they
16 would even want to. So if I don't want to,
17 the issue of how I could is irrelevant.
18 Q. Well, you're taking it --
19 you're taking my question and you're
20 answering a different question.
21 A. I see.
22 Q. My question is, how can
23 consumers who purchased adulterated Ranbaxy
24 isotretinoin in 2005 and 2006 that was

<p style="text-align: right;">Page 150</p> <p>1 adulterated, how could they have weighed the 2 fact that it was adulterated? If they wanted 3 to weigh that fact, how could they have 4 weighed that fact that it was adulterated? 5 They couldn't, right? 6 A. Again, I'll explain why I'm 7 having a hard time answering that question 8 directly. 9 Based on my understanding of 10 consumer behavior, there are consumers who 11 think drugs are adulterated when they're not 12 and consider that. And the example that I 13 give in my report was on -- because we were 14 talking about COVID vaccine earlier, about 15 bleach, and I cited a supporting document, 16 you know, something from the CDC on the 17 percentage of people that were using bleach 18 because they thought that was more 19 efficacious for them or safer or whatever set 20 of reasons they had that I'm unsure of than 21 the COVID-19 vaccine. 22 So I don't -- I said this 23 earlier, I don't think that consumers need to 24 get specific information in order for them to</p>	<p style="text-align: right;">Page 152</p> <p>1 question. You're answering a different 2 question, which is how they might have 3 weighed that information or not have weighed 4 that information. 5 My question is, it wasn't 6 disclosed to them, so even if they wanted to 7 weigh it they couldn't have, right? Even if 8 they would have considered that in their 9 decision-making, they couldn't have, right, 10 because it wasn't disclosed to them. Would 11 you agree with that? 12 A. So you're saying make the 13 assumption that people -- that there were 14 people who wanted to know, and then -- you're 15 asking me to make a lot of assumptions. 16 Q. Well, I don't think it's a big 17 assumption to assume that people would want 18 to know that their drug was contaminated. 19 A. Some will and some will not, 20 and that's what I said. 21 Q. Assume it for me, Dr. Keller, 22 assume that there were patients of Ranbaxy's 23 Sotret who would have wanted to know that 24 information.</p>
<p style="text-align: right;">Page 151</p> <p>1 include features, whether they're benefits or 2 costs or both in some cases, in order to make 3 a determination of how they impact the value 4 that they are assessing. 5 Q. You don't think consumers are 6 entitled -- you don't think these Ranbaxy 7 isotretinoin consumers were entitled to know 8 that the drug they got was adulterated? Is 9 that what you're saying? 10 A. No, I did not say that. I 11 actually don't know what you mean by 12 "entitled." 13 Q. You don't think it would have 14 been right for them to know that the drug 15 they were getting was adulterated? 16 A. There are some consumers who 17 would say, It is my right to know, and there 18 are others who would say, I don't care. 19 There is a range of consumer 20 behavior, and I don't think that you can 21 uniformly assume any consumer would be 22 exactly the same in this context of they 23 would feel that they have the right to know. 24 Q. But you're not answering my</p>	<p style="text-align: right;">Page 153</p> <p>1 A. Okay. 2 Q. But they didn't know that 3 information at the time they purchased the 4 drug, right? 5 A. Correct. 6 Q. Okay. How could they have 7 weighed that information when it wasn't 8 disclosed to them? They couldn't have, 9 right? They could not have weighed that 10 information, correct? 11 A. They could not have weighed the 12 specific information, but they could have 13 weighed related information. 14 Q. What do you mean by "related 15 information"? 16 A. You know, there are consumers 17 out there who believe that pure drugs is an 18 oxymoron, and that -- you know, and as I 19 state in my report in Section IV, I think it 20 was IV.B, which is what we were referring to 21 earlier, there are some consumers who learn 22 over time that things that they thought were 23 safe were not safe, and things that they 24 thought may have not been safe have reentered</p>

<p style="text-align: right;">Page 154</p> <p>1 the market in a different form or in some 2 other form. 3 So I think the situation is 4 much more fluid, and that consumers are aware 5 of this. 6 Q. So you're saying that you don't 7 think consumers should be entitled to expect 8 that the drugs that are distributed to them 9 at the pharmacy are as approved by the FDA? 10 A. I would never use consumers, if 11 your -- I would never agree to any sentence 12 that says "consumers" if by that you mean all 13 consumers. 14 Q. I'm asking, because you said 15 that -- I think you said that the notion of a 16 pure drug was an oxymoron. Is that what you 17 said? 18 A. I said for some consumers, not 19 for -- remember, I'm doing -- I'm applying 20 the same rule to myself that I'm applying to 21 you. I said for some consumers. I would not 22 say for all consumer a pure drug is an 23 oxymoron. 24 Q. So what you're saying is you</p>	<p style="text-align: right;">Page 156</p> <p>1 know that so you could just take another 2 manufacturer's version of generic Accutane 3 that wasn't adulterated? 4 A. It's a hypothetical, so I'm 5 giving you a hypothetical back, and that is, 6 if I like this one that I'm taking and it's 7 worked for me -- and back to my framework 8 that I talk about in the model, and I'll use 9 MICI this time, which is, depending on the 10 message that I got -- and I can give you 11 examples, depending on -- I'm focusing on the 12 individual differences, that if I've tried 13 other acne medicines and they haven't worked 14 for me, and then I find one that I really 15 like and it seems to work for me, and then 16 there is this information out there, I'm 17 saying that there are some consumers in those 18 situations that might not want to know or not 19 care about this information about the 20 adulteration from this specific batch because 21 they don't want to switch, they don't want to 22 consider any alternative products. 23 Q. Do you understand that the 24 point of our generic drug system is that all</p>
<p style="text-align: right;">Page 155</p> <p>1 don't think consumers of pharmaceuticals 2 dispensed in the US should be entitled to a 3 belief or an expectation that those drugs are 4 dispensed to them as described and approved 5 by the FDA? 6 A. Again, I don't believe that is 7 the case for all consumers. I think many 8 consumers don't think about whether the drug 9 is approved or not approved, or who approves 10 it or doesn't approve it. 11 And I'm going to break one of 12 my own rules and give you an example where if 13 I was taking a drug, and it could be this one 14 that you have as an example, and I thought it 15 was working brilliantly for me, I might not 16 want to know that the drug -- I mean, sorry, 17 I can say drug, yeah -- that the drug was 18 adulterated because I would like to continue 19 taking the drug without any trepidation. 20 Q. You might not want to know? 21 A. I might not want to know. 22 Q. Well, what if -- I mean, we're 23 talking about just one manufacturer's version 24 of generic Accutane, you wouldn't want to</p>	<p style="text-align: right;">Page 157</p> <p>1 the generics are supposed to work in the same 2 way to each other and to the brand? 3 MR. GOLDBERG: Objection. 4 BY MR. DAVIS: 5 Q. Do you understand that? 6 MR. GOLDBERG: Objection to 7 form. Asked and answered. 8 A. I am not an expert on how 9 generics are supposed to work, and I will not 10 give you an opinion on that. 11 BY MR. DAVIS: 12 Q. Let's back up for a second. 13 You talk a lot about this 14 choice exercise that consumers make in the 15 healthcare context, right? 16 A. Which context are you speaking? 17 We were talking about how a consumer might 18 value the drug that they have, so when you 19 say "choice exercise," I'm trying to 20 understand the context. 21 Q. Sure. 22 Your whole report is about 23 healthcare decision-making, right? And that 24 involves a choice, right?</p>

Page 158

1 A. I would say that that's a bit
2 of a mischaracterization. The bulk of my
3 report is focused on how consumers would
4 assess the value or worth of a drug to them.
5 Q. Okay. And once they make that
6 assessment, at what point is the decision
7 finalized for them?
8 A. Lots of cases, never. In some
9 cases, they try one, they never switch. That
10 varies by consumer.
11 Q. Well, the choice is culminated
12 when they go buy the drug, right? They're
13 acting, would you agree --
14 A. No, no.
15 Q. Would you agree that a
16 consumer, when they go fill a prescription,
17 they're acting on a choice that they've made,
18 correct? They may -- I hear what you're
19 saying, they may reevaluate that choice in
20 the future, but they're acting on a choice
21 that they made prior to that, because they
22 had to -- I mean, it's just common sense, you
23 go fill a prescription, you're doing an act,
24 right?

Page 159

1 A. As I mentioned to you earlier,
2 the consumer value is defined as a comparison
3 of benefits and costs, and the price they pay
4 or the act of actually exchanging a product
5 for money is only one aspect of the cost.
6 Q. It's an action, though, that a
7 consumer is taking, correct?
8 A. It's one of several.
9 Q. As a result of the decision and
10 choice analysis that they went through prior
11 to engaging in that act, right?
12 A. I take objection to that. As I
13 explain in my report, and this is in Section
14 IV.B of my report, consumers use a variety of
15 different methods to make those choices.
16 Some of them are noncompensatory or
17 reflexive, they haven't thought about
18 anything, they've just gone and done it
19 spontaneous, others -- there's a range --
20 others will spend a lot of time and think
21 about the plusses and minuses. There's a
22 range.
23 Q. I'm not going into the
24 qualitative aspect of that choice. All I'm

Page 160

1 saying is that in order to act, which is to
2 go fill the prescription at the pharmacy,
3 some level of choice had to be made to go do
4 that. We're not talking about zombies here
5 who are just like, you know, going to the
6 pharmacy, this is a choice that humans make
7 to go fill a prescription, is it not?
8 A. I would say some will go fill
9 and some will not. And again, as is
10 explained in my report, many consumers do not
11 fill their prescriptions, and many consumers
12 who fill their prescriptions do not take
13 their drugs. So those are also actions.
14 Q. So with this Sotret example,
15 which consumers affirmatively made the choice
16 to go get adulterated Sotret from Ranbaxy?
17 A. I have no idea.
18 Q. None, right?
19 A. Well, no, that is -- I have no
20 information on that. I can't tell you that.
21 Q. If you don't know -- if they
22 didn't know about it, how could they
23 affirmatively go choose that at the time?
24 They can't, right?

Page 161

1 A. I'm going to repose -- I'm
2 going to, sorry, reframe, reframe that
3 question.
4 Compare that to a consumer who
5 should have had the information, could have
6 had the information but did not, right? What
7 is the difference between their action and
8 someone who could not have known?
9 Q. Do you have any -- is there any
10 indication in this DOJ announcement that you
11 read that any consumer had any indication, or
12 any ability to even go and find out that
13 Ranbaxy's Sotret was adulterated at the time
14 it was dispensed to them?
15 A. That information is not
16 contained in this document.
17 Q. In fact, the opposite is
18 contained in the document, right? Part of
19 the settlement was related to Ranbaxy knowing
20 and not telling the FDA until 2007, which is
21 years after the adulterated Sotret was
22 distributed in 2005 and '6, right? So the
23 indication in this document at least is that
24 no one knew except Ranbaxy, right?

<p style="text-align: right;">Page 162</p> <p>1 A. I don't know that to be a fact.</p> <p>2 Q. Okay. Take a look at the last</p> <p>3 paragraph of page 3 of this document. It</p> <p>4 says -- and this is a quote from John Roth,</p> <p>5 the director of the FDA's office of criminal</p> <p>6 investigations. He says, "The FDA expects</p> <p>7 that companies will comply with the cGMP</p> <p>8 requirements mandated bylaw so that consumers</p> <p>9 can be assured that their medical products</p> <p>10 are safe and pure."</p> <p>11 Do you see that?</p> <p>12 A. Yes.</p> <p>13 Q. Okay. Is there anything about</p> <p>14 that statement that you disagree with?</p> <p>15 A. I am not an expert on the FDA,</p> <p>16 so I have no idea what they expect companies</p> <p>17 to do.</p> <p>18 Q. Do you think that consumers are</p> <p>19 entitled to the same expectation that the FDA</p> <p>20 has here, which is that their medical</p> <p>21 products are safe and pure?</p> <p>22 A. Again, it depends on how you</p> <p>23 ask consumers those questions. If they had</p> <p>24 to make trade-offs, they might make different</p>	<p style="text-align: right;">Page 164</p> <p>1 that are substandard, ineffective, or</p> <p>2 unsafe."</p> <p>3 Do you see that?</p> <p>4 A. Yes.</p> <p>5 Q. Okay. Do you agree from a --</p> <p>6 put your marketing consumer-patient messaging</p> <p>7 hat on -- do you agree that that would</p> <p>8 complicate your job if the integrity of the</p> <p>9 FDA's approval process was undermined?</p> <p>10 A. I cannot answer that question.</p> <p>11 Q. Okay. You don't think it would</p> <p>12 be harder, for example, to advocate for</p> <p>13 medication compliance when -- if the approval</p> <p>14 process for that very medication was -- the</p> <p>15 integrity of it was undermined because</p> <p>16 companies were selling adulterated drugs?</p> <p>17 MR. GOLDBERG: Objection to</p> <p>18 form. Ambiguous.</p> <p>19 A. I cannot answer that question.</p> <p>20 BY MR. DAVIS:</p> <p>21 Q. On page 3, back to page 3 of</p> <p>22 Exhibit 6, you'll see a paragraph, second to</p> <p>23 last paragraph, "Last year" -- which would</p> <p>24 have been 2012 based on the date of this</p>
<p style="text-align: right;">Page 163</p> <p>1 trade-offs on how important safety or purity</p> <p>2 might be to them if it meant lower efficacy</p> <p>3 or lower experience for them.</p> <p>4 Q. So you're saying that consumers</p> <p>5 of prescription drugs in the US should be</p> <p>6 forced into a position of making a trade-off</p> <p>7 that includes whether their products are safe</p> <p>8 or pure?</p> <p>9 A. That is not what I said.</p> <p>10 Q. Wouldn't that position</p> <p>11 completely undermine our prescription drug</p> <p>12 approval framework in this country?</p> <p>13 A. I am not an expert on the</p> <p>14 approval drug process, and I am not offering</p> <p>15 an opinion on it.</p> <p>16 Q. Okay. Go back to page 1 of</p> <p>17 this document, which is Exhibit 6 for the</p> <p>18 record. Another quote from Stuart Delery,</p> <p>19 who was acting assistant attorney general for</p> <p>20 the civil division of the department -- U.S.</p> <p>21 Department of Justice. He says, "When</p> <p>22 companies sell adulterated drugs, they</p> <p>23 undermine the integrity of the FDA's approval</p> <p>24 process and may cause patients to take drugs</p>	<p style="text-align: right;">Page 165</p> <p>1 document -- "FDA and Ranbaxy agreed to an</p> <p>2 injunction that prevents drugs produced at</p> <p>3 the Paonta Sahib and Dewas facilities from</p> <p>4 entering the US market until the facilities</p> <p>5 have been brought into full compliance with</p> <p>6 the FDCA and its implementing regulations."</p> <p>7 Do you see that?</p> <p>8 A. Yes.</p> <p>9 Q. So for that period of time from</p> <p>10 the beginning of the injunction until a</p> <p>11 determination of full compliance was made,</p> <p>12 there was no consumer in the US market who</p> <p>13 could have gotten a Ranbaxy drug produced at</p> <p>14 those two facilities, right? Is that what</p> <p>15 that says?</p> <p>16 A. I will make that assumption</p> <p>17 that there were no leftovers or -- there's</p> <p>18 many assumptions there, but okay.</p> <p>19 Q. And so, therefore, there would</p> <p>20 have been no supply of drugs from those</p> <p>21 facilities, correct, entering the US market?</p> <p>22 MR. GOLDBERG: Objection to</p> <p>23 form.</p> <p>24 A. Please explain that.</p>

Page 166

1 BY MR. DAVIS:
2 Q. I'm not sure what there is to
3 explain.
4 There would have been no supply
5 of drugs from those two facilities that could
6 have entered the US market for the period of
7 the injunction, correct?
8 MR. GOLDBERG: Objection to
9 form. Foundation.
10 A. So can you please explain what
11 period we're talking about?
12 BY MR. DAVIS:
13 Q. Sure.
14 The period that I thought we
15 had understood, which was the beginning of
16 the injunction until full compliance.
17 A. So I'm not a lawyer, and, you
18 know, I need to understand. You know, these
19 are fluent terms for you.
20 So when you say "the beginning
21 of the injunction," what -- and you're asking
22 me about a time period, so what time period
23 am I referring to?
24 Q. The date of the injunction last

Page 167

1 year, so 2012, FDA and Ranbaxy agreed to an
2 injunction.
3 A. So from 2012 to?
4 Q. Whatever that date was that
5 they were brought into full compliance, if
6 that date ever occurred, would you agree with
7 me that there was no supply of Ranbaxy drugs
8 from those two facilities that could have
9 entered the US market?
10 A. I am not an expert on this and
11 I cannot answer that question.
12 Q. I mean, it just plainly says it
13 there, doesn't it?
14 MR. GOLDBERG: Objection to
15 form. Argumentative.
16 A. It's not plain to me.
17 BY MR. DAVIS:
18 Q. So the FDA and Ranbaxy agreeing
19 to an injunction that, quote, prevents drugs
20 produced at the two facilities from entering
21 the US market, that doesn't suggest to you
22 that, for that time period, that there was no
23 supply of Ranbaxy drugs into the US market
24 from those two facilities?

Page 168

1 A. I will repeat why I am not
2 saying that there was no supply. In part, I
3 don't know what supply there already was in
4 the marketplace, I don't know what -- how it
5 was recalled, I don't know what instructions
6 people gave, physicians and otherwise, as to
7 what people should do with whatever supply
8 was available, and I actually from this
9 sentence don't even know.
10 It says earlier that they're
11 going to work with them. I don't know when
12 they started working with them and allowed
13 them to reenter the market. I don't know.
14 Q. Do you know what happens to the
15 supply of pharmaceuticals that are already in
16 the market once a recall is announced? Do
17 you know what happens to those pills that are
18 sitting on warehouse shelves or pharmacy
19 shelves after the recall is announced?
20 A. I am not an expert on this, and
21 I will not form an opinion.
22 MR. GOLDBERG: John, I think
23 we've been going about 90 minutes.
24 MR. DAVIS: Sure. Five

Page 169

1 minutes?
2 We can go off the record.
3 MR. GOLDBERG: Yes, let's go
4 off the record.
5 THE VIDEOGRAPHER: Off the
6 record at 1:53.
7 (Whereupon, a recess was
8 taken.)
9 THE VIDEOGRAPHER: Back on the
10 record at 2:09.
11 BY MR. DAVIS:
12 Q. Okay. Dr. Keller, we left off,
13 I was asking you about this FDA Ranbaxy
14 injunction, I was asking you how that would
15 have affected the supply of Ranbaxy's in this
16 case Sotret that we were talking about into
17 the market that was produced at these two
18 facilities, into the US market.
19 Do you recall that discussion?
20 A. I recall the discussion before
21 the break, yes.
22 Q. Okay.
23 A. Should I bring this document
24 forth again?

Page 170

1 Q. No, I was resetting our --
2 A. I'm sorry. Okay.
3 Q. -- context here.
4 Have you examined in any detail
5 how the fact of adulteration in this case,
6 for example, affects a company's ability to
7 supply their drugs into the US?
8 A. I need a clarification.
9 Q. Sure.
10 A. In this case are we talking
11 about the Ranbaxy case, or are we talking
12 about the VCD case, or some other case?
13 Q. I'm just talking generally
14 about pharmaceutical prescription drugs.
15 A. Okay.
16 Q. Did you as part of this
17 assignment, or not as part of this
18 assignment, just generally, have you ever
19 studied how the fact of a prescription drug's
20 adulteration affects its ability to be
21 distributed, marketed, sold, dispensed in the
22 United States?
23 MR. GOLDBERG: Objection.
24 Ambiguous and compound.

Page 171

1 A. I am not an expert on many of
2 the things that were raised, and I'm not
3 going to give an opinion.
4 BY MR. DAVIS:
5 Q. So you haven't looked into how
6 the fact of adulteration might affect the
7 supply of a drug in the US?
8 A. Not prior to this case.
9 Q. Did you in this case?
10 A. I reviewed Dr. Conti's report,
11 so yes.
12 Q. Okay. I'm asking not did you
13 review Dr. Conti's report. I'm asking if you
14 did any independent analysis of your own how
15 the fact of adulteration under the law might
16 affect the supply or the ability of a
17 manufacturer to supply its drug product in
18 the United States market?
19 A. No. I am a consumer behavior
20 expert. I have no opinion on drug supply for
21 the example you've given.
22 MR. DAVIS: I'm going to mark
23 Exhibit 7.
24 ///

Page 172

1 (Whereupon, Keller Exhibit
2 Number 7 was marked for
3 identification.)
4 BY MR. DAVIS:
5 Q. I understand you're not a
6 lawyer, Dr. Keller. What I'm showing --
7 MS. ANDRAS: Can you please
8 identify it with specificity on the
9 record?
10 MR. DAVIS: Sure. For the
11 record, this is Exhibit 7, which is 21
12 USC 331, part of the US Code entitled
13 "Prohibited Acts."
14 BY MR. DAVIS:
15 Q. Do you see that?
16 A. Yes.
17 Q. Do you have familiarity with
18 what the US Code is?
19 A. No.
20 Q. Do you understand that that's
21 federal law enacted by congress, signed by
22 the President?
23 MR. GOLDBERG: Objection to
24 form. Foundation.

Page 173

1 A. I did not know that. I'm not
2 an expert on the law.
3 BY MR. DAVIS:
4 Q. Okay. I'm granting you that.
5 It says there that, "The
6 following acts and the causing thereof are
7 prohibited." And then it says, "(a) The
8 introduction or delivery" into -- sorry.
9 "The introduction or delivery for
10 introduction into interstate commerce of
11 any," and it lists several things, including
12 drugs, that are adulterated or misbranded.
13 Do you see that?
14 A. Yes.
15 Q. Okay. And then (c) says, "The
16 receipt in interstate commerce of any" of the
17 same categories, including drugs, that are
18 adulterated or misbranded, and the delivery
19 or preferred delivery thereof for pay or
20 otherwise.
21 Do you see that?
22 A. I do.
23 Q. Okay. Were you aware -- your
24 testimony is you're not aware of these

Page 174

1 prohibitions under federal law, are you?
2 A. Correct.
3 Q. Okay. Thank you.
4 MR. GOLDBERG: Are you done
5 with this one?
6 MR. DAVIS: For the moment,
7 yes.
8 BY MR. DAVIS:
9 Q. Do you have any opinion about,
10 or -- let me rephrase it.
11 Do you have any understanding
12 about whether the at-issue VCDs in this case
13 were deemed to be adulterated or misbranded
14 under the law?
15 A. I don't have an opinion.
16 Q. Okay. You don't have any
17 understanding, correct?
18 A. That's not what you asked. You
19 asked if I had an opinion. So could you
20 reask the question?
21 Q. Sure.
22 MR. HONIK: I'd like Maureen to
23 read it exactly as John posed.
24 THE WITNESS: Thank you.

Page 175

1 (Whereupon, the reporter read
2 back the question:
3 QUESTION: Do you have any
4 understanding about whether the
5 at-issue VCDs in this case were deemed
6 to be adulterated or misbranded under
7 the law?)
8 MR. HONIK: Not opinion.
9 A. I apologize.
10 Could you read that again?
11 (Whereupon, the reporter read
12 back the question:
13 QUESTION: Do you have any
14 understanding about whether the
15 at-issue VCDs in this case were deemed
16 to be adulterated or misbranded under
17 the law?)
18 A. I am not a lawyer. I do not --
19 I am not going to offer any opinion on that.
20 BY MR. DAVIS:
21 Q. Okay. And the question was,
22 you don't have any understanding of whether
23 they were or not, correct?
24 A. Please explain what you mean by

Page 176

1 "understanding."
2 Q. So my question was, do you have
3 any understanding of whether the at-issue
4 VCDs in this case were deemed to be
5 adulterated or misbranded under the law?
6 A. I will answer to the best of my
7 ability. I have read the -- as you can see
8 in Appendix B of my report, I have read a
9 couple of legal documents that explain that
10 some of the at-issue VCDs were found to be
11 adulterated and unbranded under the law.
12 Q. Okay. But you're not sure how
13 many, right? You said "some." You're not
14 sure whether it's some or all of them, are
15 you?
16 A. I am -- my understanding, which
17 is what you asked, is that of the VCDs that
18 were voluntarily recalled by the
19 manufacturers, some of them, not all of them,
20 were adulterated or unbranded.
21 Q. You're not sure how many that
22 is, though?
23 A. No.
24 Q. Okay. And you didn't do any

Page 177

1 independent analysis of whether that's true
2 or not true, right?
3 A. Correct.
4 Q. Okay. Do you have any
5 understanding of whether there are
6 valsartan-containing drugs out there that
7 don't have and never had NDMA and NDEA in
8 them?
9 A. I am not an expert. I will
10 qualify that some of the material that I have
11 in my supporting documents suggested --
12 indicated to me that there were levels of
13 these two impurities that you just mentioned,
14 but I am assuming they were acceptable
15 levels.
16 Q. So my -- that's not my
17 question, though. My question -- and I'll
18 reask it just to make sure we're clear, my
19 question is, do you have any understanding of
20 whether there were not at-issue VCDs
21 manufactured by entities other than the
22 defendants in this case that did not have any
23 NDEA or NDMA in them?
24 A. I have no information on them.

Page 178

1 Q. You have no information on
2 that.
3 Didn't look at it?
4 A. No.
5 Q. Didn't investigate it?
6 A. No. Not part of my task.
7 Q. Do you have any understanding
8 of whether NDMA or NDEA are supposed to be in
9 valsartan drugs?
10 A. I'm not an expert on the
11 formulation of these drugs. I have no
12 opinion.
13 Q. Okay. So you don't know
14 whether these two substances are supposed to
15 or not supposed to be in valsartan drugs?
16 A. I am not an expert. I cannot
17 comment as to the presence, absence, or
18 extent to which these are or are not
19 necessary for these drugs.
20 Q. Well, the drugs were recalled,
21 as you said, right?
22 A. (Nodding in the affirmative).
23 Q. Doesn't that indicate to you
24 that they weren't supposed to be in there?

Page 179

1 A. My caveat is when you say
2 they're not supposed to be there, my
3 understanding is that they are there, it's
4 just not they're not supposed to be there
5 above certain levels, and that's what I'm
6 qualifying.
7 Q. But you don't know whether
8 they're supposed to be there at all or not,
9 correct?
10 MR. GOLDBERG: Objection to
11 form. Foundation.
12 A. No.
13 BY MR. DAVIS:
14 Q. Did you look at a valsartan
15 label like you looked at the Accutane label?
16 A. I already testified that I
17 looked at valsartan product labels.
18 Q. Can you point me -- it may be
19 in there, I just want you to point me to
20 where in your materials considered that would
21 be.
22 A. I can show you from my report,
23 but I don't have the binder of all the -- and
24 actually there's maybe six on a page, they're

Page 180

1 visuals, in case you have those materials and
2 you're trying to look for them, but I can
3 help.
4 (Witness reviewing document.)
5 A. I'm -- I wish I had my
6 materials in front of me, but I'm going to --
7 I don't want to guess. It could be in the
8 drugs.com or the MedlinePlus. I'm picturing
9 the page in front of me, and they're pictures
10 of multiple labels with on the left side the
11 name, and on the right side the drug
12 manufacturer and the place of manufacture.
13 That's what I'm picturing.
14 Q. Okay. You say -- flip to
15 page 30 of your report, if you don't mind,
16 Exhibit 1.
17 A. Of course.
18 Q. The title of that section is
19 "Real-world Evidence Indicates that the
20 At-Issue VCDs Held Value," correct?
21 A. Yes.
22 Q. Okay. Did you look at any
23 sales data of -- sorry.
24 Did you look at any sales data

Page 181

1 of the actual sales of these drugs after the
2 recalls were announced?
3 A. Only information that was part
4 of Dr. Conti's report, not otherwise.
5 Q. So do you know what happened to
6 sales of these products after the recalls?
7 A. I don't recall.
8 Q. Sorry, give me a few moments
9 here. I should have two copies of all this
10 somewhere, but I don't. I'm just going to
11 mark one, it's big enough for, I think, you
12 to see it.
13 MR. DAVIS: This is being
14 marked as Exhibit 8, let's start with
15 that.
16 (Whereupon, Keller Exhibit
17 Number 8 was marked for
18 identification.)
19 BY MR. DAVIS:
20 Q. Let me represent to you that
21 what I'm showing you there is the monthly
22 prescription data for --
23 A. Should I put the -- my report
24 away?

Page 182

1 Q. Sure, sure.
 2 A. Thank you. Okay.
 3 Q. What I'm representing to you
 4 here is that what's marked as Exhibit 8 is a
 5 graph showing monthly prescription data for
 6 ZHP manufactured valsartan products.
 7 Do you understand what I mean
 8 by that?
 9 A. Yes.
 10 Can I ask a clarifying
 11 question --
 12 Q. Sure.
 13 A. -- so I know how to interpret
 14 this graph?
 15 Q. Yes.
 16 A. I see that the X axis is
 17 labeled as time, but the Y axis is not
 18 labeled, and so I'm not quite sure how to
 19 interpret a graph with only one labeled axis.
 20 I could be missing something.
 21 Q. Read for me, if you don't mind,
 22 the header up at the top there.
 23 A. "Monthly ZHP Rx's by Valsartan
 24 Product."

Page 183

1 Q. Okay. So what I'll represent
 2 to you that the Y axis is there is Rx's, which
 3 is prescriptions.
 4 Do you understand that?
 5 A. So these are prescription --
 6 just clarifying, these are prescriptions of
 7 valsartan over this period of time.
 8 Q. Correct, manufactured by ZHP.
 9 A. Right. Prescriptions that were
 10 given, filled, or -- just again clarifying,
 11 because it isn't labeled.
 12 Q. Prescriptions that were filled.
 13 A. Thank you.
 14 Q. Yes. Absolutely.
 15 You didn't look -- I think your
 16 testimony was you didn't actually look at any
 17 of the sales data, did you?
 18 A. Not unless it was in
 19 Dr. Conti's appendices.
 20 Q. Do you see that the sales
 21 abruptly dropped to zero?
 22 A. So can I now assume in the Y
 23 axis that the bottom is the zero?
 24 Q. Yes, yes.

Page 184

1 A. Okay. Then yes.
 2 MR. GOLDBERG: Objection to
 3 form.
 4 BY MR. DAVIS:
 5 Q. Do you understand why for ZHP
 6 the monthly sales dropped to zero?
 7 A. I don't have that information.
 8 Q. Did you come to any
 9 understanding or investigate whether similar
 10 to Ranbaxy, ZHP was barred from importing
 11 prescription drug products to the US?
 12 A. I just want to make sure,
 13 exporting, that ZHP was barred from -- we
 14 barred them from imports of their product,
 15 right?
 16 Q. Yes. ZHP products were made
 17 illegal to sell in the US, correct?
 18 A. Yes.
 19 MR. GOLDBERG: Objection to
 20 form.
 21 BY MR. DAVIS:
 22 Q. And subject to seizure by
 23 federal agents if they were imported or
 24 attempted to be distributed?

Page 185

1 A. I am not an expert on this
 2 process. I cannot form an opinion.
 3 Q. Well, you sort of do form an
 4 opinion, though. If you look at paragraph 71
 5 of your report, you have a hypothetical
 6 supply-demand curve, do you not?
 7 A. Excuse me, I need to get there.
 8 Could you ask that question
 9 again?
 10 Q. Sure.
 11 You said you don't have an
 12 opinion one way or the other on whether ZHP
 13 was barred from importing or selling its
 14 products in the US. Am I right about that?
 15 A. I'm not sure, that may have
 16 been before your last question, I don't
 17 recall that as your last question, so I'm
 18 trying to be accurate.
 19 MR. DAVIS: Could you read that
 20 last question? Sorry.
 21 (Whereupon, the reporter read
 22 back the following:
 23 QUESTION: And subject to
 24 seizure by federal agents if they were

<p style="text-align: right;">Page 186</p> <p>1 imported or attempted to be 2 distributed? 3 THE WITNESS: I am not an 4 expert on this process. I cannot form 5 an opinion. 6 QUESTION: Well, you sort of do 7 form an opinion, though. If you look 8 at paragraph 71 of your report, you 9 have a hypothetical supply-demand 10 curve, do you not. 11 THE WITNESS: Excuse me, I need 12 to get there. 13 Could you ask that question 14 again? 15 QUESTION: Sure. 16 You said you don't have an 17 opinion one way or the other on 18 whether ZHP was barred from importing 19 or selling its products in the US. Am 20 I right about that?) 21 BY MR. DAVIS: 22 Q. So let me -- I'll withdraw the 23 last question. 24 You do at paragraph 71 on</p>	<p style="text-align: right;">Page 188</p> <p>1 And some consumers would say, I 2 don't want any of this product, it is not 3 worth anything to me, all the way to the 4 other end of the continuum where you have 5 some consumers who would say, I'm consuming 6 these impurities in multiple forms and it's 7 of no consequence to me, and everything in 8 between. 9 That's what these alternative 10 demand curves, or multiple demand curves are 11 meant to represent. 12 So when you ask the question, 13 you know, are they hypothetical demand 14 curves, yes, they are, as that they're not 15 based on data, nor is the supply curve, by 16 the way, based on data, they're just 17 representing how my frameworks and opinions 18 would translate into alternative demand 19 curves. 20 Q. Okay. And that was -- I think 21 you've answered my next question, which is, 22 this is not informed by any look at data, is 23 it? These are hypothetical scenarios you're 24 putting forward, right?</p>
<p style="text-align: right;">Page 187</p> <p>1 page 43, the next page over, supply a 2 hypothetical supply-demand curve, do you not? 3 A. Several. 4 Q. Well -- 5 A. Several demand curves, and 6 therefore -- 7 Q. You have several demand curves, 8 but you have one supply, correct? 9 A. Yes, so a combination would be 10 several supply-demand curves. 11 Q. Right. But with one supply 12 line, correct? 13 A. Yes. 14 Q. And this is hypothetical, 15 right? This is a hypothetical supply-demand 16 curve, is it not? 17 A. Well, it is a figure, and the 18 changes or the alternatives of the demand 19 curve that I'm sharing with you here reflect 20 my argument that consumers would have 21 different assessments of what the drug would 22 be -- what the at-issue VCD would be to them, 23 and based on the compensatory/noncompensatory 24 decision rules and MICI.</p>	<p style="text-align: right;">Page 189</p> <p>1 A. Yes. 2 Q. And in fact, your supply curve 3 is just inconsistent with the facts if you 4 accept, for example, the ZHP graph as 5 actually representing the sales situation, 6 correct? 7 A. It is incorrect, because the 8 example that I'm giving you in my report is 9 that one can retrospectively go to those 10 consumers -- because there was supply, they 11 were supplied the product. I mean, I'm not a 12 lawyer, but how do you have a recall if 13 there's -- no product was given? How do you 14 make, what, ZHP or any manufacturer say they 15 committed fraud because they sold something 16 if they didn't sell anything. So if there's 17 no supply, how is it possible if someone 18 sells something that there's no supply. 19 So I'm just saying that this to 20 me is not relevant -- sorry, your -- what 21 exhibit is this? 22 Q. This is Exhibit 8. 23 A. Sorry. Oh, I see that. 24 Exhibit 8 does not help inform</p>

<p style="text-align: right;">Page 190</p> <p>1 my figure on page 43, because they were 2 supplied. And I'm saying that if you went 3 back retrospectively and asked those 4 consumers, Hey, given what you know now about 5 the impurities and whichever way you want to 6 define it -- and that is going to make a 7 difference how you define it and how you 8 communicate it and who communicates it -- how 9 would you assess the value of the work of 10 this -- of the at-issue VCD that you took. 11 And all this is saying here in 12 my figure is that you will get a range of 13 responses. 14 Q. What literature do you have to 15 support what appears to be your proposition 16 that an economic damages analysis should be 17 based on a retrospective look as opposed to 18 measuring at the time of injury? 19 A. I am not a lawyer. I don't 20 have an opinion on that. 21 Q. Okay. And you're not offering 22 an economic damages analysis here, are you? 23 A. No. 24 Q. And you're not qualified to do</p>	<p style="text-align: right;">Page 192</p> <p>1 A. That is incorrect. 2 BY MR. DAVIS: 3 Q. How is that incorrect? 4 A. Because the information in this 5 case, and some of it is described in Section 6 IV.E of my report, that not only was there 7 evidence that consumers continued to take the 8 recalled valsartan based on depositions from 9 plaintiffs, but that -- and I've quoted some 10 of them, but that physicians, and I've also 11 quoted some of them, encouraged some of their 12 patients to continue taking the recalled 13 valsartan until they had other options. 14 That is my understanding of why 15 there had to be supply if that was -- if the 16 information I just shared is true. 17 Q. That's existing supply, right, 18 what had been distributed, dispensed to 19 patients prior to the recall, correct? 20 My question is, after the point 21 of recall, are you aware of any evidence of a 22 single prescription of ZHP valsartan being 23 dispensed to a patient after the point of 24 recall?</p>
<p style="text-align: right;">Page 191</p> <p>1 that, correct? 2 MR. GOLDBERG: Objection to 3 form. 4 A. It was not my task. I did not 5 do that. 6 BY MR. DAVIS: 7 Q. So -- and we'll get to the 8 retrospective aspect of this later. 9 A. Should I put it away? 10 Q. Sure. 11 But my question is, after the 12 point of recall, there was no supply of ZHP 13 valsartan in the US, was there? 14 MR. GOLDBERG: Objection to 15 form. Foundation. 16 A. No. According to this graph, 17 based on how you described it to me, no more 18 prescriptions were filled for this product 19 after this period on the X axis. 20 BY MR. DAVIS: 21 Q. Correct. That means there was 22 no more supply of it, correct, in the US 23 market? 24 MR. GOLDBERG: Same objection.</p>	<p style="text-align: right;">Page 193</p> <p>1 A. I don't have that information. 2 Q. Okay. So your supply curve 3 here that you supply is just inconsistent 4 with the facts, correct? 5 A. No. 6 MR. GOLDBERG: Objection to 7 form. Argumentative. 8 A. And I'm assuming now you're 9 referring to my report, because we have 10 multiple supply curves here. 11 BY MR. DAVIS: 12 Q. I'm talking about your 13 hypothetical supply curve, not what the 14 actual data show. 15 A. Got it. 16 So could you please repeat the 17 question? 18 Q. Your hypothetical supply curve 19 here is uninformed by the facts of this case, 20 is it not? 21 A. This figure is -- and you can 22 look at the context before and after, and I 23 will read it out to you because it's on the 24 same page, 72, "As shown in the figure above,</p>

<p style="text-align: right;">Page 194</p> <p>1 there existed some original supply and demand 2 curve (denoted by 'Demand0' and 'Supply'), 3 which resulted in an equilibrium price, P0, 4 and equilibrium quantity, Q*. Instead of 5 removing the supply curve, and assuming zero 6 demand, it is more appropriate to envision 7 how each consumer's demand would shift due to 8 knowledge of the presence (or potential 9 presence) of impurities." 10 Q. Let me ask you about that. 11 You say that there would be an 12 equilibrium price, you just read me that, 13 right? 14 A. That's one. There are multiple 15 equilibrium prices based on which demand 16 curve you're referring to. 17 Q. Let me ask you a very specific 18 question, which is, after the point of recall 19 for ZHP, since you have that data right in 20 front of you, after the point of recall there 21 would have been no supply -- there would have 22 been no equilibrium price because there was 23 no supply, right? 24 A. Yes and no.</p>	<p style="text-align: right;">Page 196</p> <p>1 A. The very fact that consumers 2 are going and asking their physician for 3 Fen-Phen -- I'm not making any assumptions 4 about all consumers here, you know that -- 5 and there's a possibility that they knew 6 about the recall, and I'm going to go one 7 step further and say given my knowledge of 8 consumer-physicians' interactions, they might 9 have even asked the physician why it was 10 recalled, they still wanted it. 11 So that gives you some sense of 12 how consumers will calculate what is valuable 13 to them or what is worth to them, even if in 14 your example the product is not available. 15 Q. So, but my question is 16 different. My question is, there is no 17 equilibrium price. Let's say there was some 18 crazy consumer who said, Yes, I want the 19 carcinogen-laced valsartan, and went in and 20 asked their physician for that, the physician 21 couldn't give them ZHP valsartan, could he? 22 MR. GOLDBERG: Objection to 23 form. Argumentative. 24 A. Well, first I want to say, and</p>
<p style="text-align: right;">Page 195</p> <p>1 Q. Okay. Well, how is it 2 different from what you -- do you recall our 3 discussion of Fen-Phen earlier? 4 A. Yes. 5 Q. And you agreed with me that 6 even if a patient wanted to get Fen-Phen they 7 couldn't get it, they couldn't pay for it, 8 right? How is it different after the point 9 of recall for ZHP valsartan? 10 A. Let's use your Fen-Phen 11 example. What I'm trying to communicate here 12 is how consumers make decisions about what a 13 product is worth to them, and price is one 14 manifestation or reflection of that. It is 15 not the only one. Let me just finish. 16 Your Fen-Phen example, you 17 brought it up again, the way -- from my 18 recall of how you described the situation is 19 it was recalled, and if a consumer of 20 Fen-Phen went to their physician and asked 21 for Fen-Phen, they could not write a 22 prescription for Fen-Phen. Am I right? Is 23 that a good -- 24 Q. Yes.</p>	<p style="text-align: right;">Page 197</p> <p>1 I'm relying on my frameworks, depending on 2 how that message was communicated, if you say 3 carcinogen-laced the way you said it versus a 4 valsartan that may contain impurities, the 5 individual's -- I'm using MICI factors -- the 6 individual's status, so if they were happy 7 with their valsartan and had -- as I shared 8 in my report in Section IV.E, they were happy 9 with their valsartan, they had serious health 10 issues, they may have even tried alternative 11 medications and felt that the valsartan was 12 the best at controlling their hypertension, 13 and contextual factors, how much their 14 relationship with their doctor and their 15 ability or inability to have a healthy 16 lifestyle, all of those factors would have an 17 impact on what they thought the drug was 18 worth. 19 BY MR. DAVIS: 20 Q. Okay. But you're not answering 21 my question. 22 My question is, if there's no 23 supply after the recall, as you can see from 24 the sales data, even if a consumer -- like</p>

<p style="text-align: right;">Page 198</p> <p>1 let's just assume that there is a consumer 2 who does want ZHP valsartan after the recall 3 and wants to go get a new prescription of it 4 from their doctor, the result is just like it 5 was with Fen-Phen, they can't get it, right? 6 A. I'm assuming that is the case, 7 yes. 8 Q. And they would end up, 9 therefore, paying no money for it, correct? 10 A. Yes. 11 Q. Okay. Thank you. 12 And there would be no 13 intersection of -- sorry, showing you my 14 screen, you've got it right there. 15 A. Yes. 16 Q. There would be no intersection 17 of supply and demand in that very specific 18 situation I just asked you about, correct? 19 A. Correct. 20 Q. Okay. Thank you. 21 A. Should I put these away? 22 Q. Sure. 23 A. Okay. 24 MR. DAVIS: I'm marking</p>	<p style="text-align: right;">Page 200</p> <p>1 what is in this label period, so I don't know 2 how to understand the absence of the two 3 impurities you just mentioned. 4 Q. Well, I'm not asking you yet to 5 understand the absence of them. I'm just 6 asking you if you see any reference to them 7 in that document. 8 A. I cannot do that. You're 9 asking if there's any reference, and I don't 10 know if there's any reference without having 11 a chance to review the document. 12 Q. Okay. So you're not willing to 13 take my word for it that they're not in 14 there? You're willing to look. Why don't 15 you take a look, that's fine. 16 Do you want to look at -- and I 17 can direct your attention, for example, to 18 make this go a little faster, okay, if you 19 don't mind, go to the very last page. 20 Do you see that last question 21 there, "What are the ingredients in Diovan?" 22 A. I do. 23 Q. Okay. Do you see any reference 24 to NDEA, NDMA?</p>
<p style="text-align: right;">Page 199</p> <p>1 Exhibit 9. 2 (Whereupon, Keller Exhibit 3 Number 9 was marked for 4 identification.) 5 BY MR. DAVIS: 6 Q. This is a -- can you identify 7 this document for me? 8 A. No. 9 Q. I'll represent to you that it's 10 a valsartan -- I'll represent to you that 11 it's a valsartan label, which may or may 12 not -- I think, we looked at your materials 13 considered. 14 Is this a document you recall 15 seeing ever? 16 A. No. 17 Q. Okay. I'll represent to you -- 18 but, you know, you're free to look, but I'll 19 represent to you that there's no mention of 20 nitrosamines, NDMA, NDEA, anywhere in this 21 label. 22 Are you willing to accept that, 23 or do you want to take a look? 24 A. I actually don't have any idea</p>	<p style="text-align: right;">Page 201</p> <p>1 A. I am not a chemist. I don't 2 know the different forms and labels. Those 3 drugs may be represented some other way. I 4 cannot answer the question. 5 Q. Would you agree with me -- 6 let's start with just a very general 7 proposition. 8 Would you agree with me that a 9 manufacturer of valsartan when they 10 distribute it into the US market, by calling 11 it valsartan and by distributing this label 12 with it, they're conveying some kind of 13 message to the people that will interact with 14 it, namely physicians and consumers, correct? 15 MR. GOLDBERG: Objection to 16 form. Foundation. 17 A. Please be more specific. 18 BY MR. DAVIS: 19 Q. Do you think that by -- when a 20 manufacturer of valsartan distributes 21 valsartan in the US market, by calling it 22 valsartan, are they conveying a message that 23 it's valsartan? It's a pretty general 24 proposition, right?</p>

Page 202

1 A. They're saying it's valsartan.
2 I'm not going to speak to what that means to
3 consumers, or physicians or anybody else.
4 Q. But there's a message embedded
5 in there, right, that this is valsartan,
6 correct?
7 A. I am not an expert on the drug
8 ingredients, and I don't know what that
9 communication would mean.
10 All I'm willing to acknowledge
11 is if they say it's valsartan, that that may
12 have meaning, and different meanings to
13 different people. I am not an expert on
14 valsartan, and I cannot give you an opinion.
15 Q. Sure.
16 And let's excise that from the
17 question, which by that I mean whatever
18 valsartan means, by calling it valsartan, the
19 manufacturer is conveying a message that it's
20 valsartan, whatever that means, right?
21 A. I'm just -- I am always
22 representing the consumer point of view, and
23 valsartan would just have different meanings
24 for different consumers based on the

Page 203

1 different messages and the context in which
2 these, you know, messages and drugs were
3 taken.
4 So I don't want to give the
5 impression that if there was a term valsartan
6 that all consumers would derive the same
7 meaning from it.
8 Q. Well, I'm not talking about the
9 recipient of the message right now. I'm
10 talking about the entity delivering the
11 message.
12 I'm saying that -- what I'm
13 asking you is do you agree that by calling it
14 valsartan, the manufacturer that calls it
15 valsartan is intending to convey a message
16 that it's valsartan, whatever that means?
17 A. Okay.
18 Q. You don't take any issue with
19 that, right? It's a pretty simple
20 proposition.
21 A. I don't like answering
22 questions that end in "whatever it means."
23 That's just my comfort level.
24 Q. Whatever valsartan means. I'm

Page 204

1 trying to --
2 A. I understand.
3 Q. I heard what you said about
4 that.
5 A. I understand.
6 Q. So what I'm trying to do is
7 just focus on a very simple question here.
8 And is there anything about
9 that that you disagree with, that a
10 manufacturer is not attempting to convey the
11 message that this is valsartan by calling it
12 valsartan, whatever that term valsartan
13 means?
14 A. Okay.
15 Q. And similarly with Exhibit 9
16 we're looking at, this label, prescribing
17 information, there's a message there, or
18 multiple messages in fact, but they all
19 relate to valsartan, correct?
20 A. Now I will need to read the
21 document. I anticipated this.
22 Q. You don't think that this
23 document that has to do with valsartan
24 conveys a message about valsartan, or

Page 205

1 multiple messages? It's a pretty simple
2 question.
3 A. I cannot answer that question.
4 I mean, if you're just saying is there
5 communication about valsartan in here? I
6 would say yes. For me, a message has a
7 different meaning, and I would need to read
8 the document to understand what the
9 message -- multiple messages might be.
10 Q. Okay. Let's go back to your
11 report for a moment, and again that section E
12 that's titled Real-world evidence indicates
13 that the at-issue VCDs held value.
14 A. Yes.
15 Q. And I understand you have --
16 you know, and I'm going to try and
17 short-circuit a long back and forth here by
18 stating that I understand that you have quite
19 a few sources of general applicability here
20 to support what you're saying amounts to
21 real-world evidence of value.
22 My question very specifically
23 here is, what evidence from this fact
24 situation and case specifically, what

<p style="text-align: right;">Page 206</p> <p>1 valsartan-specific evidence do you have that 2 is real-world evidence that indicates that 3 the VCDs at issue had value? 4 A. I have evidence from the 5 individual depositions from the plaintiffs, 6 and I have quoted some of them, who said that 7 the at-issue VCDs provided them with 8 therapeutic benefit. 9 I want to qualify, this is a 10 small subset of depositions. I know that 11 there were probably thousands if not tens of 12 thousands consumers who took valsartan and 13 this is a small group. But this is one 14 source of evidence that consumers who took 15 the at-issue valsartan said that -- some of 16 them, not all of them -- that it helped them 17 with controlling their blood pressure, that 18 they had fewer side effects such as 19 light-headedness and dizziness and nausea, 20 and that they did not suffer any extreme 21 emotional consequences to the point of 22 actually seeking professional help. So those 23 are just some examples of value from the 24 real-world evidence.</p>	<p style="text-align: right;">Page 208</p> <p>1 VCDs held value. 2 Q. Anything else, or those two? 3 A. I will also add -- thank you 4 for asking -- the FDA also mentioned that 5 consumers or patients who were taking the 6 at-issue VCDs should not stop taking the 7 VCDs, thereby indicating that they held 8 value, unless, you know, an alternative was 9 available to them. So that is also a source. 10 So I appreciate your giving me 11 a chance. 12 Q. Sure. 13 So you've identified those 14 three things. Is that everything? 15 A. To the best of my recall. 16 Q. Sure. Okay. Well, let's, I 17 guess, take them somewhat in order. 18 You concede, you know, for the 19 first point, which is the plaintiff 20 depositions, you do concede at paragraph 52 21 that in your view "The statements of 22 consumers, particularly those...in 23 litigation, regarding their retrospective 24 valuation of at-issue VCDs may not be</p>
<p style="text-align: right;">Page 207</p> <p>1 I also -- the other sources of 2 value also come from information in the 3 public press as well as in some of the 4 depositions, in the individual plaintiff 5 depositions, where physicians are either 6 publicly recommended, for example, I believe 7 Dr. Neeson, to AARP group members that, you 8 know, they should not stop taking the 9 at-issue VCDs on their own without talking to 10 their physicians because it is more important 11 to control their blood pressure, and they 12 could face very serious consequences, health 13 consequences if they stopped, and that it 14 would be -- the trade-off would be -- even if 15 there were any problems in the short or the 16 long-term with regard to any of the potential 17 cancers, which again would vary across 18 individuals, that the immediate serious 19 health consequence of stopping their at-issue 20 VCDs would be serious. 21 So the sources, just to sum, 22 are the plaintiff depositions as well as -- 23 as well as physicians. This includes 24 cardiologists who shared that the at-issue</p>	<p style="text-align: right;">Page 209</p> <p>1 reliable measures of even individual value 2 assessments," right? 3 A. I will say yes and no. 4 Q. Why are you saying yes and no 5 to something you wrote in your report? 6 A. Again, because of the context 7 in which you are reading out that one 8 sentence, and I'm going to do the following 9 sentence, which is -- okay, so I read it so I 10 don't have to go through the -- this will be 11 more efficient. 12 "Nonetheless, testimony of 13 several consumer-plaintiffs in this case 14 corroborates this post-awareness value for 15 the at-issue VCDs," and then we have a quote 16 from Samuel Cisneros. I hope I didn't 17 butcher that. 18 And "Additionally, many other 19 consumers that even with their current 20 knowledge of the impurities, the VCDs they 21 took were effective in treating their 22 hypertension." 23 Q. Since you called out 24 Mr. Cisneros particularly, I'm going to mark</p>

Page 210

1 Exhibit 10 here.
2 (Whereupon, Keller Exhibit
3 Number 10 was marked for
4 identification.)
5 BY MR. DAVIS:
6 Q. Did you read the entirety of
7 Mr. Cisneros' deposition?
8 A. I did.
9 Q. Did you read the entirety of
10 every class rep deposition that you cite in
11 your materials considered?
12 A. I read some of them, and I
13 reviewed the rest.
14 Q. How did you make a decision
15 about which ones to read in their entirety
16 and which ones to read portions of?
17 A. I used a couple of different
18 selection criteria. I was -- in alignment
19 with my MICI framework, I was looking for
20 different types of individuals, you know,
21 male, female, race, education, just to get
22 some variety or variance in those individual
23 characteristics.
24 I also, for contextual

Page 211

1 variance, I looked at things like whether
2 they were smokers or drank alcohol or
3 consumed red meat, so just to give you an
4 example of my methodology.
5 So I selected as -- like a
6 researcher, I tried to select different types
7 of consumers in the set of depositions.
8 Q. Were you provided the full
9 transcripts, or were you provided some full
10 transcripts and some incomplete transcripts?
11 A. I was provided the full
12 transcripts.
13 Q. Okay. And I get -- I hear what
14 you're saying, that you tried to review some
15 of them based on varying individual
16 characteristics.
17 How did you decide which of
18 those to review in full and which of those to
19 review selections of?
20 A. I -- once I started looking and
21 I started reading it, if I thought it was
22 interesting I read the whole thing.
23 I will admit that sometimes,
24 you know, if it was shorter I was more

Page 212

1 motivated, if it was 173 pages versus 349
2 pages.
3 And at other times I felt, you
4 know, I was not getting any new insights or
5 information, so then I would just review the
6 rest of the document.
7 Q. Okay. I mean, we're talking
8 about thousands upon thousands of pages of
9 testimony here, right?
10 A. I am aware. I don't want to
11 say -- I'm not going to multiply or give you
12 a number, but I know that there were over 40
13 depositions, and the range was typically
14 anywhere from like 150, 160 pages to like 350
15 or 400-plus pages, so yes.
16 Q. Okay. So many thousands of
17 pages?
18 A. Correct.
19 Q. So would you have reviewed
20 page 99 of Mr. Cisneros' deposition that I
21 have for you there? Do you see where he says
22 on lines 11 through 13, "[REDACTED]"
23 "[REDACTED]"
24 "[REDACTED]."

Page 213

1 Do you see that?
2 A. Yes, I do.
3 Q. Does that sound like someone
4 who would pay a dime for contaminated
5 valsartan?
6 A. [REDACTED]
7 [REDACTED], which I'm
8 going to object to now because I don't
9 believe that that is necessarily the message
10 that he was given, "[REDACTED]"
11 "[REDACTED]" is not saying that he did
12 not get any value from it. Because I just
13 quoted something in my report that said [REDACTED]
14 [REDACTED]
15 [REDACTED].
16 Q. Right. So let me see if I
17 understand what you're saying.
18 You're drawing a distinction
19 between therapeutic value and economic value,
20 right?
21 A. In part correct. I am saying
22 that the value or worth of a drug will vary
23 by consumers who are going to compare the
24 benefits, and that includes therapeutic

Page 214

1 benefits just like you describe, and the
2 costs of the drug, and that includes price.
3 So you have many other
4 variables going on simultaneously on the
5 benefit and the cost side in order to make an
6 assessment of value.
7 Q. And for you that's therapeutic
8 value in the context that we're talking about
9 right here with Mr. Cisneros?
10 A. All I'm saying is as a
11 researcher who is looking at this, I would
12 not assume the value is zero or the drug is
13 worth nothing to him because [REDACTED]
14 [REDACTED]
15 [REDACTED]
16 [REDACTED]
17 [REDACTED]
18 And even though what I just
19 read is -- [REDACTED]
20 [REDACTED] it does not mean that the calculation
21 of what the drug is worth is zero.
22 Q. Do you have any reason to doubt
23 [REDACTED]
24 [REDACTED]

Page 215

1 A. I don't have any context to
2 answer that question.
3 Q. Then you -- back to your
4 report, you provide a citation, this is
5 paragraph 52, to it looks like about a dozen
6 or so class reps, right?
7 A. Yes.
8 Q. Okay. Did you read all of
9 those transcripts in their entirety?
10 A. I read or reviewed all of them.
11 Q. Okay. So were you aware, for
12 example, that Eric Erwin in his deposition,
13 who is in your footnote here, that he stated
14 that non-contaminated VCDs wouldn't even hold
15 value for him if they came from a facility
16 that had issues?
17 A. I don't recall that exact
18 statement, but I'll take your word for it.
19 And it supports my general
20 premise that different consumers will take
21 into account different message variables,
22 their individual differences will lead them
23 to put weights on different pieces of
24 information, and the context in which that

Page 216

1 they are making this decision, that includes
2 not only their physician but their diet and
3 lifestyle, would all have an impact on how
4 they would use either a compensatory or
5 non-compensatory decision.
6 So I mean just go back to this
7 footnote. Part of what I learned from
8 reading and reviewing these plaintiff
9 depositions was the fact that many of the
10 variables that I've just mentioned, the
11 message, the individual difference, and the
12 context, were all part of the ecosystem or
13 the wholistic inputs into thinking about the
14 drug.
15 Q. Okay. You also refer to a
16 Mr. Dennis Kaplan's testimony in your
17 footnote there. Did you read at page 145 of
18 his deposition that "they should never have
19 enabled it to be out in the market where I
20 and other people could have taken it"? Did
21 you read that portion of his deposition?
22 A. Again, I don't recall that
23 exact thing, but I believe you. If you are
24 stating that was in his deposition, I believe

Page 217

1 you.
2 And again, just your last two
3 examples showed how much variance there is in
4 how consumers would respond to this
5 information.
6 Q. What about page 18 of Mary
7 McLean's deposition where she says, "I
8 wouldn't have taken it knowing that it was
9 contaminated." Do you recall reading that?
10 A. Again, I do not recall
11 specifically, but it does -- it does not go
12 against my premise that consumers will have a
13 range of reactions to the recall.
14 Q. Okay. But you're citing these
15 people in particular to say that they
16 acknowledged it had value, but they're all
17 telling you -- or they're all telling under
18 oath that it had no economic value for them,
19 that they wouldn't have purchased it, right?
20 A. I'm sorry to repeat this again.
21 Value equals benefit minus cost. They're
22 acknowledging there was therapeutic benefit.
23 That means something positive. Even if some
24 of them are acknowledging that there is no

<p style="text-align: right;">Page 218</p> <p>1 economic value, one cannot assume that the 2 sum or the difference between all of their 3 benefits and costs would equal not only 4 uniform, but would equal zero. 5 Q. I want you to -- and I hear 6 what you're saying regarding therapeutic 7 benefit, that there's -- your assertion is 8 that there's therapeutic value here and that 9 has to be accounted for, right? 10 A. My assertion is that there are 11 benefits and costs that need to be assessed 12 in order to make a determination of worth, 13 and therapeutic benefit is one example of 14 benefit. 15 Q. So let me ask you to -- I'm 16 going to set forth a hypothetical for you, 17 and I want -- I'm going to walk through it 18 step-by-step, and indulge me here, if you 19 don't mind. 20 I want you to assume that for 21 all of the at-issue VCDs, that they were all 22 adulterated. 23 Do you follow me there? 24 A. Okay.</p>	<p style="text-align: right;">Page 220</p> <p>1 that for me. I know you disagree with it, 2 but I want you to assume that with me, right? 3 Okay? 4 A. Okay. 5 Q. Assuming those things, would 6 you not agree that the value of these drugs 7 is zero dollars? 8 A. I disagree. 9 Q. Okay. How do you disagree with 10 that? 11 A. As I said, there is a set of 12 benefits. The therapeutic benefits is just 13 one benefit. So saying to me that there is 14 no therapeutic benefit just makes the value 15 of therapeutic benefits in the set of 16 benefits zero, but not the other benefits. 17 When you say it's unavailable 18 and the price is zero, yes, there is no 19 economic price or cost in the set of costs, 20 but there are many other costs. 21 So again, the remaining, not 22 the therapeutic value which you asked me to 23 assume is zero, and not the price that you 24 asked me to assume is zero, there are other</p>
<p style="text-align: right;">Page 219</p> <p>1 Q. Okay. And as I showed you in 2 the US Code exhibit I showed you, 21 USC 331, 3 I showed you that it's illegal to distribute 4 adulterated drugs, right? 5 A. That's the document I did not 6 have a chance to review, is that correct? 7 Are you referring to Exhibit 9? 8 Q. I'm referring to Exhibit 7 9 here. 10 A. Oh, I'm so sorry. 11 Okay. That's also a document 12 that I did not review completely, and you 13 just read the first page. 14 Q. Well, indulge my hypothetical 15 here, that all the at-issue VCDs here were 16 adulterated, and indulge me also that it was 17 illegal to sell those adulterated drugs, for 18 example, under 21 USC 331 or Exhibit 7. 19 Do you follow me so far? 20 A. Mm-hmm. 21 Q. I want you to also assume that 22 these VCDs are economically worthless at the 23 point of sale regardless of any medical 24 benefit they provide. I want you to assume</p>	<p style="text-align: right;">Page 221</p> <p>1 variables in this equation that would 2 determine worth. 3 Q. I think you misheard the third 4 part there. Let me try it again. 5 So I've got -- I think we're 6 through two points, right, in this 7 hypothetical, which is that all the at-issue 8 VCDs here are adulterated, that the sale of 9 those drugs would have been prohibited under 10 the law, correct? 11 A. Correct. 12 Q. Okay. Meaning that there would 13 have been no supply of them in the market, 14 and no ability for consumers to purchase 15 them, right? 16 A. Okay. 17 Q. Okay. And then I want you to 18 assume that the value of those drugs from an 19 economic standpoint as applied to -- that 20 every single person was found to have derived 21 zero economic value from these drugs 22 regardless of the medical benefit they may 23 have provided. 24 Do you follow me?</p>

Page 222

1 A. I do follow you, and I
2 disagree. I cannot -- I cannot respond
3 because I disagree with the basic premise.
4 Q. Okay. So, well, let me show
5 you something then.
6 Well, follow me through. I
7 know you disagree with the premise.
8 A. Okay.
9 Q. But follow me through here.
10 A. Okay.
11 Q. And let's just take it as a
12 fact, even if you disagree with that fact,
13 that for every single consumer of these drugs
14 that there was zero economic value for them
15 at the time of sale, that the drugs were
16 economically worthless at the time of sale
17 regardless of any medical benefit to be
18 derived from them. Assume that for me, that
19 that applies to everyone.
20 Would you not agree that,
21 assuming those things, that the value of the
22 drugs in that case would be zero dollars,
23 granted that you disagree with the premise?
24 MR. GOLDBERG: Objection to

Page 223

1 form. Foundation.
2 A. I'm going to go back to my
3 formula and say that there will be a range of
4 consumers, and I have this information in my
5 report, actually throughout my report, so I
6 can't even tell you which section of IV this
7 would belong to, but that there would be a
8 range of consumers who would say that the
9 drug had value to me, or has value to me --
10 even if they cannot get it, that the drug has
11 value to me because I did not have side
12 effects; the drug has value to me because I
13 had peace of mind; the drug had value to me
14 because I could take it in a single pill
15 form.
16 And I'll go to the cost side,
17 not paying anything, as you said, that I
18 don't -- the drug had value to me because it
19 was familiar and now I have to learn about
20 another drug; the drug has value to me
21 because now I have to go and talk to my
22 physician about another prescription; the
23 drug has value to me because -- okay.
24 I'll stop there. So you got my

Page 224

1 general idea.
2 BY MR. DAVIS:
3 Q. Sure. And I'm trying to
4 exclude that from this hypothetical, and I
5 know you disagree with the premise, I know
6 you do, and you've articulated that. But
7 just follow me through with the premise here,
8 which is that it's been determined for every
9 single one of these consumers who you just
10 posited a list of questions they might ask or
11 opinions they may have, just assume for me
12 that it's been determined that the drugs are
13 economically worthless for them regardless of
14 all that stuff.
15 Do you follow me?
16 A. Yes.
17 Q. Okay. And in that situation,
18 combine that with the fact that all the drugs
19 are posited to have been adulterated and
20 therefore illegally sold, couldn't have
21 gotten them, couldn't have paid anything for
22 them, at that point, with all those premises
23 and stuff that you don't agree with, but just
24 follow me through, would you agree with me at

Page 225

1 that point, if all those things were true,
2 which I get you don't agree with, that the
3 drugs would have no value at that point,
4 economic value?
5 A. Whoever made that determination
6 was wrong.
7 Q. Okay.
8 MR. DAVIS: I'm going to mark
9 an exhibit here.
10 MR. GOLDBERG: John, do you
11 want to take a minute break? We've
12 been going another 90 minutes.
13 MR. DAVIS: I just want to
14 finish this real fast, and then I'm
15 close to being done, to be honest.
16 MR. GOLDBERG: Okay. Got it.
17 MR. DAVIS: I'll probably want
18 to take a quick break just to go
19 through my notes.
20 MR. GOLDBERG: Sure. Got it.
21 MR. DAVIS: I'm going to mark
22 Exhibit 11.
23 (Whereupon, Keller Exhibit
24 Number 11 was marked for

Page 226

1 identification.)
2 BY MR. DAVIS:
3 Q. Just to pick up where we left
4 off, you testified to me that you thought
5 that that person who made that determination
6 would be wrong, correct?
7 A. Yes.
8 Q. Okay. Do you understand that
9 the Court is that person that's made that
10 determination in this case?
11 MR. GOLDBERG: Objection to
12 form. Foundation, mischaracterizes
13 the document.
14 BY MR. DAVIS:
15 Q. Why don't you flip to --
16 MR. GOLDBERG: You're marking
17 this as --
18 MR. DAVIS: This is Exhibit 11,
19 I believe.
20 BY MR. DAVIS:
21 Q. I want you to turn to page 20
22 of the document. The numbering is very small
23 in the top right corner.
24 A. And again, I haven't had time

Page 227

1 to review this document.
2 MR. GOLDBERG: Somehow we're
3 going to have to figure out what you
4 want to do here. She hasn't reviewed
5 the document. I know you want to ask
6 her about page 20.
7 MR. DAVIS: I don't really have
8 much to ask her. I just want to --
9 MR. GOLDBERG: I think you
10 should explain to her what the
11 document is, and give her a second to
12 at least scan it for a minute or two
13 so she can get familiar with the
14 document.
15 BY MR. DAVIS:
16 Q. I will represent to you this is
17 an opinion that the Court has issued in this
18 case, a written opinion. Do you see the case
19 header up there, "In Re: Valsartan"?
20 A. I see that.
21 Q. And do you see that on the
22 right in bold there it says, "MTD Opinion 3:
23 Warranty Claims"?
24 A. Yes.

Page 228

1 Q. You then you see "Kugler,
2 United States District Judge"?
3 A. Yes.
4 Q. Okay. And in fact, that blue
5 version at the top -- sorry, it's blue in my
6 version, but it printed black and white, but
7 you'll see the case number information, Case
8 1:19-md-2875, document number 775, filed on
9 to the docket January 22, 2021.
10 Do you see that?
11 A. Yes.
12 Q. Okay. So I'll represent to you
13 that this is an opinion of the Court that's
14 been entered into this case. And I just want
15 to -- I'm not going to ask you any detailed
16 questions about it, but on page 20 --
17 A. Sorry for clarification. So
18 when you say "an opinion of the Court," is
19 that the same thing as the opinion of the
20 judge?
21 Q. Yes, yes. The judge's order.
22 A. Thank you.
23 Q. And on page 20 the Court says,
24 "This court finds that contaminated drugs are

Page 229

1 economically worthless at the point of sale
2 by virtue of the dangerousness caused by
3 their contamination, regardless whether the
4 sole VCDs actually achieved the medical
5 purpose of lowering blood pressure. Put
6 differently, contaminated drugs, even if
7 medically efficacious for their purpose,
8 cannot create a benefit of the bargain
9 because the contaminants, and their dangerous
10 effects, were never bargained for."
11 Do you see that?
12 A. Yes.
13 Q. And your testimony is you
14 disagree with that?
15 A. I did not testify that I
16 disagreed with this. I testified that I
17 disagreed with your example.
18 I will now say that I don't
19 know the context in which this determination
20 or this decision was made. I don't know what
21 other facts were provided to the Court or to
22 the judge. I am not a lawyer. And I don't
23 know what was the input for this decision,
24 and how -- what the laws are that helped make

Page 230

1 this determination, but to say that a drug is
2 worthless because it's -- let me read that
3 again, even if it is efficacious that the
4 economic value is zero is wrong.
5 Q. Okay. But you testified
6 earlier that you've never done an economic
7 damages analysis in litigation, have you?
8 A. Correct.
9 Q. And you've never done one
10 period, right?
11 A. Correct.
12 Q. Okay. And you're not an
13 economist, right?
14 A. I have a bachelor's in
15 economics, but I'm not an economist.
16 Q. All right. Thank you.
17 MR. DAVIS: Let's take a quick
18 break, five minutes, and I'm pretty
19 close.
20 MR. GOLDBERG: Okay.
21 MR. DAVIS: We can go off the
22 record.
23 THE VIDEOGRAPHER: Off the
24 record at 3:29.

Page 231

1 (Whereupon, a recess was
2 taken.)
3 THE VIDEOGRAPHER: Back on the
4 record at 3:46.
5 BY MR. DAVIS:
6 Q. I've just got ten more minutes
7 of questions maybe and one new document for
8 you.
9 So just to re-cover one area
10 very briefly, do you remember talking with me
11 about -- we were going back and forth about
12 the fact that there's a message embedded in
13 calling the product valsartan, whatever the
14 consumer made of that message or whatever the
15 term valsartan means, I think we agreed that
16 there was a message embedded in there, right?
17 A. My recall is that this was in
18 response to the document that you showed me
19 that's Exhibit 9 that I didn't review in
20 total, and that I said I would concede that
21 there is communication in there.
22 In my expertise on health
23 message processing, I could not make a
24 determination if there was a message in

Page 232

1 there.
2 Q. But there's a communication,
3 right?
4 A. There's some material, written
5 material in there.
6 Q. Okay. And your -- and I don't
7 want to overgeneralize here, but your whole
8 focus is oriented towards the consumer,
9 right? You look at things from a mostly
10 consumer standpoint, and that also includes
11 the physician, I suppose, but your whole
12 focus is sort of consumer-oriented, right?
13 A. I am an expert on how consumers
14 assess value or worth of products and
15 services they're considering, have consumed,
16 or want to continue consuming. And so yes,
17 from that perspective I'm focused on the
18 consumers' assessment of worthiness.
19 Q. Okay. Would you agree with me
20 that the communication that -- you know, and
21 I'll adopt your term here, communication --
22 that the communication of calling the drug
23 valsartan, that was a communication that
24 consumers really had no choice but to rely

Page 233

1 on, right?
2 A. Incorrect. It is very clear
3 that consumers have a lot of different
4 sources of communication from different
5 people, from -- in different formats, and
6 that who would seek what kind of information
7 in different times, in different formats
8 would depend on the individual. It would
9 need to be an individual inquiry.
10 Q. That's your opinion?
11 A. Yes.
12 Q. Okay. Well, flip to -- back to
13 Exhibit 11, if you don't mind.
14 A. Sure.
15 Q. And go to page 14.
16 A. Just give me a moment because I
17 can't see it. All right.
18 Q. Do you see in the last --
19 second to last full paragraph on that page it
20 starts with "The manufacturer's very naming
21 of the drug"?
22 A. Yes.
23 Q. It reads, "The manufacturer's
24 very naming of the drug as valsartan or

Page 234

1 valsartan-containing amounted to an express
2 warranty on which plaintiffs had no choice
3 but to 'rely' when they were prescribed the
4 drug and bought it as a medication for their
5 high blood pressure."
6 Do you see that?
7 A. Yes.
8 Q. Okay. And do you see that
9 that's part of this Court opinion that I
10 showed you earlier?
11 A. Yes.
12 Q. And you disagree with that?
13 A. I said I did not have an
14 opinion on that because I am not a lawyer and
15 I do not have all the information that was
16 presented to this Court before this
17 determination was made. I cannot agree or
18 disagree with this statement.
19 MR. DAVIS: Okay. I'm going to
20 mark Exhibit 12.
21 (Whereupon, Keller Exhibit
22 Number 12 was marked for
23 identification.)
24 ///

Page 235

1 BY MR. DAVIS:
2 Q. Do you recognize this as -- I
3 suppose it's not technically your invoice,
4 but it's Analysis Group's invoice to
5 Mr. Goldberg here.
6 Do you see that?
7 A. I do.
8 Q. Okay. And it includes -- it
9 includes the statement that this is just the
10 ZHP share of that invoice for 16.67 percent
11 of the total.
12 Do you see that on page 1?
13 A. I do. But I'll be honest with
14 you, I'm not sure exactly what that 16.6
15 refers to.
16 Q. Let me ask it a different way.
17 Did you prepare this invoice?
18 A. No, no.
19 Q. All right.
20 A. When you say "this," you're
21 talking about the page that you're just
22 referring to, right?
23 Q. Yes.
24 A. I don't know what's on the

Page 236

1 remaining pages.
2 Q. Did you actually send this
3 invoice to -- okay, somebody else did that?
4 A. I did not prepare or send the
5 invoice.
6 Q. You'll see on page 1 it says
7 that the invoice is "For professional
8 services rendered in connection with the
9 above referenced case for the period ending
10 December 31, 2021," right?
11 A. Yes.
12 Q. Okay. And your report was
13 signed on January 12th, correct?
14 A. Correct.
15 Q. And you've also done some work
16 on the case since that point, right?
17 A. Yes.
18 Q. You're sitting here today, for
19 example. Did you sit for any preparation
20 sessions?
21 A. Yes.
22 Q. Okay. About how many would
23 that be?
24 A. Sessions defined by what unit

Page 237

1 of time?
2 Q. Hours.
3 A. Hours.
4 Are you talking about
5 preparation that I did for the depo on my
6 own, or only in some other context?
7 Q. Sure. Any context.
8 What I'm trying to get at is
9 what your next invoice might look like.
10 A. I cannot -- I cannot give you
11 an exact number because I have not calculated
12 it.
13 Q. Do you think that it's -- for
14 example in this invoice you had billed -- you
15 personally had billed 37 hours. Do you think
16 it's more than that?
17 A. I don't want to guess. I'd
18 like to go back to my records to check.
19 Q. Okay. When do you anticipate
20 the next invoice being submitted to the
21 defendants in this case by Analysis Group?
22 A. Oh, I don't know when Analysis
23 Group would submit it.
24 Q. Do these invoices get sent out

Page 238

1 monthly or quarterly?
2 A. I don't know what their
3 procedure is.
4 Q. Okay. It says your rate here
5 is \$1,000 per hour, is that correct?
6 A. Yes.
7 Q. Okay. And then there's a
8 number of Analysis Group professionals that
9 are also listed here, correct?
10 A. Should I turn the page?
11 Q. Sure, on page 2, yeah.
12 A. Yes.
13 Q. Do you recognize all those
14 names?
15 A. Yes.
16 Q. How did you select those people
17 to work with on this report?
18 A. I did not select them to work
19 with me on the report. One of the members of
20 the team, Brian Ellman, got in touch with me
21 and asked me if I would be interested in
22 speaking to some lawyers about this case, and
23 I agreed, and I did so. And the lawyers
24 decided to retain me, and this team came as

Page 239

1 part of that.
2 Q. So you don't know who --
3 putting aside Mr. Ellman, all the names below
4 him, you don't know how those individuals
5 were assigned to your team?
6 A. No.
7 Q. Okay. Did you independently go
8 and vet any of their credentials?
9 A. No.
10 Q. Okay. And do the hour
11 allocations here on page 2 look accurate to
12 you, that you billed 37 hours, and this whole
13 team here billed 326 hours --
14 A. Well --
15 Q. -- up to this point?
16 A. -- I'm assuming it's accurate.
17 It's not something that I ever saw until this
18 document was presented to me.
19 Q. If you go to the third page,
20 the next page.
21 A. Yes.
22 Q. You'll see that this is your
23 line item of your work on the case, right?
24 A. Yes.

Page 240

1 Q. Did you write those narrative
2 entries there?
3 A. I did.
4 Q. And would that be the same
5 for -- to the best of your understanding,
6 maybe you don't have any idea, but for these
7 other individuals at Analysis Group, Ellman,
8 O'Laughlin, below, would they have written
9 their own narrative descriptions?
10 A. I have no idea.
11 Q. You have no idea.
12 You would expect they probably
13 would have, though?
14 A. I have no idea.
15 Q. So what did these Analysis
16 Group employees do for you on this case?
17 A. The short answer is that I use
18 them the way I use research assistants. As
19 you mentioned, I got the case -- not the
20 case, sorry.
21 I got the request to be an
22 expert witness and write a report late last
23 year, and that is when the students are on
24 break. And just like I use the students as

Page 241

1 research assistants, I did the same with the
2 AG team.
3 Q. Okay. Did that include them
4 writing any of your report in its draft form?
5 A. The way it works is I work on
6 the report, I ask them for collaborating or
7 supporting material on -- for my opinions, I
8 ask them to read those materials that I
9 provided and find similar materials to help
10 me make a list of the references that I might
11 want to cite or I might not want to cite.
12 And I also, you know, ask them
13 as they were going through this if they had
14 any ideas, you know, they're welcome to share
15 them. But at the end of the day it's my
16 report, I care about quality, and I accept or
17 reject, you know, any ideas from anyone.
18 Q. Okay. And your invoice, your
19 time here is complete, in your opinion, up
20 through December 31st?
21 A. I mean, I will say that I, as
22 in other cases, I don't put in time that's
23 related to thinking or abstract things that
24 are associated with some of the case

Page 242

1 preparation. And, yeah, so I will say it's
2 pretty accurate.
3 Q. Okay. But more tangible things
4 like actually writing the report, that would
5 something you would bill, right?
6 A. So reading, writing, revising,
7 editing, checking, searching for literature
8 myself, those would be tangible things.
9 Q. Why is it in your line items
10 for time that the first time the mention of
11 any draft report appears is on December 16,
12 2021 where you say you reviewed an already
13 existed draft report?
14 A. That's not how I interpret
15 "review." For me, as I mentioned earlier, as
16 a reviewer and an aid, I think of review as
17 creating drafts, revising drafts, editing
18 drafts, for me it's all part of a review
19 process.
20 Q. So what you're saying is you
21 may have miswritten the narrative here and
22 this is when you started writing the report,
23 December 16th?
24 A. No. From my perspective I'm

Page 243

1 not misrepresenting it. That's what review
2 means for me.
3 So, for example, if you use the
4 page that we're looking at, when I say
5 "Review of Conti Declaration and Protective
6 Order," 12/09, I'm already reviewing and
7 writing the report based on what I'm seeing
8 from Dr. Conti's declaration and thoughts in
9 response to the protective order.
10 When I say "Review of online
11 Valsartan recall materials," I'm already
12 writing parts of the report because I'm
13 thinking about -- I'm thinking about what
14 will go into forming my opinions in the
15 report that are connected with these
16 materials.
17 Q. Sure.
18 Go down to Mr. Ellman's hours
19 on page 4, the next page. He says on
20 December 10th that he had a call with the
21 case team and reviewed an outline.
22 Do you recall what he is
23 referring to by the "outline" there?
24 A. I do not.

Page 244

1 Q. Okay. Was that something that
2 was provided by counsel?
3 A. I do not know that.
4 Q. Okay. You'll see that a number
5 of the other Analysis Group employees do have
6 narrative line items regarding their work
7 drafting the report.
8 Take a look at Laura O'Laughlin
9 on page 4. For example, on December 8th she
10 says, "Assist in preparing expert report."
11 Do you see that?
12 A. Yes.
13 Q. Same thing on the 9th, same
14 thing on the 10th.
15 And then if you go down to Kate
16 Schoenbach, I believe -- I hope I pronounced
17 that right, she says she "assisted with
18 drafting," and then something is redacted
19 there for a number of days.
20 A. Correct.
21 Q. Okay. Same thing with
22 Mr. Jacob Eby, he says that he -- for
23 example, on December 13th he said he assisted
24 in drafting.

Page 245

1 A. Yes.
2 Q. And that's all prior to
3 December 16th where you first mention
4 reviewing a draft report, right?
5 A. As I mentioned earlier, for me,
6 I started writing the report, you know, and
7 thinking -- you know, thinking through what I
8 would be looking for during that first call
9 with counsel. And I continued doing it on
10 the 9th, on the 10th, on the 16th, on the
11 17th, on the dates that you see there.
12 MR. DAVIS: Okay. All right.
13 I believe that's all the questions I
14 have.
15 I will make a formal request
16 that when the next invoice is
17 submitted that that be produced to us
18 as soon as possible.
19 And thank you, Dr. Keller. I
20 appreciate your time today.
21 THE WITNESS: Thank you very
22 much, I appreciate it.
23 MR. GOLDBERG: Just give us a
24 two-minute break and we can figure out

<p style="text-align: right;">Page 246</p> <p>1 if we have any questions for 2 Dr. Keller. 3 MR. DAVIS: Sure. 4 THE VIDEOGRAPHER: Off the 5 record at 4:03. 6 (Whereupon, a recess was 7 taken.) 8 THE VIDEOGRAPHER: Back on the 9 record at 4:07. 10 MR. GOLDBERG: We have no 11 questions for Dr. Keller at this time. 12 Thank you. 13 MR. DAVIS: Okay. Thanks. 14 THE WITNESS: Thank you very 15 much, everyone. 16 THE VIDEOGRAPHER: Off record 17 at 4:07. 18 (Whereupon, the deposition was 19 concluded.) 20 21 22 23 24</p>	<p style="text-align: right;">Page 248</p> <p>1 INSTRUCTIONS TO WITNESS 2 3 Please read your deposition over 4 carefully and make any necessary corrections. 5 You should state the reason in the 6 appropriate space on the errata sheet for any 7 corrections that are made. 8 After doing so, please sign the errata 9 sheet and date it. My name is Matt Martin. I'm the</p> <p>5 videographer for Golkow Litigation Services.</p> <p>6 Today's date is February 24, 2022, and the time is</p> <p>7 10:07 a.m. This video deposition is being held in</p> <p>8 Pittsburgh, Pennsylvania for the United States</p> <p>9 District Court, the District of New Jersey,</p> <p>10 MDL No. 2875.</p> <p>11 The deponent is Timothy Kosty.</p> <p>12 Counsel, please identify yourselves for</p> <p>13 the record.</p> <p>14 MR. DORNER: Drew Dornier on behalf of</p> <p>15 the defendants.</p> <p>16 MR. HONIK: Ruben Honik appearing for</p> <p>17 plaintiffs.</p> <p>18 MS. ANDRAS: Tiffany Andras, Greenberg</p> <p>19 Taurig, on behalf of Teva Pharmaceuticals.</p> <p>20 MR. HONIK: Can we ask Ann to just note</p> <p>21 the other appearances so that we don't need to go</p> <p>22 through everybody orally?</p> <p>23 MR. DORNER: We have no objection to</p> <p>24 that.</p> <p>25</p>

Page 10	Page 12
<p>1 MR. HONIK: Drew, you are very faint.</p> <p>2 Are you going to be defending?</p> <p>3 MR. DORNER: Yes. I'll be happy to</p> <p>4 speak up.</p> <p>5 MR. HONIK: Because I could barely hear</p> <p>6 the videographer.</p> <p>7 Ann, we're ready if you want to</p> <p>8 administer the oath.</p> <p>9 TIMOTHY E. KOSTY,</p> <p>10 having been first duly sworn, was examined</p> <p>11 and testified as follows:</p> <p>12 EXAMINATION</p> <p>13 BY MR. HONIK:</p> <p>14 Q. Mr. Kosty, good morning to you.</p> <p>15 A. Good morning.</p> <p>16 Q. My name is Ruben Honik. Can you see and</p> <p>17 hear me?</p> <p>18 A. Yes.</p> <p>19 Q. Great. And just as a housekeeping point</p> <p>20 of order, are you looking at me and the others or</p> <p>21 just me?</p> <p>22 A. I'm looking at you. You're on the</p> <p>23 laptop in front of me. There's a videographer at</p> <p>24 the end of the table. So I might look at that</p> <p>25 camera occasionally, but I'm looking at you.</p>	<p>1 the plaintiffs' lawyers in the case. You may know</p> <p>2 that. And I'm going to start the questioning of</p> <p>3 you today. I anticipate that my colleague,</p> <p>4 Mr. Stanoch, will likewise be examining you. And</p> <p>5 we're likely going to do it in that order. That</p> <p>6 is to say, I'll start. He'll pick up at some</p> <p>7 point. And I may come in on the back end with</p> <p>8 some additional areas of questioning.</p> <p>9 Do you understand that?</p> <p>10 A. Yes.</p> <p>11 Q. So, Mr. Kosty, I'm aware that at the</p> <p>12 least, you've given sworn testimony in legal</p> <p>13 matters in at least two instances, in the Loestrin</p> <p>14 case in which you participated as an expert, and</p> <p>15 in the A&P bankruptcy case; is that right?</p> <p>16 A. That's correct.</p> <p>17 Q. Have you given deposition testimony in</p> <p>18 any other matters at any time before today?</p> <p>19 A. Yes; a couple depositions years ago. I</p> <p>20 don't know how long. At least 15 years. One of</p> <p>21 the cases was a contract dispute with an award on</p> <p>22 the state Medicaid program, and the second dispute</p> <p>23 was another contract dispute between trading</p> <p>24 partners.</p> <p>25 Q. You cut out a little bit when you</p>
Page 11	Page 13
<p>1 Q. And what I'm really getting at is can</p> <p>2 you see the other lawyers as well?</p> <p>3 A. Yes. It's a small conference room.</p> <p>4 Q. Are there lawyers present with you in</p> <p>5 the conference room?</p> <p>6 A. Just the ones who identified themselves,</p> <p>7 yes.</p> <p>8 Q. You're in Pittsburgh; right?</p> <p>9 A. Correct.</p> <p>10 Q. I'm in Philadelphia, and I don't know</p> <p>11 who's in the room with you. Can you tell me who's</p> <p>12 in the room with you?</p> <p>13 A. Yes, the court reporter, the</p> <p>14 videographer, Tiffany Andras and Drew Dorner and</p> <p>15 myself.</p> <p>16 Q. That's all?</p> <p>17 A. Yes.</p> <p>18 Q. Forgive me for not knowing. Are you in</p> <p>19 one of those lawyer's offices or in an office of</p> <p>20 Golkow?</p> <p>21 A. No. We're at the Duane Morris office in</p> <p>22 downtown Pittsburgh.</p> <p>23 Q. In Pittsburgh?</p> <p>24 A. Yeah.</p> <p>25 Q. Okay. With that out of way, I'm one of</p>	<p>1 referred to the Medicaid matter. Can you tell me</p> <p>2 a little bit more about that?</p> <p>3 A. Well, it was actually a state workers'</p> <p>4 comp award to a PBM, and there was a contestation.</p> <p>5 They contested the award. So they asked me to</p> <p>6 testify as an industry expert in that case. So I</p> <p>7 gave --</p> <p>8 Q. Let me -- I apologize. Did you finish?</p> <p>9 I may have spoken over you.</p> <p>10 A. No, I did not. I gave a short expert</p> <p>11 report in that case. And then I testified via</p> <p>12 deposition. I did not testify in court in that</p> <p>13 case. But that was, like I said, 15 years ago. I</p> <p>14 don't keep track of that.</p> <p>15 Q. Okay. But let me unpack what you did a</p> <p>16 little bit. Then we can move on. You represented</p> <p>17 and gave testimony on behalf of the PBM, is that</p> <p>18 what I understood?</p> <p>19 A. One of the workers' comp PBMs, yes.</p> <p>20 Q. And as I understand it, it was a</p> <p>21 workers' comp proceeding in which a worker</p> <p>22 received an award. And you gave some testimony in</p> <p>23 support of one of the PBMs; is that correct?</p> <p>24 A. No, that's not correct.</p> <p>25 Q. All right. Why don't you clarify it for</p>

<p style="text-align: right;">Page 14</p> <p>1 me.</p> <p>2 A. The dispute was over the award of the</p> <p>3 PBM contract to process that state's workers' comp</p> <p>4 claims. So it was many steps above an individual</p> <p>5 patient or workers' comp claimant.</p> <p>6 Q. I understand.</p> <p>7 A. So it was the award to the PBM.</p> <p>8 Q. And have you retained the testimony that</p> <p>9 you gave in that matter?</p> <p>10 A. No. Our document retention policy in</p> <p>11 our company is five years. And every December we</p> <p>12 go through. If it's older than five years, it's</p> <p>13 deleted, destroyed.</p> <p>14 Q. And so given that policy that you've now</p> <p>15 described to me, is it safe to say that your</p> <p>16 company has retained your testimony in the four</p> <p>17 matters that you describe in your report that was</p> <p>18 rendered in this case?</p> <p>19 MR. DORNER: Object to the</p> <p>20 characterization.</p> <p>21 You can answer.</p> <p>22 THE WITNESS: Yes.</p> <p>23 BY MR. HONIK:</p> <p>24 Q. And specifically, for example, did you</p> <p>25 keep your transcript of testimony that you</p>	<p style="text-align: right;">Page 16</p> <p>1 firm's name. I'm trying to remember that. It's</p> <p>2 not coming to the top of my head. Give me a</p> <p>3 minute here, and I'll see if I can remember it.</p> <p>4 BY MR. HONIK:</p> <p>5 Q. While you think about that, Mr. Kosty,</p> <p>6 my next question actually is: What party did you</p> <p>7 give expert testimony on behalf?</p> <p>8 MR. DORNER: Same instruction.</p> <p>9 You can answer.</p> <p>10 THE WITNESS: The defendants.</p> <p>11 BY MR. HONIK:</p> <p>12 Q. And that was what, GSK in that case?</p> <p>13 A. Yes, the maker of Loestrin. I don't</p> <p>14 recall if there were multiple because of all the</p> <p>15 subsidiaries and different manufacturers. I don't</p> <p>16 recall all them, but it was for the defense.</p> <p>17 Q. Right. But suffice to say some law</p> <p>18 firm, the specific name of which you can't</p> <p>19 remember now, on behalf of GSK or one or more of</p> <p>20 its subsidiaries engaged you in that case;</p> <p>21 correct?</p> <p>22 A. That's correct.</p> <p>23 Q. And, similarly, if we go to your firm's</p> <p>24 system, we would be able to locate the</p> <p>25 testimony that you gave in the A&P bankruptcy</p>
<p style="text-align: right;">Page 15</p> <p>1 provided in the Loestrin case?</p> <p>2 A. I am sure it's on our system. I haven't</p> <p>3 looked at it since that case was settled or</p> <p>4 whatever happened to it.</p> <p>5 Q. Right. It was settled. You know that;</p> <p>6 right?</p> <p>7 A. I knew after my testimony. There were</p> <p>8 some other proceedings, but I did not keep up with</p> <p>9 that case to find out what happened at the end.</p> <p>10 But you evidently know it's been settled.</p> <p>11 Q. How long did you work on that case?</p> <p>12 MR. DORNER: Object to form. Vague.</p> <p>13 You can answer.</p> <p>14 THE WITNESS: About four months.</p> <p>15 BY MR. HONIK:</p> <p>16 Q. And who engaged you in that matter?</p> <p>17 A. It was --</p> <p>18 MR. DORNER: While you answer, I'll just</p> <p>19 caution to not answer anything that might be</p> <p>20 subject to a confidentiality or the</p> <p>21 attorney/client privilege.</p> <p>22 But with those instructions, you can</p> <p>23 answer, Mr. Kosty.</p> <p>24 THE WITNESS: It was a law firm. I know</p> <p>25 your next question is going to be what was the law</p>	<p style="text-align: right;">Page 17</p> <p>1 case; correct?</p> <p>2 A. Yes.</p> <p>3 Q. And would we be able to retrieve the</p> <p>4 report or reports, plural, that you prepared in</p> <p>5 each of those cases as well?</p> <p>6 MR. DORNER: And before you answer, I'll</p> <p>7 just note there may be confidentiality</p> <p>8 considerations in either of those cases with</p> <p>9 respect to any testimony or reports given.</p> <p>10 So with that understanding and note on</p> <p>11 the record, you can answer.</p> <p>12 THE WITNESS: I would confer with</p> <p>13 counsel in those cases and get their input before</p> <p>14 disclosing it. I'm not an attorney.</p> <p>15 BY MR. HONIK:</p> <p>16 Q. Right. I haven't asked you --</p> <p>17 MR. DORNER: I'm sorry, Mr. Honik.</p> <p>18 Mr. Honik, the witness was not finished with his</p> <p>19 answer. Could you please let him answer.</p> <p>20 BY MR. HONIK:</p> <p>21 Q. Go ahead, sir. Go ahead, Mr. Kosty.</p> <p>22 A. I would consult with the attorneys in</p> <p>23 that case because there's typically provisions in</p> <p>24 the engagement letter that if any discovery has</p> <p>25 asked for case materials, you have to contact the</p>

<p>Page 18</p> <p>1 attorneys and give them at least an opportunity to 2 object or not. Hold on a second. 3 (There was a discussion off the record.) 4 BY MR. HONIK: 5 Q. Mr. Kosty, let me give you an 6 instruction, and let me go back to the question 7 which you didn't respond to. The instruction is 8 this: Counsel is permitted to lodge objections on 9 the record to protect the record in the interest 10 of our respective clients. There's nothing wrong 11 with that. We're not permitted to make speaking 12 objections which in any way, shape or form 13 suggests an answer to the witness. 14 Now, the question I asked you was not, 15 can you turn the material over to me. It was 16 simply: Does it exist and is it on your system 17 and accessible to you? Can you answer that 18 question? 19 A. Yes, and I previously answered that 20 question. 21 Q. Okay. And as a point of clarification, 22 both your deposition testimony as well as the 23 report or reports that you authored are available 24 to you on your system; is that correct? 25 A. Yes.</p> <p>Page 19</p> <p>1 Q. Now, a couple of words. Inasmuch as 2 you've given testimony before, I won't spend much 3 time on this, but obviously we're not in person, 4 which typically makes this exchange a lot easier. 5 There's sometimes a bit of a lag. And for that 6 reason and others, it's important that only one of 7 us speak at a time. I've already violated that, 8 and I apologize. I will try not to do it again. 9 But let's pledge not to speak over one 10 another so that the court reporter can take down 11 everything that's said in the course of this exam. 12 Can you do that with me? 13 A. Yes. 14 Q. Number two, it's not your job to guess 15 my meaning or to understand the question if you 16 don't understand the question. In fact, I would 17 instruct you if you haven't heard or understood my 18 question, you are not to answer in favor of 19 telling me or asking me to repeat or rephrase it 20 so you do understand it. 21 Will you do that for me? 22 A. Yes. 23 Q. Today is not an endurance test. And so 24 if you need or want to take a break for any reason 25 at any time, just let me know, and we'll take a</p>	<p>Page 20</p> <p>1 break. Okay? 2 A. Yes. 3 Q. Let me give you a little bit of a road 4 map of how I think today will go so there are as 5 few surprises as possible for you. As I 6 mentioned, obviously I've started the examination 7 of you, and as I understand your opinions and 8 reports in this case, I think they can be fairly 9 broken down into two buckets of opinions or 10 information. 11 One pertains to the damages in this case 12 and in particular what Dr. Conti did on behalf of 13 plaintiffs in this case. And the other bucket 14 concerns what we refer to, and I think you might 15 agree, as ascertainability of class membership, 16 which is an area that Laura Craft provided on 17 behalf of plaintiffs and you criticize each of 18 them. Is that fair? 19 MR. DORNER: Object to the 20 characterization. 21 You can answer. 22 THE WITNESS: Yes. 23 BY MR. HONIK: 24 Q. So what I'm going to be doing initially 25 is focusing on the views that you express</p> <p>Page 21</p> <p>1 concerning damages in this case and your 2 criticisms such as it is of Dr. Conti. And 3 Mr. Stanoch, to a great extent, will limit his 4 questions or confine them to Laura Craft's views 5 and in turn your criticism of her. 6 Do you understand that? 7 A. Yes. 8 Q. One or both of us may weave in questions 9 concerning your training, background and 10 experience as it relates to some of the 11 substantive questions that we're going to ask you. 12 And so from time to time, we may interpose areas 13 of question concerning that. 14 Do you understand that? 15 A. Yes. 16 Q. Do you have a written copy of your 17 expert report, dated January 12, 2022, in front of 18 you? 19 A. Yes. I asked counsel to provide me with 20 a clean copy of my report, which they did. 21 Q. And by clean you mean it contains no 22 annotations or notes? 23 A. Correct. 24 Q. Is there a copy in your possession that 25 has notes or annotations?</p>
---	---

<p style="text-align: right;">Page 22</p> <p>1 A. Not in my possession here today, no.</p> <p>2 Q. Okay. And you have a copy, as you</p> <p>3 described it, a clean copy of your expert report</p> <p>4 in front of you?</p> <p>5 A. Yes. It's in a binder here. I'll show</p> <p>6 it to you.</p> <p>7 Q. That's okay. Do you have the three</p> <p>8 appendices that were attached to your expert</p> <p>9 report?</p> <p>10 A. Let me see if I have it included in</p> <p>11 here. Yes, I do. They have included the</p> <p>12 appendices.</p> <p>13 Q. And is it correct, is it not, that you</p> <p>14 prepared and submitted this report, dated</p> <p>15 January 12, 2022; correct?</p> <p>16 A. That is correct.</p> <p>17 Q. Did you prepare the report by yourself?</p> <p>18 A. With assistance from the Analysis Group,</p> <p>19 which is litigation support services that under my</p> <p>20 direction did some of the data analysis for me,</p> <p>21 did some of the background research on citations.</p> <p>22 But it was my report, yes.</p> <p>23 Q. Is it okay if I refer to that outside</p> <p>24 group as AG?</p> <p>25 A. Sure.</p>	<p style="text-align: right;">Page 24</p> <p>1 true, but we need a citation.</p> <p>2 So the Analysis Group helps with</p> <p>3 identifying citations that support my position.</p> <p>4 And then they're also involved with billing for my</p> <p>5 work, and I believe some invoices that they've</p> <p>6 submitted are part of the document disclosure.</p> <p>7 Q. Anything else?</p> <p>8 A. No. That's it.</p> <p>9 Q. I wrote down four things, Mr. Kosty.</p> <p>10 They do data analysis. They do research. They</p> <p>11 provide help in citing or citation. And they do</p> <p>12 billing for your work.</p> <p>13 Did I get that correct?</p> <p>14 A. Yeah. I may have missed a component or</p> <p>15 two, but at the top level, that's the four areas</p> <p>16 that they assist.</p> <p>17 Q. And to be clear, those are the four</p> <p>18 areas in which they assisted you in preparing the</p> <p>19 report in this case; correct?</p> <p>20 A. Yes.</p> <p>21 Q. For the benefit of the record, we're</p> <p>22 going to mark your complete report with the three</p> <p>23 appendices as Kosty Exhibit 1. And I'll refer to</p> <p>24 it as Exhibit 1 from time to time. Is that okay?</p> <p>25 A. Yes.</p>
<p style="text-align: right;">Page 23</p> <p>1 Q. Did AG actually write any of the words</p> <p>2 that comprise your report?</p> <p>3 A. No, they didn't. What they did is they</p> <p>4 provided suggestions, and I was the arbiter of</p> <p>5 those suggestions. Either I thought they were</p> <p>6 appropriate or not. So it was my decision whether</p> <p>7 or not to accept their recommendations. So I</p> <p>8 looked at all suggestions. The report is written</p> <p>9 by me. And that's why I signed it, because it was</p> <p>10 written by me.</p> <p>11 Q. So let me unpack that a little bit. I</p> <p>12 understand that AG does data analysis and you used</p> <p>13 them in that way; is that right?</p> <p>14 A. That's one component of their work, yes.</p> <p>15 Q. And what are the other components to</p> <p>16 which you turned to them for help?</p> <p>17 A. Well, they provide a wide range of</p> <p>18 services. They do data analysis, like I</p> <p>19 mentioned. They also do research into -- it's</p> <p>20 interesting. I don't do a lot of these expert</p> <p>21 reports in our work. My consulting business, you</p> <p>22 know, it's a small component of it. So when you</p> <p>23 have 38 years of experience and you say a</p> <p>24 statement, you know it's true, but oftentimes in</p> <p>25 these legal cases, they say, well, that may be</p>	<p style="text-align: right;">Page 25</p> <p>1 (Kosty Exhibit 1 was marked.)</p> <p>2 BY MR. HONIK:</p> <p>3 Q. You mentioned, and this is how we sort</p> <p>4 of got to this place, you said that they made --</p> <p>5 and I'm paraphrasing you -- recommendations to you</p> <p>6 and you selected those that ultimately were</p> <p>7 incorporated in your report.</p> <p>8 Did I get that right?</p> <p>9 MR. DORNER: Object to the</p> <p>10 characterization.</p> <p>11 You can answer.</p> <p>12 THE WITNESS: Yes.</p> <p>13 BY MR. HONIK:</p> <p>14 Q. When you say they made recommendations</p> <p>15 to you, what kinds of recommendations did they</p> <p>16 make?</p> <p>17 A. It was mainly on background information</p> <p>18 on the deals, the details associated with it.</p> <p>19 Q. And when you say background, what do you</p> <p>20 mean by background?</p> <p>21 A. Well, one example I can cite is the</p> <p>22 Medicaid Part D financial structure. It's been</p> <p>23 the same structure since the program was</p> <p>24 implemented in 2006. The details have changed in</p> <p>25 terms of what components are paid, what are the</p>

<p style="text-align: right;">Page 26</p> <p>1 risk corridors, what is the deductible levels each 2 year. 3 So in order to make sure that it was up 4 to date for this report, they would do the 5 research into the components that now are 6 applicable for that Part D program. And they 7 change every year based on CMS's call letter and 8 what changes are made to the program in terms of 9 the financing. So that's one example of how they 10 did the detailed research to say, all right, the 11 Med D program has all these four components. 12 However, this is what it looks like today based 13 upon their review of a call letter from CMS. 14 Q. Mr. Kosty, the example that you gave me, 15 which you describe as background that resulted 16 from detailed research, that's an example of a 17 recommendation that AG made to you? 18 A. Yes. 19 Q. And if I understood your previous 20 testimony, there were certain recommendations that 21 you accepted and incorporated into your report and 22 others that you didn't; is that correct? 23 A. That is correct. 24 Q. Can you give me an example of something 25 that they recommended that you declined to put in</p>	<p style="text-align: right;">Page 28</p> <p>1 Beckford. Those three individuals were my primary 2 contacts. 3 So I would instruct them on what I was 4 looking for, and then it was up to them to decide 5 how to utilize the resources within their company 6 to comply with my request. So if they -- 7 Q. Let's say -- 8 MR. DORNER: I'm sorry. Mr. Kosty 9 wasn't finished. 10 THE WITNESS: So if there was analyst 11 work that needed to be done, I don't micromanage 12 how they do their work. It's up to them to 13 decide. Here's what I need. How they go about 14 doing that and coming back to me, it's not up to 15 me to decide or direct. 16 BY MR. HONIK: 17 Q. You mentioned a moment ago that these 18 are the folks with whom you interfaced to make 19 requests; correct? 20 A. Requests for data analysis, requests for 21 research, those four areas. 22 Q. And when you would make those requests, 23 would you make them in writing, that is, would you 24 convey your request by email or letter? How would 25 you do that?</p>
<p style="text-align: right;">Page 27</p> <p>1 your report? 2 MR. DORNER: Objection. And I'll just 3 instruct you not to divulge the contents of any 4 draft reports or forms of draft reports that you 5 may have prepared. 6 With that, if you're able to answer, you 7 can answer. 8 THE WITNESS: None comes to mind. I 9 know there was plenty because based on my 10 experience in the industry, if you're not in the 11 industry, you might read something and come to a 12 conclusion that's inaccurate. So I would review 13 what was proposed and say, no, that doesn't -- 14 that's not how it works. It's the wrong citation. 15 It's the wrong research. 16 So I don't have a specific instance I 17 can cite for you right now, but that's the process 18 that we went through. 19 BY MR. HONIK: 20 Q. And with whom did you interface at AG 21 regarding receipt of these recommendations? Who 22 did you speak with or communicate with? 23 A. My interface at AG is Brian Ellman, who 24 is the vice president there, one of the vice 25 presidents; Ngoc Pham, who is a manager, and Tom</p>	<p style="text-align: right;">Page 29</p> <p>1 A. It would be either via email or 2 telephone call. 3 Q. And would it be fair to say that all of 4 the email exchanges you had with these individuals 5 at AG requesting assistance are emails that are on 6 your system? 7 A. The ones that I kept were, but I don't 8 keep all my emails. I get hundreds of emails a 9 day. So the ones that are pertinent, I may have 10 kept. Others I delete immediately. If you're on 11 an email string and you have eight emails on the 12 same damn subject, I don't keep eight emails. If 13 it's an important issue, I might keep the last 14 email, but not all eight of them. It's just not 15 practical. 16 Q. Is there a document that reflects the 17 retention of AG to provide assistance to you? 18 A. There's an engagement letter between AG 19 and the defendants, defendants' counsel, to engage 20 me. So I don't have a direct engagement letter 21 with the defendants' counsel. I'll work -- my 22 billing is through AG. They handle the billing 23 for me. 24 Q. So is it my understanding that AG 25 brought you into this case?</p>

<p style="text-align: right;">Page 30</p> <p>1 MR. DORNER: Object to the 2 characterization. 3 You can answer. 4 THE WITNESS: My understanding of it is 5 counsel approached AG and said, do you know an 6 expert with these qualifications. And AG said, 7 well, we have worked with Mr. Kosty before. We'll 8 set up a phone call and you can talk to him and 9 decide if he meets the needs of this case or not. 10 BY MR. HONIK: 11 Q. And then who did you speak with? 12 A. Can you be more specific? Speak with 13 who, from what company? 14 Q. What counsel did you speak with to see 15 if there was a match? 16 MR. DORNER: And again I'll caution not 17 to get into the subject of any conversations. 18 But you can answer. 19 THE WITNESS: I don't recall 20 specifically. There's many counsel and defendants 21 on this case. I believe on one call there was 15 22 counsel. I don't recall who those people were. 23 BY MR. HONIK: 24 Q. Right. So what you did, Mr. Kosty, you 25 explained to me how you got involved. You've told</p>	<p style="text-align: right;">Page 32</p> <p>1 product of counsel. 2 BY MR. HONIK: 3 Q. What characteristics or background and 4 training and experience did you identify in that 5 initial meeting to counsel? 6 MR. DORNER: Same objection. Same 7 instruction. 8 BY MR. HONIK: 9 Q. That you possessed. 10 MR. DORNER: Same instruction. 11 THE WITNESS: On the advice of 12 counsel -- 13 MR. HONIK: You're instructing him not 14 to answer what he said? 15 MR. DORNER: It reflects the work 16 product of counsel because he's answering our 17 questions. Yes, I am. Please move on. 18 BY MR. HONIK: 19 Q. When you were hired, Mr. Kosty, did you 20 execute or have counsel send a letter reflecting 21 your retention? 22 A. Not directly from me. AG has an 23 engagement letter with counsel. 24 Q. Okay. Does AG have an engagement letter 25 with you?</p>
<p style="text-align: right;">Page 31</p> <p>1 me that AG has a retention or engagement letter or 2 arrangement with defense counsel, and that defense 3 counsel sought an expert with certain 4 qualifications and that's how you got involved. 5 Did I get that straight? 6 A. Yes. 7 Q. And my initial question before I move 8 forward is: In that initial contact, can you 9 identify by name any of the attorneys who, I'll 10 say, interviewed you to see if there was a fit? 11 A. I think Drew Dorner is the only attorney 12 I remember who was the call because he's continued 13 after I've been engaged as one of the primary 14 defense counsel. 15 Q. Okay. Now, with respect to the 16 background or characteristics that you said they 17 were looking for, what characteristics or areas of 18 expertise were they looking for? 19 A. I don't know. They didn't share it with 20 me. 21 Q. Well, when Mr. Dorner and perhaps others 22 interviewed you to see if you were suitable, what 23 were they looking for? 24 MR. DORNER: Objection. I'll instruct 25 you not to answer. That gets into the work</p>	<p style="text-align: right;">Page 33</p> <p>1 A. No. 2 Q. And is there one or more communications, 3 be it email or otherwise, that reflects your 4 engagement or retention in the case with anyone? 5 A. There would be an email from the 6 Analysis Group that would have indicated to me 7 that we've been retained, I've been retained 8 through Analysis Group on this case. Whether I 9 kept that email or not, I don't recall. But I 10 could certainly look if needed. 11 Q. Okay. But you remember getting such an 12 email; right? 13 A. Yes. 14 Q. And that came from the AG group you to; 15 right? 16 A. Yes. 17 Q. And did that email describe what you 18 were tasked to do? 19 A. At a very high level, yes. 20 Q. Can you tell me what you were asked to 21 do that's reflected in that email? 22 A. Provide expert insight, consulting, 23 perhaps an expert report and testimony. When I 24 was engaged, it was unclear exactly what my role 25 was going to be. So it was a vague description,</p>

<p style="text-align: right;">Page 34</p> <p>1 high level like I mentioned.</p> <p>2 Q. Did it become clearer as time went on?</p> <p>3 A. Absolutely.</p> <p>4 Q. And what specific clarification did you</p> <p>5 receive regarding your assignment as time went on?</p> <p>6 MR. DORNER: Objection. Lack of</p> <p>7 foundation.</p> <p>8 You can answer.</p> <p>9 THE WITNESS: The instruction I got was</p> <p>10 I needed to produce an expert report evaluating</p> <p>11 Ms. Craft, Dr. Conti's and Dr. Panagos' opinions</p> <p>12 of the case and then provide the court background</p> <p>13 on the industry and how it works based on my 38</p> <p>14 years of experience.</p> <p>15 BY MR. HONIK:</p> <p>16 Q. Okay. And we may go into this a little</p> <p>17 more as the deposition goes on today, Mr. Kosty,</p> <p>18 but you're a pharmacist with an MBA; right?</p> <p>19 A. That's correct, yes.</p> <p>20 Q. And as I know it from your CV, you were</p> <p>21 for roughly 12 or 13 years working for Rite-Aid</p> <p>22 and then Thrift Drug as a pharmacist on the</p> <p>23 business side; correct?</p> <p>24 A. Yes. In my career, I started dispensing</p> <p>25 prescriptions for about a year and a half at a</p>	<p style="text-align: right;">Page 36</p> <p>1 our senior executive management wanted us to own</p> <p>2 the means of production.</p> <p>3 So I got to put all that together and</p> <p>4 hire people then to help me run it. And then my</p> <p>5 job after we stood up the company was to help</p> <p>6 create differentiating services so we could sell</p> <p>7 in the marketplace our services.</p> <p>8 Q. And it was sold; was it not?</p> <p>9 A. Well, we left the company in '96 to</p> <p>10 start our consulting company. Thrift Drug -- it's</p> <p>11 a long story, but Thrift Drug was merged with</p> <p>12 Eckerd Health Services. J.C. Penney's owned</p> <p>13 Thrift Drug. And they decided to let -- after we</p> <p>14 had left, the Eckerd Health Services people kind</p> <p>15 of ran the PBM. And then it was rolled up through</p> <p>16 acquisitions, through PharmaCare and eventually in</p> <p>17 CVS Caremark.</p> <p>18 Q. And I gather, Mr. Kosty, your experience</p> <p>19 in helping start that business coupled with your</p> <p>20 background as a pharmacist is what catapulted you</p> <p>21 into the consulting side; correct?</p> <p>22 A. Yes. When we left and started our</p> <p>23 business, the genesis of it was we see a lot of,</p> <p>24 and we still do today, silos in the industry where</p> <p>25 people in certain market segments understand</p>
<p style="text-align: right;">Page 35</p> <p>1 pharmacy in Whitesville, West Virginia. Shortly</p> <p>2 thereafter, I was promoted into a district manager</p> <p>3 role where I managed 25 pharmacies. That was more</p> <p>4 beginning the business side of it.</p> <p>5 And then subsequent, I managed the</p> <p>6 third-party operations at both companies, Rite-Aid</p> <p>7 for about five years and Thrift Drug for about a</p> <p>8 year.</p> <p>9 Q. Right. And toward the end of your</p> <p>10 tenure at Thrift Drug, you were involved in the</p> <p>11 creation of a PBM that was created by Thrift;</p> <p>12 right?</p> <p>13 A. Yes. I was lucky to be the second</p> <p>14 employee hired for that new business, and the CEO</p> <p>15 told me -- tasked me with the opportunity to build</p> <p>16 a company which not many times in your career you</p> <p>17 have that opportunity. So I ran with it.</p> <p>18 My job was to build all the</p> <p>19 administrative functions of the PBM and hire</p> <p>20 people to run those functions. So it included</p> <p>21 developing a clinical component, clinical</p> <p>22 services. We stood up a call center for both</p> <p>23 pharmacies and patients to call. We had network</p> <p>24 administration. We did an RFP and installed a</p> <p>25 multimillion dollar claims processing system that</p>	<p style="text-align: right;">Page 37</p> <p>1 certain things, but they don't have the</p> <p>2 perspective of the multiple market segments.</p> <p>3 So when I say market segments, I mean</p> <p>4 manufacturers, branded and generic companies.</p> <p>5 Then you have the payor segment where you have</p> <p>6 PBMs. You could have health plans, workers' comp</p> <p>7 PBMs, Medicaid Part D plans, a number of different</p> <p>8 payor types.</p> <p>9 Then you have pharmacies where you have</p> <p>10 retail pharmacy chains. That was my background.</p> <p>11 Initially you have specialty pharmacies. You have</p> <p>12 mail service pharmacies. You have different types</p> <p>13 of pharmacies we consult with. And then we also</p> <p>14 worked with technology companies that help</p> <p>15 businesses within the pharmaceutical market become</p> <p>16 more efficient and profitable. And we also work</p> <p>17 we say an et al. category, which would include our</p> <p>18 legal work.</p> <p>19 Q. Okay. How much of the work that your</p> <p>20 company presently does is legal versus support for</p> <p>21 the pharma or tech side of the business?</p> <p>22 MR. DORNER: Objection. Vague.</p> <p>23 You can answer.</p> <p>24 THE WITNESS: Our legal work is very</p> <p>25 minimal for our company. It's under -- I'd</p>

<p style="text-align: right;">Page 38</p> <p>1 estimate 15 percent or under. Quite frankly, we 2 enjoy working with clients on real business 3 issues. We've obtained a lot of expertise working 4 on different business issues and understanding 5 different segments. That's a lot of fun. 6 I'm not sure if I'd characterize this as 7 fun, but it's part of the legal process, right. 8 So it's not a big component of our consulting 9 business. 10 BY MR. HONIK: 11 Q. So when you say 15 percent or less, do 12 you mean by revenue or time spent? 13 A. Revenue. 14 Q. How would you quantify it in terms of 15 time spent? 16 A. Well, in the last couple of months, it's 17 been a lot of time spent. But typically I will 18 work on five to ten different client engagements 19 at a time, and that keeps me busy a hundred 20 percent of the time. 21 Q. How many folks work in your firm? 22 A. We have 15 full-time employees. We have 23 eight pharmacists on staff. We have an MBA from 24 the University of Chicago joined us last year. 25 Q. I'm sorry. What? I didn't hear.</p>	<p style="text-align: right;">Page 40</p> <p>1 economics, do you? 2 A. I don't have any degrees in economics, 3 no. 4 Q. You know, do you not, that there's a 5 specialty area within economics as an academic 6 pursuit called health economics; correct? 7 A. Yes. 8 Q. And you're not a health economics expert 9 either, are you? 10 MR. DORNER: Object to form. 11 You can answer. 12 THE WITNESS: Maybe. It depends how you 13 define an expert. I certainly know the economic 14 background on how things work in the economy, and 15 I can read and understand people's opinions on 16 different components. So I don't need to be an 17 economist or a healthcare economist to do that. 18 BY MR. HONIK: 19 Q. Suffice to say you've made no 20 contributions to the academic peer-reviewed 21 literature in economics? 22 A. Suffice it to say that's correct. 23 Q. You've never taught a course at any 24 level, undergraduate or graduate, in economics or 25 health economics; correct?</p>
<p style="text-align: right;">Page 39</p> <p>1 A. I'm sorry. MBA, business-type person 2 who joined us, some great experience. Then we 3 have IT, a couple IT people. We have 4 administrative assistant support that is about 60 5 or 40 percent of our employee base helps us, 6 allows our consultants to focus on projects and 7 not worry about the administrative work. 8 Q. Do you have any economists on your 9 staff? 10 A. No. 11 Q. And you, yourself, don't hold yourself 12 out to be an economist, do you? 13 A. I haven't been trained as an economist, 14 but in my coursework both at Ohio State and 15 graduate work at Penn State to get my MBA, I've 16 had a number of economic courses, yes. 17 Q. But you understand that there's such a 18 thing as a professional economist who is trained 19 to serve in that capacity; right? 20 MR. DORNER: Object to the 21 characterization. 22 You can answer. 23 THE WITNESS: Yes. 24 BY MR. HONIK: 25 Q. And you don't have any degrees in</p>	<p style="text-align: right;">Page 41</p> <p>1 A. Correct. 2 Q. We'll get back to some of your 3 qualifications and experience, but I just wanted 4 to establish that. 5 Is there anyone at AG upon whom you 6 relied as an economist in doing the work in this 7 case? 8 MR. DORNER: Object to the form. Vague. 9 You can answer if you can. 10 THE WITNESS: One of the persons who 11 worked on the case was an economist, but he wasn't 12 working for me in that role. It was more of an 13 analyst role for data. 14 BY MR. HONIK: 15 Q. And who was that? 16 A. Tom Beckford. 17 Q. You said Tom Beckford? 18 A. Correct. 19 Q. So Mr. Beckford is an economist, but 20 didn't work for you in this case or on this case 21 in that capacity, is that what you mean? 22 A. Yes. 23 Q. And was he the only economist at AG with 24 whom you were involved? 25 MR. DORNER: Object to foundation.</p>

<p style="text-align: right;">Page 42</p> <p>1 You can answer.</p> <p>2 THE WITNESS: He was the only economist</p> <p>3 I was involved with or worked with me on my</p> <p>4 report. I don't know if they have other</p> <p>5 economists. I assume they do, but I haven't met</p> <p>6 them.</p> <p>7 BY MR. HONIK:</p> <p>8 Q. So limiting my area of questioning and</p> <p>9 interest to folks that helped you in this case to</p> <p>10 write your report, the only one would be Tom</p> <p>11 Beckford, and he didn't work with you in his</p> <p>12 capacity as an economist. Did I get that right?</p> <p>13 A. Yes.</p> <p>14 Q. What did he do if not serve as an</p> <p>15 economist to support you? What did he do?</p> <p>16 A. Data analysis.</p> <p>17 Q. I'm sorry. You said data analysis?</p> <p>18 A. Yes.</p> <p>19 Q. And can you be a little more particular</p> <p>20 and tell me what kind of data analysis he did on</p> <p>21 your behalf in support of your work in this case?</p> <p>22 A. Sure. Let me give you an example from</p> <p>23 my report. If you go to Table 1. That's the</p> <p>24 problem with writing a long report. There's a lot</p> <p>25 of pages to go through.</p>	<p style="text-align: right;">Page 44</p> <p>1 answer negative, "no"?</p> <p>2 BY MR. HONIK:</p> <p>3 Q. Did you say "no," sir?</p> <p>4 A. That's correct.</p> <p>5 Q. Can you tell me why you didn't speak to</p> <p>6 Mr. Beckford about the economic theories that</p> <p>7 underpin Dr. Conti's views?</p> <p>8 MR. DORNER: Same objection.</p> <p>9 You can answer.</p> <p>10 THE WITNESS: I didn't need his opinion.</p> <p>11 BY MR. HONIK:</p> <p>12 Q. Did you, nonetheless, ask him his</p> <p>13 opinions?</p> <p>14 A. No.</p> <p>15 Q. Okay. Did he offer any insights as you</p> <p>16 suggested to me at the beginning of your sworn</p> <p>17 testimony that you rejected, recommendations from</p> <p>18 Beckford that you declined to incorporate in your</p> <p>19 report or analysis?</p> <p>20 MR. DORNER: Objection. Asked and</p> <p>21 answered.</p> <p>22 You can answer.</p> <p>23 THE WITNESS: I don't recall specifics,</p> <p>24 no.</p> <p>25</p>
<p style="text-align: right;">Page 43</p> <p>1 Q. What page are you on?</p> <p>2 A. I'm not there yet.</p> <p>3 (There was a discussion off the record.)</p> <p>4 BY MR. HONIK:</p> <p>5 Q. Are you at a page yet, Mr. Kosty?</p> <p>6 A. No. It's Table 1. I'm sorry. I don't</p> <p>7 have this memorized what page it's on.</p> <p>8 Q. Take a look at page 27. It might be</p> <p>9 there.</p> <p>10 A. Thank you. Yes. So an example, to</p> <p>11 create Table 1, we took IQVIA data, added the</p> <p>12 method of payment to that data, and then sorted</p> <p>13 differently by method of payment to create this</p> <p>14 table. So that's one example of how Tom Beckford</p> <p>15 helped with the data analysis of this report.</p> <p>16 Q. So Mr. Beckford, the economist at AG,</p> <p>17 helped to prepare Table 1. That's an example?</p> <p>18 A. Yes.</p> <p>19 Q. Did you discuss with Mr. Beckford any of</p> <p>20 the economic theories Dr. Conti speaks of in her</p> <p>21 report to get his insights?</p> <p>22 A. No.</p> <p>23 MR. DORNER: Objection. Vague. The</p> <p>24 question is answered. That's fine.</p> <p>25 MR. HONIK: Did the reporter get the</p>	<p style="text-align: right;">Page 45</p> <p>1 BY MR. HONIK:</p> <p>2 Q. Can you give me a single example of a</p> <p>3 recommendation anyone at AG made in connection</p> <p>4 with your work in this case that you rejected?</p> <p>5 MR. DORNER: Objection. Asked and</p> <p>6 answered.</p> <p>7 You can answer.</p> <p>8 THE WITNESS: I previously responded no.</p> <p>9 I don't recall offhand.</p> <p>10 BY MR. HONIK:</p> <p>11 Q. Okay. You gave me a single example of a</p> <p>12 recommendation that you accepted. Do you know of</p> <p>13 any others that you can recall today?</p> <p>14 A. No. I can't recall specifics.</p> <p>15 Q. You've given me this example of Table 1</p> <p>16 as something that Mr. Beckford assisted you in.</p> <p>17 And I had asked you earlier what parts of this</p> <p>18 report, the actual language, tables and other</p> <p>19 material that we find here, was authored by AG</p> <p>20 versus you.</p> <p>21 Can you tell me any other places that AG</p> <p>22 wrote in this report, Exhibit 1?</p> <p>23 MR. DORNER: Object to the</p> <p>24 characterization.</p> <p>25 You may answer.</p>

<p style="text-align: right;">Page 46</p> <p>1 THE WITNESS: You mischaracterized my 2 statement around Table 1. I asked them to produce 3 it for me to evaluate it. I went through their 4 methodology. I checked it myself. And then I 5 agreed to put it in my report. 6 BY MR. HONIK: 7 Q. Understood. Are there any other parts 8 of your written report marked Exhibit 1 that was 9 authored in whole or in part by anyone at AG? 10 MR. DORNER: Objection. 11 BY MR. HONIK: 12 Q. You can answer. 13 MR. DORNER: You can answer. I'll 14 object to form, but you can answer. 15 THE WITNESS: They assisted with the 16 tables that were created for this report. 17 BY MR. HONIK: 18 Q. Understood. Is there any other language 19 that AG wrote that's in Exhibit 1? 20 MR. DORNER: Object to form. 21 Mischaracterization. Asked and answered. 22 You can answer. 23 THE WITNESS: As I previously testified, 24 they made suggestions. It was up to me to 25 evaluate suggestions. But when I accepted them, I</p>	<p style="text-align: right;">Page 48</p> <p>1 they made comments to those drafts or to that 2 draft, some of which you accepted, others that you 3 rejected, and then you incorporated them in a new 4 draft? Is that part of the way you did this? 5 MR. DORNER: Object to form. Compound. 6 You may answer. 7 THE WITNESS: Yes. Certainly in 8 drafting and creating a hundred-page report, you 9 don't just sit down and write the final copy to 10 start with. 11 BY MR. HONIK: 12 Q. Absolutely. Absolutely. 13 A. If someone can do that, I'd love to meet 14 them. But you have to go through, create, 15 criticize, edit, update and repeat. 16 Q. Understood. 17 A. I don't know any other expert that would 18 sit down and write an entire report. So that's 19 the process we went through. I would create the 20 report. I would get feedback. I would edit my 21 report. And then there would be another iteration 22 until we got to the final product. 23 BY MR. HONIK: 24 Q. Totally understand. How many different 25 iterations would you say you exchanged with AG</p>
<p style="text-align: right;">Page 47</p> <p>1 accepted them into my report. 2 BY MR. HONIK: 3 Q. I totally understand that, Mr. Kosty. 4 I've moved past that. And I'm asking a very 5 specific question. You, yourself, identified 6 correctly that this is a long report with many 7 sections. 8 I'm asking you whether there is any 9 language or other material in this report that was 10 specifically authored, written by anyone at AG. 11 Yes or no. 12 MR. DORNER: Object to form. 13 Mischaracterization. Asked and answered. The 14 witness is also permitted to offer an explanation. 15 He can't be forced to answer "yes" or "no." 16 With that, you can answer one more time. 17 THE WITNESS: As I said twice before, 18 they made suggestions. I evaluated suggestions, 19 and I decided what to include or not. 20 BY MR. HONIK: 21 Q. Let me understand how this suggestion 22 and recommendation process worked. Did you write 23 a draft of the report and then share it with AG? 24 A. Yes. 25 Q. And did you undergo a process in which</p>	<p style="text-align: right;">Page 49</p> <p>1 before the final form of this report as submitted 2 to plaintiffs' counsel occurred? 3 A. I have no idea. 4 Q. Well, more than five? 5 MR. DORNER: Objection. Asked and 6 answered. 7 You can answer. 8 THE WITNESS: It was more than five. 9 The exact number I don't know. 10 BY MR. HONIK: 11 Q. And over what period of time would this 12 iterative exchange of drafts and comments -- how 13 long did it take place? 14 A. I'm trying to recall. I was engaged on 15 the project I think in early August. So it was 16 probably somewhere in the October, November 17 timeframe I started working on a report. But I 18 don't recall the specific date. I don't know if 19 it's October 31, it's November 1, but it was about 20 that timeframe. 21 Q. And what areas of your report did you 22 solicit comments from AG on? 23 A. I solicited comments on the entire 24 report. 25 Q. Did you solicit comments from AG as to</p>

<p style="text-align: right;">Page 50</p> <p>1 the specifics of the opinions authored by 2 Dr. Conti? 3 MR. DORNER: Objection. Vague. And 4 form. 5 But you can answer. 6 THE WITNESS: No. 7 BY MR. HONIK: 8 Q. Did you send Dr. Conti's report up to 9 the folks at AG? 10 A. I believe they have access to the 11 report. I didn't send it to them. Perhaps 12 defense counsel sent it to them. 13 Q. Did you discuss Dr. Conti's reports with 14 the folks at AG? 15 A. Yes. 16 Q. Did you discuss Laura Craft's report 17 with the folks at AG? 18 A. Yes. 19 Q. And did they offer comments first as to 20 Rena Conti's opinions to you? 21 A. Based on my report, they offered me 22 comments. I mean, obviously, when you review 23 someone's report, you'll have a discussion on the 24 contents, et cetera. That's just a normal course 25 of business.</p>	<p style="text-align: right;">Page 52</p> <p>1 BY MR. HONIK: 2 Q. And one or more folks at AG provided 3 recommendations, substantive recommendations about 4 the section of your report that pertains to 5 Dr. Conti; is that correct? 6 MR. DORNER: Object to form. 7 Characterization. 8 You may answer. 9 THE WITNESS: Your word is substantial 10 or substantive I believe you said, counselor. I 11 don't recall if they were or were not. But like I 12 indicated earlier, I had requested feedback on the 13 entirety of my report. So whatever feedback they 14 provided, as I mentioned three times previously, I 15 reviewed and decided whether it had merit or not 16 and either included or did not. 17 BY MR. HONIK: 18 Q. So I'm still trying to understand the 19 process. And the reason for that, Mr. Kosty, is 20 that the court in this case, in the valsartan case 21 is going to need to understand your methodology 22 about how you arrived at your opinions. 23 Do you understand that? 24 MR. DORNER: Object to form. Calls for 25 a legal conclusion.</p>
<p style="text-align: right;">Page 51</p> <p>1 Q. Well, that's what I'm trying to unpack 2 and understand before we move on, Mr. Kosty. With 3 respect specifically to Dr. Conti's report, you 4 first and foremost spoke with AG about her 5 opinions; is that correct? 6 MR. DORNER: Object to the 7 characterization. 8 You may answer. 9 THE WITNESS: I wouldn't say first and 10 foremost. That's not my words. They were a 11 component of the discussion. Obviously, there was 12 discussion with counsel about it, too. 13 BY MR. HONIK: 14 Q. Mr. Kosty, I apologize. I don't think I 15 made myself clear. I don't mean first and 16 foremost on your part. I mean that's the first 17 question I have that's foundational. And all I'm 18 trying to establish at the outset, and I'll ask 19 more questions as we go along, you spoke to one or 20 more people at AG about Dr. Conti's opinions in 21 this case; correct? 22 MR. DORNER: Objection. Asked and 23 answered. 24 You may answer. 25 THE WITNESS: Yes.</p>	<p style="text-align: right;">Page 53</p> <p>1 But you may answer. 2 THE WITNESS: Yes. 3 BY MR. HONIK: 4 Q. And part of your methodology was to rely 5 upon advice from AG in the preparation of your 6 report; was it not? 7 MR. DORNER: Object to the 8 characterization. 9 You may answer. 10 THE WITNESS: I did not rely on AG to 11 write my report is what you're asking. It's my 12 report. 13 BY MR. HONIK: 14 Q. No, sir. That's not what I'm asking. 15 MR. DORNER: I'm sorry. The witness 16 wasn't finished with his answer. Go ahead, 17 Mr. Kosty. 18 THE WITNESS: Thank you. 19 In Dr. Conti's section, I read her 20 expert report and came to my own conclusions. 21 Those directed my writing and my report in that 22 section that I criticized her methodology. Those 23 are my conclusions based on my reading of the 24 facts in the case. 25</p>

<p style="text-align: right;">Page 54</p> <p>1 BY MR. HONIK:</p> <p>2 Q. Mr. Kosty, I have no doubt that you</p> <p>3 arrived at your own impressions about Dr. Conti's</p> <p>4 views and that you wrote the section that</p> <p>5 criticizes her. I have no doubt about that.</p> <p>6 But you've also confirmed to me that you</p> <p>7 spoke with one or more persons at AG about</p> <p>8 Dr. Conti's opinions and views; isn't that</p> <p>9 correct?</p> <p>10 A. Yes.</p> <p>11 Q. So first question based on that</p> <p>12 foundational point is: Who did you speak with</p> <p>13 about Dr. Conti's views at AG?</p> <p>14 A. It would be Brian Ellman, Ngoc Pham and</p> <p>15 Tom Beckford, and there was one other person who</p> <p>16 has since left their company, Kelly Adamski.</p> <p>17 Q. Kelly?</p> <p>18 A. Adamski.</p> <p>19 Q. Where is Ms. Adamski now?</p> <p>20 A. I have no idea.</p> <p>21 MR. DORNER: Object to form. Calls for</p> <p>22 speculation.</p> <p>23 You can answer if you can.</p> <p>24 THE WITNESS: I don't know.</p> <p>25</p>	<p style="text-align: right;">Page 56</p> <p>1 Mr. Kosty is to not divulge the contents of any</p> <p>2 draft of a report. It's a simple instruction.</p> <p>3 Clearly not improper, Mr. Honik. It's in the</p> <p>4 federal rules.</p> <p>5 And with that instruction and an</p> <p>6 objection to the form, you may answer.</p> <p>7 THE WITNESS: I don't recall specifics.</p> <p>8 BY MR. HONIK:</p> <p>9 Q. What topics did you discuss with those</p> <p>10 four people concerning Dr. Conti's views?</p> <p>11 A. Like I said, I don't recall specifics of</p> <p>12 those discussions, but obviously we would have had</p> <p>13 to discuss the methodology and her conclusions.</p> <p>14 Q. So you've now identified that you</p> <p>15 discussed the methodology that Dr. Conti used; is</p> <p>16 that right?</p> <p>17 A. Yes.</p> <p>18 Q. What was that discussion? What did you</p> <p>19 and the four people at AG discuss concerning</p> <p>20 Dr. Conti's methodology?</p> <p>21 MR. DORNER: Same instruction with</p> <p>22 respect to drafts.</p> <p>23 But you may otherwise answer.</p> <p>24 THE WITNESS: I don't recall that</p> <p>25 specific discussion.</p>
<p style="text-align: right;">Page 55</p> <p>1 BY MR. HONIK:</p> <p>2 Q. What did you speak to these four people</p> <p>3 about at AG as concerns Dr. Conti's opinions and</p> <p>4 views?</p> <p>5 MR. DORNER: I'll caution not to get</p> <p>6 into any discussions particularly where counsel</p> <p>7 were involved and also which would be reflected in</p> <p>8 drafts of your report which are work product.</p> <p>9 MR. HONIK: That's an improper</p> <p>10 instruction, Mr. Doren.</p> <p>11 MR. DORNER: You can put that on the</p> <p>12 record, Mr. Honik, but draft reports you're not</p> <p>13 accessible to.</p> <p>14 With that, to the extent you can answer,</p> <p>15 you may answer.</p> <p>16 BY MR. HONIK:</p> <p>17 Q. Before you do, Mr. Kosty, I've not asked</p> <p>18 you a single question about the drafts. What I've</p> <p>19 asked you, for clarification, and Mr. Dorners</p> <p>20 instructions are highly improper in shaping your</p> <p>21 testimony, is simply: What did you discuss with</p> <p>22 the four people at AG that you've now identified</p> <p>23 to me as it concerns Dr. Conti's views and</p> <p>24 impressions in her report?</p> <p>25 MR. DORNER: And the instruction to</p>	<p style="text-align: right;">Page 57</p> <p>1 BY MR. HONIK:</p> <p>2 Q. How is it you recall that you discussed</p> <p>3 methodology that Dr. Conti employed?</p> <p>4 A. Well, if you read the report, you have</p> <p>5 to read the methodology, right. And you also have</p> <p>6 to look at the conclusion based on those</p> <p>7 methodologies, which I say in my report, and I'm</p> <p>8 sure we'll get into later, I disagree with</p> <p>9 completely. But it's my reading of the report, my</p> <p>10 analysis and recommendations of critique of her</p> <p>11 work is in my report.</p> <p>12 Q. Okay. So let me unpack that. You</p> <p>13 discuss and write about the methodology Dr. Conti</p> <p>14 employed, and you're assuming you spoke to these</p> <p>15 four people about that. Is that what you're</p> <p>16 telling me?</p> <p>17 MR. DORNER: Object to the</p> <p>18 characterization.</p> <p>19 You may answer, Mr. Kosty.</p> <p>20 THE WITNESS: This mischaracterizes the</p> <p>21 statement. We may have discussed the methodology</p> <p>22 and her conclusion, but in the report, when I came</p> <p>23 to my conclusion, which is in my report that her</p> <p>24 methodology -- she creates an alternative reality</p> <p>25 of how the world works, and she defends that</p>

<p>Page 58</p> <p>1 reality that nowhere shall I go outside of that 2 alternative reality. And if you question my 3 alternative reality, you're wrong. 4 Well, in the real world, things work 5 differently, Mr. Honik. People have to go to the 6 pharmacy. They need to be treated for their 7 medication -- their healthcare issues. In this 8 case, the products were in the marketplace. They 9 were dispensed to millions of patients, right, and 10 they were effective in treating people's blood 11 pressures and preventing adverse outcomes. 12 So along that way, people got tremendous 13 therapeutic value from these products. So to say 14 they're worthless is just nonsense. Those 15 products stayed out of the hospital. They didn't 16 have strokes. They didn't have heart attacks. 17 They kept them healthy. Even in the 18 economic plaintiffs, people that were deposed 19 said, yeah, we received benefit from these 20 products. 21 So when Dr. Conti says they're 22 worthless, that just does not hold any water in 23 how the real world works. Unfortunately, things 24 happen and you have to deal with it, and that's 25 what was done in this case when the manufacturer</p> <p>Page 59</p> <p>1 identified there was an impurity. They didn't 2 know what the impurity was. They did some 3 research and they went to the FDA. The FDA 4 conducted the research in 2018. And you can look 5 on their website for the entire chronology of what 6 happened. 7 Then they decided to implement voluntary 8 recalls. And part of the recall notices to 9 patients were to enable them as a recommendation. 10 Don't stop taking your medication. Go contact 11 your healthcare provider and decide with them what 12 course of action to take, which could be either 13 stay on those products, switch to another VCD 14 product that was not -- did not have the 15 impurities, or switch to another therapy 16 completely. 17 The reason they didn't recommend stop 18 taking that medication, because there were adverse 19 outcomes that could happen. Excuse me. I need a 20 drink here. 21 So the regulatory process that's been 22 set up in the industry was followed. The problem 23 was identified. The FDA was involved and 24 informed, and they took action through the 25 voluntary recalls to recall those products out of</p>	<p>Page 60</p> <p>1 the marketplace. So in the real world, you can't 2 just assume those things didn't happen. We have 3 to deal with the patients. We have to deal with 4 supply. We have to deal with alternatives. 5 In order to do that, you have to address 6 the problem. And you just can't say in an 7 alternative reality, oh, it's worthless and never 8 happened because that's not what, in fact, 9 happened. 10 BY MR. HONIK: 11 Q. Are you done? 12 A. Yes. 13 Q. The long answer that you just gave, is 14 that the substance of the conversation you had 15 with the four folks at AG regarding the 16 worthlessness analysis that Dr. Conti provided? 17 MR. DORNER: Object to form. 18 You can answer. 19 THE WITNESS: No. That's my conclusion 20 of Dr. Conti's analysis and my experience -- 21 BY MR. HONIK: 22 Q. I know it's your conclusion. The 23 question, sir -- 24 MR. DORNER: I'm sorry. I'm sorry. The 25 witness wasn't finished with his answer,</p> <p>Page 61</p> <p>1 Mr. Honik. 2 BY MR. HONIK: 3 Q. The question, Mr. Kosty -- 4 MR. DORNER: The witness was not 5 finished with his answer. Please let him finish. 6 BY MR. HONIK: 7 Q. Did you talk about the subjects -- 8 Mr. Kosty, here's the question. Did you talk 9 about the subjects that were in your elaborate 10 response with the four people at AG? Yes or no. 11 MR. DORNER: Objection. Form. 12 Mischaracterizes. And I'll note for the record 13 that opposing counsel didn't let the witness 14 finish his prior answer. 15 With that, you may answer. 16 THE WITNESS: No, because they don't 17 have the background in the industry that I do. 18 And, unfortunately, things happen, like I just 19 went through the explanation of the regulatory 20 safeguards in the industry with the FDA. They 21 don't have that background. I do. 22 I've worked with pharmacies. I've 23 worked with mail service pharmacies. I've worked 24 with PBMs. You have to address these issues as 25 they come up. And those issues were identified,</p>
---	--

<p style="text-align: right;">Page 62</p> <p>1 fairly quickly were addressed and implemented in 2 the industry. So that's my opinion, that you just 3 can't say, oh, my gosh, if this never happened, 4 these products are worthless. 5 I see no documentation in this case that 6 would illustrate any patient did not receive the 7 therapeutic benefit of the VCD products they were 8 taking. So my conclusion is you just can't say, 9 well, this is how the world should work. This is 10 my alternative reality. You have to deal with how 11 the world actually works. 12 And how the world actually works is the 13 products were in commerce. They were identified 14 as issues. Those issues were addressed. 15 Processes were changed. And patients got on 16 alternative therapy or they got on VCD products 17 that didn't have the impurities. 18 That's the reality of the matter. And I 19 can't in my world where you have to deal with 20 these things wish it away. 21 BY MR. HONIK: 22 Q. Did you discuss this idea about the real 23 world that you've now twice explained to me with 24 the four folks at AG that you identified? 25 MR. DORNER: Objection. Vague.</p>	<p style="text-align: right;">Page 64</p> <p>1 MR. DORNER: Objection to the 2 characterization. 3 You may answer. 4 THE WITNESS: I spoke in a similar 5 manner about Ms. Craft's report. We -- 6 BY MR. HONIK: 7 Q. And -- I'm sorry. 8 A. Go ahead. That's fine. 9 Q. What did these folks convey to you at AG 10 about Laura Craft's opinions? 11 MR. DORNER: I'll caution not to divulge 12 the contents of any drafts that you may have 13 received. 14 THE WITNESS: I don't recall specific 15 conversations. Ms. Craft had another long report 16 that had many components to it. But I don't 17 recall the specific conversations. 18 BY MR. HONIK: 19 Q. Mr. Kosty, one of the things that needs 20 to be assured in this instance is that the report 21 which will be evaluated ultimately by the court 22 and potentially fact finders was authored by you. 23 So I'll ask you before moving on: Is 24 there any part of this report that reflects the 25 views of anyone at AG exclusively?</p>
<p style="text-align: right;">Page 63</p> <p>1 You can answer. 2 THE WITNESS: I don't recall if I 3 specifically addressed this issue or not. 4 BY MR. HONIK: 5 Q. And when you say you don't recall, does 6 that convey to me that you may have spoken with 7 the four folks at AG you identified about 8 Dr. Conti's economic worth analysis? 9 MR. DORNER: Objection to the 10 characterization. 11 You may answer. 12 THE WITNESS: I don't recall. I just 13 answered the same question. 14 BY MR. HONIK: 15 Q. And when you say you don't recall, does 16 that leave open the possibility that you may or 17 may not have? Is that fair? 18 MR. DORNER: Asked and answered. 19 You can answer. 20 THE WITNESS: Yes. It could be either 21 way. I don't recall. 22 BY MR. HONIK: 23 Q. Is it equally true that you spoke with 24 these four folks at AG about Laura Craft's 25 opinions in her report?</p>	<p style="text-align: right;">Page 65</p> <p>1 MR. DORNER: Object to form. Asked and 2 answered. Mischaracterizes. Argumentative. 3 You may answer. 4 THE WITNESS: The answer is no. 5 BY MR. HONIK: 6 Q. When you had this iterative exchange 7 with the folks at AG over drafts of this report, 8 would you get back written comments or track 9 changes or red lines to your draft? 10 MR. DORNER: Object to form. 11 Mischaracterizes. 12 You may answer. 13 THE WITNESS: It could have been via 14 conversation on a telephone call. There could 15 have been red line suggestions. Both of those 16 were alternatives that we discussed. 17 BY MR. HONIK: 18 Q. And the red lines and the suggestions 19 weren't limited to help in preparing tables. They 20 were red lines to language of your report; is that 21 correct? 22 A. I previously answered that question yes. 23 I told you we went through an edit process 24 iteration. I explained the methodology. It's the 25 same methodology now that it was half an hour ago.</p>

<p style="text-align: right;">Page 66</p> <p>1 Q. Was there anyone at your own consulting 2 firm that assisted you in writing this report? 3 A. No. 4 Q. And when in relation to its date, 5 namely, January 12, 2022, would you say it was 6 completed? 7 A. Probably January 11, 2022. 8 Q. And to whom did you send it initially 9 when it was complete? 10 A. It goes to counsel. 11 Q. And who did you send it to specifically? 12 Mr. Dorner? 13 A. Yes. 14 Q. Turn, if you would, in Exhibit 1, which 15 is your report, to page 9. 16 MR. DORNER: Actually, Ruben, we've been 17 going for about an hour. If this is on the same 18 topic, I'm fine with exploring and wrapping up 19 that topic, but then I think at that point it 20 might be a good time for our first break. 21 BY MR. HONIK: 22 Q. Mr. Kosty, do you need a break? 23 A. Yes. That would be great. 24 Q. Do you want five minutes now? 25 A. Sure.</p>	<p style="text-align: right;">Page 68</p> <p>1 that in the code. 2 BY MR. HONIK: 3 Q. And you're familiar with both of those 4 definitions in your extensive experience in the 5 pharma space; right? 6 A. Yes. 7 Q. Do you agree that U.S. pharmacies are 8 not permitted to sell drugs which are adulterated 9 under that FDA definition? 10 MR. DORNER: Objection. Outside the 11 scope. Calls for a legal conclusion. 12 You may answer. 13 THE WITNESS: Yeah. The pharmacies can 14 only purchase and the wholesalers only provide 15 approved FDA drugs. So they have to purchase 16 FDA-approved drugs. They don't have an option to 17 purchase nonFDA-approved drugs. 18 BY MR. HONIK: 19 Q. Right. And I appreciate that response 20 and I understand it. But I've asked a rather 21 specific question. 22 Do you agree that pharmacists in the 23 United States are prohibited from selling 24 adulterated drugs as defined by the FDA? 25 MR. DORNER: Objection. Asked and</p>
<p style="text-align: right;">Page 67</p> <p>1 Q. All right. Let's take five minutes. 2 We'll return at, let's call it, 15 after the hour. 3 THE VIDEOGRAPHER: Off record 11:09. 4 (Recess from 11:09 a.m. to 11:18 a.m.) 5 THE VIDEOGRAPHER: We are back on the 6 record at 11:18. 7 MR. DORNER: Ruben, I know it's faint 8 because the videographer is at the other end. We 9 went on 11:18. We're on. 10 MR. HONIK: Okay. I didn't hear anybody 11 or anything. 12 BY MR. HONIK: 13 Q. Mr. Kosty, do you agree that the FDA has 14 a specific definition of adulterated? 15 MR. DORNER: Objection. Outside the 16 scope. 17 You may answer. 18 THE WITNESS: Yes. There's a definition 19 of adulterated in the code, yes. 20 BY MR. HONIK: 21 Q. Do you agree that the FDA has a specific 22 definition of mislabeled? 23 MR. DORNER: Same objection. 24 You can answer. 25 THE WITNESS: Yes. They also define</p>	<p style="text-align: right;">Page 69</p> <p>1 answered. Calls for a legal conclusion. Outside 2 the scope. 3 You may answer. 4 THE WITNESS: When you say pharmacist 5 dispensed, the pharmacists are covered under the 6 state Board of Pharmacy regulations in all 50 7 states, and I have not looked at all 50 states to 8 see what those regulations are. So I don't know 9 off the top of my head if those regulations 10 address that or not. Like I said in my earlier 11 response, pharmacists can only order drugs that 12 have been approved by the FDA. 13 BY MR. HONIK: 14 Q. And I apologize if you didn't hear my 15 question. I didn't talk about dispensing. I 16 talked about selling. I'm asking you whether you 17 agree that no pharmacy -- no pharmacy or pharmacy 18 system can sell an adulterated drug in the class 19 of trade in the U.S. as defined by the FDA. Yes 20 or no. 21 MR. DORNER: Objection. Asked and 22 answered. This is the third time. The witness 23 cannot be required to give a "yes" or "no" answer. 24 He's permitted to explain. 25 MR. HONIK: Stop instructing him.</p>

Page 70	Page 72
<p>1 MR. DORNER: It's not an instruction, 2 Ruben. It's the law of the case. 3 MR. HONIK: You're making a speaking 4 objection. 5 MR. DORNER: Do not talk over me, 6 Mr. Honik. Do not talk over me. It's very hard 7 for Ms. Medis to take all that down if you do. I 8 will restart. 9 Asked and answered a third time. The 10 witness cannot be required to give a "yes" or 11 "no." Calls for a legal conclusion. And outside 12 the scope. 13 You may answer. 14 THE WITNESS: Like I said, the pharmacy 15 can only purchase approved drugs. In this case, 16 they purchased the adulterated -- excuse me -- the 17 VCD drugs that had impurities. So they purchased 18 them. They were approved under ANDAs and they 19 were dispensed to patients. 20 So when you say the pharmacy sells, the 21 pharmacy dispenses drugs. That's how they sell 22 them to patients. 23 BY MR. HONIK: 24 Q. Mr. Kosty, you apparently read a lot of 25 deposition testimony in this case and you listed</p>	<p>1 Q. Did you read any testimony from any of 2 the retailers which confirmed that none of those 3 retail chains would sell adulterated drugs as 4 defined by the FDA? 5 MR. DORNER: Object to the 6 characterization. Objection. Outside the scope. 7 Vague. 8 You can answer. 9 THE WITNESS: I don't recall those 10 specifics. 11 BY MR. HONIK: 12 Q. And so if I suggested to you that each 13 and every one of them confirmed under oath that 14 none of those retail chains would or could sell 15 adulterated drugs as defined by the FDA, you'd 16 have no basis to deny that, would you? 17 MR. DORNER: Objection. 18 Mischaracterizes. Outside the scope. 19 You may answer. 20 THE WITNESS: No. I wouldn't have any 21 basis to object to their testimony if that's what 22 their testimony is. 23 BY MR. HONIK: 24 Q. And, similarly, you didn't read any 25 testimony from any of the retailer defendants that</p>
Page 71	Page 73
<p>1 it in your reliance material; right? 2 A. Yes. 3 Q. Did you read any of the testimony from 4 30(b)(6) witnesses proffered by the retailers in 5 this case? 6 MR. DORNER: Object to form. 7 You can answer. 8 THE WITNESS: I'm not sure from a legal 9 perspective what's a 30(b)(6) witness. I read 10 declarations from the pharmacy executives about 11 their business practices. 12 BY MR. HONIK: 13 Q. Um-hum. Did you read any testimony from 14 any of the retailer defendants in this case? 15 A. Yes. 16 MR. DORNER: Objection. Vague. 17 You can answer. 18 THE WITNESS: Yes. 19 BY MR. HONIK: 20 Q. Which ones did you read? 21 A. I think I cite a number of them in my 22 report. The one that I recall offhand is the lady 23 from Kroger's. Her last name is Britt, I believe, 24 or first name. But, yeah, I did read some of 25 those testimonies.</p>	<p>1 confirmed that they would never sell mislabeled 2 drugs as defined by the FDA, would you? 3 MR. DORNER: Objection. Compound. 4 Outside the scope. 5 You can answer. 6 THE WITNESS: I don't recall those 7 specifics. 8 BY MR. HONIK: 9 Q. You agree that the FDA has the power 10 through its regulatory enforcement to identify 11 drugs which are adulterated as defined by them as 12 well as mislabeled; correct? 13 MR. DORNER: Objection. Compound. 14 Calls for a legal conclusion. Outside the scope. 15 Mischaracterizes. 16 You may answer. 17 THE WITNESS: Yes. 18 BY MR. HONIK: 19 Q. Turn, if you would, to page 9 of your 20 report, section D that's called Assignment. 21 A. Yes. 22 Q. And I take it in paragraph 24, this 23 describes what you were asked to do by the 24 defendants in this case; right? 25 A. Yes.</p>

Page 74	Page 76
<p>1 Q. The first sentence up till that first 2 semicolon I take to be background material or 3 information, right, explain the factors and 4 practices in the industry; is that correct? 5 MR. DORNER: Objection. Compound. 6 You can answer. 7 THE WITNESS: Yeah. It's more than 8 background on the pharmaceutical industry. 9 Someone on the call is not on mute. 10 BY MR. HONIK: 11 Q. Sorry for the interruption. Continue 12 your answer. 13 A. So it's more than background 14 information. It's information on how the industry 15 works in practice. 16 Q. Okay. And then what follows after that 17 semicolon are the, I'll say, four specific 18 assignments that you undertook; right? 19 MR. DORNER: Objection to the 20 characterization. 21 You can answer. 22 THE WITNESS: Yes. 23 BY MR. HONIK: 24 Q. The first is to describe presumably the 25 complexities that are relevant to the assessment</p>	<p>1 BY MR. HONIK: 2 Q. Class membership, if you're in or out of 3 the class, you looked at data on that question; 4 did you not? 5 A. I did, yes. 6 Q. That was one of your claimed 7 assignments; correct? 8 A. Yes. 9 Q. The third thing that you did to look at 10 available data to allow someone to calculate the 11 amount of impurities to which a patient might have 12 been exposed. Did you do that? 13 A. Yes. 14 Q. How did you do that? 15 A. I looked at the specifics in this case 16 with the impurities in the different lots. Then I 17 looked at the industry to see could we identify by 18 patient what potential impurities they may have 19 ingested in taking the VCD products at issue. So 20 I looked at that. 21 I looked at the DSCSA, which is a 22 10-year long implementation of the law which 23 really had two components to it. One component 24 was to prevent and make very difficult for the 25 introduction of counterfeit drug products into the</p>
Page 75	Page 77
<p>1 of injury; right? 2 A. Yes. 3 Q. The second is the extent to which data 4 is available to allow someone to identify class 5 membership; right? 6 MR. DORNER: Objection to the 7 characterization. You're not reading the entirety 8 of the paragraph. 9 MR. HONIK: Nor am I trying to. Stop 10 interrupting. 11 MR. DORNER: I'm allowed to make an 12 objection, Mr. Honik. Don't interrupt me. 13 BY MR. HONIK: 14 Q. Mr. Kosty, was that the second thing 15 that you tried to do -- 16 MR. DORNER: Objection. 17 BY MR. HONIK: 18 Q. -- to discuss available data to identify 19 class membership? 20 MR. DORNER: Objection. 21 Mischaracterizes. 22 You can answer. 23 THE WITNESS: It was to -- let me see 24 the specific verbiage -- was to include class 25 members and also class exclusions.</p>	<p>1 supply chain. And the second component of that 2 law was to provide the ability for the industry in 3 the event of a recall to be able to track a 4 recalled product down to the patient level. 5 So this law from 2013 to 2023, it's a 6 rolling implementation over that timeframe. That 7 law has not been fully implemented, not until 8 November of 2023. The ability to track a specific 9 lot to a patient is not available in the industry 10 today. So when I looked at could we track to an 11 individual patient the specific lot numbers and 12 the impurities potentially ingested, could that be 13 done, my conclusion is no, it can't be done given 14 the state of the industry today. 15 Q. So I gather from your answer that FDA 16 regulations and federal law impacted your 17 analysis; correct? 18 MR. DORNER: Objection to the 19 characterization. 20 You can answer. 21 THE WITNESS: Yeah, it mischaracterizes 22 it. The DSCSA is the law that I looked at and 23 understand. I don't know if there's other federal 24 regulations that pertain to this. But the DSCSA 25 implementation obviously has been a big issue in</p>

Page 78	Page 80
<p>1 the industry since 2013 when it was passed.</p> <p>2 So there's been a whole process involved</p> <p>3 with supply chain participants having discussions</p> <p>4 in the industry to determine, A, how can we comply</p> <p>5 with this, B, what are the operational</p> <p>6 alternatives for compliance and, C how do we work</p> <p>7 with our trading partners to implement so we can</p> <p>8 comply with these regulations.</p> <p>9 So this has been an ongoing process for</p> <p>10 nine or ten years now to decide as an industry how</p> <p>11 do you implement these complex regulations. So</p> <p>12 it's an ongoing process. It's iterative.</p> <p>13 Business partners can agree to do things one way.</p> <p>14 They can agree to do things another way. The</p> <p>15 industry consortiums that are looking at these</p> <p>16 implementation issues are trying to understand</p> <p>17 what's the best way to do that so it's effective</p> <p>18 and most cost effective for all the participants.</p> <p>19 So, like I said, it's an ongoing process.</p> <p>20 BY MR. HONIK:</p> <p>21 Q. Mr. Kosty, I just wanted to know if the</p> <p>22 law impacted your analysis.</p> <p>23 MR. DORNER: Objection. Vague.</p> <p>24 You may answer.</p> <p>25 THE WITNESS: Yes. The DSCSA impacted</p>	<p>1 certain on the record that none of your opinions</p> <p>2 go to the liability part of this case, correct,</p> <p>3 that is, whether the defendants did anything wrong</p> <p>4 or right as to the VCDs; right?</p> <p>5 MR. DORNER: Objection. Compound.</p> <p>6 Mischaracterizes.</p> <p>7 You can answer.</p> <p>8 THE WITNESS: Yes, that's correct.</p> <p>9 BY MR. HONIK:</p> <p>10 Q. What you did is really confined to</p> <p>11 commenting in the areas we've now described with</p> <p>12 respect to damages, on the one hand, and</p> <p>13 ascertaining class membership, on the other; is</p> <p>14 that correct?</p> <p>15 MR. DORNER: Same objections.</p> <p>16 You can answer.</p> <p>17 THE WITNESS: Those were the primary</p> <p>18 focuses of my report, yes.</p> <p>19 BY MR. HONIK:</p> <p>20 Q. Fair enough. Now, this last assignment</p> <p>21 that I just read to you that you agreed I read</p> <p>22 correctly, do you agree that you'd have to</p> <p>23 understand on what legal basis defendants may be</p> <p>24 found liable to answer the question and determine</p> <p>25 if reliable data exists to estimate damages?</p>
Page 79	Page 81
<p>1 my analysis.</p> <p>2 BY MR. HONIK:</p> <p>3 Q. And did other FDA regulations impact</p> <p>4 your analysis?</p> <p>5 A. No.</p> <p>6 Q. Did you say "no"?</p> <p>7 A. I said no.</p> <p>8 Q. The fourth item that you discussed among</p> <p>9 your assignments is the "extent to which data are</p> <p>10 available and sufficient to reliably estimate</p> <p>11 damages on a class-wide basis in the event any</p> <p>12 defendants are found liable."</p> <p>13 Do you see that sentence?</p> <p>14 A. Yes.</p> <p>15 Q. Did I read that correctly?</p> <p>16 A. You did.</p> <p>17 Q. First, is it true that you offer no</p> <p>18 opinions on defendants' liability?</p> <p>19 A. That is true. I critiqued the</p> <p>20 plaintiffs' experts' reports.</p> <p>21 Q. You concede that -- I'm sorry. I spoke</p> <p>22 over you. What?</p> <p>23 A. I critiqued the plaintiffs' experts'</p> <p>24 that I was assigned to look at reports.</p> <p>25 Q. Right. And I'm just trying to be</p>	<p>1 MR. DORNER: Objection. Vague. Calls</p> <p>2 for a legal conclusion. Mischaracterizes.</p> <p>3 You may answer.</p> <p>4 THE WITNESS: No. I am not an attorney.</p> <p>5 I'm not in the legal profession. I looked at this</p> <p>6 from an industry perspective.</p> <p>7 BY MR. HONIK:</p> <p>8 Q. Right. And I get that. You've</p> <p>9 expressed that to me, and I accepted that's what</p> <p>10 you did.</p> <p>11 A. Right.</p> <p>12 Q. But I'm asking a slightly different</p> <p>13 question. In order to comment on whether there is</p> <p>14 data that's sufficient to reliably estimate</p> <p>15 damages, don't you need to understand the legal</p> <p>16 basis upon which one or more of these defendants</p> <p>17 may be found liable?</p> <p>18 MR. DORNER: Same objections.</p> <p>19 BY MR. HONIK:</p> <p>20 Q. Yes or no.</p> <p>21 MR. DORNER: Same objection.</p> <p>22 You can answer.</p> <p>23 THE WITNESS: No, because I'm looking at</p> <p>24 the data as an industry perspective, not a legal</p> <p>25 perspective.</p>

<p>Page 82</p> <p>1 BY MR. HONIK:</p> <p>2 Q. Well, let me ask you this: Do you think</p> <p>3 whether a defendant is liable under principles,</p> <p>4 for example, of warranty versus unjust enrichment</p> <p>5 impact your assignment?</p> <p>6 MR. DORNER: Objection. Calls for a</p> <p>7 legal conclusion. Outside the scope. And vague.</p> <p>8 You may answer.</p> <p>9 THE WITNESS: No. It does not impact my</p> <p>10 evaluation of available data in this case.</p> <p>11 BY MR. HONIK:</p> <p>12 Q. Did you consider in any way, shape or</p> <p>13 form in any of your analyses whether a defendant</p> <p>14 might be liable under one or an alternative theory</p> <p>15 of legal liability?</p> <p>16 MR. DORNER: Objection. Outside the</p> <p>17 scope. Calls for a legal conclusion.</p> <p>18 You may answer.</p> <p>19 THE WITNESS: No.</p> <p>20 BY MR. HONIK:</p> <p>21 Q. And so specifically when you drill down</p> <p>22 to answer the question is there reliable data to</p> <p>23 estimate damages, you didn't consider at all</p> <p>24 whether that liability attaches in a theory of</p> <p>25 warranty breach or unjust enrichment; correct?</p>	<p>Page 84</p> <p>1 You can answer.</p> <p>2 THE WITNESS: Yes. I'm not here to make</p> <p>3 a legal conclusion based on the legal terms that</p> <p>4 you just stated. I'm here to provide an opinion</p> <p>5 in my industry expertise on the available data and</p> <p>6 what potentially could that show or not show.</p> <p>7 That was the basis for my critiques of Dr. Conti's</p> <p>8 economic report.</p> <p>9 BY MR. HONIK:</p> <p>10 Q. Did you understand in reading</p> <p>11 Dr. Conti's report that she was asked to make</p> <p>12 certain assumptions?</p> <p>13 MR. DORNER: Objection to</p> <p>14 mischaracterization.</p> <p>15 You may answer if you know.</p> <p>16 THE WITNESS: Yes. She was instructed</p> <p>17 to make a lot of assumptions that really limited</p> <p>18 her focus to that alternative reality that she</p> <p>19 worked in.</p> <p>20 BY MR. HONIK:</p> <p>21 Q. And tell me in as clear a way as you can</p> <p>22 what alternative reality you're referring to when</p> <p>23 you use that phrase.</p> <p>24 A. Well, she assumes that the products are</p> <p>25 worthless. She assumes that there is no supply</p>
<p>Page 83</p> <p>1 MR. DORNER: Objection. Compound.</p> <p>2 Calls for a legal conclusion. Vague. And</p> <p>3 mischaracterizes.</p> <p>4 You may answer.</p> <p>5 THE WITNESS: I did not look at the</p> <p>6 legal definitions of all those different legal</p> <p>7 terms to inform my analysis of the data. I looked</p> <p>8 at it again from an industry perspective.</p> <p>9 BY MR. HONIK:</p> <p>10 Q. When you received this assignment, were</p> <p>11 you asked to make any assumptions by anyone?</p> <p>12 A. Not in this area, no. I don't recall</p> <p>13 any assumptions I was asked to make. My</p> <p>14 assignment is pretty straightforward, the</p> <p>15 different areas. But, no, I was not asked to make</p> <p>16 assumptions in it.</p> <p>17 Q. You've said to me repeatedly, Mr. Kosty,</p> <p>18 that you looked at this from an industry</p> <p>19 perspective. Do you remember telling me that?</p> <p>20 A. Yes.</p> <p>21 Q. And can you tell me why you think that's</p> <p>22 a proper way to answer the assignments or</p> <p>23 questions that you delineate on page 9, paragraph</p> <p>24 24 of your report?</p> <p>25 MR. DORNER: Objection. Vague.</p>	<p>Page 85</p> <p>1 curve for those products. She assumes that the</p> <p>2 retailers and wholesalers dispense those products</p> <p>3 knowing that they had impurities. So she's</p> <p>4 created the sandbox where anything outside of</p> <p>5 that, it's not of importance to her.</p> <p>6 Q. You reject those assumptions; is that</p> <p>7 correct?</p> <p>8 A. Yes. In my analysis, I do reject those</p> <p>9 assumptions because, as I explained earlier, in</p> <p>10 the real world it works differently, and we have</p> <p>11 to deal with those things.</p> <p>12 Q. In addition to reviewing Dr. Conti's</p> <p>13 report, did you read her testimony from her</p> <p>14 deposition?</p> <p>15 A. I read a draft, rough draft of it, and I</p> <p>16 skimmed through her testimony, yes.</p> <p>17 Q. Were you directed to read specific parts</p> <p>18 of it by anyone?</p> <p>19 A. No.</p> <p>20 Q. Turn, if you would, to Appendix C of</p> <p>21 Exhibit 1, your report, which is the listing of</p> <p>22 materials you relied upon.</p> <p>23 A. What page in Exhibit C?</p> <p>24 Q. The page is delineated C-1, your</p> <p>25 Appendix C.</p>

<p style="text-align: right;">Page 86</p> <p>1 A. Yes.</p> <p>2 Q. Earlier in your report you actually</p> <p>3 state that you relied upon certain court filings;</p> <p>4 isn't that right?</p> <p>5 A. Yes, and they're listed here.</p> <p>6 Q. And there are seven listed documents</p> <p>7 that you claim to have relied upon in helping to</p> <p>8 form your opinions; correct?</p> <p>9 A. Yes.</p> <p>10 Q. Are these the only seven court filings</p> <p>11 or court documents that you relied upon apart from</p> <p>12 depositions and the like?</p> <p>13 MR. DORNER: Objection. Vague.</p> <p>14 You can answer.</p> <p>15 THE WITNESS: Yes.</p> <p>16 BY MR. HONIK:</p> <p>17 Q. Did you select these seven court</p> <p>18 filings?</p> <p>19 A. No. Defense counsel selected those for</p> <p>20 my review based on their legal expertise. I would</p> <p>21 have no basis of understanding the legal process</p> <p>22 and all the motions and back and forth attorneys</p> <p>23 do from a pharmacist and industry perspective.</p> <p>24 So, no, I relied on counsel to provide</p> <p>25 me the documentations they felt relevant in my</p>	<p style="text-align: right;">Page 88</p> <p>1 Q. Take a look at footnote 43.</p> <p>2 A. Okay. Yes. I'm at the footnote.</p> <p>3 Q. Is that the footnote that refers to the</p> <p>4 reliance material letter that we looked at in</p> <p>5 Appendix C?</p> <p>6 A. In addition to the declaration of Megan</p> <p>7 Mistarz from Walgreens.</p> <p>8 Q. And your reliance on it, is it limited</p> <p>9 to this idea that open pharmacy networks have</p> <p>10 higher reimbursement rates?</p> <p>11 A. In referencing the section, yes, but I</p> <p>12 also read it for general knowledge on the</p> <p>13 background of the case.</p> <p>14 Q. Meaning you read the letter that was</p> <p>15 sent in on this issue to the court on macro</p> <p>16 discovery; correct?</p> <p>17 A. Yes.</p> <p>18 MR. DORNER: Object to form.</p> <p>19 You can answer.</p> <p>20 BY MR. HONIK:</p> <p>21 Q. What else did you extract from the</p> <p>22 letter that you relied upon?</p> <p>23 A. I don't recall the specifics from that</p> <p>24 letter. If I recall correctly, it was about a</p> <p>25 hundred pages.</p>
<p style="text-align: right;">Page 87</p> <p>1 assignment.</p> <p>2 Q. And in what way did you rely upon the</p> <p>3 retailer pharmacy defendants' letter Re: Macro</p> <p>4 Discovery Disputes, which is the fifth item that</p> <p>5 you list as a reliance material?</p> <p>6 A. I would have to find out the exact</p> <p>7 footnote that references this to answer that</p> <p>8 question. If you want to give me a couple of</p> <p>9 minutes to find it, I will.</p> <p>10 But the gist of that letter was, I</p> <p>11 guess, there were discovery disputes and</p> <p>12 objections on what was to be disclosed, and my</p> <p>13 recollection --</p> <p>14 MR. DORNER: I'm sorry. The witness</p> <p>15 wasn't finished quite. I'm sorry.</p> <p>16 THE WITNESS: My recollection was this</p> <p>17 document explained that back and forth between, I</p> <p>18 guess, the retailers and the plaintiffs'</p> <p>19 attorneys.</p> <p>20 BY MR. HONIK:</p> <p>21 Q. Can you find the footnote that you think</p> <p>22 references that reliance material?</p> <p>23 A. Give me a minute to find that material.</p> <p>24 I'm trying to narrow it down to the area of the</p> <p>25 report where I discuss the pharmacy data.</p>	<p style="text-align: right;">Page 89</p> <p>1 Q. You think it was a hundred-page letter?</p> <p>2 A. If it's the one that I believe was</p> <p>3 referenced here, yes, it was about a hundred-page</p> <p>4 letter.</p> <p>5 Q. Mr. Kosty, there are nearly 2000 docket</p> <p>6 entries in this case. Do you have any idea or can</p> <p>7 you tell me why this one letter was sent to you?</p> <p>8 MR. DORNER: Objection. Asked and</p> <p>9 answered. Calls for speculation. And</p> <p>10 mischaracterizes.</p> <p>11 You may answer.</p> <p>12 THE WITNESS: I recall asking for this</p> <p>13 background on what the retailers' issues were with</p> <p>14 the data.</p> <p>15 BY MR. HONIK:</p> <p>16 Q. What do you mean retailer issues?</p> <p>17 A. My understanding, if I recall the</p> <p>18 letter -- and as you rightly point out, there's</p> <p>19 hundreds of documents in this case, so to recall</p> <p>20 specifically -- but my recollection is it was a</p> <p>21 back and forth on what information would be</p> <p>22 disclosed.</p> <p>23 Q. Sir, the seven court filings and only</p> <p>24 seven that you rely upon, six of them are briefs</p> <p>25 or memos that counsel provided. This is the only</p>

<p style="text-align: right;">Page 90</p> <p>1 letter.</p> <p>2 Can you tell me why this is the only</p> <p>3 letter upon which you rely?</p> <p>4 MR. DORNER: Same objection.</p> <p>5 THE WITNESS: No.</p> <p>6 MR. HONIK: Why don't we mark and bring</p> <p>7 up the June 16, 2020 letter that Mr. Kosty claims</p> <p>8 to have relied on and mark that Exhibit 2.</p> <p>9 (Kosty Exhibit 2 was marked.)</p> <p>10 THE WITNESS: Do I need to download</p> <p>11 these or something, or how does this work?</p> <p>12 MR. DORNER: I believe if we refresh</p> <p>13 your screen, it should appear.</p> <p>14 THE WITNESS: How does one refresh the</p> <p>15 screen?</p> <p>16 MR. DORNER: That mouse is live. You</p> <p>17 can use the mouse to navigate as you need.</p> <p>18 BY MR. HONIK:</p> <p>19 Q. Do we have that on the share screen?</p> <p>20 MR. DORNER: I don't see it, Ruben.</p> <p>21 MR. HONIK: Dave, Layne, can somebody</p> <p>22 bring it up?</p> <p>23 MR. STANOCH: The letter is available</p> <p>24 and marked as Exhibit 2. This is David Stanoch.</p> <p>25 I could share my screen if that would help.</p>	<p style="text-align: right;">Page 92</p> <p>1 to the use of an incomplete exhibit.</p> <p>2 MR. HONIK: Thank you.</p> <p>3 BY MR. HONIK:</p> <p>4 Q. Let us know when you're ready to answer,</p> <p>5 Mr. Kosty.</p> <p>6 Mr. Kosty, are you ready to respond to</p> <p>7 my question?</p> <p>8 A. I'm still looking through the document,</p> <p>9 counselor.</p> <p>10 Q. Let me know when you're done.</p> <p>11 A. Will do. Okay.</p> <p>12 Q. Do you remember the question?</p> <p>13 A. How did I rely on this in my report?</p> <p>14 Q. Correct.</p> <p>15 A. The reliance is in terms of the</p> <p>16 confidentiality nature of the PBM agreements that</p> <p>17 both parties -- the retailers and the PBMs hold</p> <p>18 these documents close to the vest as very</p> <p>19 confidential. It outlines the business</p> <p>20 arrangement between those parties.</p> <p>21 Q. Is that your complete response?</p> <p>22 A. Yes.</p> <p>23 Q. In what way does the confidentiality</p> <p>24 which is claimed to attach to those PBM agreements</p> <p>25 impact any of your opinions?</p>
<p style="text-align: right;">Page 91</p> <p>1 MR. HONIK: Thank you.</p> <p>2 BY MR. HONIK:</p> <p>3 Q. Mr. Kosty, this is page 1 of what's now</p> <p>4 marked Exhibit 2 that you listed as a reliance</p> <p>5 document from among the court filings. It's dated</p> <p>6 June 16, 2020. It's a letter authored by Sarah</p> <p>7 Johnston at Barnes & Thornburg on behalf of one or</p> <p>8 more retailers.</p> <p>9 Does this refresh your recollection</p> <p>10 about this letter upon which you relied?</p> <p>11 A. This does refresh my recollection. And</p> <p>12 my earlier recollection was incorrect. This is a</p> <p>13 different document.</p> <p>14 MR. DORNER: And I do want to note for</p> <p>15 the record this letter comes with many</p> <p>16 attachments, as I understand it. So these</p> <p>17 attachments are not part of Exhibit 2 that's been</p> <p>18 entered by plaintiffs' counsel.</p> <p>19 BY MR. HONIK:</p> <p>20 Q. Mr. Kosty, do you remember now seeing</p> <p>21 this and in what way you relied upon this letter?</p> <p>22 A. Give me a moment to go through here.</p> <p>23 Q. Sure. Take your time.</p> <p>24 MS. KAPKE: This is Kara Kapke for CVS</p> <p>25 and Rite Aid. I just want to lodge an objection</p>	<p style="text-align: right;">Page 93</p> <p>1 A. In this section of the report, this was</p> <p>2 the background on the industry, and it's</p> <p>3 explaining why these things are confidential and</p> <p>4 kept close to the vest. So it informed my opinion</p> <p>5 in terms of how it's used in the industry and that</p> <p>6 all parties to the agreement believe they're</p> <p>7 highly confidential.</p> <p>8 Q. What is it about the confidential or</p> <p>9 claimed confidential nature of PBM agreements</p> <p>10 impacts any of your opinions in this case?</p> <p>11 A. It impacts on what the actual rates were</p> <p>12 paid to those pharmacies both at the point of</p> <p>13 adjudication, and then subsequent to the</p> <p>14 adjudication, whether there's adjustments to it</p> <p>15 made through a DIR fee. There might be a</p> <p>16 withhold. There might be a performance network</p> <p>17 payment for certain metrics that are achieved.</p> <p>18 So all those different types of terms</p> <p>19 and conditions are documented in these agreements</p> <p>20 between the parties. And it's not surprising to</p> <p>21 me that they've put up a fight to not disclose</p> <p>22 those documents.</p> <p>23 Q. So accepting as true that those</p> <p>24 arrangements or PBM contracts may or may not</p> <p>25 reflect differing rates, my question is: What is</p>

<p style="text-align: right;">Page 94</p> <p>1 it about their confidentiality which you claim you 2 relied upon impacts any of your opinions? 3 A. The section here I use as a citation is 4 the background on the industry to explain why 5 they're important, but it doesn't impact my 6 opinions further on in the report, just basic 7 industry knowledge that these documents are highly 8 confidential. 9 Q. Sir, turn to the page 4 of this exhibit 10 marked 2 now, page 4 of the letter, under Roman 11 III. Argument, heading A, which reads, 12 "Disgorgement of profits is not an available 13 remedy to plaintiffs." Do you see that? 14 A. Yes. 15 Q. Didn't you rely upon that statement in 16 authoring your report? 17 MR. DORNER: Objection to both the form 18 and also to the use of an incomplete exhibit. 19 You may answer if you can. 20 THE WITNESS: I did not use this 21 document in that analysis, no. 22 BY MR. HONIK: 23 Q. Well, I didn't ask you that. I asked 24 you whether you assumed that disgorgement of 25 profits is not an available remedy to plaintiffs</p>	<p style="text-align: right;">Page 96</p> <p>1 in this deposition, I'm not an attorney. I'm not 2 in the legal profession. When I critiqued 3 Dr. Conti's methodology, I'm doing it from a 4 business perspective, as I say in my report. 5 So I did not include any legal arguments 6 in my analysis. It was of no importance to me in 7 my report. I'm looking at her methodology from a 8 business perspective, and that's where my comments 9 are taken from. 10 BY MR. HONIK: 11 Q. Do you know what disgorgement of profits 12 means? 13 A. Not from a legal perspective, no. 14 Q. From any perspective. From that of a 15 pharmacist with an MBA. 16 A. Disgorgement would be to give them back, 17 the profit back. Certainly in this section A, it 18 doesn't say what the profit is or how it's 19 calculated, and that goes the gist of my argument 20 against the methodology proposed. 21 Q. What do you mean by that? 22 A. I mean Dr. Conti does not take into 23 account the cost associated. In the retailer 24 example in this section, this Exhibit 2, she just 25 assumes whatever happened at the point of sale is</p>
<p style="text-align: right;">Page 95</p> <p>1 in authoring your report. Yes or no. 2 MR. DORNER: Same objection. 3 You can answer. 4 THE WITNESS: I did not, no. 5 BY MR. HONIK: 6 Q. You understood that the retailers in 7 this document and others made that argument; 8 correct? 9 MR. DORNER: Objection. Outside the 10 scope. 11 You may answer if you can. 12 THE WITNESS: No. I don't understand 13 that because I didn't read it for that legal 14 perspective. 15 BY MR. HONIK: 16 Q. Sir, I'm confused. How can you comment 17 on a methodology for calculating damages if you 18 don't understand or attempt to understand whether 19 disgorgement of profits is a proper measure of 20 damages? 21 MR. DORNER: Objection. Calls for a 22 legal conclusion. Vague. 23 You may answer. 24 THE WITNESS: It calls for a legal 25 conclusion. I don't -- like I've said many times</p>	<p style="text-align: right;">Page 97</p> <p>1 the cost to the retailer. It's so ludicrous that 2 she doesn't even include the cost of the drug in 3 her analysis. 4 So if there's no cost of the drug, then 5 what in the world could a patient pick up if there 6 was no product there? So obviously the pharmacy 7 had to account and purchase those products they 8 can dispense to patients. They have to hire staff 9 to run their pharmacies. They have to hire a 10 pharmacist. They have to hire technicians. They 11 hire clerical people. They hire front end people. 12 They have rent. They have leases they 13 have to pay for. I'm sorry I'm going too fast. 14 They have all these other operating costs, heat, 15 light, upkeep, to provide services to patients 16 when they come into the pharmacies. 17 Dr. Conti includes none of those in her 18 methodology. So I went and looked in the industry 19 because the cost of dispensing is an important 20 concept, especially in the Medicaid arena where 21 the Medicaid programs have gone to NADAC plus 22 dispensing fee. So NADAC is more an estimate of 23 the product cost. So states were required to 24 conduct a cost of dispensing survey. 25 And so NACDS, as I reference in my</p>

<p style="text-align: right;">Page 98</p> <p>1 report, published a survey that indicated it was 2 \$12.40 per prescription cost to fill those 3 prescriptions. Dr. Conti accounts for none of 4 those costs. Again, another assumption is that 5 that product is magically there for a patient and 6 doesn't consider all these other operating costs 7 that retailers have to have in order to provide 8 services to patients. 9 So that's the basis of my business 10 review of her methodology for retailers. 11 Q. Mr. Kosty, do you think you need to 12 understand what the point of injury is to comment 13 on the damages available in this case? 14 MR. DORNER: Object to form. Calls for 15 a legal conclusion. Vague. 16 You may answer. 17 THE WITNESS: The way I look at this is 18 there's a -- the way the case -- my understanding 19 is there's an allegation that those patients were 20 harmed. I see no documentation that indicates 21 that they were harmed from a pharmacist/healthcare 22 perspective. The point of sale is one moment in 23 time. All these adjustments that have been after 24 the fact need to be accounted for. 25 I don't know your answer from a legal</p>	<p style="text-align: right;">Page 100</p> <p>1 You may answer if you can. 2 THE WITNESS: Yes. My opinions did not 3 depend on any legal understanding of those terms. 4 BY MR. HONIK: 5 Q. Did you ever have an understanding that 6 there needs to be a connection between theory of 7 liability and calculation of damages in cases such 8 as this that you've been asked to work on? Did 9 anybody tell you that? 10 MR. DORNER: Objection. Compound. 11 Calls for a legal conclusion. 12 You may answer. 13 THE WITNESS: It was outside the scope 14 of my assignment. 15 BY MR. HONIK: 16 Q. And you don't have any idea or view 17 about whether the legal theories supporting a 18 claim of damages is connected; correct? 19 MR. DORNER: Objection. Vague. Calls 20 for a legal conclusion. 21 You may answer. 22 THE WITNESS: I don't have an 23 understanding of the legal ramifications of those 24 terms. 25</p>
<p style="text-align: right;">Page 99</p> <p>1 perspective. From a business perspective, the 2 initial engagement with the healthcare system is 3 when that patient, at least in this example, gets 4 their prescription filled in the retail pharmacy. 5 BY MR. HONIK: 6 Q. Mr. Kosty, do you think it matters in 7 calculating class-wide economic damages to 8 understand when the harm occurred in the eyes of 9 the law? 10 MR. DORNER: Same objection. 11 You may answer. 12 THE WITNESS: Again, I did not look at 13 this issue from a legal perspective. I looked at 14 it from a practical business perspective. And as 15 I just went through, the components that are 16 required for a pharmacy to be operational and 17 dispensing prescriptions are many and numerous and 18 costly. 19 BY MR. HONIK: 20 Q. And you've already confirmed that in no 21 way did the theory of liability, whether pursued 22 under warranty or unjust enrichment or any theory 23 legally, weighed in on your opinions; correct? 24 MR. DORNER: Objection. Asked and 25 answered. Mischaracterizes.</p>	<p style="text-align: right;">Page 101</p> <p>1 BY MR. HONIK: 2 Q. Take a look at page 7 of this exhibit. 3 Do you see the paragraph that begins with the 4 language, "Put another way, to the extent the 5 consumer plaintiffs have suffered no actual harm 6 (because, for instance, they had no copay for 7 valsartan) they have no standing to bring any type 8 of economic loss claim." 9 Do you see that sentence? 10 A. Yes. 11 Q. Did you adopt that assumption in writing 12 your report? 13 MR. DORNER: Objection. Asked and 14 answered. 15 You may answer. 16 THE WITNESS: No. 17 BY MR. HONIK: 18 Q. Do you agree that the plaintiffs have no 19 economic loss and have suffered no actual harm? 20 MR. DORNER: Objection to the extent it 21 calls for a legal conclusion. Compound. Outside 22 the scope. 23 You may answer. 24 THE WITNESS: So in the case the 25 sentence that says patients that had no copay,</p>

<p style="text-align: right;">Page 102</p> <p>1 they had zero out-of-pocket expense for the 2 valsartan prescription. So from an economic 3 perspective, they had no payment to the pharmacy 4 for that prescription. So there's no copay. So 5 it's zero. 6 But from a legal perspective, like I 7 just mentioned, I don't have an opinion one way or 8 another on it. 9 BY MR. HONIK: 10 Q. Sir, do you have a belief that consumer 11 plaintiffs who purchased contaminated or 12 adulterated VCDs have no economic harm? Is that 13 your view? 14 MR. DORNER: Objection. 15 Characterization. Vague. Form. 16 You may answer if you can. 17 THE WITNESS: That was not part of my 18 assignment to evaluate that. 19 BY MR. HONIK: 20 Q. You did look at Dr. Conti's report which 21 expressed the view that there was economic harm 22 that those class members suffered; correct? 23 A. Yes. 24 Q. And at a high level, you don't agree 25 with that opinion; right?</p>	<p style="text-align: right;">Page 104</p> <p>1 BY MR. HONIK: 2 Q. Yeah. Let me rephrase it. 3 Do you think it matters what the court's 4 legal view is about how to measure damages in this 5 case? 6 MR. DORNER: Objection. Calls for a 7 legal conclusion. Form. Vague. 8 You may answer. 9 THE WITNESS: It does matter what the 10 court says, but it didn't matter to me in my 11 assignment, in my report, what those legal 12 decisions may or may not be. My assignment was 13 from an industry perspective to comment on these 14 four topics we previously went through. 15 BY MR. HONIK: 16 Q. I totally get that your perspective was 17 limited or confined to what you describe as the 18 industry perspective. But before I dig deeper 19 into this point, I'm just trying to understand 20 whether it would matter to your analysis, albeit 21 limited to the industry, to know and understand 22 how the court views the proper calculation of 23 damages might occur. 24 MR. DORNER: Objection. 25</p>
<p style="text-align: right;">Page 103</p> <p>1 MR. DORNER: Objection. Vague. 2 You may answer. 3 THE WITNESS: Yes. 4 BY MR. HONIK: 5 Q. And so the question naturally devolves 6 to: Do you believe that there was any economic 7 harm to consumers of contaminated or adulterated 8 VCDs during the class period? 9 MR. DORNER: Objection. 10 Characterization. Vague. Calls for a legal 11 conclusion. Outside the scope. Compound. 12 You may answer. 13 THE WITNESS: That's outside the scope 14 of my assignment. 15 BY MR. HONIK: 16 Q. Sir, is it, in your view, outside of the 17 purview of what should inform your opinion to 18 understand what the court's view of the right 19 measure of damages may be in this case? 20 MR. DORNER: Objection. Vague. And to 21 form. 22 You can answer if you understand. 23 THE WITNESS: Could you repeat that 24 again, counselor? 25</p>	<p style="text-align: right;">Page 105</p> <p>1 BY MR. HONIK: 2 Q. Yes or no. 3 MR. DORNER: Objection. 4 Mischaracterizes. Outside the scope. Calls for a 5 legal conclusion. Form. Vague. And compound. 6 You may answer. 7 THE WITNESS: It was outside the scope 8 of my assignment. And, no, I didn't look at the 9 legal issues that you just described. 10 BY MR. HONIK: 11 Q. And it was of no moment to you in 12 writing your report to understand what the proper 13 criteria would be under the law to calculate 14 economic damages for consumer plaintiffs or TPPs; 15 correct? 16 MR. DORNER: Objection. Lacks 17 foundation. Calls for a legal conclusion. Vague. 18 And calls for a legal conclusion. 19 You may answer. 20 THE WITNESS: Yes. It was of no moment 21 for me to evaluate those issues. As I said 22 previously, I looked at them from an industry 23 perspective. 24 MR. HONIK: Let's mark as Exhibit 3 25 Judge Kugler's Motion to Dismiss Opinion 3</p>

<p>Page 106</p> <p>1 Regarding Warranty Claims. If you can bring that 2 up, that would be great. 3 MR. DORNER: Ruben, would you mind if I 4 either showed Mr. Kosty how to refresh the exhibit 5 folder or do it for him? Would that bother you? 6 MR. HONIK: You can do whatever you 7 like. 8 (Kosty Exhibit 3 was marked.) 9 BY MR. HONIK: 10 Q. We'll mark this Exhibit 3, Mr. Kosty. I 11 did not see this listed in your Appendix C of 12 Exhibit 1, your report, that this was a material 13 you relied upon. Is that right? 14 A. Yes. 15 Q. So the defense lawyers that engaged you 16 to write your report never produced it so that you 17 could read it; right? 18 A. Yes. 19 Q. And are you looking at this for the 20 first time ever? 21 A. Yes. 22 Q. I want to represent to you that what a 23 motion to dismiss opinion is is a ruling by the 24 court on the sufficiency in this case of the 25 complaint or the amended complaint which you did</p>	<p>Page 108</p> <p>1 court's view on the question of how to measure 2 economic worth as it relates to the claims 3 asserted in this case, did you? 4 A. I did not. 5 Q. If you turn with me in Exhibit 3 to page 6 20 of the court's opinion, I want to point some 7 language out to you. 8 Do you see the second paragraph that 9 begins with the words, "This court finds"? 10 A. I'll still getting there. Page 20? 11 Q. Yes, sir. Are you there? 12 A. I'm there now. Okay. 13 Q. Do you see the paragraph that begins 14 with the words "This court finds"? 15 A. Yes. 16 Q. It reads, and I quote, "This court finds 17 that contaminated drugs are economically worthless 18 at the point of sale by virtue of the 19 dangerousness caused by their contamination 20 regardless whether the sold VCDs actually achieved 21 the medical purpose of lowering blood pressure." 22 Did I read that correctly? 23 A. You did. 24 Q. And do you understand now that that 25 principle articulated by the court, albeit in this</p>
<p>Page 107</p> <p>1 look at; correct? 2 A. Yes. 3 Q. And, in fact, you quite accurately 4 listed the allegations that plaintiff make in the 5 complaint against the various defendants here; 6 right? 7 A. Yes. 8 Q. So I represent to you that this is an 9 expression of the court's view about whether those 10 allegations sufficiently lay out an actionable and 11 cognizable legal claim. Do you understand that? 12 MR. DORNER: I'll object to the 13 characterization. And this is really legal 14 testimony. 15 But you can answer. 16 THE WITNESS: Can you explain what a 17 cognizable legal claim is? 18 BY MR. HONIK: 19 Q. Sure. Plaintiffs make allegations in a 20 complaint, and what the court does is accept them 21 as true for the purposes of determining whether 22 they lay out a proper legal claim. 23 Do you understand that? 24 A. Yes. 25 Q. Okay. And so you didn't look at the</p>	<p>Page 109</p> <p>1 context, was something we asked Dr. Conti to 2 assume? Do you understand that? 3 MR. DORNER: Objection to the 4 characterization of the court opinion. Object to 5 form. Compound. Calls for a legal conclusion. I 6 think that's it. 7 You can answer if you understand. 8 THE WITNESS: I'm unaware of any 9 conversations between plaintiffs' attorneys and 10 Dr. Conti on this issue. 11 BY MR. HONIK: 12 Q. Right. But you read her report and you 13 understood that the underpinning of her economic 14 analysis is predicated on the fact that she was 15 asked to assume that the drugs were adulterated as 16 defined by the FDA and that there was no sale 17 curve that would give the drugs any value. You 18 understand that, don't you? 19 MR. DORNER: Objection. Compound. 20 You can answer. 21 THE WITNESS: Yes. She states that as 22 one of her assumptions in her report, yes. 23 BY MR. HONIK: 24 Q. And you can see for yourself that the 25 court tracks that assumption in this opinion; do</p>

<p style="text-align: right;">Page 110</p> <p>1 you not?</p> <p>2 MR. DORNER: Objection.</p> <p>3 Mischaracterizes the opinion. Calls for a legal</p> <p>4 conclusion.</p> <p>5 You may answer.</p> <p>6 THE WITNESS: Yes.</p> <p>7 BY MR. HONIK:</p> <p>8 Q. You see the second sentence that</p> <p>9 follows, it says, "Put differently, contaminated</p> <p>10 drugs, even if medically efficacious for their</p> <p>11 purpose, cannot create a benefit of the bargain</p> <p>12 because the contaminants and their dangerous</p> <p>13 effects were never bargained for."</p> <p>14 Do you see that?</p> <p>15 A. Yes.</p> <p>16 Q. And do you understand that principle to</p> <p>17 be that when you are sold or purchase an</p> <p>18 adulterated drug, that you're not getting the</p> <p>19 benefit of the bargain? Do you understand that?</p> <p>20 MR. DORNER: Objection.</p> <p>21 Mischaracterizes. Outside the scope. Calls for a</p> <p>22 legal conclusion. Compound and vague.</p> <p>23 You may answer.</p> <p>24 THE WITNESS: I don't know what -- can</p> <p>25 you explain to me from a legal perspective what</p>	<p style="text-align: right;">Page 112</p> <p>1 I have done."</p> <p>2 BY MR. HONIK:</p> <p>3 Q. Mr. Kosty, you confirm that you made no</p> <p>4 economic conclusions in your report; correct?</p> <p>5 MR. DORNER: Objection.</p> <p>6 Characterizations.</p> <p>7 You can answer if you can.</p> <p>8 THE WITNESS: I think it</p> <p>9 mischaracterizes my economic conclusions based on</p> <p>10 my industry analysis of those additional</p> <p>11 associated costs with both the pharmacies, the</p> <p>12 retailers and the wholesalers.</p> <p>13 BY MR. HONIK:</p> <p>14 Q. Sir, the last sentence reads, "Further,</p> <p>15 contaminated drugs do create a present injury</p> <p>16 because their sale should never have occurred."</p> <p>17 Do you see that?</p> <p>18 A. Yes.</p> <p>19 Q. Did you take that statement into account</p> <p>20 in any of your analyses in your report?</p> <p>21 A. I did not.</p> <p>22 Q. You understand that if legally the sale</p> <p>23 of these adulterated drugs should not have</p> <p>24 occurred, that that impacts their economic worth?</p> <p>25 MR. DORNER: Objection. Calls for a</p>
<p style="text-align: right;">Page 111</p> <p>1 the benefit of the bargain is?</p> <p>2 BY MR. HONIK:</p> <p>3 Q. Is it correct that the persons who</p> <p>4 engaged you to write your report never explained</p> <p>5 that principle to you?</p> <p>6 A. Yes.</p> <p>7 Q. And so, therefore, you couldn't possibly</p> <p>8 have any economic insight into whether benefit of</p> <p>9 the bargain damages exist in this case or not, can</p> <p>10 you?</p> <p>11 MR. DORNER: Objection.</p> <p>12 Mischaracterizes. Argumentative. Compound. And</p> <p>13 vague. And calls for a legal conclusion.</p> <p>14 You may answer.</p> <p>15 THE WITNESS: My assignment was not to</p> <p>16 make economic conclusions, but to evaluate the</p> <p>17 economic -- Conti's calculations from a business</p> <p>18 perspective, and that's what I have done.</p> <p>19 MR. HONIK: Can I have the answer read</p> <p>20 back.</p> <p>21 (The following record was read back:</p> <p>22 "THE WITNESS: My assignment was</p> <p>23 not to make economic conclusions, but to</p> <p>24 evaluate the economic -- Conti's calculations</p> <p>25 from a business perspective, and that's what</p>	<p style="text-align: right;">Page 113</p> <p>1 legal conclusion. Mischaracterizes. Outside the</p> <p>2 scope.</p> <p>3 You can answer.</p> <p>4 THE WITNESS: I don't have a legal</p> <p>5 opinion on this. But from a business perspective,</p> <p>6 those products were sold and were dispensed to</p> <p>7 patients.</p> <p>8 BY MR. HONIK:</p> <p>9 Q. Do you deny that they should not have</p> <p>10 been?</p> <p>11 MR. DORNER: Objection. Calls for</p> <p>12 speculation. Lack of foundation. Again,</p> <p>13 mischaracterizes. Calls for a legal conclusion.</p> <p>14 Vague. I think that's all of them.</p> <p>15 THE WITNESS: I think in this case, if</p> <p>16 it was known before these products were on the</p> <p>17 market -- the FDA has the duty to identify</p> <p>18 products and regulate them as safe and effective.</p> <p>19 If this information was known before those</p> <p>20 products were launched into the marketplace, then</p> <p>21 my expectation is the FDA would not have approved</p> <p>22 those products.</p> <p>23 In fact, they were approved and were</p> <p>24 launched into the marketplace and the pharmacies</p> <p>25 dispensed them, unbeknownst to them, that they had</p>

<p style="text-align: right;">Page 114</p> <p>1 impurities and the wholesalers distributed them, 2 unbeknownst to them, there were impurities. And 3 that's how they got into the market. 4 Assuming perfect information and all 5 that was known up front before this happened, my 6 expectation would be those products would not have 7 been available because the FDA would not have 8 approved them. 9 BY MR. HONIK: 10 Q. You will agree that the FDA prohibits 11 the introduction or delivery into interstate 12 commerce any prescription drug that is adulterated 13 or misbranded? 14 MR. DORNER: Objection. Calls for a 15 legal conclusion. Outside the scope. 16 You can answer. 17 THE WITNESS: I don't know the specific 18 FDA regulation, but my understanding would be 19 those drugs, if they were misbranded and 20 adulterated, would not be approved. 21 BY MR. HONIK: 22 Q. Well, we're not talking about approval. 23 We're talking about whether you accept as true 24 that the FDA specifically prohibits the 25 introduction of adulterated or misbranded drugs</p>	<p style="text-align: right;">Page 116</p> <p>1 legal conclusion. Mischaracterization. Outside 2 the scope. Vague. And I think compound. 3 You may answer. 4 THE WITNESS: No, I did not. 5 BY MR. HONIK: 6 Q. Are you, in fact, familiar with the 7 listing of FDA's prohibited acts as it concerns 8 prescription drugs? 9 MR. DORNER: Objection to vague. 10 You can answer. 11 THE WITNESS: Not at a detailed level 12 because that's not my area of expertise in terms 13 of regulatory compliance. But as a pharmacist, 14 yes, you have an understanding of those 15 requirements. 16 BY MR. HONIK: 17 Q. Sir, do you understand that Dr. Conti 18 looked at this with care and is the very 19 foundation of her damage analysis, mainly that 20 these drugs were improperly introduced into the 21 stream of commerce because they were adulterated 22 and misbranded as defined by the FDA? 23 MR. DORNER: Objection. Compound. 24 Lacks foundation. Mischaracterizes. Vague. 25 You can answer.</p>
<p style="text-align: right;">Page 115</p> <p>1 into interstate commerce. Yes or no. 2 MR. DORNER: Same objections. And the 3 witness is entitled to an explanation. 4 THE WITNESS: Yes. The FDA would 5 prohibit those if they had known about them. But 6 in this case, they did not know about them. 7 BY MR. HONIK: 8 Q. Did you consider that prohibition in any 9 of your analysis in your report? 10 MR. DORNER: Objection to the extent it 11 calls for a legal conclusion. Outside the scope. 12 You may answer. 13 THE WITNESS: No, I did not because, as 14 I stated previously, these things did happen and 15 the industry, as I explained earlier, had the 16 regulatory mechanism to identify and respond to 17 them and conduct the voluntary recalls. So, no, I 18 did not take that into account in my answer or my 19 report. 20 BY MR. HONIK: 21 Q. And is it true that you also didn't take 22 into account that those prohibited drugs that are 23 either adulterated or misbranded cannot be 24 proffered for pay or otherwise? 25 MR. DORNER: Objection. Calls for a</p>	<p style="text-align: right;">Page 117</p> <p>1 THE WITNESS: I have no foundation as to 2 what Dr. Conti considered besides the report that 3 she provided. 4 BY MR. HONIK: 5 Q. Well, did you consider foundational to 6 your expressed opinions what the FDA's views are 7 on the placement of prohibited adulterated, 8 misbranded drugs in the stream of commerce? Did 9 that in any way weigh on your opinions? 10 MR. DORNER: Objection. Lacks 11 foundation. 12 You can answer. 13 THE WITNESS: No, it did not. I looked 14 at the formularies for calculating unjust 15 enrichment for both retailers and the wholesalers, 16 and my comments were limited to those formulas. 17 MR. HONIK: Let's mark as Exhibit 4 and 18 bring up 21 U.S.C.A. Section 331. 19 (Kosty Exhibit 4 was marked.) 20 THE WITNESS: Is that Exhibit 4? 21 MR. HONIK: It's going to be marked 22 Exhibit 4. 23 BY MR. HONIK: 24 Q. Have you seen this before today? 25 A. No.</p>

<p style="text-align: right;">Page 118</p> <p>1 Q. Part of the Food and Drug Act.</p> <p>2 A. No. I have not reviewed this prior to</p> <p>3 this.</p> <p>4 Q. No. I've asked a different question.</p> <p>5 In your 38 years of experience, have you ever seen</p> <p>6 this act?</p> <p>7 A. Oh, yes, of course.</p> <p>8 Q. And have you seen this specific section</p> <p>9 that defines with particularity prohibited acts by</p> <p>10 the FDA?</p> <p>11 MR. DORNER: Objection to</p> <p>12 characterization.</p> <p>13 You can answer.</p> <p>14 THE WITNESS: I've reviewed the FDA act,</p> <p>15 certain parts of it based upon our consulting</p> <p>16 projects and the need to know certain information.</p> <p>17 But for this case, I did not specifically go and</p> <p>18 read the FDA's Food, Drug and Cosmetics Act.</p> <p>19 BY MR. HONIK:</p> <p>20 Q. Let me unpack that. For this report</p> <p>21 that you prepared in valsartan that we're here to</p> <p>22 talk about today, you didn't look at any of the</p> <p>23 FDA regulations. Is that what you're saying?</p> <p>24 A. No. That mischaracterizes my statement.</p> <p>25 I did go and look at the specific definitions of</p>	<p style="text-align: right;">Page 120</p> <p>1 FDA prohibits the placement of an adulterated or</p> <p>2 misbranded drug into the stream of commerce;</p> <p>3 correct?</p> <p>4 MR. DORNER: Objection. Calls for a</p> <p>5 legal conclusion. Characterization.</p> <p>6 You can answer.</p> <p>7 THE WITNESS: I don't know the answer to</p> <p>8 that because the way I read this, the</p> <p>9 introduction, in my mind, it's the introduction, a</p> <p>10 known introduction of a product that meets these</p> <p>11 criteria. If I don't know there's an issue, then</p> <p>12 I could have, like in this case, introduced that</p> <p>13 product not knowing that it was -- had an impurity</p> <p>14 into it.</p> <p>15 So the way I interpret this, it doesn't</p> <p>16 say it, but knowingly introducing. If I don't</p> <p>17 know there's an issue, then I wouldn't know I was</p> <p>18 potentially violating this.</p> <p>19 BY MR. HONIK:</p> <p>20 Q. Sir, you don't list this among your</p> <p>21 reliance materials; right?</p> <p>22 A. That's correct.</p> <p>23 Q. And you don't disagree that whether one</p> <p>24 knows it or doesn't know it, this prohibited act</p> <p>25 is not in any way qualified by that. It simply</p>
<p style="text-align: right;">Page 119</p> <p>1 misbranded and adulterated.</p> <p>2 Q. Okay. Apart from that, did you look at</p> <p>3 anything else pertaining to FDA's regulations and</p> <p>4 rules?</p> <p>5 A. Not in terms of reviewing this FD&C Act,</p> <p>6 but I did -- not in terms of regulations. I did</p> <p>7 review, like I mentioned earlier, the website that</p> <p>8 gave us the chronology of the nitrosamines issue.</p> <p>9 Q. Right. But I'm talking about FDA</p> <p>10 regulations. Did you look at any besides the two</p> <p>11 you mentioned, namely, the definition of</p> <p>12 adulterated and misbranded?</p> <p>13 A. I did not.</p> <p>14 Q. This one reads, "The following acts and</p> <p>15 the costing thereof are prohibited." Do you see</p> <p>16 that?</p> <p>17 A. Yes.</p> <p>18 Q. And the very first thing listed at (a)</p> <p>19 is "The introduction or delivery for introduction</p> <p>20 into interstate commerce of any food, drug,</p> <p>21 device, tobacco product or cosmetic that is</p> <p>22 adulterated or misbranded."</p> <p>23 Did I read that correctly?</p> <p>24 A. Yes.</p> <p>25 Q. And that means in plain English that the</p>	<p style="text-align: right;">Page 121</p> <p>1 states that you can't put an adulterated or</p> <p>2 misbranded product, drug product into the stream</p> <p>3 of commerce. That is what it says; correct?</p> <p>4 MR. DORNER: Objection. Compound.</p> <p>5 Calls for a legal conclusion. Outside the scope.</p> <p>6 And mischaracterizes.</p> <p>7 You may answer.</p> <p>8 THE WITNESS: Yes. That's what it says.</p> <p>9 BY MR. HONIK:</p> <p>10 Q. And that's synonymous or the same as</p> <p>11 saying that there's no legitimate supply curve.</p> <p>12 That is, you can't legally introduce into the</p> <p>13 legal class of trade an adulterated or misbranded</p> <p>14 drug product; correct?</p> <p>15 MR. DORNER: Objection.</p> <p>16 Mischaracterizes. Lacks foundation. Calls for a</p> <p>17 legal conclusion. Let me see the question.</p> <p>18 BY MR. HONIK:</p> <p>19 Q. Your answer, sir?</p> <p>20 MR. DORNER: I'm sorry. I was making</p> <p>21 sure that my objection was complete. I apologize,</p> <p>22 Mr. Honik.</p> <p>23 BY MR. HONIK:</p> <p>24 Q. Your answer, Mr. Kosty?</p> <p>25 MR. DORNER: I'm sorry. I'm confirming</p>

<p style="text-align: right;">Page 122</p> <p>1 my objection is complete. 2 BY MR. HONIK: 3 Q. Your answer, Mr. Kosty? 4 MR. DORNER: You may answer. 5 THE WITNESS: Yes. 6 BY MR. HONIK: 7 Q. And if you look with me at (c), the 8 prohibited acts are even more specific. It says, 9 and I quote, "The receipt in interstate commerce 10 of any food, drug, device, tobacco product or 11 cosmetic that is adulterated on misbranded and the 12 delivery or proffered delivery for pay or 13 otherwise." 14 Do you see that? 15 A. Yes. 16 Q. And so the FDA act here is specific in 17 saying that you cannot exchange for money an 18 adulterated or misbranded product that you placed 19 into the stream of commerce; correct, sir? 20 MR. DORNER: Objection. Calls for a 21 legal conclusion. Outside the scope. And 22 mischaracterizes. 23 You can answer. 24 THE WITNESS: Yes. That's how it's 25 written.</p>	<p style="text-align: right;">Page 124</p> <p>1 and, therefore, subject to this prohibition of 2 placing them in interstate commerce? 3 MR. DORNER: Objection. 4 Mischaracterizes. Calls for a legal conclusion. 5 You may answer. 6 THE WITNESS: Yes. That was one of the 7 assumptions in the Conti report. 8 BY MR. HONIK: 9 Q. Correct. Do you know what the word 10 syllogism means? 11 A. No. 12 Q. It's where you take one element and add 13 another element and perhaps more and you arrive at 14 a conclusion or assumption. 15 Accepting that definition of syllogism, 16 do you understand that what Dr. Conti did was to 17 accept as true that these valsartan-containing 18 drugs were as defined by the FDA adulterated and 19 mislabeled and, therefore, subject to this 20 prohibition where you couldn't place them into the 21 stream of commerce? 22 Do you understand that? 23 MR. DORNER: Same objections. 24 You can answer. 25 THE WITNESS: I understand that's one of</p>
<p style="text-align: right;">Page 123</p> <p>1 BY MR. HONIK: 2 Q. And you told me that you're familiar 3 with the FDA definition of adulterated and 4 misbranded; right? 5 A. Yes. 6 Q. And do you understand and accept that an 7 adulterated and misbranded product can be one that 8 was not subject to appropriate cGMPs? 9 MR. DORNER: Objection. Outside the 10 scope. Calls for a legal conclusion. 11 Mischaracterizes. 12 You may answer. 13 THE WITNESS: Yeah, that's the outside 14 the scope my expertise. I'm not a cGMP expert. 15 BY MR. HONIK: 16 Q. Do you, nonetheless, understand in your 17 experience in the pharmacy area that failure of 18 cGMP can be a basis upon which the FDA finds a 19 drug to be adulterated or misbranded? 20 MR. DORNER: Same objections. 21 THE WITNESS: Yes. 22 BY MR. HONIK: 23 Q. And are you aware in reading Dr. Conti's 24 report that she was asked to assume that the drugs 25 were, in fact, adulterated and misbranded here</p>	<p style="text-align: right;">Page 125</p> <p>1 the assumptions she made in her report, yes. 2 BY MR. HONIK: 3 Q. Okay. Now, Mr. Kosty, if you were asked 4 by the court to serve as an expert witness in this 5 case, you wouldn't turn down that opportunity if 6 presented, would you? 7 MR. DORNER: Objection. Form. Vague. 8 Lacks foundation. Calls for speculation. 9 You can answer. 10 THE WITNESS: Maybe. It depends. It 11 depends on what other projects I would have going 12 on at the time whether or not I would accept 13 another legal assignment, because it's been my 14 experience working on these cases that they're 15 very time consuming and you have deadlines that 16 just are all encompassing in terms of work 17 activity. 18 So I'd evaluate if I had the bandwidth 19 to take on another project or not. 20 BY MR. HONIK: 21 Q. That's fair and I understand your 22 response. Here's the beauty of these 23 examinations. 24 I want you to assume, Mr. Kosty, that 25 the court has given you that assignment and you've</p>

<p style="text-align: right;">Page 126</p> <p>1 accepted it and the court is asking you to assess 2 damages in this case and only that. And I want 3 you to further assume that the court has 4 instructed you in the face of a demonstration that 5 the VCDs in question were adulterated and 6 mislabeled and, therefore, should never have been 7 in the marketplace, that there was a failure of 8 the bargain to be satisfied and your job is to 9 calculate the damages at the point of sale. 10 Do you understand that hypothetical? 11 A. Yes. 12 MR. DORNER: I'll object to -- 13 BY MR. HONIK: 14 Q. How would you go -- 15 MR. DORNER: I'm sorry. I will object 16 to an incomplete hypothetical, to compound, to 17 mischaracterizing and to calling for a legal 18 conclusion. 19 You may ask the next question. 20 BY MR. HONIK: 21 Q. How would you then calculate the damages 22 for consumers at the point of sale? 23 MR. DORNER: Objection. Outside the 24 scope. Incomplete hypothetical. 25 Mischaracterizes.</p>	<p style="text-align: right;">Page 128</p> <p>1 at the point of sale, what would you do as to 2 those damages? What would you look at? 3 MR. DORNER: Same objections plus 4 incomplete hypothetical. 5 You may answer. 6 THE WITNESS: I would need further 7 research to do that. I would have to identify 8 legal -- in this case what a TPP is and identify 9 who that TPP was responsible for that 10 prescription. 11 BY MR. HONIK: 12 Q. You know that at the point of sale when 13 there's a prescription, a VCD dispensed, it's 14 known instantly in that financial transaction how 15 much an insurer paid and how much the consumer 16 paid; correct? 17 A. No, that is not correct. All you know 18 at the point of sale at the pharmacy is how much 19 to collect from the patient and what PBM is 20 responsible for paying the pharmacist. 21 Q. And the amount -- 22 MR. DORNER: I'm sorry. I'm sorry. 23 Mr. Kosty wasn't finished with his answer. We've 24 also been going for an hour and ten here. So I'd 25 ask for a break at some point.</p>
<p style="text-align: right;">Page 127</p> <p>1 You may answer. 2 THE WITNESS: The only information at 3 the point of sale concerning a patient on when a 4 prescription is adjudicated is the amount of 5 copay. 6 MR. DORNER: And I'll likewise add an 7 objection to calling for a legal conclusion. I 8 apologize. Please keep going. 9 BY MR. HONIK: 10 Q. So you agree that if one could determine 11 the amount of a copay or co-insurance at the point 12 of sale for a consumer buying a contaminated or 13 adulterated VCD, that would be the proper measure 14 of their damages under my hypothetical; correct? 15 MR. DORNER: Objection. Calls for a 16 legal conclusion. Outside the scope. 17 Mischaracterizes. 18 You may answer. 19 THE WITNESS: Yes. That would be the 20 only information you would have, at the point of 21 sale. 22 BY MR. HONIK: 23 Q. That's right. And if you were asked 24 under a similar hypothetical to calculate what the 25 TPPs or insurers paid as part of that transaction</p>	<p style="text-align: right;">Page 129</p> <p>1 But, Mr. Kosty, please finish you 2 answer. 3 THE WITNESS: So what the pharmacy 4 knows -- and you got to think about what does the 5 pharmacy care about. The pharmacy was presented a 6 prescription drug card from the patient. The 7 pharmacy enters certain information into their 8 computer system. They adjudicate the claim. They 9 know what PBM is responsible for paying them. 10 So as long as the PBM makes payment to 11 that pharmacy, they don't need to know any 12 information further than that. In my experience, 13 running a third party for Rite-Aid and Thrift 14 Drug, it did not matter who the TPP was. It only 15 mattered if that PBM that we had the contractual 16 relationship paid their claims. And if they did 17 that, we were satisfied, and that was all we 18 needed to know. And it's very straightforward 19 from a pharmacy perspective. The PBM pays us, and 20 we relieve our receivable. 21 BY MR. HONIK: 22 Q. It is straightforward such that at the 23 point of adjudication, one knows in an insured 24 situation how much the consumer has to pay and how 25 much the insurer is paying; correct?</p>

<p style="text-align: right;">Page 130</p> <p>1 MR. DORNER: Same objections.</p> <p>2 THE WITNESS: The pharmacy doesn't know</p> <p>3 who the payor is outside the PBM. And your</p> <p>4 characterization that's the insurance company is</p> <p>5 inaccurate. The PBM may be contracted with a</p> <p>6 self-insured employer. They could have a</p> <p>7 contractual relationship with another PBM. They</p> <p>8 could have a relationship with a TPA.</p> <p>9 So there's all different opportunities</p> <p>10 for relationships. All the pharmacy knows is that</p> <p>11 PBM is responsible for the payment to them.</p> <p>12 BY MR. HONIK:</p> <p>13 Q. Sir, and I apologize because I don't</p> <p>14 think I made my question clear enough. It's not</p> <p>15 consequential what the pharmacy knows. I'm asking</p> <p>16 about data that's created at the point of</p> <p>17 adjudication.</p> <p>18 You agree, do you not, that every single</p> <p>19 time an American picks up a prescription who</p> <p>20 happens to be insured, there is data collected</p> <p>21 that exists somewhere that reveals how much the</p> <p>22 consumer paid, that is, the patient, and how much</p> <p>23 his or her insurance company contributed? That</p> <p>24 data exists; correct?</p> <p>25 MR. DORNER: Objection. Argumentative</p>	<p style="text-align: right;">Page 132</p> <p>1 pharmacy.</p> <p>2 BY MR. HONIK:</p> <p>3 Q. Sir, if a cash customer, an uninsured</p> <p>4 customer pays cash for any prescription drug, that</p> <p>5 amount is known; correct?</p> <p>6 A. Yes.</p> <p>7 MR. DORNER: And, Ruben, I do want to</p> <p>8 jump in. I could use a break here soon as well.</p> <p>9 MR. HONIK: We're almost done. Stop</p> <p>10 interrupting me for now.</p> <p>11 MR. DORNER: Ruben, please. I'm asking</p> <p>12 for a break. It's a civil matter.</p> <p>13 MR. HONIK: We're not going to take a</p> <p>14 break right now. I have several more questions.</p> <p>15 MR. DORNER: I'm not asking you to stop</p> <p>16 now.</p> <p>17 MR. HONIK: Excuse me?</p> <p>18 MR. DORNER: I'm not asking you to stop</p> <p>19 now. I'm asking shortly I could use a break.</p> <p>20 MR. HONIK: Stop interrupting me. I</p> <p>21 heard you the first time. We'll stop when I want</p> <p>22 to stop. We're near the end.</p> <p>23 BY MR. HONIK:</p> <p>24 Q. Mr. Kosty, inasmuch as you know what the</p> <p>25 cash payor pays, isn't it true the data exists</p>
<p style="text-align: right;">Page 131</p> <p>1 and lacks foundation. Vague. Compound. And</p> <p>2 mischaracterizes.</p> <p>3 You may answer.</p> <p>4 THE WITNESS: So the point of sale, as</p> <p>5 I've stated before, is the transaction between the</p> <p>6 pharmacy and the patient and the PBM. So the PBM</p> <p>7 now has that transaction. Let's just assume for</p> <p>8 argument's sake that that transaction has been</p> <p>9 completed and the PBM is in possession of it.</p> <p>10 So now the PBM has to bill their client.</p> <p>11 And the way the PBMs are set up, they have a</p> <p>12 number of different business models, the first one</p> <p>13 being a transparent pass-through, and that means</p> <p>14 that the PBM is going to bill their customer,</p> <p>15 whoever that may be which could include an</p> <p>16 insurance company, the amount paid at the</p> <p>17 pharmacy. So it's transparent. It's a</p> <p>18 pass-through price.</p> <p>19 The other model that PBMs employ is</p> <p>20 called a traditional spread model. And what the</p> <p>21 PBMs do is take whatever that transaction amount</p> <p>22 is at the pharmacy and they add a markup to it</p> <p>23 before they bill their customer. So the amount</p> <p>24 the PBM ultimately pays may be different than what</p> <p>25 is adjudicated at the point of sale at the</p>	<p style="text-align: right;">Page 133</p> <p>1 that is knowable as to the amount an insured</p> <p>2 consumer pays, what his or her share is, and what</p> <p>3 the insurance company paid and what their share</p> <p>4 is? That is data that is available today; is it</p> <p>5 not?</p> <p>6 MR. DORNER: Objection. Vague.</p> <p>7 Compound. Argumentative. Lacks foundation. And</p> <p>8 mischaracterizes.</p> <p>9 You may answer.</p> <p>10 THE WITNESS: Yeah, the data would be</p> <p>11 available if you knew what party to go ask for it.</p> <p>12 BY MR. HONIK:</p> <p>13 Q. Do you agree that IQVIA collects the</p> <p>14 very datapoints that we're discussing now, mainly</p> <p>15 the amount of payments by consumers and TPPs for</p> <p>16 prescription drugs in America?</p> <p>17 MR. DORNER: Object to characterization.</p> <p>18 You may answer.</p> <p>19 THE WITNESS: Yes. IQVIA buys data from</p> <p>20 various entities in the pharmaceutical industry.</p> <p>21 And the purpose of the IQVIA data is to provide</p> <p>22 trend information to market participants. It's</p> <p>23 also used in the pharmaceutical industry to track</p> <p>24 from a brand pharmaceutical manufacturer</p> <p>25 perspective their salesforce effectiveness.</p>

<p style="text-align: right;">Page 134</p> <p>1 So if I'm a salesman in a certain 2 territory, say Pittsburgh, and I'm promoting a 3 product, then the IQVIA data is used to track the 4 performance of that drug product in my sales 5 territory. So there's a lot of uses of the IQVIA 6 data that's typically aggregated. You can't go 7 and look at individual claims from them. That's 8 not part of their business model. 9 BY MR. HONIK: 10 Q. You agree that IQVIA data is the gold 11 standard that's used day in and day out in the 12 pharmaceutical industry; correct? 13 A. Yes. It's the leading provider of that 14 data, although there are other alternatives you 15 could purchase. 16 MR. HONIK: We can take a break now. 17 How much time do you want, Drew? 18 MR. DORNER: It's up to Mr. Kosty. Five 19 or ten? 20 THE WITNESS: My question, when are we 21 going to plan to break for lunch? 22 MR. DORNER: Is now a good time, Ruben? 23 MR. HONIK: We can do that if you'd 24 like. It's 12:36. What time do you want to 25 resume?</p>	<p style="text-align: right;">Page 136</p> <p>1 A. Yes. I'm there. 2 Q. And if I'm reading your report 3 correctly, the subparts to paragraph 31 beginning 4 with (a) and going through several pages 5 concluding in (e) are the various specific ways in 6 which you disagree with Dr. Conti and her views; 7 right? 8 A. Yes. 9 Q. And in 31(a), we sort of talked about 10 this, this is the part of her conclusions that I 11 think you described as being in an unreal or 12 fantasy world. Do you remember that? 13 A. I do. 14 Q. And the reason you made those statements 15 previously is because you place a value on the 16 clinical or therapeutic benefit of even these 17 contaminated drugs; right? 18 A. I haven't used the word contaminated. 19 The ones with impurity, yes, I do place a clinical 20 value on them. 21 Q. Well, I hate to retrench and go back 22 over territory I thought we had reached agreement 23 to, but the definition of adulterated is specific 24 and defined by the FDA; correct? 25 MR. DORNER: Object to form. Legal</p>
<p style="text-align: right;">Page 135</p> <p>1 MR. DORNER: Do you want a half hour or 2 do you want a little longer? 3 THE WITNESS: 1:15. 4 MR. HONIK: 1:15 we'll resume. Thank 5 you. 6 THE VIDEOGRAPHER: Off the record 12:36. 7 (Recess from 12:36 p.m. to 1:19 p.m.) 8 THE VIDEOGRAPHER: We're back on the 9 record at 1:19. 10 BY MR. HONIK: 11 Q. Mr. Kosty, good afternoon. I presume 12 you had a satisfactory lunch break and you're 13 ready to proceed now? 14 A. Yes. 15 Q. Before we took our lunch break, we were 16 talking about in lawyerly terms the benefit of the 17 bargain theory and the proper criteria for 18 assessing damages in this case. 19 Do you remember that? 20 A. Yes. 21 Q. And that's a topic that you took 22 Dr. Conti to task in your report; did you not? 23 A. I did. 24 Q. Can you turn with me to Exhibit 1, which 25 is your report, paragraph 31 appearing on page 13.</p>	<p style="text-align: right;">Page 137</p> <p>1 conclusion. 2 THE WITNESS: Yes. 3 BY MR. HONIK: 4 Q. And you accept that that is the 5 operative definition that we have to work under 6 when we speak about adulterated drugs; correct? 7 A. Yes. 8 Q. In other words, we can't make up our own 9 definition of adulterated; correct? 10 A. Correct. 11 Q. And I'm happy to spend some time doing 12 so, but you agree that adulteration can occur 13 where the FDA decides there's noncompliance with 14 current good manufacturing practices; correct? 15 MR. DORNER: Objection to form. Asked 16 and answered. Calls for a legal conclusion. 17 THE WITNESS: I don't know all the 18 remedies the FDA has in their armamentarium. What 19 they could do, I don't know for sure from a 20 regulatory perspective. 21 BY MR. HONIK: 22 Q. Let's take a moment and talk about this 23 before we continue because I see that there may be 24 some gap in our shared knowledge and experience 25 about this.</p>

Page 138

1 MR. HONIK: Dave, can you bring up the
2 FDA warning letter, the first of them for, say,
3 ZHP.
4 MR. DORNER: Are you entering this as an
5 exhibit?
6 MR. HONIK: Yep. Are we up to five?
7 MR. DORNER: That's what I have.
8 (Kosty Exhibit 5 was marked.)
9 BY MR. HONIK:
10 Q. Mr. Kosty, I apologize, but I don't
11 think this was among the reliance materials that
12 you cited; correct?
13 A. Correct.
14 Q. And for the benefit of the record,
[REDACTED]

Page 139

[REDACTED]

Page 140

[REDACTED]

Page 141

[REDACTED]

8 BY MR. HONIK:
9 Q. Okay. So if we're now talking about as
10 defined adulterated drugs according to the FDA, by
11 reason of a failure to maintain current good
12 manufacturing practices, you certainly understand
13 that that can form a basis for a drug being
14 defined as adulterated; correct?
15 MR. DORNER: Object to form. Calls for
16 a legal conclusion. Outside the scope.
17 You may answer.
18 THE WITNESS: Yes.
19 BY MR. HONIK:
20 Q. And we looked earlier -- again this
21 foundational -- that among the prohibited acts
22 that the FDA has listed under its regulations
23 under the Food and Drug Act is the sale and
24 placement in the stream of commerce of adulterated
25 drugs. We looked at that together; did we not?

<p style="text-align: right;">Page 142</p> <p>1 MR. DORNER: Same objections. 2 THE WITNESS: Yes. 3 BY MR. HONIK: 4 Q. Now, circling back to where I wanted to 5 be, we looked together in Exhibit 3 Judge Kugler's 6 opinion in the Motion to Dismiss in which he said 7 that regardless whether the sold VCDs actually 8 achieved the medical purpose of lowering blood 9 pressure, it's still considered worthless. 10 Do you remember we looked at that 11 together? 12 MR. DORNER: Are you going to show the 13 witness the document? 14 MR. HONIK: I can if he needs to. 15 BY MR. HONIK: 16 Q. But do you remember that? 17 A. Yes. 18 Q. Okay. Now, if we turn to your paragraph 19 31(a), the criticism that you have here of 20 Dr. Conti is that she didn't take into 21 consideration some potential therapeutic or 22 clinical value of the adulterated VCDs; correct? 23 A. Yes. 24 Q. And in your view as a pharmacist with an 25 MBA, one must take the actual purchase price and</p>	<p style="text-align: right;">Page 144</p> <p>1 of that value that you indicate here is yet to be 2 determined by anybody. But it does have value. 3 BY MR. HONIK: 4 Q. Okay. Well, let's unpack that a little 5 bit. Number one, if the court is correct that 6 even if the adulterated VCDs lowered blood 7 pressure, that is, did what it was supposed to do 8 clinically, if it's still without value, then the 9 full purchase price is the damage; correct? 10 MR. DORNER: Object to the form. 11 Outside the scope. Calls for a legal conclusion. 12 You may answer. 13 THE WITNESS: I'm not an attorney. I 14 don't know the legal answer to that question. 15 BY MR. HONIK: 16 Q. I want you to assume that even if a 17 contaminated drug that works to lower blood 18 pressure and, therefore, creates a clinical value 19 as you suggest in 31(a), that that drug is still 20 worthless. 21 Assuming that statement to be true, the 22 proper measure of damages is the full purchase 23 price of that drug; correct? 24 MR. DORNER: Object to form. Calls for 25 a legal conclusion. Outside the scope.</p>
<p style="text-align: right;">Page 143</p> <p>1 offset it by some calculation for its therapeutic 2 value. That's your point, isn't it? 3 A. Can you repeat that question once more? 4 Q. Sure. Let me rephrase it. 5 Your point in 31(a) is that even if 6 there is some diminution in value to the VCD, that 7 you have to offset whatever that number is by its 8 therapeutic or clinical value to the patient. 9 That's your point, isn't it? 10 MR. DORNER: Object to form. Outside 11 the scope. Mischaracterizes. 12 You may answer. 13 THE WITNESS: Yes. The therapeutic 14 value that the patients receive do have value to 15 them in the healthcare system, yes. 16 BY MR. HONIK: 17 Q. Correct. And according to you, what 18 your model or formula is is that you have to take 19 whatever the purchase or actual price of the drug 20 is and deduct from it the clinical value that the 21 patient received. That's your point; right? 22 MR. DORNER: Same objections. 23 THE WITNESS: I don't think I stated it 24 in that way in my report. Obviously, the 25 therapeutic value, the decision on what percentage</p>	<p style="text-align: right;">Page 145</p> <p>1 You can answer. 2 THE WITNESS: In those hypotheticals and 3 with those requirements, the answer is yes. 4 BY MR. HONIK: 5 Q. And if you're somehow correct, if you 6 were somehow correct as a matter of legal 7 principle, which really controls here, and one 8 must deduct the clinical or therapeutic value, 9 then one must arrive at some value for that 10 clinical benefit; correct? 11 A. Yes. 12 Q. Is it true that you did not present a 13 methodology or formula for evaluating and placing 14 a value on therapeutic benefit? 15 A. That question was outside the scope of 16 my assignment. So, no, I did not calculate that 17 calculation. 18 Q. And, in fact, you have no way of knowing 19 how to do that, do you? 20 A. Well, this is the first time it's been 21 suggested, so I don't know. I haven't thought 22 about it. I would need to consider it and 23 certainly -- 24 Q. How would you in your experience even 25 begin to go about placing a value on the</p>

Page 146

1 therapeutic benefits of a drug?
2 MR. DORNER: Object to form. Outside
3 the scope.
4 You can answer.
5 THE WITNESS: Therapeutic benefits to
6 the patient in the healthcare system would be what
7 would the adverse events be if you didn't have
8 that drug and didn't have it replaced by an
9 alternative with similar therapeutic
10 characteristics.
11 Like in this case, you have an ARB that
12 is at issue. It could be an ACE inhibitor. It
13 could be a replacement for that ARB. It could
14 create the value for the patient in lowering the
15 blood pressure.
16 So the first part I would look at would
17 be what is the alternative cost if we don't
18 control this instance. So in this example, if we
19 have antihypertensive patients that have a
20 hypertensive crisis and perhaps they may be
21 subject to a stroke, they might have a heart
22 attack, there are other adverse consequences to
23 not taking their medication. So I would begin to
24 look at what are the costs to the system and to
25 patients for those activities.

Page 147

1 And I would venture a guess that the
2 cost of treating an MI or a stroke patient -- that
3 could take months to treat a stroke patient -- is
4 much more expensive than a low cost generic VCD
5 drug. So I would start looking at what would my
6 cost be without those medications as a basis to
7 begin the analysis.
8 You just suggested this, so I haven't
9 thought through other aspects of this, but I'm
10 sure there are other components that would need to
11 be researched, and I'm sure there's data published
12 on what is the average cost of a heart attack, the
13 average cost of a stroke patient. I imagine
14 there's ranges that you could model to estimate
15 what those costs would be if VCD drugs were not
16 taken and the therapeutic benefit was not
17 received.
18 BY MR. HONIK:
19 Q. Suffice to say you didn't do any of that
20 work, did you?
21 A. No. That was not my assignment.
22 Q. Number one. Number two, you're aware,
23 Mr. Kosty, that there were noncontaminated,
24 nonadulterated generic valsartan in the
25 marketplace that the consumer could choose; are

Page 148

1 you not?
2 MR. DORNER: Object to characterization.
3 You can answer.
4 THE WITNESS: Well, the pharmacist would
5 choose. The consumer doesn't choose the valsartan
6 drug that's dispensed. It's the pharmacist that
7 would choose. Yeah, the pharmacist would know
8 there were products that didn't have any
9 impurities.
10 BY MR. HONIK:
11 Q. Sir, I'm asking a very simple question.
12 During the relevant class period from 2012 to
13 2018, you were aware, were you not, that apart
14 from the defendants who put contaminated valsartan
15 into the stream of commerce, there were other
16 suppliers who provided uncontaminated valsartan;
17 are you not?
18 MR. DORNER: Object to the
19 characterization.
20 You may answer.
21 THE WITNESS: Yes.
22 BY MR. HONIK:
23 Q. And you were similarly aware that there
24 were other therapies available in the
25 pharmaceutical marketplace to treat high blood

Page 149

1 pressure and other coronary ailments; correct?
2 A. Correct.
3 Q. So during the time that consumers and
4 third-party payors were paying for FDA-defined
5 adulterated drugs, there was an option for those
6 entities to purchase drugs that were not
7 adulterated; correct?
8 MR. DORNER: Object to form. Calls for
9 a legal conclusion. Therefore, outside the scope.
10 You may answer.
11 THE WITNESS: Once they were informed
12 there was an issue with the supply of the at-issue
13 VCDs, yes.
14 BY MR. HONIK:
15 Q. And, in fact, that's what happened even
16 after the recall; correct? Consumers were in a
17 position to choose either uncontaminated valsartan
18 or other therapies to control their health
19 conditions; correct?
20 A. Yes, because the at-issue VCD drugs were
21 off the market through a voluntary recall.
22 MR. DORNER: I'll put a late objection
23 to characterization.
24 BY MR. HONIK:
25 [REDACTED]

Page 150

1 [REDACTED]
2 [REDACTED]
3 [REDACTED]
4 [REDACTED]
5 [REDACTED]
6 [REDACTED]
7 [REDACTED]
8 [REDACTED]
9 [REDACTED]
10 [REDACTED]
11 [REDACTED]
12 BY MR. HONIK:
13 Q. And do you think knowing about the basis
14 for the lack of a sales curve, that is, the
15 legitimacy of uncontaminated drugs in the
16 marketplace would have been relevant to your
17 analysis?
18 MR. DORNER: Objection.
19 Characterization. Outside the scope. Calls for a
20 legal conclusion.
21 You may answer.
22 THE WITNESS: No. I would have -- like
23 I did in my report, from an industry perspective,
24 I would have looked at what was available and what
25 could have been purchased and what, in fact,

Page 151

1 happened.
2 Please repeat the question if I didn't
3 answer it. But in my mind, that was the issue.
4 BY MR. HONIK:
5 Q. I understand you. Do you accept as true
6 that a product that doesn't meet cGMP cannot be
7 entered into the legal class of trade in the U.S.
8 pharmaceutical market?
9 MR. DORNER: Object to form. Calls for
10 a legal conclusion. Outside the scope.
11 You may answer.
12 THE WITNESS: From a legal conclusion, I
13 don't know. I would not expect that, but from a
14 legal conclusion, I don't know.
15 BY MR. HONIK:
16 Q. Respectfully, Mr. Kosty, it's not a
17 legal conclusion. It comes from the FDA
18 regulatory scheme.
19 And the question was whether you
20 understood under the FDA's regulatory and
21 enforcement powers that a product that doesn't
22 meet cGMP can't enter the legal class of trade in
23 the U.S. pharmaceutical market. Either you do or
24 you don't.
25 MR. DORNER: Same objections. And lacks

Page 152

1 foundation.
2 You can answer.
3 THE WITNESS: Yes.
4 BY MR. HONIK:
5 Q. And in plainer English, that means that
6 pharmacies can't sell products that don't meet
7 cGMP practices and standards nor can a consumer
8 pay for it or their insurance company pay for it.
9 Do you understand that?
10 MR. DORNER: Object to form. Calls for
11 a legal conclusion. Outside the scope.
12 You can answer.
13 THE WITNESS: It depends when that issue
14 is known in the marketplace. If it's known before
15 the product is launched or afterwards and it's
16 recalled, then that product is not available for
17 sale. But, for example, the wholesaler does not
18 test products to determine whether they meet cGMP
19 requirements of the manufacturers.
20 The retailers don't buy product either
21 direct from manufacturers or from wholesalers and
22 test products whether they meet cGMP requirements.
23 So they're depending upon the manufacturer and the
24 FDA to provide that information that they can use
25 in the supply chain.

Page 153

1 So if the product was already launched
2 and it was found out that there was issues like
3 there were in this case, products were voluntarily
4 recalled like I would expect to happen in the
5 regulatory framework.
6 If it was before the products were
7 introduced in the market, then those products
8 would not have been available and would not have
9 been launched in the marketplace because the FDA
10 would not have approved those products.
11 BY MR. HONIK:
12 Q. Mr. Kosty, do you agree that the FDA's
13 regulatory scheme requires manufacturers to attest
14 to cGMP compliance not only when first entering
15 the market, but yearly thereafter?
16 MR. DORNER: Object to form. Calls for
17 a legal conclusion. Outside the scope.
18 You may answer.
19 THE WITNESS: My understanding is in
20 this example, the ANDA process, when generics are
21 approved, those attestations are made. And it's
22 my understanding they're reconfirmed on a yearly
23 basis.
24 BY MR. HONIK:
25 Q. And do you agree that the FDA requires

<p style="text-align: right;">Page 154</p> <p>1 not only attestation, that is, a statement, but 2 that you have to produce evidence or proof that 3 you're meeting those cGMP requirements? 4 MR. DORNER: Same objections. Legal 5 conclusion. Outside the scope. 6 THE WITNESS: I don't know. I've never 7 seen those documents to comment on what they 8 include or don't include. 9 BY MR. HONIK: 10 Q. Do you agree that only prescriptions 11 that have met that evidentiary standard for cGMP 12 and are safe and efficacious are allowed to be 13 sold in the U.S. market? 14 MR. DORNER: Same objections. Legal 15 conclusion. Outside the scope. 16 You may answer. 17 THE WITNESS: Yes. Upon approval of 18 their ANDA in this case, yes. 19 BY MR. HONIK: 20 Q. And do you have any knowledge about the 21 economic principle that a drug which doesn't meet 22 those requirements are considered economically 23 worthless and, therefore, have no legitimate 24 supply curve? 25 MR. DORNER: Objection. Lacks</p>	<p style="text-align: right;">Page 156</p> <p>1 periodic inspections of manufacturers to verify 2 their forms that they meet the cGMP requirements. 3 BY MR. HONIK: 4 Q. And, sir, again I understand you're not 5 an economist, but do you understand that there can 6 only be a legitimate supply curve for drugs if and 7 only if a drug is produced in accordance with 8 cGMP, not only by attestation but by empirical 9 proof? 10 MR. DORNER: Object to the form. Lacks 11 foundation. Outside the scope. Calls for a legal 12 conclusion. 13 You can answer. 14 THE WITNESS: The supply curve -- there 15 wouldn't be a supply curve because there wouldn't 16 be a product available in the marketplace in your 17 hypothetical here. 18 BY MR. HONIK: 19 Q. Do you understand that the FDA 20 evidentiary standard for this compliance we've 21 been speaking of concerns not only the cGMP 22 requirements, but evidence of quality, purity, 23 identity and strength of the drug product? 24 MR. DORNER: Object to the 25 characterization. Outside the scope. Calls for a</p>
<p style="text-align: right;">Page 155</p> <p>1 foundation. Outside the scope. 2 You may answer. 3 THE WITNESS: Could you repeat that one 4 more time, please? 5 BY MR. HONIK: 6 Q. Do you agree with the corollary of the 7 last question, namely, that drugs only have an 8 economic value if they meet cGMP and are safe and 9 efficacious? 10 MR. DORNER: Objection. Lacks 11 foundation. Outside the scope. 12 You may answer. 13 THE WITNESS: How do you define economic 14 value? 15 BY MR. HONIK: 16 Q. Do you agree that manufacturers have to 17 attest and prove cGMP compliance and that their 18 drugs are safe and efficacious to sell into the 19 U.S. legal class of trade? 20 MR. DORNER: Object to form. Calls for 21 a legal conclusion. Outside the scope. 22 You may answer. 23 THE WITNESS: They have to attest that 24 their products meet the cGMP requirements, my 25 understanding, and, B, the FDA also conducts</p>	<p style="text-align: right;">Page 157</p> <p>1 legal conclusion. 2 You may answer. 3 THE WITNESS: I'm not a regulatory 4 compliance expert for a pharmaceutical 5 manufacturer, so I don't know specifics what 6 they're required to produce. 7 BY MR. HONIK: 8 Q. Sir, when you got your MBA at Penn 9 State, did you understand there can't be a price 10 given or associated with a product where its 11 demand curve does not meet its supply curve? 12 MR. DORNER: Object to form. Outside 13 the scope. 14 You can answer. 15 THE WITNESS: Yes. 16 BY MR. HONIK: 17 Q. So you understood from that standpoint 18 that if there's no legitimate supply curve which 19 meets that demand curve, no price can be 20 associated with the product in question, 21 correct -- 22 MR. DORNER: Object to form. 23 BY MR. HONIK: 24 Q. -- as a matter of economic principle? 25 MR. DORNER: Object to the form. Lacks</p>

<p style="text-align: right;">Page 158</p> <p>1 foundation. Vague. And outside the scope. 2 You may answer. 3 THE WITNESS: There would be no price 4 because there would be no supply. 5 BY MR. HONIK: 6 Q. Now, in terms of determining the actual 7 purchase price of valsartan-containing drugs as to 8 consumers and TPPs, there is available data that 9 we talked about before the break that would reveal 10 those sums; correct? 11 A. There would be multiple data sources 12 that would have to be referred to to be able to 13 calculate that information. But with the 14 information supplied, you could, yes. 15 Q. And if we could -- do you have a copy of 16 Dr. Conti's report in front of you? 17 A. No, I do not. 18 Q. No problem. 19 MR. HONIK: Dave, can we bring up her 20 report and I'll direct you to a specific part of 21 it. We're going to call this Exhibit 6, I guess. 22 MR. STANOCH: Stand by. 23 THE WITNESS: Okay. 24 (Kosty Exhibit 6 was marked.) 25</p>	<p style="text-align: right;">Page 160</p> <p>1 line? 2 A. I do. 3 Q. The end payor, that's the TPP; right? 4 A. Yes. 5 Q. And the consumer, that's the patient who 6 picked up the prescription; right? 7 A. Yes. 8 Q. And you understood that what Dr. Conti 9 did in arriving at these numbers in this table is 10 she just looked at the actual price paid at the 11 point of sale as between payment from TPPs and 12 payments from consumers. Do you see that? 13 MR. DORNER: Object to the 14 characterization. 15 You can answer. 16 THE WITNESS: Can you point me to where 17 she states that? 18 BY MR. HONIK: 19 Q. So the table doesn't state anything 20 other than the numbers. But having read the 21 report, you understood that the method she 22 employed was to look at IQVIA data of sales at 23 point of sale, and she simply took the actual 24 price. Do you understand that that's what she 25 did?</p>
<p style="text-align: right;">Page 159</p> <p>1 BY MR. HONIK: 2 Q. You've seen this before no doubt, yes? 3 A. Yes. 4 Q. If we turn together to page 31 and look 5 at Table 1 together, this is the table which 6 reflects the Aggregate Manufacturer Group Damages 7 attached to the various theories of liability in 8 this case. Do you remember reviewing this? 9 A. Yes. 10 Q. And you understand because there are 11 multiple theories of legal liability, that there 12 may be an opportunity to add those sums up, but 13 you note in the footnote to this table that 14 they're deduplicated. In other words, they're not 15 added together. 16 Do you understand that concept? 17 MR. DORNER: Object to the 18 characterization. Mr. Kosty didn't note anything 19 in this report. It's not his. 20 THE WITNESS: Yes. 21 BY MR. HONIK: 22 Q. Can you answer my question? 23 A. Yes. 24 Q. So, in other words, just by way of 25 example, if you look at ZHP -- do you see the ZHP</p>	<p style="text-align: right;">Page 161</p> <p>1 A. Yes. 2 Q. And she divided it up between the 3 payment that went from the TPP or insurer and the 4 payment that was collected from the consumer in 5 the form of copays and co-insurances. Do you see 6 that reflected in those numbers? 7 A. Yes. 8 Q. So I understand that you have a 9 different theory and that you've applied this 10 industry sort of approach to it. But assuming the 11 court is correct and assuming we can prove the 12 elements of the Complaint which Dr. Conti assumed, 13 this would be the way you would arrive at the 14 actual cash or purchase price of the drug to 15 determine the damages in a model that looks at the 16 benefit of the bargain theory; correct? 17 MR. DORNER: Object to form. Calls for 18 a legal conclusion. Outside the scope. 19 Mischaracterizes. 20 You can answer. 21 THE WITNESS: The method is partially 22 correct. As I point out in my report, the IQVIA 23 data doesn't identify in approximately 15 percent 24 of the cases who the actual TPP is. And IQVIA is 25 unable to identify those entities. But absent</p>

<p style="text-align: right;">Page 162</p> <p>1 that, the only other information you would have</p> <p>2 would be the data available here.</p> <p>3 BY MR. HONIK:</p> <p>4 Q. Would be the what?</p> <p>5 A. The data here that's available through</p> <p>6 IQVIA.</p> <p>7 Q. Okay. So your criticism of the use of</p> <p>8 the IQVIA data is that you believe there's some</p> <p>9 15 percent that may not be reflected; correct?</p> <p>10 MR. DORNER: Object to form.</p> <p>11 Characterization.</p> <p>12 You can answer.</p> <p>13 THE WITNESS: Yeah. My characterization</p> <p>14 review would be overstated.</p> <p>15 BY MR. HONIK:</p> <p>16 Q. Sir, the methodology that arrived at</p> <p>17 these numbers is correct, save for your criticism</p> <p>18 of the 15 percent that you alluded to in the IQVIA</p> <p>19 data; is that correct?</p> <p>20 MR. DORNER: Object to form. Outside</p> <p>21 the scope. Calls for a legal conclusion.</p> <p>22 You may answer.</p> <p>23 THE WITNESS: That was outside the scope</p> <p>24 of my analysis. But given the IQVIA data, that's</p> <p>25 the only data that would be available to add up</p>	<p style="text-align: right;">Page 164</p> <p>1 MR. DORNER: Object to form.</p> <p>2 Mischaracterization.</p> <p>3 You can answer.</p> <p>4 THE WITNESS: My critique of Dr. Conti's</p> <p>5 analysis is she only did the easy ones. The</p> <p>6 difficult ones are like a Medicare Part D program</p> <p>7 where the government subsidizes approximately 75</p> <p>8 percent of the direct payments to the Med D plan</p> <p>9 which includes the basic -- average national basic</p> <p>10 payment plus a reinsurance payment. The other</p> <p>11 25 percent is paid by the beneficiary through</p> <p>12 premiums.</p> <p>13 So in a Med D plan, the government is</p> <p>14 actually paying 75 percent of the cost of the</p> <p>15 product for the patients. Dr. Conti does not take</p> <p>16 into account those expenditures for these VCD</p> <p>17 prescriptions that are government funded.</p> <p>18 BY MR. HONIK:</p> <p>19 Q. Sir, we're going to ask you a lot of</p> <p>20 questions about Medicare a little later, but when</p> <p>21 you say that she ignores the role of government</p> <p>22 payors, that's false, isn't it? She doesn't</p> <p>23 ignore it, does she?</p> <p>24 A. Not completely, but in certain cases she</p> <p>25 does.</p>
<p style="text-align: right;">Page 163</p> <p>1 here.</p> <p>2 BY MR. HONIK:</p> <p>3 Q. Okay. Fair enough. And if we took this</p> <p>4 and if, as you claim, there should be offsets for</p> <p>5 clinical or therapeutic benefit, you don't know</p> <p>6 and you can't tell us how to arrive at those</p> <p>7 numbers; correct?</p> <p>8 A. That was not part of my assignment, no.</p> <p>9 Q. Do you know of anyone who did that on</p> <p>10 behalf of the defendants?</p> <p>11 MR. DORNER: Object to form. Outside</p> <p>12 the scope. Calls for speculation.</p> <p>13 You can answer.</p> <p>14 THE WITNESS: I don't know.</p> <p>15 BY MR. HONIK:</p> <p>16 Q. Take a look at subparagraph (c) on the</p> <p>17 next page of your report, page 14.</p> <p>18 A. Yes.</p> <p>19 Q. This is the paragraph in which you</p> <p>20 criticized Dr. Conti for ignoring the role of</p> <p>21 government payors. Do you see that?</p> <p>22 A. Yes.</p> <p>23 Q. Do you not remember seeing in her report</p> <p>24 that she specifically excluded government payments</p> <p>25 for these drugs?</p>	<p style="text-align: right;">Page 165</p> <p>1 Q. In fact, if you look at Dr. Conti's</p> <p>2 report at paragraph 75, she states the specific</p> <p>3 ways in which she accounts for government payment,</p> <p>4 doesn't she?</p> <p>5 A. Hold on. Let me get there. That's what</p> <p>6 she states, yes.</p> <p>7 Q. Right. In fact, she's rather specific,</p> <p>8 isn't she? She says that she eliminated CHIP,</p> <p>9 federal assistance programs, Medicare Parts A and</p> <p>10 B, state assistance programs, for example ADAP,</p> <p>11 Tricare, Department of Veterans Affairs, Indian</p> <p>12 Health Service and state employee plans, not</p> <p>13 excluding city and county plans because they're</p> <p>14 private, and workers' compensation.</p> <p>15 Do you see that?</p> <p>16 A. You read that correctly, yes.</p> <p>17 Q. And she footnoted that and said see</p> <p>18 valsartan TPP class definitions and exclusions to</p> <p>19 confirm the fact that she was conforming to the</p> <p>20 class definition and the theories of liability;</p> <p>21 correct?</p> <p>22 MR. DORNER: Object to form.</p> <p>23 Characterization.</p> <p>24 You can answer.</p> <p>25 THE WITNESS: Yes, without seeing that</p>

<p>Page 166</p> <p>1 specific. Could you bring that up and I could 2 take a look at it? 3 BY MR. HONIK: 4 Q. Are you talking about the footnote? 5 A. No, not the footnote. I don't have 6 these class definitions and exclusions memorized. 7 Q. Well, you do because you listed them 8 among your reliance material. They're in the 9 Complaint and Motion for Class Certification. 10 Didn't you read it there? 11 MR. DORNER: Object to form. 12 Argumentative. 13 You can answer. 14 THE WITNESS: I don't have a 15 photographic memory to all the documents I relied 16 upon to recall the specific definition here. 17 BY MR. HONIK: 18 Q. Well, the point here is that, A, she 19 didn't ignore it, and, B, you don't doubt for a 20 second that what she put in or excluded is 21 reflected in the class definition, do you? 22 MR. DORNER: Objection. Object to form. 23 You can answer. 24 THE WITNESS: No, I don't. 25</p>	<p>Page 168</p> <p>1 You can answer. 2 THE WITNESS: The theory of liability 3 was not part of my assignment. I did not look at 4 it. 5 BY MR. HONIK: 6 Q. You didn't consider it at all; right? 7 A. No. 8 MR. DORNER: Object to form. Outside 9 the scope. 10 BY MR. HONIK: 11 Q. So it didn't matter to you whether a 12 particular theory yielding damages sounded in 13 warranty or sounded in unjust enrichment; that 14 difference didn't matter to you, did it? 15 MR. DORNER: Object to form. Outside 16 the scope. 17 You can answer. 18 THE WITNESS: It was outside the scope. 19 It did not. 20 BY MR. HONIK: 21 Q. Sir, do you understand generally that 22 the proper measure of damages at the end of the 23 day will be determined by the court or a court in 24 conjunction with jury findings and not what you 25 think or even I think? Do you understand that?</p>
<p>Page 167</p> <p>1 BY MR. HONIK: 2 Q. Okay. And if you had, if there was some 3 lack of consonance there, you would have raised 4 that in your report and you didn't; right? 5 A. The issues I had were raised in my 6 report, yes. 7 Q. No, no. What I'm asking you is: If 8 there was inconsistency between what Dr. Conti 9 eliminated in the form of government payments, if 10 that was inconsistent with the class definition, 11 you would have pointed that out; would you not? 12 MR. DORNER: Object to form to the 13 extent it calls for a legal conclusion or was 14 outside the scope. 15 You can answer. 16 THE WITNESS: Yes. 17 BY MR. HONIK: 18 Q. And you're familiar -- and you didn't do 19 so; right? 20 A. Didn't do so what? I'm sorry. 21 Q. You didn't point out any inconsistencies 22 between the damage model and the theory of 23 liability, did you? 24 MR. DORNER: Object to form. Outside 25 the scope.</p>	<p>Page 169</p> <p>1 A. Yes. 2 Q. And did you take into consideration any 3 assumptions about what the proper criteria should 4 be for calculating damages in this case? 5 MR. DORNER: Object to form. Outside 6 the scope. 7 You may answer. 8 THE WITNESS: Not from a legal 9 perspective, no. 10 BY MR. HONIK: 11 Q. And it's true that the only perspective, 12 as I understand it, that you applied is something 13 that you referred to as the industry standpoint; 14 right? 15 A. Yes. 16 Q. What exactly do you mean by the industry 17 standpoint? Since if that's the only criteria you 18 used, the court is going to have to evaluate that 19 criteria. What does it mean to look at it from 20 the industry standpoint? 21 A. Well, we have to unpack that a little 22 bit. The industry includes obviously the 23 manufacturers. It includes the wholesalers. It 24 includes the retail pharmacies. So when you look 25 at it from the industry perspective, there's a</p>

<p style="text-align: right;">Page 170</p> <p>1 business model that follows that we all know and 2 are familiar with. I can do a high fly by. 3 But you have the manufacturers that 4 produce the products. You have wholesalers and 5 retailers that buy products from manufacturers. 6 You have retail pharmacies and other types of 7 pharmacies, mail service, specialty, et cetera, 8 that will dispense products to patients. 9 As I note in one of my tables and 10 diagrams in my report, there's a flow of product 11 information, supply information, and there's a 12 flow of pharmacy benefit information in the 13 industry. So when I'm looking at it from an 14 industry perspective, I'm taking both of those 15 flows of product and pharmacy benefit payment flow 16 into account in my opinions. 17 Q. I'm not really sure what you're trying 18 to convey, but are you suggesting that the 19 criteria for measuring damages should be viewed by 20 those that introduced these adulterated drugs into 21 the stream of commerce? 22 MR. DORNER: Object to form. 23 Argumentative. Lacks foundation. 24 THE WITNESS: You mischaracterized my 25 testimony. What I'm explaining to you is how the</p>	<p style="text-align: right;">Page 172</p> <p>1 assignment. 2 BY MR. HONIK: 3 Q. Sir, I'm just asking you what you mean 4 by looking at damages from an industry 5 perspective. How do you take that statement and 6 translate that into a methodology or manner of 7 calculation that the court can evaluate in a 8 Daubert proceeding? 9 MR. DORNER: Object to form. Outside 10 the scope. Calls for a legal conclusion. 11 You may answer. 12 THE WITNESS: That was not my objective 13 or assignment in the report, to calculate -- to 14 develop an economic model of damages. My 15 assignment was to review the expert reports and 16 critique them from an industry perspective. I 17 explained how the flow of product and the flow of 18 pharmacy benefit information happens in the 19 industry. 20 And from an industry perspective, 21 products are sold at a cost from manufacturers to 22 their customers. They're resold in the wholesaler 23 case to the pharmacies. Pharmacies that buy them 24 direct from the manufacturer have a different cost 25 perhaps than the wholesaler cost. So those</p>
<p style="text-align: right;">Page 171</p> <p>1 industry works in practice. 2 BY MR. HONIK: 3 Q. And that's well and good, Mr. Kosty. I 4 get that you understand how that works. I'm 5 asking a rather specific question, and that is -- 6 because you criticized Dr. Conti for how she 7 arrived at damages. And she used legal standards 8 acknowledging she, herself, is not a lawyer 9 because that's how damages get calculated, based 10 on what the court or jury or some combination 11 thereof decides. 12 My question to you is since you didn't 13 do that and you only relied upon an industry's 14 point of view, I'm trying to understand what that 15 point of view is and how it informs the 16 calculation of damages. 17 What is it about the manufacturers, the 18 wholesalers and the retailers informs how to 19 measure damages? 20 MR. DORNER: Object to form. 21 Unintelligible question. Argumentative. Outside 22 the scope. Mischaracterizes. And lacks 23 foundation. 24 You can answer if you can. 25 THE WITNESS: That was not part of my</p>	<p style="text-align: right;">Page 173</p> <p>1 transactions within the industry inform my opinion 2 on what costs are associated with providing those 3 services. 4 So, for example, the wholesalers, in 5 order to provide drugs to pharmacies to dispense 6 to patients, they have to have distribution 7 capabilities. They have to procure product. They 8 likely have over a hundred thousand products in 9 their distribution center to be able to sell to 10 pharmacies for dispensing to patients. So they've 11 incurred a tremendous amount of costs. They have 12 delivery vehicles. They have automation. You 13 name it. There's a lot of costs associated with a 14 wholesaler providing services to their customers. 15 Earlier I explained the cost associated 16 with retailers and their ability to dispense 17 product to patients in terms of purchasing, 18 staffing stores, et cetera. So the revenue flows 19 through. On the other pharmacy side, you have the 20 reimbursement that impacts your revenue, but from 21 the manufacturer and wholesaler and pharmacies, 22 there's a cost of goods sold associated with 23 providing products. 24 From an industry perspective, that's the 25 flow of products through the channels ultimately</p>

<p style="text-align: right;">Page 174</p> <p>1 to patients. That's the perspective I'm taking 2 and that's what I mean from an industry 3 perspective. 4 So when I critique the different 5 analyses, I'm including from the industry 6 perspective. Unlike Dr. Conti, you have to have a 7 product in the pharmacy to be able to sell to a 8 patient. Her assumption is, well, there's no cost 9 associated with the product. In fact, in the 10 industry there is a cost associated with that 11 product. So that's what I'm reflecting in my 12 analysis and differentiating from what she's done. 13 BY MR. HONIK: 14 Q. Mr. Kosty, did you not understand or 15 know that the very letter that you cited as a 16 reliance material was over a discovery battle of 17 whether upstream costs from the retailers and 18 wholesalers could be produced to the plaintiffs in 19 this case? Did you know that? 20 MR. DORNER: Object to form. The 21 characterization. 22 THE WITNESS: I did not. 23 BY MR. HONIK: 24 Q. Even though you read the letter and 25 cited it in the Appendix C as a reliance material;</p>	<p style="text-align: right;">Page 176</p> <p>1 A. Yes. 2 Q. And do you remember we discussed -- 3 let's back up. Among all the letters, countless 4 letters sent into the court in this case and 5 various things on the docket, you listed this as a 6 reliance material; right? 7 A. Yes. 8 Q. And as I understood it, the reason you 9 told me you did that was because of some 10 confidentiality that attached to this upstream 11 data that the retailers and wholesalers didn't 12 want to produce; right? 13 A. Yeah, specific to the pharmacy, yes, to 14 pharmacy benefit agreements, yes. 15 Q. So here's my question: Are you aware 16 sitting here today that no upstream cost data was 17 ever provided to the plaintiffs in this case? 18 MR. DORNER: Object to form. Outside 19 the scope. Mischaracterizes. 20 You can answer. 21 THE WITNESS: Yes. I am aware of that. 22 BY MR. HONIK: 23 Q. And you're aware, or maybe you're not, 24 that unjust enrichment requires looking at a 25 formula that requires calculating profit; correct?</p>
<p style="text-align: right;">Page 175</p> <p>1 correct? 2 MR. DORNER: Same objections. 3 Argumentative. 4 You can answer. 5 THE WITNESS: Could you refer me to that 6 specific letter you're mentioning, the one you 7 showed earlier? 8 BY MR. HONIK: 9 Q. Sure. It's been marked as an exhibit, 10 and you specifically relied on it or I should say 11 more accurately, the defense lawyers provided it 12 to you. 13 MR. DORNER: Object to the 14 characterization. There's no question either. 15 THE WITNESS: What exhibit was that? 16 MR. HONIK: Dave, do you remember the 17 number? 18 MR. STANOCH: Two. 19 BY MR. HONIK: 20 Q. It's Exhibit 2, sir. 21 MR. DORNER: Is there a question 22 pending? 23 MR. HONIK: Yeah. 24 BY MR. HONIK: 25 Q. Do you remember looking at that exhibit?</p>	<p style="text-align: right;">Page 177</p> <p>1 MR. DORNER: Object to form. Calls for 2 a legal conclusion. Outside the scope. 3 You may answer. 4 THE WITNESS: I'm not familiar with the 5 unjust enrichment formula from a legal 6 perspective, no. 7 BY MR. HONIK: 8 Q. Well, that's curious because one of your 9 most substantial criticisms is that profit isn't 10 properly calculated by Dr. Conti because she 11 didn't take into consideration costs. 12 Isn't that one of your criticisms? 13 A. Yes. 14 Q. And my only question you to is: Were 15 you aware that we sought the identity of those 16 costs and they were not produced at least to this 17 point? Are you aware of that? 18 MS. KAPKE: Object to form. 19 Mischaracterizes the record to date. 20 MR. DORNER: We'll join in that. 21 BY MR. HONIK: 22 Q. Mr. Kosty, you can answer. 23 A. Yes. I'm aware that information has not 24 been produced. 25 Q. We have sales data. We have point of</p>

Page 178

1 purchase data. But we have no upstream costs
 2 provided to us. Do you know that?
 3 MR. DORNER: Same objections.
 4 THE WITNESS: Yes.
 5 BY MR. HONIK:
 6 Q. And are you aware having reviewed at
 7 least some parts of Dr. Conti's testimony and all
 8 of her report that she said if we're produced that
 9 information, that can be easily and flexibly
 10 worked into her methodology for calculating
 11 damages? Are you aware of that?
 12 MR. DORNER: Same objection.
 13 Mischaracterizes. Outside the scope.
 14 You can answer.
 15 THE WITNESS: Yes.
 16 BY MR. HONIK:
 17 Q. I'm sorry. Did you say "yes"?
 18 A. Yes.
 19 Q. And you did not design or certainly in
 20 your report there's no evidence that you designed
 21 a methodology or formula for calculating the costs
 22 that you complained that Dr. Conti didn't
 23 consider; right?
 24 MR. DORNER: Outside the scope.
 25 You can answer.

Page 179

1 THE WITNESS: That was not my
 2 assignment, so I did not do that.
 3 BY MR. HONIK:
 4 Q. Understood. You didn't do it because
 5 nobody asked you to do it; right?
 6 A. Correct.
 7 Q. Now, in your assignment in Loestrin, did
 8 you use the same methodology, that is, look at
 9 damages from the standpoint of industry much as
 10 you did here?
 11 MR. DORNER: Mr. Kosty, in response to
 12 this question, I'll just caution you to the extent
 13 there's any of confidentiality orders in place
 14 that prohibits you, to avoid violating any of
 15 those provisions.
 16 THE WITNESS: I don't recall.
 17 BY MR. HONIK:
 18 Q. What did you do in Loestrin?
 19 MR. DORNER: Same instruction,
 20 Mr. Kosty.
 21 THE WITNESS: At a high level, I
 22 reviewed the case documentation, produced an
 23 expert report and testified via deposition.
 24 BY MR. HONIK:
 25 Q. So that involved the drug Loestrin and

Page 180

1 the fact that there was cGMP violations from the
 2 facility from which it was manufactured; correct?
 3 MR. DORNER: Object to form.
 4 You can answer.
 5 THE WITNESS: I don't recall the
 6 specifics, no.
 7 BY MR. HONIK:
 8 Q. Do you recall any of the specifics?
 9 A. Not to that level of detail, no. I'm
 10 not sure how many years ago, three or four years
 11 ago. I've had probably hundreds of projects since
 12 that time. I haven't looked at that
 13 documentation. No, I don't recall.
 14 Q. That's somewhat astonishing to me
 15 because for all of your projects in the industry,
 16 you've only had in the last four years four legal
 17 matters. Am I wrong about that?
 18 MR. DORNER: Object to form.
 19 Argumentative.
 20 You can answer.
 21 THE WITNESS: You mischaracterized our
 22 business. Like I mentioned to you earlier in this
 23 deposition, our focus is not on legal cases. Our
 24 focus is on working with our clients in different
 25 market segments on their business problems.

Page 181

1 BY MR. HONIK:
 2 Q. That's precisely my point.
 3 MR. DORNER: I'm sorry. Mr. Honik, the
 4 witness was not finished.
 5 THE WITNESS: Thank you.
 6 So the focus of our consulting practice
 7 is not legal cases. The focus of our consulting
 8 practice is on consulting in the industry. And
 9 along the line of doing hundreds of projects over
 10 the years with multiple segments of the industry,
 11 we understand, I understand how the industry
 12 works, how the interrelationships between all the
 13 different parties work from a contractual
 14 perspective, from an operational perspective, and
 15 from a financial perspective.
 16 So that's been the focus of our
 17 consulting business. It's not been a focus to be
 18 a professional witness.
 19 BY MR. HONIK:
 20 Q. You have billed something on the order
 21 of magnitude -- Mr. Stanoch will review it with
 22 you -- about \$600,000 in this case; right?
 23 MR. DORNER: Objection. If you're going
 24 to refer to invoices and Mr. Stanoch will go over
 25 them, I'd ask that he at least be shown the

<p style="text-align: right;">Page 182</p> <p>1 documents you're referencing. 2 BY MR. HONIK: 3 Q. Am I wrong? You made about \$600,000 in 4 this case? 5 MR. DORNER: Object to the 6 characterization. 7 THE WITNESS: I do not know how much our 8 company has made. I haven't made money 9 personally. Our company is paid for my services. 10 BY MR. HONIK: 11 Q. AG billed for your work and their work 12 collectively about 600 grand; right? 13 A. I don't know. I haven't added up the 14 invoice. It was not important to me. 15 Q. It strikes me, Mr. Kosty, that the very 16 point you're making, that your ordinary work in 17 the pharmacy industry is the vast bulk of what you 18 do, that your work in this legal arena, few cases 19 as there have been, do not stand out in your mind 20 such that you don't know anything about Loestrin; 21 right? 22 MR. DORNER: Objection. Counsel is 23 testifying. Argumentative. 24 You can answer if there is a question. 25 THE WITNESS: I don't know what the</p>	<p style="text-align: right;">Page 184</p> <p>1 no. 2 BY MR. HONIK: 3 Q. You recall giving testimony, don't you? 4 A. I recall a deposition, yes. I don't 5 recall specifically what I said during that 6 testimony if you're going to ask me questions 7 about that, sir. 8 Q. Well, in preparation for today's 9 testimony, you reviewed your Loestrin testimony, 10 didn't you? 11 A. I did not. 12 Q. Did you have a discussion about your 13 involvement in Loestrin? Yes or no. 14 A. Discussion with whom? 15 Q. I don't know what you said. Did you 16 talk to anybody in preparation for today about the 17 work you previously did in the Loestrin matter? 18 A. No. 19 MR. DORNER: Objection to the extent 20 it's seeking conversations with counsel. They're 21 protected by work product. 22 BY MR. HONIK: 23 Q. You're aware, are you not -- 24 MR. DORNER: Sorry. Mr. Honik, I wasn't 25 finished with my objection, and the court reporter</p>
<p style="text-align: right;">Page 183</p> <p>1 question is, but you mischaracterize. There was 2 no need for me to look at -- 3 BY MR. HONIK: 4 Q. What work did you do in Loestrin? What 5 work did you do in Loestrin? 6 MR. DORNER: Objection. Asked and 7 answered. I would caution the witness not to 8 divulge anything subject to a confidentiality 9 order or privilege. 10 THE WITNESS: I would have to consult 11 with counsel before getting into specifics. 12 BY MR. HONIK: 13 Q. Did you do work that was similar in 14 nature to the work you were asked to do here? 15 MR. DORNER: Same instruction. You're 16 trying to back door it, Mr. Honik. I can't allow 17 that and allow the witness to get in trouble. 18 THE WITNESS: On the advice of counsel, 19 I'm not going to answer that question. 20 BY MR. HONIK: 21 Q. Did you do work in Loestrin pertaining 22 to damages and ascertainability? 23 MR. DORNER: Same -- if you can answer 24 it, that's fine. 25 THE WITNESS: I don't recall specifics,</p>	<p style="text-align: right;">Page 185</p> <p>1 needs a break here. Object to the extent it's 2 calling for work product and the impressions of 3 counsel. Next question. 4 BY MR. HONIK: 5 Q. You're aware that there was a motion to 6 exclude your testimony in that case; correct? 7 A. That's my understanding, that that's a 8 motion made for all experts. 9 Q. Whether it was or not, you're aware of 10 there was one made for you; right? 11 A. Yes. 12 Q. And when that occurred, that was shared 13 with you so that you could consult with the 14 attorneys in defending your opinions; did you not? 15 MR. DORNER: Objection. Again, don't 16 answer anything respecting conversations that you 17 had with counsel for the purpose providing an 18 expert opinion in another case potentially also 19 protected by a confidentiality order. 20 THE WITNESS: On the advice of counsel, 21 I'm not going to answer that question. 22 BY MR. HONIK: 23 Q. You're not being advised not to answer 24 it. You're being advised not to reveal certain 25 information if it's subject to the</p>

Page 186

1 confidentiality. Otherwise, you can respond.
2 A. It's subject to confidentiality.
3 Q. I beg your pardon?
4 A. I don't have approval from the attorneys
5 in that case to discuss anything. Like I
6 mentioned to you, I haven't reviewed those
7 documents. So I don't recall specifics to any of
8 those motions, et cetera.
9 Q. Do you remember the question I asked?
10 A. Yes. You asked if I had reviewed the
11 opinion -- I think it's called a Daubert motion,
12 is that correct -- to exclude my testimony.
13 Q. I asked you if you were aware that there
14 was a motion to exclude your specific testimony.
15 A. Yes.
16 Q. And do you recall discussing that motion
17 and the basis with counsel? Yes or no. I don't
18 want to know what was said.
19 A. No.
20 Q. You don't recall --
21 A. No.
22 Q. -- speaking to counsel about it?
23 A. No. I don't recall.
24 Q. Do you remember that you, yourself, read
25 the motion and the basis for challenging your

Page 187

1 opinions?
2 A. I did read the motion.

19 BY MR. HONIK:
20 Q. Mr. Kosty, are you aware that the
21 defense lawyers in the Loestrin case, in fact,
22 dedesignated much of your testimony as not
23 confidential?
24 MR. DORNER: Objection.
25 Mischaracterizes. Lacks foundation. Same

Page 190

1 instruction.

2 MR. HONIK: How do you know that that is

3 a mischaracterization? Are you attesting to the

4 fact that it's confidential, his testimony?

5 MR. DORNER: I'm not attesting to

6 anything, and I haven't said that, Mr. Honik.

7 MR. HONIK: Then don't instruct your

8 client not to answer because we're just going to

9 come back here.

10 MR. DORNER: The instruction is to not

11 answer with anything that is covered by a

12 confidentiality order.

12 BY MR. HONIK:

13 Q. You're able to get an answer by review

14 of your own testimony, a transcript of which you

15 possess; correct?

16 A. I could review my testimony, but I would

17 need to contact the attorneys we worked with in

18 this case, in the Loestrin case, to get any

19 clearance from them. I don't have clearance to

20 share documentation.

21 Q. Let me ask you this before I move on:

22 Apart from that potential obstacle which I

23 maintain doesn't exist, do you, nonetheless, have

24 recall sufficient to answer my question now?

25 A. I don't.

Page 192

1 [REDACTED]

2 [REDACTED]

3 [REDACTED]

4 [REDACTED]

5 [REDACTED]

6 instructing you not to answer anything subject to

7 a confidentiality order. Asked and answered a

9 conclusion. Outside the scope. Lacks foundation.

10 Argumentative.

11 Move on, counsel.

12 MR. HONIK: Mr. Dorner, do you know

13 Shakespeare?

14 MR. DORNER: I'm not testifying here

15 today, Ruben.

16 MR. HONIK: Do you know the phrase,

17 "Methinks she doth protest too much"? You may

18 want to stop while you're ahead.

19 BY MR. HONIK:

20 Q. Do you remember the question, Mr. Kosty?

21 A. No, I don't.

22 Q. The question was: Do you have

23 sufficient memory today sitting there under oath

24 to at least remember that the basis for trying to

25 exclude your testimony was that the central

Page 193

1 premise of your opinion was false? Do you

2 remember that that was raised?

3 MR. DORNER: Same objections.

4 You can answer.

5 THE WITNESS: No, I don't.

6 BY MR. HONIK:

7 Q. Do you know that the court did not rule

8 on your exclusion because the case was certified

9 and then settled? Do you know that much?

10 MR. DORNER: Objection. Outside the

11 scope. Calls for a legal conclusion. Lacks

12 foundation.

13 You may answer.

14 THE WITNESS: I do know the case was

15 settled. That's the extent to it.

16 BY MR. HONIK:

17 Q. And in your memory, how long ago did

18 this occur?

19 MR. DORNER: Objection as to whatever

20 "this" is.

21 THE WITNESS: Yeah, what is "this"?

22 What do you speak of?

23 BY MR. HONIK:

24 Q. If I said to you that the motion to

25 exclude your testimony was filed in February of

<p>Page 194</p> <p>1 2019, would that comport with your memory?</p> <p>2 A. Yes, because it was before COVID. I</p> <p>3 always look at things pre- and post-COVID, right.</p> <p>4 Q. It was only in 2019; correct?</p> <p>5 A. Yes.</p> <p>6 Q. And you have no memory that would allow</p> <p>7 you to respond to any of my questions?</p> <p>8 A. That's correct. No memory to those</p> <p>9 specifics that you obviously want to get into. I</p> <p>10 don't recall. I haven't looked at that</p> <p>11 documentation since 2019.</p> <p>12 Q. You're aware that there was an in-person</p> <p>13 or in-court class certification hearing in</p> <p>14 Loestrin?</p> <p>15 A. Yes.</p> <p>16 Q. Did you say "yes"?</p> <p>17 A. Yes.</p> <p>18 Q. And you're aware that every single one</p> <p>19 of the defense experts got to testify, but you</p> <p>20 didn't; right?</p> <p>21 A. I wasn't aware of that. I know I didn't</p> <p>22 testify. I was there available to testify.</p> <p>23 Q. I'm sorry. I spoke over you, and I</p> <p>24 apologize. What was the last thing you said?</p> <p>25 A. I was there available to testify and I</p>	<p>Page 196</p> <p>1 rebate payments under their supply agreement that</p> <p>2 was the subject of a creditor action to recoup</p> <p>3 those payments, right, into the bankruptcy estate?</p> <p>4 A. That's incorrect.</p> <p>5 Q. Okay. What was involved if not that?</p> <p>6 A. I don't have approval from counsel to</p> <p>7 discuss this matter.</p> <p>8 Q. What can you tell me that you did and</p> <p>9 your assignment was in that matter?</p> <p>10 A. I don't have approval from counsel to</p> <p>11 discuss this matter.</p> <p>12 Q. On what basis do you believe it's</p> <p>13 subject to a confidentiality or other protective</p> <p>14 order?</p> <p>15 MR. DORNER: Object to form. Calls for</p> <p>16 a legal conclusion.</p> <p>17 You can answer.</p> <p>18 THE WITNESS: My experience with legal</p> <p>19 cases, if anything that needs to be disclosed, it</p> <p>20 needs to be discussed with the attorneys ahead of</p> <p>21 time and get proper clearances. And my</p> <p>22 understanding is any of these questions that come</p> <p>23 up, I need to consult with counsel for McKesson in</p> <p>24 this case.</p> <p>25</p>
<p>Page 195</p> <p>1 wasn't called upon.</p> <p>2 Q. Well, in fact, the defense lawyers told</p> <p>3 you that they weren't going to call you; isn't</p> <p>4 that right?</p> <p>5 MR. DORNER: Don't answer that question.</p> <p>6 THE WITNESS: On the advice of counsel,</p> <p>7 I'm not going to answer that question.</p> <p>8 BY MR. HONIK:</p> <p>9 Q. Sir, the fact remains that you didn't</p> <p>10 testify at the class certification hearing. Do</p> <p>11 you know why?</p> <p>12 MR. DORNER: Don't answer that question</p> <p>13 to the extent -- don't answer the question.</p> <p>14 MR. HONIK: You're instructing him not</p> <p>15 to answer why he understands he didn't testify?</p> <p>16 MR. DORNER: Yes, I am. Move on.</p> <p>17 BY MR. HONIK:</p> <p>18 Q. You testified in the A&P bankruptcy</p> <p>19 case, didn't you?</p> <p>20 A. Yes. I produced a report and took a</p> <p>21 deposition.</p> <p>22 Q. And in that case I think you were an</p> <p>23 expert for McKesson; right?</p> <p>24 A. Correct.</p> <p>25 Q. And that case involved significant</p>	<p>Page 197</p> <p>1 BY MR. HONIK:</p> <p>2 Q. So you didn't do that in advance of</p> <p>3 today. And you don't know sitting here if you are</p> <p>4 prohibited or not; right?</p> <p>5 A. I'm not an attorney, but in an abundance</p> <p>6 of caution, I will request that I need to consult</p> <p>7 with counsel in that case before making any</p> <p>8 statements.</p> <p>9 Q. You didn't do that before today, did</p> <p>10 you?</p> <p>11 A. No.</p> <p>12 Q. What did you do in the confidential</p> <p>13 arbitration related to pharmacy claims that you</p> <p>14 listed?</p> <p>15 A. I know that one is confidential because</p> <p>16 I asked the counsel proactively about that case.</p> <p>17 Q. I'm sorry. I'm sorry. You said it's</p> <p>18 not confidential?</p> <p>19 A. I said it is confidential.</p> <p>20 Q. Let me understand your testimony. Did</p> <p>21 you just tell me that before today, you checked</p> <p>22 with counsel on that one?</p> <p>23 A. Yes.</p> <p>24 Q. And you did so in anticipation that you</p> <p>25 might be asked questions about it today?</p>

Page 198

1 A. I did it in anticipation of what could
 2 be disclosed in my report. So if you look at the
 3 exhibit in my report, it's very high level, right?
 4 Would you agree?
 5 Q. I don't know what you're talking about.
 6 What exhibit?
 7 A. Appendix B. I'm sorry.
 8 Q. I'm looking at Appendix B in which you
 9 list --
 10 A. Confidential --
 11 Q. Let me ask the question. Are you
 12 referring to Appendix B in which you list the only
 13 four expert testimonies in the past four years?
 14 A. Yes, and specifically to number two.
 15 Q. Right. And what you're telling me is
 16 that in advance of today, you took the time to
 17 check with counsel in item number two, this
 18 arbitration-related matter, to learn whether or
 19 not it was confidential, and you told me that it
 20 is. Isn't that what you said?
 21 MR. DORNER: Object to the
 22 characterization.
 23 You can answer.
 24 THE WITNESS: Yeah, that
 25 mischaracterizes the statement there. The reason

Page 199

1 I checked with counsel was to get an update on the
 2 status of the case. And, oh, by the way, counsel,
 3 I'm involved with another legal matter. How is
 4 this considered? Is there anything I can state
 5 about this if questioned, and the answer was no.
 6 BY MR. HONIK:
 7 Q. Wait, wait. Let me understand what
 8 you're telling me. The item at number two, the
 9 legal matter there, that's still pending?
 10 A. It's been settled is my understanding.
 11 I haven't seen any documentation, but counsel said
 12 it was settled.
 13 Q. And number three is settled and number
 14 four is settled; right?
 15 A. I do not know about number three. I
 16 don't know the status of that case.
 17 Q. But you told me under oath that you
 18 reached out to the lawyers in matter number two,
 19 the confidential arbitration, to find out the
 20 status, but it was already settled; right?
 21 A. It was in the process of being settled
 22 was what was told to me by counsel.
 23 MR. DORNER: And, again, I have to
 24 instruct don't go on anything that you're not
 25 allowed to say pursuant to confidentiality.

Page 200

1 BY MR. HONIK:
 2 Q. Why didn't you do the same exact thing
 3 for the Loestrin matter and the A&P matter? Why
 4 didn't you call the lawyers there in advance of
 5 today and check on the status and whether you
 6 were, as Mr. Dorner seems to suggest, prohibited
 7 from revealing information to us?
 8 MR. DORNER: Object to form.
 9 Argumentative.
 10 You can answer.
 11 THE WITNESS: It was not part of my
 12 preparation for this case. I mean, you wanted a
 13 listing of the ones I've submitted expert reports.
 14 That's what I provided. It wasn't -- like I said,
 15 it wasn't my point to go and ask these people for
 16 permission or not to testify about it. My
 17 understanding of this process today, you were
 18 going to ask me about my report in this case.
 19 BY MR. HONIK:
 20 Q. Sir, you did tell me that you did call
 21 the lawyers in item number two to find out if it
 22 was subject to confidentiality. That's what you
 23 told me.
 24 And my question is -- let me finish the
 25 question -- why didn't you do the very same thing

Page 201

1 in the two other matters involving McKesson and
 2 Loestrin?
 3 MR. DORNER: Object to form.
 4 Mischaracterizes. Argumentative.
 5 You may answer.
 6 THE WITNESS: I reached out to counsel
 7 to see if I could provide a description of the
 8 case to include in Appendix B. Counsel informed
 9 me, no, we do not want you to provide that
 10 information. It's confidential. So on advice of
 11 counsel, that's what I've done. And number two is
 12 read that way.
 13 BY MR. HONIK:
 14 Q. I understand that completely, Mr. Kosty.
 15 And my question is: Why didn't you do the very
 16 same thing as to item three, the A&P/McKesson
 17 matter, and number four, the Loestrin matter in
 18 which your testimony was sought to be excluded?
 19 Why didn't you check on those two?
 20 MR. DORNER: Same objection plus asked
 21 and answered multiple times.
 22 THE WITNESS: Those cases -- obviously
 23 Loestrin settled. The A&P, I don't know the
 24 status of that case. There was no reason to reach
 25 out for an update. So I didn't.

<p style="text-align: right;">Page 202</p> <p>1 BY MR. HONIK:</p> <p>2 Q. What I'm asking you is why didn't you</p> <p>3 learn in advance of today --</p> <p>4 A. I just answered your question. There</p> <p>5 was no reason.</p> <p>6 Q. Let me finish the question, sir. Let me</p> <p>7 finish.</p> <p>8 Why didn't you do as to the McKesson and</p> <p>9 Loestrin matters the same as you did in the</p> <p>10 arbitration and learn whether you were subject to</p> <p>11 some confidentiality or other privilege obstacle?</p> <p>12 Why didn't you do that?</p> <p>13 MR. DORNER: I have to stop you, but not</p> <p>14 because of an objection. You cut out in the</p> <p>15 middle of your question, Ruben. I'm sorry, but</p> <p>16 could you repeat it?</p> <p>17 MR. HONIK: Ann, did you get it?</p> <p>18 COURT REPORTER: I think I did.</p> <p>19 MR. DORNER: I missed about four words</p> <p>20 in the middle.</p> <p>21 (The following record was read back:</p> <p>22 "Q Why didn't you do as to the</p> <p>23 McKesson and Loestrin matters the same as you</p> <p>24 did in the arbitration and learn whether you</p> <p>25 were subject to some confidentiality or other</p>	<p style="text-align: right;">Page 204</p> <p>1 you did?</p> <p>2 A. I submitted an expert report in the</p> <p>3 case, and no deposition was taken.</p> <p>4 Q. That was a case concerning Actos; right?</p> <p>5 And that was a RICO claim. Do you remember that?</p> <p>6 A. Yes.</p> <p>7 Q. And that was brought by TPPs and end</p> <p>8 users as well; right?</p> <p>9 A. I don't recall the specifics.</p> <p>10 Q. Well, did you prepare a report or submit</p> <p>11 a report, as you state here, on the issues of</p> <p>12 damages and ascertainability?</p> <p>13 A. As previously answered, I will have to</p> <p>14 consult with the counsel for that case before</p> <p>15 answering that question.</p> <p>16 Q. I'm just asking the topics on which</p> <p>17 you --</p> <p>18 A. I'm unwilling to provide those topics to</p> <p>19 you.</p> <p>20 Q. Do you know sitting here what the topics</p> <p>21 are and you're just not going to tell me because</p> <p>22 you might be subject to a confidentiality? Just</p> <p>23 tell me that.</p> <p>24 A. Yes.</p> <p>25 Q. Okay. So you do know the topics that</p>
<p style="text-align: right;">Page 203</p> <p>1 privilege obstacle? Why didn't you do</p> <p>2 that?")</p> <p>3 THE WITNESS: Because I didn't need an</p> <p>4 update on those cases.</p> <p>5 BY MR. HONIK:</p> <p>6 Q. Did you check with the lawyers in the</p> <p>7 Takeda matter about whether you could testify</p> <p>8 about your role in that case?</p> <p>9 A. I did not.</p> <p>10 Q. Do you know whether or not there's any</p> <p>11 prohibition against your revealing what you did in</p> <p>12 that case?</p> <p>13 A. I don't, but I would ask them before</p> <p>14 providing any information on that case.</p> <p>15 Q. And who engaged you in that matter?</p> <p>16 A. That's another case with the Analysis</p> <p>17 Group.</p> <p>18 Q. I didn't quite catch the end of your</p> <p>19 answer.</p> <p>20 A. Who engaged me? The attorneys engaged</p> <p>21 me in that case through the Analysis Group.</p> <p>22 Q. And what work did you do?</p> <p>23 A. I will need to get their approval before</p> <p>24 sharing that information.</p> <p>25 Q. You can't even tell me what kind of work</p>	<p style="text-align: right;">Page 205</p> <p>1 you prepared your report in Takeda; right?</p> <p>2 A. Yes.</p> <p>3 Q. And you do know the subjects of your</p> <p>4 submitted expert report in the arbitration;</p> <p>5 correct?</p> <p>6 A. Yes.</p> <p>7 Q. And you do know the topics in which you</p> <p>8 prepared a report and gave deposition testimony in</p> <p>9 the A&P bankruptcy case; right?</p> <p>10 A. Yes.</p> <p>11 Q. And we've already -- well, perhaps we</p> <p>12 haven't. Can you tell me the subjects of your</p> <p>13 report in Loestrin?</p> <p>14 MR. DORNER: Same instruction with</p> <p>15 respect to confidentiality and privilege.</p> <p>16 THE WITNESS: I'm going to have to</p> <p>17 consult with counsel before answering those</p> <p>18 questions.</p> <p>19 BY MR. HONIK:</p> <p>20 Q. Do you know sitting here today whether</p> <p>21 or not the topics of your expert report in</p> <p>22 Loestrin are the same topics as those on which</p> <p>23 you've given a report in this case?</p> <p>24 MR. DORNER: Same instructions. It's</p> <p>25 just a back door.</p>

Page 206

1 THE WITNESS: Yeah, I'm going to have to
2 ask counsel before disclosing any information.

³ BY MR. HONIK:

4 Q. I'm simply asking if they're the same or
5 different topics.

6 A. I don't recall.

7 Q. You don't recall the topics on which you
8 gave testimony and prepared a report in Loestrin,
9 is that your sworn testimony?

10 MR. DORNER: Same instruction.

11 THE WITNESS: I'm going to have to
12 consult with counsel before answering.

13 BY MR. HONIK:

14 Q. Listen to what I'm asking, Mr. Kosty.
15 Sitting here today, is it your testimony that you
16 do not know in your head, putting aside any
17 confidentiality, that you simply do not know the
18 topics on which you gave testimony and prepared a
19 report in Loestrin?

20 A. I do know the topics, but I don't know
21 the specifics.

22 Q. That's right. And the follow-up and
23 final question is: Are those topics the same or
24 different topics than those in which you wrote in
25 this case?

1 MR. DORNER: Do not answer that question
2 to the extent it requires you to divulge
3 confidential information.

4 MR. HONIK: In what way would that be
5 subject to any confidentiality impediment?

6 MR. DORNER: Mr. Honik, your experts
7 have marked their reports as Restricted

8 Confidential, which means they can be disclosed
9 for other purposes. If Mr. Kosty's report is
10 likewise marked that way in the Loestrin matter, a
11 point which I don't know --

12 MR. HONIK: I don't know what you're
13 talking about.

14 MR. DORNER: I'm answering your
15 question, Mr. Honik.

16 MR. HONIK: I'm only asking if the
17 topics are the same or different. That's the
18 question that's pending.

19 MR. DORNER: Do not answer.

20 BY MR. HONIK:

21 Q. Are the topics in Loestrin the same or
22 different than the ones you wrote on here? That's
23 all. Can you answer that question?

24 MR. DORNER: If he answers yes, then you
25 can back door exactly what was said in Loestrin.

17 A. Yes, I can.

18 O. Can you hear me?

19 A. Loud and clear.

20 Q. Very good, sir. You understand you're
21 still under oath; right?

22 A. Yes.

23 Q. I'd like to focus on your opinions
24 regarding Ms. Craft and what courts call
25 ascertainability. Okay?

<p style="text-align: right;">Page 210</p> <p>1 A. Yes.</p> <p>2 Q. And you understand you offer some</p> <p>3 opinions in this case in that regard; right?</p> <p>4 A. Right.</p> <p>5 Q. And, for instance, if we look at</p> <p>6 paragraph 30 of your report, you summarize your</p> <p>7 opinions with respect to the identification of</p> <p>8 class members; correct?</p> <p>9 A. Let me get there real quick. Paragraph</p> <p>10 30 did you say?</p> <p>11 Q. Let me know when you're there.</p> <p>12 A. Yes. Okay.</p> <p>13 Q. You're there, sir?</p> <p>14 A. I am there.</p> <p>15 Q. Great. And is it correct that this</p> <p>16 paragraph and its subsections is your summary of</p> <p>17 opinions relating to identification of class</p> <p>18 members?</p> <p>19 A. Yes.</p> <p>20 Q. And you have five subparts there, (a)</p> <p>21 through (e); is that right?</p> <p>22 A. That's correct.</p> <p>23 Q. Subpart (a) talks about identifying the</p> <p>24 final TPP payor for prescription drugs; right?</p> <p>25 A. Yes.</p>	<p style="text-align: right;">Page 212</p> <p>1 the proposed medical monitoring classes; correct?</p> <p>2 A. That's correct.</p> <p>3 Q. This critique does not relate to the</p> <p>4 proposed TPP or economic loss consumer classes;</p> <p>5 right?</p> <p>6 A. Correct.</p> <p>7 Q. And then subpart (c), you talk about</p> <p>8 exclusions; correct?</p> <p>9 A. Yes.</p> <p>10 Q. You give the example of state government</p> <p>11 entities; correct?</p> <p>12 A. Correct.</p> <p>13 Q. Which classes does this critique relate</p> <p>14 to?</p> <p>15 A. The TPP class.</p> <p>16 Q. Right. So the paragraph 30(c) relates</p> <p>17 to the proposed TPP class only; right?</p> <p>18 A. Correct.</p> <p>19 Q. And then subpart (d) of paragraph 30</p> <p>20 talks about lot number information and expiration</p> <p>21 date; is that correct?</p> <p>22 A. That's correct.</p> <p>23 Q. And these critiques as set forth in</p> <p>24 paragraph 30(d) relate to the medical monitoring</p> <p>25 class; correct?</p>
<p style="text-align: right;">Page 211</p> <p>1 Q. So this subsection relates to the</p> <p>2 proposed third-party payor or TPP class; correct?</p> <p>3 A. Correct.</p> <p>4 Q. And actually, before we keep going, we</p> <p>5 can agree, can we not, that there's three proposed</p> <p>6 classes here; correct? There's the economic loss</p> <p>7 consumer class, the economic loss TPP class, and</p> <p>8 the medical monitoring class; right?</p> <p>9 A. Yes.</p> <p>10 Q. So we can speak generally about those</p> <p>11 three overarching buckets of proposed classes; is</p> <p>12 that fair?</p> <p>13 A. Thank you.</p> <p>14 Q. So as you said, subpart (a) of your</p> <p>15 paragraph 30 relates to the proposed TPP class;</p> <p>16 correct?</p> <p>17 A. Correct.</p> <p>18 Q. This critique of yours has nothing to do</p> <p>19 with the economic loss consumer class or the</p> <p>20 medical monitoring class; correct?</p> <p>21 A. That's correct.</p> <p>22 Q. The next subpart you have is 30(b);</p> <p>23 right?</p> <p>24 A. Yes.</p> <p>25 Q. And this critique of yours relates to</p>	<p style="text-align: right;">Page 213</p> <p>1 A. Correct.</p> <p>2 Q. And finally your subpart (e) of</p> <p>3 paragraph 30 relates to combining information and</p> <p>4 manual review as you say; right?</p> <p>5 A. That would be associated with the</p> <p>6 patients' economic loss class and the TPPs.</p> <p>7 Q. So paragraph 30(e) reflects the critique</p> <p>8 that relates to which classes?</p> <p>9 A. The TPP class and the consumer class,</p> <p>10 the economic damages.</p> <p>11 Q. Other than it sounds like the combining</p> <p>12 of information in paragraph 30(e), the only</p> <p>13 critiques you have of the economic loss -- strike</p> <p>14 that.</p> <p>15 The only critiques that you have here of</p> <p>16 the economic loss consumer class are those</p> <p>17 reflected in 30(e); right?</p> <p>18 MR. DORNER: Object to form.</p> <p>19 Characterization.</p> <p>20 You can answer.</p> <p>21 THE WITNESS: That's the only one</p> <p>22 reflected in the summary. If you give me a</p> <p>23 minute, I'll go through the detail to see if</p> <p>24 there's any others. There's more detail in my</p> <p>25 report, but I'm sure we'll get there.</p>

<p style="text-align: right;">Page 214</p> <p>1 BY MR. STANOCH:</p> <p>2 Q. Tell me what that is.</p> <p>3 A. It's covered in 88 and 89 paragraphs,</p> <p>4 but I would say that's a summary of those</p> <p>5 paragraphs.</p> <p>6 Q. Got it. So paragraphs 88, 89 again</p> <p>7 relate to the combining of data sources, as you</p> <p>8 say it, which was what paragraph 30(e) summarized;</p> <p>9 right?</p> <p>10 MR. DORNER: Object to the</p> <p>11 characterization.</p> <p>12 You can answer.</p> <p>13 THE WITNESS: Yes.</p> <p>14 BY MR. STANOCH:</p> <p>15 Q. And, look, I'm not trying to trick you,</p> <p>16 Mr. Kosty. I think, correct me if I'm wrong, at</p> <p>17 some point you talk about an exclusion of classes</p> <p>18 about defendants' employees. You recall that in</p> <p>19 your opinions; right?</p> <p>20 A. Yes.</p> <p>21 Q. I'm sorry. I didn't hear you.</p> <p>22 A. I'm sorry. Yes.</p> <p>23 Q. Thank you for that. And would that</p> <p>24 critique apply to all three of the proposed</p> <p>25 classes?</p>	<p style="text-align: right;">Page 216</p> <p>1 you opine on in this case as to the economic loss</p> <p>2 consumer case is combining data as elaborated in</p> <p>3 your report; correct?</p> <p>4 A. Yes.</p> <p>5 MR. DORNER: I'll object to the</p> <p>6 characterization. But keep going, Dave.</p> <p>7 BY MR. STANOCH:</p> <p>8 Q. And number two, the class exclusion</p> <p>9 relating to defendants' employees?</p> <p>10 MR. DORNER: Same objection.</p> <p>11 You can answer.</p> <p>12 THE WITNESS: Yes.</p> <p>13 BY MR. STANOCH:</p> <p>14 Q. Are there any other opinions that you're</p> <p>15 offering as to the economic loss consumer class</p> <p>16 besides those two we just listed?</p> <p>17 MR. DORNER: Same objection.</p> <p>18 You can answer.</p> <p>19 THE WITNESS: No.</p> <p>20 BY MR. STANOCH:</p> <p>21 Q. As to the medical monitoring class,</p> <p>22 again, one of your critiques relates to combining</p> <p>23 data as set forth in your report; right?</p> <p>24 A. Yes.</p> <p>25 Q. And the other is as summarized in</p>
<p style="text-align: right;">Page 215</p> <p>1 A. It would only apply to the consumer</p> <p>2 economic class for the patients specifically. Did</p> <p>3 I answer your question?</p> <p>4 Q. You did. Thanks. So I think after</p> <p>5 going through that, it sounds like there's two</p> <p>6 critiques then that you opine on in this case as</p> <p>7 to the economic loss consumer case. One is about</p> <p>8 combining data as elaborated in your report;</p> <p>9 correct?</p> <p>10 A. Yes.</p> <p>11 Q. And the second is the ability to exclude</p> <p>12 defendants' employees; correct?</p> <p>13 A. In this subsection (e) is what you're</p> <p>14 speaking to specifically; correct? Is there a way</p> <p>15 to turn this up? Can you hear me okay or not?</p> <p>16 Q. Now I can. So maybe if you make sure</p> <p>17 you lean into the mic. So it sounds like you said</p> <p>18 this subsection (e). Is that what you were</p> <p>19 talking about?</p> <p>20 A. Yes. That was my question. Were you</p> <p>21 referring just to this subsection (e)?</p> <p>22 Q. No, sir. I was running through your</p> <p>23 summary of opinions to help frame for our</p> <p>24 questions. And then the question I'll repose to</p> <p>25 you is: It sounds like your two critiques that</p>	<p style="text-align: right;">Page 217</p> <p>1 paragraph 30(b) about levels of exposure; right?</p> <p>2 A. For specific patients, yes.</p> <p>3 Q. And the same issue regarding exclusion</p> <p>4 of defendants' employees; right?</p> <p>5 MR. DORNER: Object to the form.</p> <p>6 But you can answer if you understand.</p> <p>7 THE WITNESS: What section are you</p> <p>8 referring to?</p> <p>9 BY MR. STANOCH:</p> <p>10 Q. I'm just asking you, sir. I'm trying to</p> <p>11 get all of your opinions critiquing the medical</p> <p>12 monitoring class. Then we can go through each of</p> <p>13 them.</p> <p>14 A. You were going through (a), (b). That's</p> <p>15 why I asked the question which one are you</p> <p>16 referring to. So can you repeat that question?</p> <p>17 Q. Sure. Your critique about excluding</p> <p>18 defendants' employees, would that apply to the</p> <p>19 medical monitoring class?</p> <p>20 A. Yes.</p> <p>21 Q. And then are there any other critiques</p> <p>22 of the medical monitoring class besides those</p> <p>23 three that we just listed that you're opining on</p> <p>24 in this case?</p> <p>25 A. Not that I recall.</p>

<p style="text-align: right;">Page 218</p> <p>1 Q. You make reference in paragraph 30 to 2 manual review. Do you see that, sir? 3 A. Yes. 4 Q. You see that; right? 5 A. I do. 6 Q. What do you mean by manual review as you 7 use the phrase in your report? 8 A. You would have to look at specific 9 documents or contact people for additional 10 information that would have to be somehow 11 documented to apply the various inclusions, 12 exclusions in this class. 13 Q. How do you use the phrase manual review 14 as it relates to data? 15 A. I don't believe I talked about that 16 context here, but manual review of data would be 17 the process of matching different data sources. 18 If you have disparate data sources, you have to 19 have a way to link them. 20 Oftentimes that's a manual review, at 21 least initially, so you can determine if you have 22 multiple sources how do they link to each other, 23 if at all, and if they do, then what's the 24 limitations to that linking, or are you happy with 25 the sufficiency of it.</p>	<p style="text-align: right;">Page 220</p> <p>1 particular task that may be necessary to identify 2 class members? 3 A. I do not. That was not part of my 4 assignment to try to cobble these data sources 5 together, no. 6 Q. And putting aside the cobbling together, 7 as you say, it is correct, is it not, that nowhere 8 do you purport to quantify how much manual review 9 would be required for any particular task that may 10 be necessary to identify class members? 11 A. No. I don't quantify the hours that 12 would be required to do these things, no. 13 Q. Do you propose in your report anywhere 14 any methodology for how you would attempt to 15 quantify the amount of manual review necessary to 16 perform any particular task to identify class 17 members? 18 A. That was not my assignment, no. 19 Q. You're familiar with the National 20 Council for Prescription Drug Programs; correct? 21 A. Yes. 22 Q. Can we call that NCPDP today? 23 A. Absolutely. 24 Q. And you understand, of course, that the 25 NCPDP have promulgated certain standards?</p>
<p style="text-align: right;">Page 219</p> <p>1 Q. Does the fact that some data 2 manipulation by a human being mean that it's 3 administratively infeasible to use that data to 4 identify class members? 5 MR. DORNER: Objection. To the extent 6 it calls for a legal conclusion. And 7 mischaracterization. 8 You can answer. 9 THE WITNESS: When you're linking 10 different datasets, you have to have some kind of 11 manual evaluation of those datasets unless it's 12 coming from the same system where you know the 13 database criteria and the keys to those database 14 tables. 15 BY MR. STANOCH: 16 Q. And the fact that you need a human being 17 to do what you just described, does that mean that 18 it's administratively infeasible to use that data 19 to identify class members? 20 MR. DORNER: Repeat objections. 21 You can answer. 22 THE WITNESS: No. 23 BY MR. STANOCH: 24 Q. Do you quantify anywhere in your report 25 how much manual review would be required for any</p>	<p style="text-align: right;">Page 221</p> <p>1 A. Yes. I'm a member of that organization. 2 Q. And what are the NCPDP data standards? 3 A. I don't know all of them in particular, 4 but the one that applies to this case is the D.0 5 telecommunications standard. 6 Q. And do those NCPDP standards relate to 7 the data fields used for communications for 8 adjudicating pharmacy claims? 9 A. Yes. That's the purpose of the 10 standard. 11 Q. Has that standard been in effect since 12 2003? 13 A. I'm trying to recall. I think it was a 14 little bit later than that. But it's the D.0 15 standard. The organization started with 16 Version 1. Once it became a HIPAA named standard, 17 then there was a whole process involved with 18 NCPDP, creating the new standard and, B, it had to 19 get approved through CMS and another committee or 20 two. 21 So it's been very difficult for the 22 industry to update that standard. So it's been in 23 use for a number of years. I'm not sure if it's 24 2003, but late 2000s, 2008 maybe is when it first 25 went into use.</p>

<p style="text-align: right;">Page 222</p> <p>1 Q. That's fair. Would you agree that since 2 approximately 2008, pharmacies have used those 3 NCPDP standards to process pharmaceutical claims? 4 A. Yes. 5 Q. Would you agree that since approximately 6 2008, PBMs have used the NCPDP standards to 7 process pharmaceutical claims? 8 A. Yes. 9 Q. Would you agree that to process 10 pharmaceutical claims, PBMs must be able to map 11 communications from pharmacies to their own claims 12 databases? 13 A. Yes. 14 Q. You don't identify any instance in your 15 report, do you, of where a PBM has not or cannot 16 map communications from pharmacies to their own 17 claims databases for pharmacy claims; right? 18 A. That's correct. 19 Q. Do the NCPDP standards contain a field 20 for NDC code for the drug dispensed by the 21 pharmacy? 22 A. Yes. 23 Q. You understand the NDC code allows 24 identification of the drug manufacturer? 25 A. I do.</p>	<p style="text-align: right;">Page 224</p> <p>1 Q. And do you agree that PBMs maintain 2 personal identifying information for the 3 prescriptions that are dispensed and communicated 4 to them by pharmacies? 5 A. Yes. 6 Q. Do you agree that pharmacies maintain 7 data on the amount paid by a consumer for a drug 8 dispensed? 9 MR. DORNER: Object to form. Vague. 10 You can answer. 11 THE WITNESS: Yes. 12 BY MR. STANOCH: 13 Q. Do you agree that PBMs maintain the 14 amount paid by a consumer for a drug dispensed by 15 a pharmacy that's communicating to that PBM? 16 A. Yes. 17 Q. Do you agree that pharmacies maintain 18 data on which pharmacy dispenses a drug to a 19 consumer? 20 A. Yes. 21 Q. Do you agree that PBMs maintain data on 22 which pharmacy dispenses a drug to a consumer from 23 the communications the PBM receives from the 24 pharmacies? 25 MR. DORNER: Objection to form. Vague.</p>
<p style="text-align: right;">Page 223</p> <p>1 MR. DORNER: I'll object to the 2 characterization. But you can keep going, Dave. 3 THE WITNESS: Let me add a 4 clarification. It identifies a supplier which may 5 be the manufacturer. Supplier, product code and 6 package size is the three components of the NDC. 7 BY MR. STANOCH: 8 Q. You agree that the NDC code identifies a 9 given drug's package size and type; right? 10 A. Yes. 11 Q. And you would agree the NDC number 12 identifies the product's strength, dosage form and 13 formulation? 14 A. Yes. 15 Q. Do you agree that pharmacies maintain 16 data about the drugs they dispense to consumers? 17 A. Yes. 18 Q. Would you agree that PBMs maintain data 19 on the pharmacy claims submitted to them by drugs 20 dispensed by pharmacies? 21 A. Yes. 22 Q. Do you agree that pharmacies maintain 23 personal identifying information for the consumers 24 to whom a prescription is dispensed? 25 A. Yes.</p>	<p style="text-align: right;">Page 225</p> <p>1 You can answer. 2 THE WITNESS: Yes. 3 BY MR. STANOCH: 4 Q. Do you agree that pharmacies maintain 5 the data on when a drug is dispensed to a 6 consumer? 7 A. Yes. 8 Q. Do you agree that PBMs maintain data on 9 when a drug is dispensed to a consumer from the 10 communications the PBM receives from the pharmacy? 11 A. Yes. 12 Q. Do you agree that pharmacies maintain 13 data on the state in which a drug is dispensed to 14 a consumer? 15 A. Yes. 16 Q. Do you agree that PBMs maintain data on 17 the state in which a drug is dispensed to a 18 consumer from the communications the PBM receives 19 from the pharmacy? 20 A. Yes. 21 Q. You do not specifically opine on how 22 long any specific pharmacy or PBM maintains 23 pharmacy claims data, do you? 24 A. Not in my report, no. 25 Q. In your report I believe at paragraph</p>

<p style="text-align: right;">Page 226</p> <p>1 159, you do allude to a Medicare requirement of 2 maintaining records for 10 years; correct? 3 A. Let me get there. But, yes, that's the 4 requirement for Med D programs. 5 Q. Are you familiar from your experience of 6 pharmacies maintaining pharmacy claims data for at 7 least 10 years? 8 MR. DORNER: Object to form. 9 You can answer. 10 THE WITNESS: It's up to the individual 11 pharmacy or pharmacy chain to decide how long they 12 want to keep it. Obviously, Med D is the longest 13 period of time. So like in this case, the 14 defendant retail pharmacies produced data I think 15 that went back to 2013 or so. 16 But anyway, it's up to the individual 17 pharmacy. They could delete data or archive it 18 earlier based on other provisions. But that's an 19 individual business decision of each of those 20 pharmacies. 21 BY MR. STANOCH: 22 Q. You're not offering any opinion in this 23 case, are you, that any specific pharmacy retained 24 pharmacy claims data for less than 10 years, are 25 you?</p>	<p style="text-align: right;">Page 228</p> <p>1 affirmatively deleted any pharmacy claims data; 2 right? 3 A. I have knowledge of that, no. 4 Q. And you have no knowledge about whether 5 any retail pharmacy defendant maintains pharmacy 6 claims data for less than 10 years, do you? 7 A. I don't know. 8 Q. And you didn't even look into that for 9 purposes of your report; correct? 10 A. That is correct. 11 Q. You allude to whether PBMs may store 12 data for certain periods of time in your paragraph 13 159; is that right? 14 A. Are you speaking of the second sentence 15 of that paragraph? 16 Q. Yes, sir. 17 A. Yes. I'm not aware of any legal 18 requirements for PBMs to store commercial claims 19 data for a specified period of time. 20 Q. You're not offering any opinion in this 21 case about how long any PBM retains pharmacy 22 claims data, do you? 23 A. I do not offer that opinion, no. 24 Q. And you don't know sitting here one way 25 or the other, do you, about how long any</p>
<p style="text-align: right;">Page 227</p> <p>1 MR. DORNER: Object to form. Vague. 2 You can answer. 3 THE WITNESS: That's not covered in my 4 report. I don't know what individual pharmacy 5 chains do in that regard. 6 BY MR. STANOCH: 7 Q. You're not offering any opinion in this 8 case about any specific pharmacy deleting any 9 pharmacy claims data, are you? 10 A. I'm not. 11 Q. As part of your opinions in this case, 12 did you review any document retention policies for 13 the retail pharmacy defendants? 14 A. No, I did not. 15 Q. Would you be surprised to know that the 16 produced policies set a record retention for 10 17 years on pharmacy claims? 18 MR. DORNER: Object to the 19 characterization. Lacks foundation. 20 You can answer if you know. 21 THE WITNESS: I would not be surprised 22 due to the Medicare Part D requirements, no. 23 BY MR. STANOCH: 24 Q. You're certainly not offering any 25 opinion that any retail pharmacy defendant</p>	<p style="text-align: right;">Page 229</p> <p>1 particular PBM maintains any pharmacy claims data, 2 do you? 3 A. I don't. 4 Q. And did you look into the document 5 retention policies for any PBM in connection with 6 your opinions in this case? 7 A. I did not. 8 Q. You're not offering any opinion in this 9 case that any PBM affirmatively deleted pharmacy 10 claims data, are you? 11 A. I'm not. 12 Q. Stand by for an exhibit, sir. Are you 13 familiar with entity known as Express Scripts? 14 A. Yes. 15 Q. They're a PBM; correct? 16 MR. DORNER: Object to form. 17 You can answer. 18 THE WITNESS: Yes. I'm trying to -- is 19 the exhibit going to come up here? 20 BY MR. STANOCH: 21 Q. I haven't pulled up an exhibit, sir. 22 A. I thought you were going to reference 23 one. 24 Q. Stand by for the exhibit, but before we 25 get there, you're familiar with Express Scripts;</p>

Page 234

[REDACTED]

Page 236

[REDACTED]

9 BY MR. STANOCH:

10 Q. Are you familiar with the entity known

11 as Navitus?

12 A. Yes.

13 Q. What is Navitus?

14 A. Navitus is a regional PBM.

15 Q. Have you ever done any work with them

16 outside of litigation?

17 A. Yes; many, many years ago.

18 Q. What do you remember doing with Navitus?

19 MR. DORNER: And I'll just caution to

20 the extent any of this is covered by

21 confidentiality designation.

22 THE WITNESS: This one is a long time.

23 We worked with their pharmacy director on various

24 activities to help them run a better pharmacy

25 program in the PBM.

Page 235

[REDACTED]

Page 237

1 BY MR. STANOCH:

2 Q. Navitus is a PBM you said; right?

3 A. Yes.

4 Q. I'm going to mark the next exhibit,

5 Exhibit 9. Stand by.

6 (Kosty Exhibit 9 was marked.)

7 BY MR. STANOCH:

8 Q. Let me know when you can access that

9 document.

10 A. It came up in small format. I was able

11 to figure out how to increase it. Okay. Got it.

12 Q. You see this appears to be a Navitus

13 Record Retention and Record Availability Schedule?

14 A. Yes.

15 Q. Do you see here there's a few paragraphs

16 under Requirements?

17 A. Yes. It leads me to believe -- yeah,

18 the first sentence leads me to believe this

19 applies to the Medicare policy.

20 Q. The sentence reads, "PBMs as first tier

21 and downstream entities must comply with Medicare

22 laws, regulations and CMS instructions," paren,

23 citation, "and agree to audits and inspection by

24 CMS and/or its designees and to cooperate, assist

25 and provide information as requested and maintain

<p style="text-align: right;">Page 238</p> <p>1 records a minimum of 10 years."</p> <p>2 Did I read that right?</p> <p>3 A. Yes.</p> <p>4 Q. Do you have any reason to disagree with</p> <p>5 that statement from Navitus?</p> <p>6 A. Not as it applies to Medicare, no.</p> <p>7 Q. You don't offer any opinion in your</p> <p>8 report whatsoever about whether any pharmacy or</p> <p>9 PBM retains non-Medicare records for less than 10</p> <p>10 years; right?</p> <p>11 MR. DORNER: Object to form.</p> <p>12 You can answer.</p> <p>13 THE WITNESS: I do not.</p> <p>14 BY MR. STANOCH:</p> <p>15 Q. You can put that aside. Back to the</p> <p>16 NCPDP standards, Mr. Kosty, do those standards</p> <p>17 have a field for group number?</p> <p>18 A. Yes.</p> <p>19 Q. Do those standards have a field for</p> <p>20 cardholder ID?</p> <p>21 A. Yes.</p> <p>22 Q. Do those standards have a code for, I</p> <p>23 guess, a person, a person code?</p> <p>24 A. Person code, yes.</p> <p>25 Q. Do those standards have a code for birth</p>	<p style="text-align: right;">Page 240</p> <p>1 Q. And cardholder ID field, sir, what does</p> <p>2 that show?</p> <p>3 A. It's whatever the card issuer designates</p> <p>4 as the cardholder ID.</p> <p>5 Q. That would be the ID that was assigned</p> <p>6 to the particular person who has the card?</p> <p>7 A. Right. Whoever issued the card would</p> <p>8 assign that number, yes.</p> <p>9 Q. And person code, what does that reflect?</p> <p>10 A. Well, person code reflects probably at a</p> <p>11 higher level the relationship of that patient to</p> <p>12 the cardholder. So some systems require a person</p> <p>13 code. Others might have a different ID for each</p> <p>14 member of your family, for example.</p> <p>15 So the person code is typically used</p> <p>16 when there's one ID for the family, and then it</p> <p>17 identifies the individual patient within that</p> <p>18 family who that prescription is being filled for.</p> <p>19 Q. Understood. So hypothetically I could</p> <p>20 have a card where my person code is 1 and my</p> <p>21 spouse's code would be 2?</p> <p>22 A. Correct.</p> <p>23 Q. And that's the purpose of the person</p> <p>24 code field, to differentiate between persons under</p> <p>25 the same plan; right?</p>
<p style="text-align: right;">Page 239</p> <p>1 date?</p> <p>2 A. They have a field for birth date, yes.</p> <p>3 Q. Do those standards have a field for</p> <p>4 name?</p> <p>5 A. Yes.</p> <p>6 Q. Do those standards have a field for</p> <p>7 address?</p> <p>8 A. The patient's address, yes.</p> <p>9 Q. Correct. When we're referring to birth</p> <p>10 date, we're referring to the patient's birth date;</p> <p>11 correct?</p> <p>12 A. Yes.</p> <p>13 Q. And when we're referring to name, that</p> <p>14 would be the patient's name; correct?</p> <p>15 A. Correct.</p> <p>16 Q. And as you said, the address field would</p> <p>17 be the patient's address; correct?</p> <p>18 A. Yes.</p> <p>19 Q. And the group number field would be</p> <p>20 what?</p> <p>21 A. It would be an identifier that tells the</p> <p>22 PBM system as one component how to process the</p> <p>23 claim. So a group number can be anything,</p> <p>24 anything. It's up to the card issuer to determine</p> <p>25 what the group number is.</p>	<p style="text-align: right;">Page 241</p> <p>1 A. No. It would be under the same</p> <p>2 cardholder.</p> <p>3 Q. Correct.</p> <p>4 A. So it may be an employee. So the</p> <p>5 employee has coverage, and if he has family</p> <p>6 coverage or if she has family coverage, then those</p> <p>7 dependents would be listed. In some cases the</p> <p>8 person code is used to identify those people.</p> <p>9 Q. Do you agree that within a single system</p> <p>10 you can follow a particular consumer over time</p> <p>11 using the group number, cardholder ID, person</p> <p>12 code, birth date, name and address fields?</p> <p>13 MR. DORNER: Object to form.</p> <p>14 You can answer.</p> <p>15 THE WITNESS: Maybe. If that person</p> <p>16 stays within the same group for that time period,</p> <p>17 yes, you could track that person. Let's say you</p> <p>18 had a person that moved to a different group.</p> <p>19 Then you wouldn't be able to track them with that</p> <p>20 group number key.</p> <p>21 BY MR. STANOCH:</p> <p>22 Q. Because the group number might change?</p> <p>23 A. Exactly.</p> <p>24 Q. But you would not expect, for</p> <p>25 instance -- strike that.</p>

Page 242	Page 244
<p>1 Do you agree that you can map equivalent 2 data fields from different software packages using 3 the field names used? 4 MR. DORNER: Object to form. 5 You can answer. 6 THE WITNESS: Can you be more specific? 7 The field names used, what specific fields are you 8 talking about? 9 BY MR. STANOCH: 10 Q. Well, let's keep it confined to the six 11 we just identified, group number, cardholder ID, 12 person code, birth date, name and address. 13 A. Can you repeat your question now? 14 Q. Sure. Do you agree that you can map 15 equivalent data fields from different software 16 packages using the six fields we just described? 17 A. For the most part, yes. The only caveat 18 I would have, if it's the same -- well, you would 19 need to know who the PBM was that retained that 20 data because if you had a person, maybe they 21 changed PBMs or their health plan changed PBMs or 22 their employer changed benefits and went to a 23 different PBM. You would not be able to track 24 that across the different PBM systems. 25 But within one PBM system that was</p>	<p>1 ensure that you were looking at the same patient 2 record. 3 BY MR. STANOCH: 4 Q. You agree that PBMs and pharmacies can 5 only transmit data between themselves if the data 6 is understandable by each entity; right? 7 A. Yes. 8 Q. And you agree that PBMs and pharmacies 9 can only transmit data between themselves if the 10 data are stored in each entity's respective 11 system; right? 12 A. Yes. It's got to be stored somewhere to 13 transmit it. 14 Q. Right. When a data transmission from a 15 pharmacy at a point of dispensement goes to a PBM, 16 that data doesn't disappear. Each entity would 17 have a record of the transaction; right? 18 A. That's correct. 19 Q. In fact, if there's any data missing 20 during that communication between the pharmacy and 21 the PBM, can the transaction be completed? 22 A. It depends. We've talked, I think, six 23 key fields here. It depends on the PBM claims 24 processing system, what fields they're requiring 25 to approve a claim and process it. So if they</p>
Page 243	Page 245
<p>1 responsible for that claim you could track it. 2 Q. You could map data from equivalent 3 fields across systems in certain circumstances; 4 correct? 5 MR. DORNER: Object to form. 6 You can answer. 7 THE WITNESS: Yes. In certain 8 circumstances, yes. 9 BY MR. STANOCH: 10 Q. For instance, let's take a field for 11 birth date. Okay? 12 A. Um-hum. 13 Q. If I go to pharmacy one and they have my 14 birth date, then I go to pharmacy two and they 15 have my birth date, those fields, everything else 16 aside, could be mapped; correct? 17 A. That would be one key to the mapping, 18 yes. 19 Q. And the process you would use for the 20 mapping would be similar for other available 21 fields; correct? 22 MR. DORNER: Objection. Form. 23 You can answer. 24 THE WITNESS: Yes. You would try to get 25 as many key fields as possible to be able to</p>	<p>1 only use four of those fields and the other two 2 are blank, it doesn't matter. 3 But if they require all six fields, they 4 would have to have information that could be 5 validated on the PBM side. 6 Q. You're familiar with the term data 7 dictionaries; right? 8 A. Yes. 9 Q. What does that mean to you? 10 A. It's a description of the data 11 attributes of the fields within a system. 12 Q. In laymen's parlance, it's sort of a 13 key, if you will, for what fields or values mean 14 in pharmacy claims data? 15 MR. DORNER: Object to the 16 characterization. 17 You can answer. 18 THE WITNESS: Yes. But organizations 19 may keep other data that's not part of the 20 standard, and that would be included also in their 21 data dictionary, assuming they have good IT 22 hygiene practices. 23 BY MR. STANOCH: 24 Q. In your experience, do PBMs and 25 pharmacies maintain data dictionaries for the</p>

<p>Page 246</p> <p>1 fields and values in their pharmacy claims data?</p> <p>2 A. Somewhere in their IT department, they</p> <p>3 might have a data dictionary. My experiences</p> <p>4 running a PBM is I didn't go to a data dictionary</p> <p>5 every day to look at fields. I knew what they</p> <p>6 meant. So, likely somewhere in the organization</p> <p>7 you could find one.</p> <p>8 Q. For purposes of your opinions in this</p> <p>9 case, you did not undertake to collect any data</p> <p>10 dictionaries from any PBM, pharmacy or other</p> <p>11 entity, did you?</p> <p>12 A. I did not.</p> <p>13 Q. You talk a little bit about potential</p> <p>14 difficulties in merging or matching data across</p> <p>15 different entities, pharmacy claims databases; is</p> <p>16 that right?</p> <p>17 A. Yes.</p> <p>18 Q. For that part of that discussion, you</p> <p>19 cite the Pew Charitable Trust study from 2018;</p> <p>20 right?</p> <p>21 A. Yes.</p> <p>22 Q. And the Pew Charitable Trust study, that</p> <p>23 was not confined to matching just pharmacy or PBM</p> <p>24 data; correct?</p> <p>25 MR. DORNER: Object to form.</p> <p>Page 247</p> <p>1 You can answer.</p> <p>2 THE WITNESS: If I recall correctly, the</p> <p>3 Pew study was looking at records within a health</p> <p>4 plan using their patient management system. So,</p> <p>5 yeah, they indicated there was, I think,</p> <p>6 18 percent duplication of patient records within</p> <p>7 their medical management system and that health</p> <p>8 plan.</p> <p>9 BY MR. STANOCH:</p> <p>10 Q. Right. The Pew Charitable Trust study</p> <p>11 was talking about matching patient medical records</p> <p>12 such as doctor's notes, lab diagnostics and the</p> <p>13 things of that nature; right?</p> <p>14 A. Yes. The same thing happens in pharmacy</p> <p>15 systems where you have to go from -- you could</p> <p>16 create duplicate records within your pharmacy</p> <p>17 system. If you went to a different pharmacy, if</p> <p>18 you were a snow bird and had two addresses, then</p> <p>19 you could potentially create additional records</p> <p>20 for the same patient.</p> <p>21 That's always been a challenge for</p> <p>22 pharmacies because you obviously would want the</p> <p>23 same patient in one record.</p> <p>24 Q. The Pew Charitable Trust was talking</p> <p>25 about medical records. They were not talking</p>	<p>Page 248</p> <p>1 specifically about matching PBM and pharmacy</p> <p>2 claims data; correct?</p> <p>3 A. Yes. That was not the nature of the</p> <p>4 study.</p> <p>5 Q. In fact, I can put it in front of you if</p> <p>6 you like. The Pew charitable Trust study you cite</p> <p>7 does not even mention PBMs, does it?</p> <p>8 A. No.</p> <p>9 Q. And you agree that pharmaceutical claims</p> <p>10 adjudication depends on different data than the</p> <p>11 data being used for the medical claims</p> <p>12 adjudication; right?</p> <p>13 A. Yes. It's specific to pharmacy.</p> <p>14 Q. In looking at your report in paragraph</p> <p>15 158, sir --</p> <p>16 A. Yes.</p> <p>17 Q. -- other than your footnote 298 to the</p> <p>18 Pew Charitable Trust study we're talking about,</p> <p>19 you don't cite any other information or source</p> <p>20 regarding the difficulties with matching records;</p> <p>21 correct?</p> <p>22 MR. DORNER: Object to form.</p> <p>23 You can answer.</p> <p>24 THE WITNESS: I don't cite another</p> <p>25 source, but my experience in the industry has</p> <p>Page 249</p> <p>1 indicated the challenges there are matching across</p> <p>2 these different systems when, for example, a TPP</p> <p>3 may change benefits and use one PBM for a two-year</p> <p>4 period and maybe switch to another PBM. There's</p> <p>5 movement between PBMs. There's movement of</p> <p>6 patients between employers. Perhaps someone got a</p> <p>7 new job.</p> <p>8 The other component that is tricky is</p> <p>9 people get married. They get divorced. They have</p> <p>10 name changes for whatever reason. So all those</p> <p>11 issues make it difficult to track across different</p> <p>12 systems for patient information.</p> <p>13 BY MR. STANOCH:</p> <p>14 Q. You mentioned TPP may switch PBMs. Is</p> <p>15 that what you said?</p> <p>16 A. Yes.</p> <p>17 Q. For instance, a TPP may be using one PBM</p> <p>18 and then it may use a different PBM. Is that what</p> <p>19 you're saying?</p> <p>20 A. Yes. It's an ongoing competition in the</p> <p>21 marketplace to determine what PBM to use and what</p> <p>22 benefits that are offered that are attractive to</p> <p>23 employers.</p> <p>24 Q. And the risk you're opining on in that</p> <p>25 instance is that the TPP may show up twice, once</p>
---	--

Page 250

1 in the first PBM's data and then again in the
 2 second PBM's data; right?
 3 A. Yes. They may be in multiple systems.
 4 They may have new cards issued to their
 5 membership. There's a number of different
 6 components that introduce variability into these
 7 systems.
 8 Q. So that risk there as it comes to
 9 identifying TPPs is that there's twice as many
 10 opportunities to identify that TPP; right?
 11 MR. DORNER: Object to form.
 12 Mischaracterization.
 13 You can answer.
 14 THE WITNESS: Yeah, if it's in the
 15 multiple systems, then you would have many
 16 opportunities, yes.
 17 BY MR. STANOCH:
 18 Q. You mentioned this, I think, a moment
 19 ago. In your experience, have you, in fact,
 20 worked on merging claims data from the two
 21 different entities using NCPDP fields?
 22 A. Yes.
 23 Q. Have you done that for PBMs?
 24 A. Yes.
 25 Q. You were able to merge claims data from

Page 251

1 the two different PBMs for work that you or your
 2 consulting firm was doing?
 3 A. Yeah. We had two projects where we
 4 helped a PBM convert claims processing systems
 5 from one PBM to the other. I think I mentioned in
 6 the report somewhere there's a lot of individual
 7 business decisions that need to be made when you
 8 do claims conversion.
 9 You have to decide how much prescription
 10 data to convert. How are you going to use that
 11 data? You're going to have make sure that you can
 12 map the data into the new system or the successor
 13 claims processing system. Then you got to test
 14 that information to make sure the mapping is
 15 correct, and then you have as much data as
 16 management decided to ingest into the new systems.
 17 That's one of the management decisions,
 18 is how much data do you need and why and why do we
 19 load any more data than is absolutely required.
 20 Typically, it's more of a clinical discussion on
 21 how far back in the patient profile do you want to
 22 look for those clinical edits.
 23 Q. What fields did you use to map the
 24 claims data between the two PBMs that you were
 25 analyzing?

Page 252

1 A. The six fields that you identified are
 2 key fields. Other fields would be the pharmacy.
 3 Those would probably be the majority of them,
 4 unless there were other components, prior
 5 authorizations or clinical edits.
 6 One of the things that when you have to
 7 do these projects, you look at minimizing patient
 8 disruption. So if you're able to convert
 9 information that precludes calling your help desk
 10 or the patient going back to their benefits
 11 office, you try to look at those situations. But
 12 six I think at a minimum you would need, plus the
 13 pharmacy ID.
 14 Q. That would be a pharmacy ID for the
 15 particular pharmacy dispensing a particular drug?
 16 A. Correct.
 17 Q. How about the field for NDC code?
 18 A. Yes.
 19 Q. How about the field for date of service?
 20 A. Yes. That's part of the conversion
 21 process. You look at how long back you have to
 22 use the date of service to make that decision.
 23 Q. Date of service is the date a pharmacy
 24 dispensed a drug to a consumer; right?
 25 A. It's the date they filled the

Page 253

1 prescription. Whether it was dispensed to the
 2 consumer, we don't know, but they sent it through
 3 the claims adjudication process on that date.
 4 Q. Fair enough. Was your
 5 engagement -- strike that.
 6 Which PBMs data were you working on when
 7 you were doing this claims data merger analysis?
 8 A. Catalyst Rx and Systems Excellence at
 9 the time. Those two companies eventually merged
 10 into Catamaran Rx.
 11 Q. You said the letters X -- I'm sorry.
 12 The second one you said, that's also known as SXC;
 13 right?
 14 A. Yeah. The name of the company changed
 15 over the years.
 16 Q. Got it. And you said ultimately
 17 Catalyst Rx and SXC successfully merged into the
 18 PBM known as Catamaran?
 19 A. Correct.
 20 Q. And your work in analyzing the Catalyst
 21 and SXC's PBM claims data was part of the
 22 underlying work that led to that successful
 23 merger; right?
 24 A. Yes. We actually converted Catalyst Rx
 25 from an Argus claims processing system to the SXC

Page 254

1 system.

2 Q. You just faded out. I heard you

3 converted the Catalyst from an Argus claims

4 processing system to a what?

5 A. SXC.

6 Q. So you essentially -- you can use your

7 own words if I'm wrong -- you essentially were

8 able to convert the Catalyst PBM pharmacy claims

9 data to the SXC pharmacy claims data platform?

10 A. Yes.

11 Q. If you can go to paragraph 152 of your

12 report, sir. Let me know when you're there.

13 A. Okay.

14 Q. Here you talk in part about Ms. Craft's

15 report, about the data from the large PBMs and

16 retail pharmacy data in this case could be

17 expected to cover up to 98 percent of class

18 purchases. Do you see that?

19 A. Yes.

20 Q. You don't offer any specific opinion

21 regarding that characterization of that

22 combination to be expected to cover up to

23 98 percent of class purchases of valsartan, do

24 you?

25 A. No. I note that the time and expense

Page 255

1 required to obtain data from all these entities is

2 the issue at hand here.

3 Q. You don't quantify either here in

4 paragraph 152 or anywhere else how much time and

5 expense would be required to do that combination;

6 correct?

7 A. That was not part of my assignment, no.

8 Q. In the next paragraph, again you do not

9 specifically refute Ms. Craft's statement that the

10 top six PBMs processed between 89 to 96 percent of

11 U.S. prescription volume annually between 2015 and

12 2018; correct?

13 A. Correct.

14 MR. DORNER: Object to form.

15 You can keep going.

16 BY MR. STANOCH:

17 Q. Do you agree with Ms. Craft's statement,

18 that the top six PBMs processed between 89 and 96

19 percent of U.S. prescription volume annually

20 between 2015 and 2018?

21 A. Based on the source she provides, yes.

22 There's been consolidation. But as I also note,

23 there's an additional 60 PBMs in the United States

24 that do similar functions.

25 Q. You go on to talk about that in this

Page 256

1 paragraph 153; right?

2 A. Yes.

3 Q. You say, "PBM consolidation over time

4 may make data production review more difficult as

5 information needs to be pulled and combined from

6 multiple claims processing systems, which have

7 different field naming conventions and meaning."

8 Correct?

9 A. Yes.

10 Q. You don't identify which, if any, PBMs

11 have combined over time that may make data

12 production and review more difficult, correct, in

13 this paragraph?

14 [REDACTED]

15 [REDACTED]

16 [REDACTED]

17 [REDACTED]

18 [REDACTED]

19 It's one of those things you have to as

20 a business perspective decide what's the value for

21 me to exert the energy to convert clients to a

22 different claims processing system, or do I wait a

23 period of time until their renewal is up and they

24 renew with the company and then convert them to

25 the new system.

Page 257

1 So there's management decisions made.

2 So you may run systems in parallel. You might

3 have systems that have different versions. So

4 there's a number of components that go into making

5 that management decision on what claims processing

6 system to use or if you use both of them or

7 multiple systems.

8 [REDACTED]

9 [REDACTED]

10 [REDACTED]

11 [REDACTED]

12 [REDACTED]

13 [REDACTED]

14 [REDACTED]

15 Q. You don't identify any other potential

16 examples, do you?

17 A. I did not in this report. There's many

18 examples of PBM acquisition.

19 Q. Well, you understand I'm here to depose

20 you about the confines of your opinions as set

21 forth in your report; right?

22 A. Yes.

23 Q. Your report contains all the opinions

24 you intend to offer at this point in this case?

25 A. Yes.

<p>Page 258</p> <p>1 [REDACTED] 2 [REDACTED] 3 [REDACTED] 4 [REDACTED] 5 [REDACTED] 6 [REDACTED] 7 [REDACTED] 8 [REDACTED] 9 [REDACTED] 10 [REDACTED] 11 [REDACTED] 12 [REDACTED] 13 [REDACTED] 14 [REDACTED] 15 [REDACTED] 16 [REDACTED] 17 [REDACTED] 18 [REDACTED] 19 [REDACTED] 20 [REDACTED] 21 [REDACTED] 22 [REDACTED] 23 [REDACTED] 24 [REDACTED] 25 [REDACTED]</p>	<p>Page 260</p> <p>1 opinion as to subpoenaing claims data from PBMs, 2 are you? 3 MR. DORNER: Object to the form. 4 You can answer if you understand. 5 THE WITNESS: I don't believe so, no. 6 BY MR. STANOCH: 7 Q. You've never been involved in a 8 litigation subpoena to a PBM for pharmacy claims 9 data; is that correct? 10 A. That's not correct, no. 11 Q. You have been involved in that? 12 A. Yes. I have been involved in that, yes. 13 Q. Do you offer any opinions in this case 14 concerning the process for subpoenaing pharmacy 15 claims data from PBMs? 16 A. No, I have not. There's nothing in my 17 report that addresses that issue. 18 Q. So you're not opining, for instance, and 19 I'll remind you you're under oath, sir, on how 20 long the subpoena process may take to obtain 21 pharmacy claims data from a PBM? 22 MR. DORNER: Object to form. Outside 23 the scope. Argumentative. 24 You can answer. 25 THE WITNESS: I'm looking to see where</p>
<p>Page 259</p> <p>1 [REDACTED] 2 [REDACTED] 3 [REDACTED] 4 [REDACTED] 5 [REDACTED] 6 [REDACTED] 7 [REDACTED] 8 [REDACTED] 9 [REDACTED] 10 [REDACTED] 11 [REDACTED] 12 [REDACTED] 13 [REDACTED] 14 [REDACTED] 15 MR. DORNER: Hey, Dave, we're a little 16 over an hour. I don't know where a good place to 17 break is, but when you get there, let's go ahead 18 and take a short one. 19 MR. STANOCH: Sure. We'll go a few more 20 minutes just to round this out, Mr. Dorner, if 21 that's okay with your witness, and then we can 22 take a break, absolutely. 23 MR. DORNER: Sure. 24 BY MR. STANOCH: 25 Q. Mr. Kosty, you're not offering any</p>	<p>Page 261</p> <p>1 they characterize it, but I believe I use the term 2 burdensome. I'm trying to figure out which 3 paragraph that's at. Let me look. 4 BY MR. STANOCH: 5 Q. Well, sir, you said you're not offering 6 any opinion on subpoenaing pharmacy claims data 7 from PBMs; correct? 8 A. Yes. 9 Q. And I'm happy to share my screen, but I 10 can't even find the word subpoena in your report. 11 Would that surprise you? 12 A. No. 13 Q. So again, you're not opining, sir, on 14 how long the subpoena process may take to obtain 15 pharmacy claims data from a PBM, are you? 16 MR. DORNER: Object to form. 17 Characterization. 18 You can answer. 19 THE WITNESS: No. 20 BY MR. STANOCH: 21 Q. You're aware that -- I think we 22 established this -- some of the retail pharmacy 23 defendants in this case have corporate affiliates 24 that are PBMs; right? 25 A. Yes.</p>

<p style="text-align: right;">Page 262</p> <p>1 Q. ESI is one of them; right?</p> <p>2 A. Yes.</p> <p>3 Q. CVS Caremark; right?</p> <p>4 A. Yes.</p> <p>5 Q. OptumRx; right?</p> <p>6 A. Yeah. Their mail service is part of the</p> <p>7 PBM, yes.</p> <p>8 Q. And while they may not be a defendant,</p> <p>9 Humana Pharmacy also has a PBM, a Humana</p> <p>10 affiliate; right?</p> <p>11 A. Yes.</p> <p>12 Q. Did you talk to anyone at any of those</p> <p>13 retail pharmacy defendants about what it would</p> <p>14 take to obtain PBM pharmacy claims data from their</p> <p>15 PBM affiliates?</p> <p>16 MR. DORNER: Object to form.</p> <p>17 MS. KAPKE: Object to form.</p> <p>18 MR. DORNER: Vague.</p> <p>19 You can answer.</p> <p>20 THE WITNESS: No, I did not speak</p> <p>21 directly to any retailers or pharmacy defendants.</p> <p>22 BY MR. STANOCH:</p> <p>23 Q. I'm sorry. Are you done?</p> <p>24 A. Or pharmacy defendants.</p> <p>25 Q. Did you communicate with any retail</p>	<p style="text-align: right;">Page 264</p> <p>1 regarding the process that would be involved to</p> <p>2 obtain PBM claims data from the retail pharmacy</p> <p>3 defendants' PBM affiliates in this case?</p> <p>4 MR. DORNER: Object to form. Vague.</p> <p>5 You can answer.</p> <p>6 THE WITNESS: No.</p> <p>7 MS. KAPKE: I'll join that objection.</p> <p>8 And since you asked the basis of my objection, I</p> <p>9 think his report speaks for itself on what he was</p> <p>10 provided. And with that objection, I'll let him</p> <p>11 go ahead and answer.</p> <p>12 THE WITNESS: No.</p> <p>13 BY MR. STANOCH:</p> <p>14 Q. You opine in paragraph 160 of your</p> <p>15 report, sir -- tell me when you're there. Are you</p> <p>16 on paragraph 160, sir?</p> <p>17 A. Yes.</p> <p>18 Q. Very good. I just want to make sure</p> <p>19 we're on the same page. Here you reference an</p> <p>20 OptumRx declaration; correct?</p> <p>21 A. Yes.</p> <p>22 Q. And you reference claims data that may</p> <p>23 be archived were not as readily accessible as more</p> <p>24 recent claims. Do you see that?</p> <p>25 A. Yes.</p>
<p style="text-align: right;">Page 263</p> <p>1 pharmacy defendant for purposes of preparing your</p> <p>2 opinions in this case?</p> <p>3 MS. KAPKE: Object to form.</p> <p>4 A. No.</p> <p>5 MR. STANOCH: What's the form objection,</p> <p>6 Ms. Kapke?</p> <p>7 MS. KAPKE: You're asking him if he's</p> <p>8 communicated with the defendants, and I frankly</p> <p>9 don't know what you mean by that, if you mean</p> <p>10 counsel or if you mean directly with the</p> <p>11 defendants. If you're talking counsel, he has</p> <p>12 been retained by counsel for the retail pharmacy</p> <p>13 defendants, and those communications are</p> <p>14 privileged.</p> <p>15 I don't understand your question. So</p> <p>16 I'm not going to instruct him further. But if you</p> <p>17 want to clarify what you're talking about, then I</p> <p>18 will make further objections.</p> <p>19 BY MR. STANOCH:</p> <p>20 Q. Mr. Kosty, did you communicate with any</p> <p>21 business personnel at any retail pharmacy</p> <p>22 defendant for purposes of preparing your opinions</p> <p>23 in this case?</p> <p>24 A. No.</p> <p>25 Q. Were you provided any information</p>	<p style="text-align: right;">Page 265</p> <p>1 Q. You never analyzed how long it would</p> <p>2 take any PBM to produce archived claims data, did</p> <p>3 you?</p> <p>4 A. That was not part of my assignment, no.</p> <p>5 Q. You never analyzed how long it would</p> <p>6 take any PBM to produce pharmacy claims data that</p> <p>7 is not as readily accessible, did you?</p> <p>8 A. No. That was not part of my assignment.</p> <p>9 Q. Do you have any understanding about what</p> <p>10 archived data means?</p> <p>11 A. Yes.</p> <p>12 Q. Do you offer any opinions in your report</p> <p>13 as to archived data?</p> <p>14 A. No.</p> <p>15 Q. So you're not opining in this case then</p> <p>16 how long it would take any PBM to produce archived</p> <p>17 pharmacy claims data; correct?</p> <p>18 A. Correct.</p> <p>19 Q. And you're not opining in this case how</p> <p>20 long it would take any PBM to produce pharmacy</p> <p>21 claims data that is not as readily accessible;</p> <p>22 correct?</p> <p>23 A. That is correct.</p> <p>24 Q. Have you ever worked in any litigation</p> <p>25 context to obtain archived data?</p>

Page 266

1 A. Could you explain what you mean by
2 litigation context?
3 Q. Have you ever been retained in any case
4 in which your work included obtaining archived
5 data?
6 A. No.
7 Q. Have you ever been retained in any case
8 in which your work included obtaining not readily
9 accessible data?
10 A. No.
11 Q. Now might be a good time to honor your
12 counsel's request for a break, sir.
13 A. Yes. Let's do that. You said 10
14 minutes?
15 MR. STANOCH: Off the record.
16 THE VIDEOGRAPHER: Off the record 4:04.
17 (Recess from 4:04 p.m. to 4:19 p.m.)
18 THE VIDEOGRAPHER: We are back on the
19 record at 4:19.
20 BY MR. STANOCH:
21 Q. Welcome back, Mr. Kosty. Just yes/no.
22 Did you talk to your counsel during the break?
23 A. Yes.
24 Q. Did you talk to anyone else besides your
25 counsel during the break?

Page 267

1 A. No.
2 Q. Did you communicate via email, text or
3 telephone with anybody during the break?
4 A. No.
5 Q. Did you look at any documents during the
6 break?
7 A. No.
8 Q. You did not conduct any literature
9 review for purposes of quantifying the feasibility
10 of combining claims data from different sources,
11 did you?
12 MR. DORNER: Object to form.
13 You can answer.
14 THE WITNESS: No.
15 BY MR. STANOCH:
16 Q. So you don't know what published
17 literature may exist concerning the feasibility of
18 combining claims data; you don't have any opinions
19 on that in this case?
20 A. I did not research that in the
21 literature, no.
22 Q. Stand by. I'm marking Exhibit 10, sir.
23 It should be in your folder. I'll share my screen
24 as well.
25 (Kosty Exhibit 10 was marked.)

Page 268

1 BY MR. STANOCH:
2 Q. Can you see it?
3 A. I'm bringing it up.
4 Q. Tell me when you're there.
5 A. All right. It's up.
6 Q. This appears to be an article
7 entitled "The Epidemiology of Prescriptions
8 Abandoned at the Pharmacy" from the Annals of
9 Internal Medicine; is that right?
10 A. That is the title of the article, yes.
11 Q. Have you seen this before?
12 A. I have not.
13 Q. If you would scroll down to the second
14 page, sir. Are you there?
15 A. I'm getting there. Just trying to get
16 an understanding what this article is about.
17 Okay.
18 Q. And you see here as part of what the
19 authors of this article did is they said, "...we
20 merged the database from a large retail pharmacy
21 chain with a database from a large pharmacy
22 benefits manager (PBM)."
23 Do you see that?
24 MR. DORNER: I'll object to form just to
25 the extent this is a document several pages in

Page 269

1 length that Mr. Kosty has never seen. So I'll
2 object to the form in that sense.
3 But other than that, you can continue.
4 THE WITNESS: Yeah, so the title is
5 Epidemiology of Prescriptions Abandoned at the
6 Pharmacy. Okay. So that's the intent. What
7 section did you highlight?
8 BY MR. STANOCH:
9 Q. I'll repeat it. Do you see on page 2
10 the authors of this study say, "...we merged the
11 database from a large retail pharmacy chain with a
12 database from a large pharmacy benefits manager
13 (PBM)"?
14 A. Yes. That's what it says.
15 Q. And you see in the right-hand column
16 they state, "Electronic pharmacy data from the
17 retail pharmacy and PBM were matched on pharmacy
18 store number, prescription number, fill date and
19 patient zip code. We successfully matched
20 99.93 percent of retail transactions with pharmacy
21 data."
22 Do you see that?
23 A. You've read that correctly.
24 MR. DORNER: Same objection as my
25 previous.

Page 270

1 BY MR. STANOCH:
2 Q. Do you have any basis to disagree with
3 the authors' statements regarding their
4 99.93 percent match of the pharmacy and PBM
5 pharmacy data that they were working with?
6 MR. DORNER: Same objection with respect
7 to the document and Mr. Kosty's unfamiliarity.
8 THE WITNESS: I would need to read this
9 document to determine the parameters around this
10 matching. If it's within a year, yes, those data
11 are going to be available and that would not
12 surprise me. But I would need to see what context
13 and how long the data matching period was from
14 this article.
15 I don't know if you want to give me a
16 minute to read it and find that information.
17 BY MR. STANOCH:
18 Q. I think it would be fair enough for us
19 to put it aside. But the question would be being
20 here now without reviewing the article more
21 closely, you can't say one way or the other
22 anything about the successful match rate reported
23 in this article?
24 MR. DORNER: Same objections as
25 previous.

Page 271

1 You can answer.
2 THE WITNESS: I would have to study this
3 article and understand the context and what were
4 the motivations of both parties, et cetera, before
5 opining on whether that could be replicated.
6 BY MR. STANOCH:
7 Q. You can put that aside.
8 You can turn to paragraph 156 of your
9 report, sir. Tell me when you're there.
10 A. Yes.
11 Q. And here, among other things, you're
12 talking about what you say are the payor mix at
13 independent pharmacies; right?
14 A. Yes.
15 Q. And then you go on in the next paragraph
16 talking about the prices paid for VCDs may be
17 different for independent pharmacies versus larger
18 chain stores pharmacy; right?
19 A. Yes. Typically, an independent pharmacy
20 is not able to negotiate as favorable
21 reimbursement rates as a large major chain.
22 Q. Does variation in the price paid for a
23 valsartan-containing drug matter in this
24 litigation for purposes of either of the two
25 economic loss classes?

Page 272

1 MR. DORNER: Object to the form to the
2 extent it's outside the scope and/or calls for a
3 legal conclusion.
4 You can answer if you know.
5 THE WITNESS: Yeah, for the TPP class,
6 it would vary on what was paid.
7 BY MR. STANOCH:
8 Q. TPP class membership is based on whether
9 they paid; right?
10 MR. DORNER: I'm sorry. I didn't catch
11 that, Dave. We had a cutout on that. Could you
12 repeat that?
13 BY MR. STANOCH:
14 Q. TPP class membership is based on whether
15 they paid or reimbursed for a drug; right?
16 MR. DORNER: Object to the
17 characterization. Legal conclusion.
18 You can answer.
19 THE WITNESS: Yes.
20 BY MR. STANOCH:
21 Q. TPP class membership does not depend on
22 the dollar amount that was reimbursed for a
23 particular drug; correct?
24 MR. DORNER: Same objection.
25 THE WITNESS: In order to calculate

Page 273

1 damages, you would need to know what that TPP paid
2 for that individual drug.
3 BY MR. STANOCH:
4 Q. We're just talking about
5 ascertainability and identification of class
6 membership now. Okay, sir?
7 A. Okay.
8 Q. And for that purpose, price variation in
9 the amounts paid or reimbursed for
10 valsartan-containing drugs doesn't matter, does
11 it?
12 MR. DORNER: Object to form. Same
13 objection.
14 THE WITNESS: No, it doesn't matter. It
15 just matters if the TPP is self-insured or fully
16 insured.
17 BY MR. STANOCH:
18 Q. If a TPP was ultimately responsible for
19 reimbursing a dollar, it falls within the class as
20 much as a TPP that would have been reimbursing a
21 thousand dollars; right?
22 MR. DORNER: Same objections.
23 You can answer.
24 THE WITNESS: Yes.
25

<p style="text-align: right;">Page 274</p> <p>1 BY MR. STANOCH: 2 Q. We're not in this case trying to 3 construct a but-for world price for valsartan, are 4 we? 5 MR. DORNER: Object to the form. Calls 6 for a legal conclusion. Vague. 7 You can answer if you understand. 8 THE WITNESS: I don't know. 9 BY MR. STANOCH: 10 Q. You're certainly not proffering any 11 opinion on what the price for valsartan-containing 12 drugs should have been in a different hypothetical 13 world, are you? 14 A. No. That was not part of my assignment. 15 Q. You can look at paragraph 161, sir. 16 Tell me when you're there. 17 A. Yes. 18 Q. Here you're talking about obtaining 19 claims data from individual TPPs; correct? 20 A. Yes. 21 Q. You're not opining, sir, that TPPs 22 cannot provide their own data to show how much 23 they ultimately paid for valsartan-containing 24 drugs, are you? 25 MR. DORNER: Object to form.</p>	<p style="text-align: right;">Page 276</p> <p>1 A. No. They could go ask their PBM or TPA, 2 yes. 3 Q. You don't offer any opinion that any TPP 4 class member could not go to its PBM, TPA, ASO to 5 obtain data on how much a given TPP reimbursed for 6 valsartan-containing drugs, are you? 7 MR. DORNER: Object to form. Asked and 8 answered. 9 You can answer. 10 THE WITNESS: I did not. 11 BY MR. STANOCH: 12 Q. You did not analyze how hard it would be 13 for any particular TPP to access their own payment 14 data to provide proof of class membership, did 15 you? 16 A. No. That was not part of my assignment. 17 Q. In fact, the only example you cite in 18 paragraph 161 was plaintiff MADA and it did go to 19 its ASO and PBM to get certain data for its 20 payment for valsartan-containing drugs; right? 21 A. Yes. 22 Q. You don't have any other specific 23 examples about TPPs and whether or not it would be 24 difficult for them or not -- strike that. 25 You don't offer in paragraph 161 or</p>
<p style="text-align: right;">Page 275</p> <p>1 You can answer. 2 THE WITNESS: They may have difficulty 3 getting that information. In this case, MADA had 4 to go to two or three entities to get that 5 information. They were the TPP, so they were able 6 to obtain that information. 7 MR. DORNER: I think the court reporter 8 might have had difficulty. Could you just repeat 9 the last part of your answer, Mr. Kosty? Never 10 mind. 11 BY MR. STANOCH: 12 Q. Sir, you're not opining that TPPs cannot 13 access records themselves showing what they paid 14 for valsartan-containing drugs, are you? 15 A. It's a little bit more complicated than 16 that. If the TPP maintains their own records, 17 then they could access them obviously. But if 18 they don't maintain their own records and they 19 have to go to their PBM or TPA to get that 20 information, then that's what they would need to 21 do. 22 Q. And are you opining that a TPP could not 23 go to its own PBM and TPA to obtain data on how 24 much the TPP reimbursed for valsartan-containing 25 drugs?</p>	<p style="text-align: right;">Page 277</p> <p>1 elsewhere any specific examples of a particular 2 TPP and whether it can or cannot obtain its own 3 reimbursement data, do you? 4 A. I do not. 5 Q. Sir, do you agree that a 6 claims -- strike that. 7 You make discussion in your report 8 throughout about TPAs and ASOs; right? 9 A. Yes. 10 Q. And we can agree TPA means third-party 11 administrator? 12 A. Yes. 13 Q. And ASO means administrative services 14 organization? 15 A. Yes. 16 Q. And I think you may mention once or 17 twice a PSAO. And what's a PSAO? 18 A. PSAO is in context to a group of 19 independent pharmacies, a pharmacy services 20 administrative organization. 21 Q. Do you offer any opinion in your report 22 that PSAOs would not have records of their own 23 pharmacy clients' transactions? 24 A. That was not part of my assignment, so I 25 didn't offer an opinion on that question.</p>

<p style="text-align: right;">Page 278</p> <p>1 Q. You're not offering any opinions, sir, 2 are you, that a TPA or ASO does not have data on 3 their respective clients' drug reimbursements? 4 MR. DORNER: Object to the 5 characterization. 6 You can answer. 7 THE WITNESS: I do not. 8 BY MR. STANOCH: 9 Q. Do you agree that the claims data that a 10 PBM presents to a TPA or ASO must be sufficient to 11 allow the TPA or ASO to bill their respective TPP 12 clients? 13 MR. DORNER: Object to form. 14 You can answer if you understand. 15 THE WITNESS: I understand, yes, in 16 terms of invoicing, perhaps in terms of detail. 17 BY MR. STANOCH: 18 Q. Do you agree that PBM data must be in a 19 format that allows a TPA or ASO to link particular 20 pharmacy claims to their respective self-funded 21 plan clients? 22 A. Could you repeat the question? 23 Q. Sure. Do you agree that PBM -- I'll 24 start over. 25 Do you agree that PBM data must be in a</p>	<p style="text-align: right;">Page 280</p> <p>1 A. Yes. 2 Q. You don't offer any opinion anywhere in 3 your report of any particular TPA or ASO that 4 simply tells a PBM just give us a bill that says 5 pay us X, do you? 6 A. I do not. 7 Q. Do you offer any opinion in your report 8 that any TPA or ASO does not have data to identify 9 its client payors? 10 MR. DORNER: Object to form. 11 You can answer. 12 THE WITNESS: Can you define client 13 payors? 14 BY MR. STANOCH: 15 Q. Sure. How would you define the entities 16 that would retain a TPA or ASO to manage pharmacy 17 benefits? 18 A. It would be the TPA's clients. So 19 you're asking that question with -- 20 Q. Yes. I'll re-ask it. 21 A. Thank you. 22 Q. Do you offer any opinion in your report 23 that any TPA or ASO does not have data to identify 24 its clients? 25 A. No.</p>
<p style="text-align: right;">Page 279</p> <p>1 format that allows a TPA or ASO to link particular 2 pharmacy claims to their respective self-funded 3 plan clients? 4 MR. DORNER: Object to form. Vague. 5 And foundation. 6 You can answer if you understand it. 7 THE WITNESS: Same as the previous 8 answer. Yes and no. It depends on what that TPA 9 requires from the PBM to bill their clients. If 10 they want the claims detail associated with it, 11 then it would be available. If they just want a 12 bill that says pay us X, that would be available, 13 too. 14 BY MR. STANOCH: 15 Q. You don't offer an opinion, do you, sir, 16 in your report as to any TPA or ASO that says just 17 send us a bill; right? 18 MR. DORNER: Object to the 19 characterization. 20 You can answer if you understand. 21 THE WITNESS: I do not. 22 BY MR. STANOCH: 23 Q. You said if you just want a bill that 24 says pay us X, that's a possibility. Is that what 25 you said?</p>	<p style="text-align: right;">Page 281</p> <p>1 Q. You mentioned in your report the 2 potential for an ASO that may contract with 3 another ASO. 4 A. Yes. 5 Q. You don't provide any analysis in your 6 report, do you, about how frequently the layering 7 of ASOs might occur, do you? 8 A. Not in that example, no. 9 Q. You did not analyze whether PBMs and any 10 TPA or ASO name their fields in their respective 11 claims data system differently, did you? 12 MR. DORNER: Object to form. 13 You can answer. 14 THE WITNESS: I did not. 15 BY MR. STANOCH: 16 Q. Would you agree that a PBM needs a PCN 17 number to process a pharmacy claim and route it to 18 the appropriate party? 19 A. No. 20 Q. What is a PCN number? 21 A. It's a processor control number. 22 Q. Did you provide any analysis in your 23 report about whether a PBM needs a PCN number to 24 process a pharmacy claim and route it to the 25 appropriate party?</p>

<p style="text-align: right;">Page 282</p> <p>1 A. I didn't provide an analysis, but I 2 provided an example. Let me find it. It was the 3 OptumRx payor sheet. 4 Q. Other than the OptumRx payor sheet that 5 you cite, did you provide any other examples? 6 A. No. I just provided that one example. 7 Once I get to it, I'll go through it with you. 8 Q. When you get to that page, let me know 9 the page first. That's the question. What page 10 is that? 11 A. That's a good question. That's what I'm 12 looking for. It is page 53 of the report. 13 Q. Are you talking about Figure 2? 14 A. Yes, that's correct. This is a sample 15 of the 2021 OptumRx payor sheet. It explains to 16 the pharmacy how to route a claim to them. And if 17 you look through here, it will tell you who the 18 client is. 19 I know ProAct, as I mentioned in the 20 report, is a PBM with a BIN and processor control 21 number. So the pharmacy needs that BIN and 22 processor control number to route claims for Optum 23 for ProAct PBM. The pharmacy has no idea who 24 ProAct PBM's customers are, nor do they 25 necessarily care. All they care is they can route</p>	<p style="text-align: right;">Page 284</p> <p>1 A. They don't route the claim back to them. 2 They bill them for the services provided. But, 3 yes, they would be able to identify who to bill 4 for those service. 5 Q. And the services we're talking about 6 would be the pharmacy benefit to cover in this 7 case valsartan-containing drugs? 8 A. Correct. 9 Q. And you would expect that to be the same 10 in the instance of MedalistRx; right? 11 A. Yes. 12 Q. Thank you. Let's switch gears a little 13 bit to a discussion about the medical monitoring 14 class, sir. 15 A. Yes. 16 Q. I think your discussion there is on 17 paragraphs 119 and 126 of your report. So why 18 don't you get there and let me know when you're 19 there. 20 A. You said 119? 21 Q. Yes, sir. 22 A. Okay. Thank you. I'm there. 23 Q. Great. And these are your opinions 24 concerning the medical monitoring class 25 specifically; right?</p>
<p style="text-align: right;">Page 283</p> <p>1 the claim, get it processed, approved for payment 2 and service their patient. 3 So in the bottom example here, it's a 4 company named MedalistRx, BIN number 016580, PCN 5 NA. It's not applicable. So this example 6 supports my industry experience that is a PCN 7 number is not required to process a pharmacy 8 claim. It's dependent upon on the claims 9 processing system and what key fields they need to 10 process the claim. 11 If you look at the NCPDP D.0 standard, 12 the PCN is an optional field. 13 Q. Do you agree that in this instance, 14 ProAct would have data to indicate which of its 15 clients it should route a particular claim back 16 to? 17 A. They would be able to bill their client 18 based on the information. If one of their clients 19 is a TPA, they would not necessarily know who that 20 TPA's client is. All they know is their 21 contractual relationship is with the TPA. 22 Q. And the question was: Do you agree that 23 ProAct would have its own data to indicate which 24 of its clients it should route a particular claim 25 back to? The answer to that is yes; right?</p>	<p style="text-align: right;">Page 285</p> <p>1 MR. DORNER: Object to form. 2 You can answer. 3 THE WITNESS: Yes. 4 BY MR. STANOCH: 5 Q. One of the first things you say in 6 paragraph 120 relates to the levels of NDMA or 7 NDEA in VCDs; right? 8 A. Yes. 9 Q. You never analyzed the levels of 10 nitrosamines in any valsartan-containing drug, did 11 you? 12 A. No. 13 Q. You never analyzed the levels of 14 nitrosamine contamination in any valsartan API, 15 did you? 16 A. No. 17 Q. You mentioned Aurobindo here 18 specifically; right? 19 A. Yes, in paragraph 120. 20 Q. Do you have any other specific examples 21 about any other defendants' valsartan-containing 22 drugs that you discuss in the context of the 23 levels of nitrosamines in their 24 valsartan-containing drugs? 25 A. No.</p>

Page 286

1 Q. Did you -- strike that.
 2 You never analyzed whether Aurobindo's
 3 lot level recalls encompassed all product lots
 4 then available on the market, did you?
 5 MR. DORNER: Object to form.
 6 THE WITNESS: No.
 7 BY MR. STANOCH:
 8 Q. Because you make it a point to say, oh,
 9 well, Aurobindo did lot level recalls; right?
 10 A. Yes.
 11 Q. But you don't know whether those lot
 12 level recalls encompassed all products from lots
 13 then available on the market at the time of the
 14 recall, did you?
 15 A. No. I did not have access to the
 16 recalled product that was obtained, no.
 17 Q. You would agree, would you, that if a
 18 lot level recall included all available lots of a
 19 given NDC, then that would effectively mean there
 20 was no product under that NDC remaining on the
 21 market?
 22 MR. DORNER: Object to form. Outside
 23 the scope. Mischaracterizes.
 24 You can answer.
 25 THE WITNESS: Yes. If they recall all

Page 287

1 lots of an NDC number, then the pharmacies would
 2 have removed those from the shelves and the
 3 wholesalers, too.
 4 BY MR. STANOCH:
 5 Q. You don't know if that occurred for
 6 Aurobindo product or not; right?
 7 A. I don't have specific examples of that
 8 occurring or not occurring, no.
 9 Q. And you don't know if that occurred for
 10 any other defendant's valsartan-containing drugs;
 11 right?
 12 A. No. I haven't seen that information.
 13 Q. As a pharmacist, do you agree that
 14 nitrosamines are carcinogenic?
 15 MR. DORNER: Object to form. Outside
 16 the scope.
 17 BY MR. STANOCH:
 18 Q. You can answer.
 19 THE WITNESS: Can I answer?
 20 MR. DORNER: Yes.
 21 THE WITNESS: I didn't know if you were
 22 done. Please repeat the question. I'm sorry.
 23 BY MR. STANOCH:
 24 Q. As a pharmacist, do you agree that
 25 nitrosamines are carcinogenic?

Page 288

1 MR. DORNER: Object to form. Outside
 2 the scope. And mischaracterizes.
 3 THE WITNESS: As a pharmacist, I don't
 4 know. I read some reports in this case both from
 5 the plaintiffs' and the defendants' clinical
 6 experts to get some background. But I haven't
 7 formed an opinion whether it's carcinogenic or
 8 not.
 9 BY MR. STANOCH:
 10 Q. As a pharmacist, do you agree that
 11 nitrosamines are genotoxic?
 12 MR. DORNER: Object to form. Same
 13 objections as my previous.
 14 THE WITNESS: Based on the clinical
 15 experts in this case, that was their contention,
 16 but I haven't independently verified it. But I
 17 assume they're right. So that's their opinion it
 18 is genotoxic.
 19 BY MR. STANOCH:
 20 Q. Were you familiar with nitrosamines from
 21 your work prior to your involvement in this case?
 22 A. Yes, only in regards to how much
 23 nitrosamines one could consume by eating a
 24 cheeseburger topped with applewood bacon and
 25 washing it down with a beer. So I am familiar

Page 289

1 that nitrosamines are available for patients to
 2 consume and they're a naturally occurring
 3 byproduct of cooked meats, smoked meats, a number
 4 of different products that do contain
 5 nitrosamines. So, yes, I was familiar with it.
 6 MR. DORNER: Mark my late objection.
 7 I'm sorry, Dave, to cut you off.
 8 BY MR. STANOCH:
 9 Q. Do you agree that any exposure to a
 10 carcinogenic substance contributes to a cancer
 11 risk?
 12 MR. DORNER: Objection to form. Lacks
 13 foundation. Outside the scope.
 14 THE WITNESS: I don't have one opinion
 15 one way or another. I'm not an epidemiologist. I
 16 don't do those kind of studies, so I don't have an
 17 opinion on it.
 18 BY MR. STANOCH:
 19 Q. You said you heard about nitrosamines
 20 with a bacon burger and a beer; right?
 21 A. Yes.
 22 Q. So as a pharmacist, do you think if that
 23 person having the bacon burger and beer also took
 24 valsartan with nitrosamines, was that valsartan
 25 additive to that person's carcinogenic risk?

Page 290

1 MR. DORNER: Object to form. I'll
2 repeat my previous objections made. Outside the
3 scope. Mischaracterizes.
4 THE WITNESS: I don't have a clinical
5 opinion on that. I don't know.
6 MS. KAPKE: This is Kara for CVS and
7 Rite-Aid. I'm just going to interpose a form
8 objection to the use of "as a pharmacist." I
9 think Mr. Kosty's report reflects his opinion in
10 this case as someone who has worked in the
11 pharmacy industry.
12 But I object to your characterization of
13 his questions starting with "as a pharmacist" when
14 they relate to these opinions that are clearly
15 outside the scope of his report.
16 MR. STANOCH: Ms. Kapke, Mr. Dorner is
17 perfectly capable of lodging objections. I'd
18 appreciate if you confined your objections to a
19 single objector. And I'll also ask him another
20 question then.
21 BY MR. STANOCH:
22 Q. Mr. Kosty, do you think that a person
23 having a bacon burger and a beer who also took
24 valsartan that contained nitrosamines -- was that
25 valsartan additive to that person's carcinogenic

Page 291

1 risk?
2 MR. DORNER: Object to form. Outside
3 the scope. Mischaracterizes. And with respect to
4 the term "as a pharmacist," object to usage of
5 that term.
6 Furthermore, other defendants have a
7 right to object on the record just as we do, and
8 that's what Ms. Kapke is going to do. She's
9 permitted to make those objections just as I am.
10 MR. STANOCH: Mr. Dorner, first of all,
11 you've said all day mischaracterizes. I'm asking
12 him the question, not his testimony. So nothing
13 is being mischaracterized. Number two, I didn't
14 use the phrase "as a pharmacist." So I don't
15 appreciate that objection.
16 BY MR. STANOCH:
17 Q. So I'm going to ask the question again,
18 sir. Mr. Kosty, do you think a person having a
19 bacon burger and a beer who also ingested
20 valsartan that had nitrosamines -- was that
21 valsartan contributive to that person's
22 carcinogenic risk?
23 MR. DORNER: Object to form. Lacks
24 foundation. Outside the scope.
25 You can answer.

Page 292

1 THE WITNESS: I don't know if it
2 increases the carcinogenic risk. I know it
3 increases the amount they consumed, but that's it.
4 BY MR. STANOCH:
5 Q. When did you first remember hearing
6 anything about nitrosamines?
7 A. I don't recall specifically. It was
8 probably related to this case though. Or in the
9 industry we get, gosh, 20, 25 news feeds to inform
10 our consultants and keep up to speed on what's
11 going on in the industry. I'm sure one of those
12 news feeds had a story about this situation.
13 Q. So it's your testimony that you never
14 knew about nitrosamines until you were retained in
15 this litigation?
16 MR. DORNER: Object to form.
17 Mischaracterizes.
18 THE WITNESS: That mischaracterizes. As
19 I mentioned, I'm sure I saw it in one of those
20 news feeds, but I don't recall the specific time
21 or date that might have happened.
22 BY MR. STANOCH:
23 Q. Those are news feeds though about this
24 litigation; right?
25 A. No. They're news feeds about the

Page 293

1 industry. Every member organization typically has
2 a news feed, some annoyingly multiple times a day.
3 I'm sure you get them, too, right. So it at least
4 informs you that there's something that perhaps
5 you need to look at. So it's just a matter of an
6 ongoing process for our consultants to stay up to
7 speed.
8 I'm sure this morning I had 20 of those
9 emails in my in-basket when I woke up.
10 Q. So sometime prior to this litigation,
11 you think you may have had a news feed that
12 discussed something about nitrosamines; fair?
13 A. Fair, yes.
14 Q. You just can't say how much before in
15 time that feed might have made it to your
16 attention?
17 MR. DORNER: Object to form.
18 You can answer.
19 THE WITNESS: I don't know.
20 BY MR. STANOCH:
21 Q. In paragraph 121 you talk about the
22 lifetime cumulative exposure threshold set forth.
23 I'm sorry. It's paragraph 119. You talk about
24 the lifetime cumulative thresholds of NDMA, NDEA
25 exposure for the medical monitoring class; is that

<p style="text-align: right;">Page 294</p> <p>1 right?</p> <p>2 A. That's correct.</p> <p>3 Q. You don't know how the lifetime</p> <p>4 cumulative exposure thresholds were established</p> <p>5 for purposes of the medical monitoring motion for</p> <p>6 class certification, do you?</p> <p>7 A. No. All I have known is what I read.</p> <p>8 It would have been interesting to see some</p> <p>9 information on how this was established, but it</p> <p>10 wasn't in the Complaint.</p> <p>11 Q. You never analyzed the lifetime</p> <p>12 cumulative exposure thresholds set forth in the</p> <p>13 medical monitoring class then; right?</p> <p>14 A. I did not.</p> <p>15 Q. You don't know, for instance, if the</p> <p>16 lifetime cumulative exposure thresholds were based</p> <p>17 on the lowest levels of nitrosamine contamination</p> <p>18 found in any particular valsartan-containing drug,</p> <p>19 do you?</p> <p>20 A. How those levels were established by the</p> <p>21 plaintiffs, I don't know how they did it, so no.</p> <p>22 Q. If the thresholds were based on the</p> <p>23 lowest documented nitrosamine levels, then your</p> <p>24 point about variations of levels you write about</p> <p>25 doesn't matter, does it?</p>	<p style="text-align: right;">Page 296</p> <p>1 analyze the nitrosamine levels any particular</p> <p>2 drug; right?</p> <p>3 A. No.</p> <p>4 Q. Your point is that they may have varied;</p> <p>5 right?</p> <p>6 A. Well, the documentation I've seen, for</p> <p>7 example, the Aurobindo you mentioned, there were</p> <p>8 variations of nitrosamine levels between lot</p> <p>9 numbers, yes.</p> <p>10 Q. If the thresholds were based on the</p> <p>11 lowest documented Aurobindo levels, then that</p> <p>12 would be the most conservative assumption?</p> <p>13 MR. DORNER: Object to form. Lacks</p> <p>14 foundation.</p> <p>15 You can answer.</p> <p>16 THE WITNESS: The assumption there is</p> <p>17 they all had impurities. I don't know if they did</p> <p>18 or not, but there could have been some lot numbers</p> <p>19 that had no detectable impurities. I don't know</p> <p>20 specifically to that level of detail without</p> <p>21 looking at documentation.</p> <p>22 BY MR. STANOCH:</p> <p>23 Q. Assume that all the given defendant</p> <p>24 manufacturers of valsartan had some level of</p> <p>25 nitrosamine in it. Okay?</p>
<p style="text-align: right;">Page 295</p> <p>1 MR. DORNER: Objection. Argumentative.</p> <p>2 Lacks foundation.</p> <p>3 THE WITNESS: No. That's incorrect. It</p> <p>4 does matter. It matters that you're able to</p> <p>5 accurately identify the amount ingested by</p> <p>6 patients over time. And part of my assignment was</p> <p>7 to opine on the ability -- and let me find it for</p> <p>8 you so I can read it.</p> <p>9 "The extent to which available data</p> <p>10 allow for the calculation of the amount of</p> <p>11 impurities to which a patient may have been</p> <p>12 exposed and the extent to which the data are</p> <p>13 available sufficiently to reliably estimate</p> <p>14 damages."</p> <p>15 So it's the amount that the patients</p> <p>16 were exposed to.</p> <p>17 BY MR. STANOCH:</p> <p>18 Q. What are you reading from?</p> <p>19 A. Paragraph 24, my assignment.</p> <p>20 Q. It's a hundred paragraphs earlier. Hold</p> <p>21 on.</p> <p>22 A. I know. So if you go four lines up from</p> <p>23 the bottom once you get there.</p> <p>24 Q. I see it. Thank you. I see it. Your</p> <p>25 point on the levels is that -- again, you didn't</p>	<p style="text-align: right;">Page 297</p> <p>1 A. Okay.</p> <p>2 Q. And if the lowest documented level of</p> <p>3 nitrosamine was used to calculate the thresholds,</p> <p>4 that would be the most conservative assumption?</p> <p>5 MR. DORNER: Object to form. Lacks</p> <p>6 foundation.</p> <p>7 You can answer.</p> <p>8 THE WITNESS: Yes. As a hypothetical,</p> <p>9 yes.</p> <p>10 BY MR. STANOCH:</p> <p>11 Q. Another opinion you have about the</p> <p>12 medical monitoring class is about actual</p> <p>13 consumption. You talk about that in paragraph</p> <p>14 122; is that right?</p> <p>15 A. Yes. That's correct. This is an area</p> <p>16 that the pharmacy industry has focused on for</p> <p>17 years to try to get patients that -- just because</p> <p>18 a prescription was dispensed to a patient doesn't</p> <p>19 mean they take the medication as prescribed.</p> <p>20 So this illustrates a study for</p> <p>21 hypertensive patients. I believe it was about</p> <p>22 70 percent of the medication that was dispensed</p> <p>23 was actually consumed in this study.</p> <p>24 Q. You're talking about the study</p> <p>25 referenced in your footnote 219, Chang, et al.?</p>

<p>Page 298</p> <p>1 A. Correct.</p> <p>2 Q. We'll mark that as the next exhibit,</p> <p>3 Exhibit 11.</p> <p>4 (Kosty Exhibit 11 was marked.)</p> <p>5 BY MR. STANOCH:</p> <p>6 Q. Tell me when you can see it, sir. I'm</p> <p>7 also sharing it.</p> <p>8 A. Okay.</p> <p>9 Q. Do you have it in front of you now, sir?</p> <p>10 A. I do.</p> <p>11 Q. And before we get into it, this is the</p> <p>12 only study that you cite specifically for your</p> <p>13 opinion in paragraph 122; right?</p> <p>14 A. That's correct.</p> <p>15 Q. Again, your opinion there is talking</p> <p>16 about actual consumption, which I take to mean</p> <p>17 someone who filled the prescription, if they</p> <p>18 actually ingested the pill; right?</p> <p>19 A. Correct.</p> <p>20 Q. You would call it nonadherence if</p> <p>21 somebody filled the script and then didn't take</p> <p>22 all of that script; right?</p> <p>23 A. Correct.</p> <p>24 Q. That's not the same type of nonadherence</p> <p>25 that the Chang article is talking about, is it?</p>	<p>Page 300</p> <p>1 the section called Calculation of Nonadherence and</p> <p>2 Prescription Fill Characteristics. Do you see</p> <p>3 that?</p> <p>4 A. What page are you on there?</p> <p>5 Q. This would be page 137.</p> <p>6 A. Okay.</p> <p>7 Q. Do you see the article writes there,</p> <p>8 "Medication nonadherence was calculated using the</p> <p>9 proportion of days covered algorithm." Is that</p> <p>10 right?</p> <p>11 A. Yes.</p> <p>12 Q. It continues, "Proportion of days</p> <p>13 covered represents the proportion of days an</p> <p>14 individual had prescription medication available</p> <p>15 from the index prescription fill date until their</p> <p>16 death or the study end date, December 31, 2015."</p> <p>17 Do you see that?</p> <p>18 A. Yes.</p> <p>19 Q. Then it continues, "Nonadherence was</p> <p>20 defined as the proportion of days covered less</p> <p>21 than 80 percent which aligns with current</p> <p>22 standards." Right?</p> <p>23 A. Yes.</p> <p>24 Q. So this article is talking about</p> <p>25 nonadherence in terms of days in which a</p>
<p>Page 299</p> <p>1 A. I'm going to have to refamiliarize</p> <p>2 myself with this article, so give me a minute.</p> <p>3 Q. While you're doing that, I'll ask a</p> <p>4 different question, sir.</p> <p>5 MR. DORNER: Then I'll move to strike</p> <p>6 the pending question.</p> <p>7 MR. STANOCH: Hold on, Mr. Dorner.</p> <p>8 Relax. I don't need a smirk either.</p> <p>9 MR. DORNER: Are you withdrawing your</p> <p>10 question?</p> <p>11 MR. STANOCH: Withdraw the prior</p> <p>12 question. I will withdraw the prior question,</p> <p>13 Mr. Dorner.</p> <p>14 MR. DORNER: Thanks.</p> <p>15 BY MR. STANOCH:</p> <p>16 Q. Mr. Kosty, have you seen this article</p> <p>17 before today?</p> <p>18 A. Yes.</p> <p>19 Q. You read it before?</p> <p>20 A. Yes.</p> <p>21 Q. When is the last time you read it?</p> <p>22 A. I looked at an excerpt of it preparing</p> <p>23 for this deposition, or a highlighted. I don't</p> <p>24 recall offhand.</p> <p>25 Q. I'm going to direct your attention to</p>	<p>Page 301</p> <p>1 prescription was in existence for a particular</p> <p>2 drug; right?</p> <p>3 A. Yes.</p> <p>4 Q. This article is not talking about</p> <p>5 nonadherence in terms of whether a particular</p> <p>6 patient actually ingested any pill that they got</p> <p>7 from a dispensed product; right?</p> <p>8 MR. DORNER: Object to the</p> <p>9 characterization of the document.</p> <p>10 You can answer.</p> <p>11 THE WITNESS: Where are you reading that</p> <p>12 from, counselor?</p> <p>13 BY MR. STANOCH:</p> <p>14 Q. I'm asking. We established here that</p> <p>15 nonadherence, as this article defines it, means</p> <p>16 days in which a prescription was not available to</p> <p>17 cover those dates; right?</p> <p>18 A. Yeah. Proportion of days covered</p> <p>19 measures the prescription available to a patient</p> <p>20 that hasn't been taken.</p> <p>21 Q. Right. So, for instance, if someone got</p> <p>22 a 30-day prescription, stopped for 30 days and</p> <p>23 then got another prescription for the next 30</p> <p>24 days, in that 90-day period, days covered would be</p> <p>25 60 out of 90; right?</p>

Page 302	Page 304
<p>1 A. Correct.</p> <p>2 Q. And nonadherence in that instance for</p> <p>3 how this articles defines nonadherence would be 30</p> <p>4 days out of that 90-day period; right?</p> <p>5 A. In that example, yes.</p> <p>6 Q. So that type of nonadherence is</p> <p>7 different than what you're talking about in terms</p> <p>8 of whether someone actually ingests the pills in a</p> <p>9 prescription bottle they get from a pharmacy;</p> <p>10 right?</p> <p>11 A. Right. But let's go back to the metric.</p> <p>12 This metric doesn't measure whether patients have</p> <p>13 taken that medication or not. All we know in your</p> <p>14 example there's a prescription that was refilled</p> <p>15 twice in the 90-day period. And for 30 days we're</p> <p>16 assuming they didn't take that medication, right.</p> <p>17 But we don't know. We don't know if they had a</p> <p>18 supplier medication, that they took those or they</p> <p>19 didn't take it.</p> <p>20 So this is the measurement that's used</p> <p>21 in the industry to calculate nonadherence and</p> <p>22 determine in this example that the patient was not</p> <p>23 taking their medication for the 30 days. In fact,</p> <p>24 CMS uses a similar metric for the Medicare Part D</p> <p>25 Star Ratings to measure this rate of adherence.</p>	<p>1 think it's proportion -- but anyway, you have to</p> <p>2 look at how much was available for that patient to</p> <p>3 take. Then you track them longitudinally over</p> <p>4 time to see how much they actually took based on</p> <p>5 the claims data. And then making that use of</p> <p>6 data, that's how you determine the nonadherence</p> <p>7 rate like they did here.</p> <p>8 That's exactly how the industry does it,</p> <p>9 and those are the determinations made on those.</p> <p>10 So when Medicare Part D implemented these Star</p> <p>11 Ratings, all Medicare Part D plans were incented</p> <p>12 to work with patients to try to get their</p> <p>13 adherence rates up. And they got bonuses for</p> <p>14 improving those metrics.</p> <p>15 So one easy way to improve the metric is</p> <p>16 to convert people to mail service, right. So</p> <p>17 instead of having to fill 12 prescriptions per</p> <p>18 year for a maintenance drug, you only need to fill</p> <p>19 four prescriptions a year for the maintenance</p> <p>20 drug. So immediately upon that change, at least</p> <p>21 for the first quarter, you've increased that</p> <p>22 patient's compliance rate because they have that</p> <p>23 90-day supply in their possession.</p> <p>24 Then you would have to look at when they</p> <p>25 got their next refill in my mail service example</p>
Page 303	Page 305
<p>1 So it's a standard measurement in the industry.</p> <p>2 Q. In fact, this article assumes, does it</p> <p>3 not, that a patient took all of the pills for a</p> <p>4 given prescription that he or she received;</p> <p>5 correct?</p> <p>6 MR. DORNER: Object to the</p> <p>7 characterization.</p> <p>8 You can answer if you know.</p> <p>9 THE WITNESS: Yes. That's the only</p> <p>10 assumption you can make, because no one knows. No</p> <p>11 one is at that patient's house watching them</p> <p>12 whether or not they take the medication or not.</p> <p>13 So when you're looking at claims data or pharmacy</p> <p>14 data, those are the things that are implied in</p> <p>15 these calculations.</p> <p>16 BY MR. STANOCH:</p> <p>17 Q. So again, the Chang article's discussion</p> <p>18 of nonadherence relates to days during a given</p> <p>19 period of time where there that was not a</p> <p>20 prescription available for a drug; right?</p> <p>21 MR. DORNER: Object to form.</p> <p>22 THE WITNESS: A prescription was</p> <p>23 available, but the medication was not taken. So</p> <p>24 without getting into the specific calculations of</p> <p>25 percentage of days covered or proportion -- I</p>	<p>1 to determine if they're taking it and ingesting it</p> <p>2 as prescribed by the physician. So, yeah, the</p> <p>3 claims data is all we have to do these</p> <p>4 calculations, and this is the industry standard</p> <p>5 for how to do it.</p> <p>6 BY MR. STANOCH:</p> <p>7 Q. In paragraph 123 you talk about</p> <p>8 combining data records; is that right?</p> <p>9 A. Yes, a consumption record for individual</p> <p>10 consumers.</p> <p>11 Q. You're aware that the retailer pharmacy</p> <p>12 defendants in this case along with Humana Pharmacy</p> <p>13 produced data for individual consumers of</p> <p>14 valsartan prescriptions; right?</p> <p>15 MR. DORNER: Object to form.</p> <p>16 You can answer.</p> <p>17 THE WITNESS: Yes.</p> <p>18 BY MR. STANOCH:</p> <p>19 Q. You performed no analysis, did you, to</p> <p>20 test whether pharmacy data could not be combined</p> <p>21 to track a patient's drug usage across multiple</p> <p>22 pharmacies, did you?</p> <p>23 A. I did not. That was not part of my</p> <p>24 assignment.</p> <p>25 Q. And because you never analyzed that, you</p>

<p>Page 306</p> <p>1 cannot say and do not offer an opinion how long it 2 would take to construct such a record; correct? 3 A. I did not offer that opinion, no. 4 Q. In fact, you never even looked at all 5 the retail pharmacy defendants' data that they 6 produced in this case, did you? 7 MR. DORNER: Object to form. 8 You can answer if you know. 9 THE WITNESS: I did not. 10 BY MR. STANOCH: 11 Q. In your discussion of the medical 12 monitoring class here, you're also presuming that 13 it's going to be necessary to combine pharmacy 14 data in the first place, aren't you? 15 A. That's one of the assumptions, yes. So 16 if you have a patient that goes to Walgreens and 17 then transfers their prescriptions to CVS and then 18 eventually to Rite-Aid, you would have to track 19 those patients across those pharmacies to identify 20 what their cumulative lifetime consumption of 21 those products were. 22 The challenge is how do you track those 23 patients across the different pharmacy datasets. 24 As I indicate in my report, there's no universal 25 patient identifier that allows one to track those</p> <p>Page 307</p> <p>1 patients. So each pharmacy system assigns a 2 unique patient identification number that enables 3 that chain to track the patient. That number is 4 unique to the chain and it doesn't vary -- it does 5 vary between chains. 6 So when you say I'll need to track that 7 patient, well, if they've only gone to Walgreens, 8 you can track that patient. But if they switch 9 pharmacies, maybe they went to an independent 10 pharmacy, then that information would not be even 11 available today based on what data was presented. 12 So, no, you can't track patients across 13 pharmacies in the data to determine the lifetime 14 cumulative threshold. 15 Q. Because you did not look at all at least 16 the retail pharmacies' data they produced in this 17 case, you have no opinion on how frequently it may 18 be that patients switched between pharmacies? 19 A. I didn't do a study of this data, but 20 based on my experience working with pharmacies and 21 pharmacists, it's gotten to be even more frequent 22 now to change pharmacies because people -- for 23 example, if you have after high deductible health 24 plan and your pharmacy benefit -- you have a 25 \$5,000 deductible, that patient knows for the most</p>	<p>Page 308</p> <p>1 part unless I'm on a specialty medication, I'm not 2 going to meet my deductible. 3 So they, in fact, have adopted cash 4 customer behaviors in the marketplace to shop for 5 the lowest prescription. I'm sure if you've 6 watched any TV or listened to the radio or 7 Pandora, GoodRx is advertising everywhere, right. 8 So we can save you money. The GoodRx app requires 9 you to go to the pharmacy of their choice that 10 they've identified as having a lower price. 11 So, yes, there's a tremendous amount of 12 pharmacy shopping. Quite frankly, from a clinical 13 perspective, it's detrimental to the patient 14 because no one pharmacy has all their records. 15 Q. You don't offer any opinion in your 16 report, Mr. Kosty, as to how many patients would 17 satisfy the lifetime cumulative exposure 18 thresholds based solely on a single pharmacy's 19 records, do you? 20 A. No. That was not part of my assignment. 21 Q. And because you didn't even look at all 22 the retail pharmacies' data that they produced in 23 this case, you can't tell us how hard or easy it 24 would be to combine that data, can you? 25 A. No. I haven't looked at those specific</p> <p>Page 309</p> <p>1 datasets. 2 Q. And you don't offer that opinion in your 3 report, do you? 4 A. I don't. 5 Q. On this topic, you mentioned date of 6 birth. Let's say a patient goes to one pharmacy 7 and they record their date of birth, the year, 8 just the last two digits, say birthday January 15, 9 '90. Okay? Are you with me? 10 A. You broke up a little bit. January 15, 11 1990? 12 Q. Correct. But their data only looked at 13 the last two digits. So it would be 011590. Are 14 you with me? 15 A. Okay. 16 Q. Now, let's say that patient goes to 17 another pharmacy, and they have a four digit for 18 the year, right. So the patient's birth date 19 there is 01151990. Okay? 20 A. Okay. 21 Q. Is it your position that it is not 22 administratively feasible to identify that 23 patient's prescriptions in those two pharmacies 24 because some manual review would be necessary to 25 reconcile the year values?</p>
---	---

<p style="text-align: right;">Page 310</p> <p>1 MR. DORNER: Object to form. Incomplete 2 hypothetical. Calls for a legal conclusion. 3 You can answer. 4 THE WITNESS: Yeah, the pharmacies 5 typically do have four-digit year numbers, so that 6 wouldn't be an issue. But if not, you would have 7 to assume, and especially older people, someone is 8 over 85 years old or 80 years old, maybe older 9 than that. You would have to make some 10 assumptions. But you could get a good first pass 11 and then look at exceptions. 12 BY MR. STANOCH: 13 Q. And that's part of sort of the normal 14 data analysis in the field in which you work; 15 right? 16 A. Yeah. It's part of the manual review 17 required. 18 Q. It's your opinion though that that 19 manual review, to reconcile a date of '90 versus 20 1990, would render identification of class members 21 not administratively feasible? 22 MR. DORNER: Object to form. Calls for 23 a legal conclusion. Incomplete hypothetical. 24 But you can answer. 25 THE WITNESS: It mischaracterizes my</p>	<p style="text-align: right;">Page 312</p> <p>1 data sources. What if you have a hundred or 2 hundreds of data sources that have to be combined. 3 So you multiple that exercise by 50 or a 4 hundredfold. And then it does become 5 administratively not feasible to do this. 6 BY MR. STANOCH: 7 Q. You never did that analysis and don't 8 offer an opinion, do you, Mr. Kosty, as to at what 9 point would that analysis become administratively 10 feasible? Do you? 11 MR. DORNER: Same objection. 12 You can answer. 13 THE WITNESS: I did not offer that 14 analysis. Neither did Ms. Craft. 15 BY MR. STANOCH: 16 Q. You talk in paragraphs 137, 139 about 17 the class exclusion for defendants' employees; is 18 that right? 19 A. Yes. 20 Q. And with respect to that exclusion, you 21 list it there in paragraph 137; right? First 22 sentence. 23 A. Yes. 24 Q. And you're quoting Ms. Craft in part 25 where it says, "Defendants and affiliated entities</p>
<p style="text-align: right;">Page 311</p> <p>1 report. The date of birth is one example that 2 you're focused on here. The others are the 3 patient's name, the patient address. Those are 4 the components that are confounding in trying to 5 match up the patient information as well as the 6 identifier within that specific pharmacy system. 7 BY MR. STANOCH: 8 Q. I think we touched on this before, but 9 we'll be clear. You don't offer any opinions in 10 your report, do you, about how much, quote, manual 11 effort would be required to reconcile data in 12 different sources; correct? 13 MR. DORNER: Object to form. Asked and 14 answered. 15 THE WITNESS: That was not my 16 assignment, no. 17 BY MR. STANOCH: 18 Q. And simply because a human being may 19 have to reconcile two sets of data, does that 20 render identification of class members not 21 administratively feasible? 22 MR. DORNER: Object to form. Calls for 23 a legal conclusion. 24 THE WITNESS: Yeah, you've 25 mischaracterized it. You're talking about two</p>	<p style="text-align: right;">Page 313</p> <p>1 and their employees, officers, directors and 2 agents"; right? 3 A. Yes. 4 Q. And the only portion of that exclusion 5 you're focused on is defendants' employees as you 6 state; correct? 7 A. Correct. 8 Q. You're not offering any opinions on 9 whether it would be challenging or not 10 administratively feasible to identify defendants' 11 affiliate entities; right? 12 MR. DORNER: Object to form. Legal 13 conclusion. 14 You can answer. 15 THE WITNESS: Well, it depends on how 16 you define affiliated entities. So in the example 17 in the case today, we have Express Scripts and 18 Cigna are owned by the same entity. I would 19 consider both sets of patients part, or employees, 20 of that entity. 21 BY MR. STANOCH: 22 Q. In terms of -- I'm sorry. Are you done? 23 A. Yeah. I'm just saying a lot of these 24 companies have -- you might say, well, it's 25 Amerisource Bergen, but they might have 30 or 50</p>

<p>Page 314</p> <p>1 subsidiaries that they own and manage under that 2 corporate umbrella. 3 So when I state employees, it would 4 include not only ABC corporate, but all their 5 affiliates and subsidiaries to evaluate. 6 Q. You're not offering any opinion on 7 whether it would be challenging or not to identify 8 a defendant's affiliate entities, are you? 9 A. No. 10 Q. You're focused purely on human beings, 11 not entities; right? 12 A. Correct. 13 Q. Employees; right? 14 A. Employees. 15 MR. DORNER: Object to form. 16 You can answer. 17 BY MR. STANOCH: 18 Q. I don't think you are, but let's make it 19 clear. You're not opining that the defendants in 20 this case do not maintain records of who their 21 employees are, are you? 22 A. No, I'm not. 23 Q. Did you ask any defendant in this case 24 whether they keep records of their employees? 25 A. I did not.</p>	<p>Page 316</p> <p>1 THE WITNESS: I don't know. I would not 2 think so, but I don't know. 3 BY MR. STANOCH: 4 Q. You're not offering that opinion here; 5 right? 6 A. I'm not, no. 7 Q. And you're not offering any opinion on 8 how frequently this same exclusion appears in 9 other class cases, are you? 10 A. No. 11 Q. And the numbers of employees you list in 12 your Table 3, you agree those are numbers you 13 pulled from publicly-available information? 14 A. Yes. 15 Q. And those are numbers concerning the 16 entire United States; right? 17 A. It would be numbers of employees 18 employed by these entities. I have no idea. 19 Assuming if they're global, maybe it's included. 20 I don't know. 21 Q. You understand that the class 22 definitions here encompass less than all 50 states 23 of the country; right? 24 A. Yes. 25 Q. Did you do any analysis whatsoever to</p>
<p>Page 315</p> <p>1 Q. Did anyone provide you any information 2 suggesting any defendant in this case did not keep 3 required records for their employees? 4 A. I did not ask for that information nor 5 ask the question, no. 6 Q. And it's certainly not referenced 7 anywhere in your report any such information; 8 right? 9 A. Correct. 10 Q. You did not look at any defendants' 11 employment records to determine how many employees 12 they may have during the class period; right? 13 A. No. We looked at publicly-available 14 information that's summarized in Table 3. 15 Q. But you didn't look at the defendants' 16 employment records such as W-2s or anything else, 17 did you? 18 A. That was not part of my assignment, no. 19 Q. And you're not opining that any 20 defendant affirmatively deleted records that would 21 show their employees during the class period, are 22 you? 23 MR. DORNER: Object to form. Calls for 24 speculation. 25 You can answer.</p>	<p>Page 317</p> <p>1 try to identify how many employees each defendant 2 had in a given state during the class period? 3 A. No. That was not part of my assignment. 4 Q. Did you do any analysis of how many 5 defendants' employees might have filled 6 prescriptions for at-issue valsartan during the 7 class period? 8 A. No. That was not part of my assignment. 9 Q. Are you offering any opinion on how much 10 effort it would take any defendant to produce its 11 own employee records to identify its employees 12 during the class period? 13 MR. DORNER: Object to form. 14 You can answer. 15 THE WITNESS: No. 16 BY MR. STANOCH: 17 Q. Let's flip back a few pages to around 18 paragraphs 128 to 136. Tell me when you're there, 19 sir. 20 MR. DORNER: Dave, we're at about an 21 hour. So I don't know what a good stopping point 22 is. 23 THE WITNESS: Can we take a quick 24 five-minute break? 25 MR. DORNER: Mr. Kosty has asked for a</p>

<p>Page 318</p> <p>1 quick five.</p> <p>2 MR. STANOCH: Fine. We can go off the</p> <p>3 record. We'll come back at 5:25.</p> <p>4 THE VIDEOGRAPHER: Off the record at</p> <p>5 5:18.</p> <p>6 (Recess from 5:18 p.m. to 5:28 p.m.)</p> <p>7 THE VIDEOGRAPHER: Back on the record at</p> <p>8 5:28.</p> <p>9 MR. DORNER: We're back on.</p> <p>10 MR. STANOCH: Thank you.</p> <p>11 BY MR. STANOCH:</p> <p>12 Q. Welcome back, Mr. Kosty. Other than</p> <p>13 your counsel, did you communicate with anyone else</p> <p>14 during the break?</p> <p>15 A. No.</p> <p>16 Q. Did you look at any documents during the</p> <p>17 break?</p> <p>18 A. No.</p> <p>19 Q. Let's turn to paragraphs 128 to 136 of</p> <p>20 your report, please. Tell me when you're there.</p> <p>21 A. I'm there.</p> <p>22 Q. Wonderful. This is where you talk about</p> <p>23 exclusion of state government entities from the</p> <p>24 TPP class; correct?</p> <p>25 A. Yes.</p>	<p>Page 320</p> <p>1 entity?</p> <p>2 A. Yes.</p> <p>3 Q. You're aware that the Patrolmen's</p> <p>4 Benevolent Association of New York is a city level</p> <p>5 organization?</p> <p>6 MR. DORNER: Object to form.</p> <p>7 Characterization.</p> <p>8 THE WITNESS: Yes.</p> <p>9 BY MR. STANOCH:</p> <p>10 Q. You said "yes"?</p> <p>11 A. Yes. I looked at it one time. I</p> <p>12 couldn't tell you what the city was, but, yes, I</p> <p>13 looked at this.</p> <p>14 Q. It's probably New York City; is that</p> <p>15 fair?</p> <p>16 MR. DORNER: Same objection.</p> <p>17 You can answer.</p> <p>18 THE WITNESS: Yes. I would expect it,</p> <p>19 yes.</p> <p>20 BY MR. STANOCH:</p> <p>21 Q. And as a city, state government entity,</p> <p>22 it's proper, is it not, to include it as Dr. Conti</p> <p>23 did; correct?</p> <p>24 MR. DORNER: Object to form. Calls for</p> <p>25 a legal conclusion.</p>
<p>Page 319</p> <p>1 Q. And you provide certain examples in this</p> <p>2 section; correct?</p> <p>3 A. Yes.</p> <p>4 Q. One of them in paragraph 130 is that of</p> <p>5 the New York State Nurses Association and the</p> <p>6 Patrolmen's Benevolent Association; right?</p> <p>7 A. Correct.</p> <p>8 Q. And you write at the end Dr. Conti</p> <p>9 excluded New York State Nurses Association; right?</p> <p>10 A. Yes.</p> <p>11 Q. You'd agree that exclusion would be</p> <p>12 correct though because that would be a state</p> <p>13 government entity; right?</p> <p>14 MR. DORNER: Objection. Lacks</p> <p>15 foundation.</p> <p>16 You can answer.</p> <p>17 THE WITNESS: Yes. They should be</p> <p>18 excluded.</p> <p>19 BY MR. STANOCH:</p> <p>20 Q. And you say she includes Patrolmen's</p> <p>21 Benevolent Association of New York; right?</p> <p>22 A. Yes.</p> <p>23 Q. And it's your contention that</p> <p>24 Patrolmen's Benevolent Association of New York</p> <p>25 should have been excluded as a state government</p>	<p>Page 321</p> <p>1 You can answer.</p> <p>2 THE WITNESS: As long as it's a</p> <p>3 self-funded plan, yes.</p> <p>4 BY MR. STANOCH:</p> <p>5 Q. Well, the point here is about exclusion</p> <p>6 of state government entities; right?</p> <p>7 A. Yes.</p> <p>8 Q. And city and county governments were not</p> <p>9 part of that; right?</p> <p>10 A. Well, it depends how you define state</p> <p>11 government entities.</p> <p>12 Q. Well, it's defined in the class</p> <p>13 definition for the TPPs. You remember that;</p> <p>14 right?</p> <p>15 A. Okay.</p> <p>16 Q. I'm sorry. What was the answer?</p> <p>17 A. Yes.</p> <p>18 Q. So if the Patrolmen's Benevolent</p> <p>19 Association of New York is a city government</p> <p>20 entity, then it's proper to include it as</p> <p>21 Dr. Conti did; right?</p> <p>22 MR. DORNER: Repeat my objections.</p> <p>23 THE WITNESS: If it's a city-based</p> <p>24 organization.</p> <p>25</p>

<p>Page 322</p> <p>1 BY MR. STANOCH: 2 Q. You didn't offer any analysis that you 3 did here to confirm whether Patrolmen's Benevolent 4 Association of New York is a city government 5 entity that should be included; right? 6 A. I did not. 7 Q. If you jump down to paragraph 132, you 8 talk about Montana; correct? 9 A. Yes. 10 Q. I think you say that Montana considers 11 the Montana University System employees to be 12 state employees; right? 13 A. Yes. 14 Q. And you cite an article from a local 15 Montana paper. 16 A. What footnote are you referring to? 17 Q. I'm looking at footnote 244 in paragraph 18 133, sir. 19 A. Yes. It is from a Montana paper. 20 Q. That article doesn't say anything about 21 the pharmacy benefit plan, does it. 22 A. I would have to refer to that article to 23 answer your question. 24 Q. I'll pull it up. Did you look at that 25 article prior to today?</p> <p>Page 323</p> <p>1 A. Yes. 2 MR. DORNER: Object to form. 3 You can answer. 4 THE WITNESS: Yes. 5 (Kosty Exhibit 12 was marked.) 6 BY MR. STANOCH: 7 Q. Here's Exhibit 12. Let me know when you 8 can access it. I'm sharing my screen as well. Do 9 you see it? 10 A. I'm bringing it up. 11 Q. Do you have it? 12 A. I do have it up. I'm reading through 13 it. Okay. 14 Q. This article is talking about the 15 salaries of certain folks; right? 16 A. At the start of it it does, yes. 17 Q. It doesn't talk anything about the 18 pharmacy benefit plan for any particular 19 employees, does it? Sir? 20 A. I'm sorry. I was looking through it. I 21 do not see that reference, no. 22 Q. There's no discussion about whether the 23 Montana University System's prescription drug plan 24 is self-funded or not, is there? 25 A. There is not.</p>	<p>Page 324</p> <p>1 Q. Did you think to go to anything publicly 2 available from the State of Montana to confirm 3 your assertion that Montana University System is 4 not self-funded? 5 A. I did not. 6 Q. I'm going to mark the next exhibit, 7 Exhibit 13. 8 (Kosty Exhibit 13 was marked.) 9 BY MR. STANOCH: 10 Q. The title page, it reads Montana 11 University System Summary Plan Description 12 Effective July 1, 2021. Do you see that? 13 A. I do. 14 Q. Have you seen this document before? 15 A. No. 16 Q. In the plan funding section, it says, 17 "The Montana University System medical plan, 18 prescription drug plan, dental plans and the 19 vision hardware plans are self-insured, 20 self-funded." 21 Do you see that? 22 MR. DORNER: I'll object to form. This 23 is a document from 2021. It doesn't cover the 24 claim period. I'll further object that this is a 25 112-page document that Mr. Kosty has never before</p> <p>Page 325</p> <p>1 seen. With that noted -- 2 MR. STANOCH: Noted. 3 BY MR. STANOCH: 4 Q. Do you see that you language, Mr. Kosty? 5 A. Yes. 6 Q. That would suggest, would it not, that 7 the prescription drug plan for Montana University 8 System employees is self-funded; right? 9 MR. DORNER: Same objections. 10 THE WITNESS: Yeah, for benefits 11 effective July 1, 2021, yes. 12 BY MR. STANOCH: 13 Q. Right. You didn't go ahead and conduct 14 any analysis to see how easily one could look up 15 your assertion which you cited the newspaper 16 article for that the Montana University System 17 would not be self-funded? 18 MR. DORNER: Objection. Unintelligible 19 question. 20 THE WITNESS: What I would do is go back 21 through the class period from 2012 forward to look 22 at SPD if it was available to make that 23 determination. 24 BY MR. STANOCH: 25 Q. And you didn't do that, did you?</p>
--	--

<p>Page 326</p> <p>1 A. I did not, no.</p> <p>2 Q. And are you aware that Montana maintains</p> <p>3 a publicly-available list of self-insured plans</p> <p>4 that operate within the state?</p> <p>5 A. No.</p> <p>6 Q. You never conducted any analysis of</p> <p>7 whether Montana or any other state maintains</p> <p>8 publicly-available information about self-insured</p> <p>9 plans that operate within their borders, did you?</p> <p>10 A. No. That was not part of my assignment.</p> <p>11 Q. So you can't really say one way or the</p> <p>12 other how burdensome it would be to look up</p> <p>13 publicly-available sources to determine whether</p> <p>14 certain plans are self-funded or not from state</p> <p>15 sources; right?</p> <p>16 A. Well, this is one example of a paper</p> <p>17 document you would have to obtain and review. If</p> <p>18 you had to do that same thing for every</p> <p>19 state-funded employee group, then that could be</p> <p>20 burdensome, if you had to do that for all 50</p> <p>21 states, without looking at those self-funded</p> <p>22 websites and whether you could download</p> <p>23 information that was usable. You would have to go</p> <p>24 through a manual review assuming that's not</p> <p>25 downloadable to do that analysis.</p> <p>Page 327</p> <p>1 But I have not looked at that and would</p> <p>2 need to do that to opine further.</p> <p>3 BY MR. STANOCH:</p> <p>4 Q. You did not contact any state to verify</p> <p>5 any information about the status of their plans as</p> <p>6 self-funded or not, did you?</p> <p>7 A. No. That was not my assignment.</p> <p>8 Q. So you can't quantify for us how much</p> <p>9 time it would take to do that; correct?</p> <p>10 A. That was not my assignment. And in</p> <p>11 Ms. Craft's report, she did not undertake a</p> <p>12 similar exercise to determine how burdensome it</p> <p>13 would be or not, no.</p> <p>14 Q. That's not my question, sir. I'm asking</p> <p>15 what you did.</p> <p>16 Am I correct that you can't quantify for</p> <p>17 us how much time it would take to contact each</p> <p>18 state to determine the status if the plan is</p> <p>19 self-funded or not?</p> <p>20 MR. DORNER: Objection. Asked and</p> <p>21 answered.</p> <p>22 THE WITNESS: I did not undertake that</p> <p>23 analysis, no.</p> <p>24 BY MR. STANOCH:</p> <p>25 Q. So you can't quantify for us how much</p>	<p>Page 328</p> <p>1 time it would take to contact each state to</p> <p>2 determine the status if the plan is self-funded or</p> <p>3 not; right?</p> <p>4 MR. DORNER: Objection for the third</p> <p>5 time. Asked and answered.</p> <p>6 THE WITNESS: No. That was not part of</p> <p>7 my assignment.</p> <p>8 BY MR. STANOCH:</p> <p>9 Q. Sitting here today, could you quantify</p> <p>10 for me how much time it would take to contact each</p> <p>11 state to determine the status if the plan is</p> <p>12 self-funded or not?</p> <p>13 A. That was not part of my assignment. It</p> <p>14 would probably take a tremendous effort to go</p> <p>15 through all 50 states and analyze that.</p> <p>16 Plaintiffs have not done that to indicate their</p> <p>17 analysis of how burdensome this is in order to</p> <p>18 contact 50 states.</p> <p>19 I know from my work in the pharmacy</p> <p>20 industry, working with -- trying to get ahold of</p> <p>21 people at state is very difficult. But I have not</p> <p>22 undertaken that analysis, no.</p> <p>23 Q. You're offering no opinion in this case,</p> <p>24 are you, Mr. Kosty, about how much burden would</p> <p>25 become too much burden for purposes of verifying</p> <p>Page 329</p> <p>1 which plans states consider self-funded or not;</p> <p>2 correct?</p> <p>3 MR. DORNER: Object to form. Vague. To</p> <p>4 the extent it calls for a legal conclusion also.</p> <p>5 You can answer.</p> <p>6 THE WITNESS: No. I did not undertake</p> <p>7 that exercise.</p> <p>8 BY MR. STANOCH:</p> <p>9 Q. Would an hour be burdensome?</p> <p>10 MR. HONIK: Same objections.</p> <p>11 THE WITNESS: No. For all 50 states?</p> <p>12 If you can do that in an hour, no, that would not</p> <p>13 be burdensome.</p> <p>14 BY MR. STANOCH:</p> <p>15 Q. Would five hours be burdensome?</p> <p>16 MR. DORNER: Same objection.</p> <p>17 THE WITNESS: No. Five hours would not</p> <p>18 be burdensome.</p> <p>19 BY MR. STANOCH:</p> <p>20 Q. Would 15 hours be burdensome?</p> <p>21 MR. DORNER: Same objections.</p> <p>22 THE WITNESS: No.</p> <p>23 BY MR. STANOCH:</p> <p>24 Q. Would 25 hours be burdensome?</p> <p>25 A. No, but no one knows sitting here today</p>
---	---

<p style="text-align: right;">Page 330</p> <p>1 how long it would take.</p> <p>2 Q. You can't tell me at what point the</p> <p>3 number of hours it would take to do this exercise</p> <p>4 becomes burdensome, can you?</p> <p>5 MR. DORNER: Same objections as the ones</p> <p>6 I stated two questions ago.</p> <p>7 THE WITNESS: That was not my</p> <p>8 assignment, no.</p> <p>9 BY MR. STANOCH:</p> <p>10 Q. Put that aside, sir. Stand by. Go to</p> <p>11 paragraph 115, sir.</p> <p>12 A. One one five, is that it?</p> <p>13 Q. Yes, sir.</p> <p>14 A. Okay.</p> <p>15 Q. Here you're talking about Ms. Craft and</p> <p>16 Dr. Conti's use of the Xponent data; right?</p> <p>17 A. Yes.</p> <p>18 Q. And you say that Dr. Conti included</p> <p>19 certain payors in her damages calculations; right?</p> <p>20 A. Yes.</p> <p>21 Q. And that Ms. Craft excluded for purposes</p> <p>22 of her counting TPPs some of those same payors in</p> <p>23 the IQVIA data; right?</p> <p>24 A. Yes.</p> <p>25 Q. The data that both Ms. Craft and</p>	<p style="text-align: right;">Page 332</p> <p>1 BY MR. STANOCH:</p> <p>2 Q. We're not talking about who, Mr. Kosty.</p> <p>3 We're talking about the amounts paid for valsartan</p> <p>4 drugs; right?</p> <p>5 A. Well, if you use that logic, then you</p> <p>6 would not have excluded anybody in the IQVIA data,</p> <p>7 right.</p> <p>8 Q. We're indicating here that Dr. Conti</p> <p>9 included payments by third-party entities</p> <p>10 reflected in the third party unspec and all other</p> <p>11 third-party fields; right?</p> <p>12 A. Yes.</p> <p>13 Q. And those fields indicate that there</p> <p>14 were payors who paid for at-issue valsartan during</p> <p>15 the class period; right?</p> <p>16 MR. DORNER: Object to form.</p> <p>17 You can answer.</p> <p>18 THE WITNESS: Based on IQVIA's</p> <p>19 definition, they don't know who paid for them.</p> <p>20 The payment was made, but they don't know who.</p> <p>21 BY MR. STANOCH:</p> <p>22 Q. Payment was paid; correct?</p> <p>23 A. Payment was made by someone.</p> <p>24 Q. Exactly. And, therefore, the fact that</p> <p>25 there was payment for at-issue valsartan is</p>
<p style="text-align: right;">Page 331</p> <p>1 Dr. Conti were looking at, they show that some</p> <p>2 entity paid something for valsartan; right?</p> <p>3 MR. DORNER: Object to form.</p> <p>4 You can answer.</p> <p>5 THE WITNESS: Yeah, third party</p> <p>6 unspecified, yes, there is data that says someone</p> <p>7 paid for it. We just don't know who paid for it.</p> <p>8 BY MR. STANOCH:</p> <p>9 Q. Right. So for Ms. Craft's purpose of</p> <p>10 identifying a particular TPP, it's appropriate to</p> <p>11 not count those folks because you don't know who</p> <p>12 they are particularly; right?</p> <p>13 A. Right. I would not have counted them in</p> <p>14 my analysis for either Craft or Conti.</p> <p>15 Q. For Dr. Conti though, the fact that</p> <p>16 someone paid for the valsartan, that's properly</p> <p>17 included in the damages estimate for the class;</p> <p>18 correct?</p> <p>19 MR. DORNER: Object to form. Outside</p> <p>20 the scope. Calls for a legal conclusion.</p> <p>21 THE WITNESS: I would disagree with</p> <p>22 that. IQVIA that you said earlier is the gold</p> <p>23 standard of pharmacy data doesn't know who these</p> <p>24 payors are. So I don't know how Ms. Conti or</p> <p>25 Dr. Conti can identify who those payors are.</p>	<p style="text-align: right;">Page 333</p> <p>1 pertinent to the total amount of damages paid</p> <p>2 regardless of identity during the class period;</p> <p>3 correct?</p> <p>4 MR. DORNER: Object to form. Lacks</p> <p>5 foundation. Outside the scope. Calls for a legal</p> <p>6 conclusion.</p> <p>7 THE WITNESS: If you would take that</p> <p>8 tact, I don't know how you would apply class</p> <p>9 exclusions to that data.</p> <p>10 BY MR. STANOCH:</p> <p>11 Q. We're not talking about exclusions here.</p> <p>12 You don't talk about that, do you, as to</p> <p>13 Dr. Conti?</p> <p>14 A. No.</p> <p>15 Q. And I think we talked about this this</p> <p>16 morning. You didn't perform any econometric</p> <p>17 analysis of the IQVIA data, did you?</p> <p>18 A. No.</p> <p>19 Q. I'm going to mark another exhibit, sir.</p> <p>20 Stand by.</p> <p>21 (Kosty Exhibit 14 was marked.)</p> <p>22 BY MR. STANOCH:</p> <p>23 Q. Sir, Exhibit 14 is the collection of</p> <p>24 invoices for your and AG's work in this case.</p> <p>25 Tell me when you have that in front of you.</p>

<p>Page 334</p> <p>1 A. Yes, I have it.</p> <p>2 Q. Are there any other invoices that have</p> <p>3 been issued for your and AG's work in this case</p> <p>4 besides those reflected here?</p> <p>5 A. I don't know. I'm not part of the AG</p> <p>6 invoicing process.</p> <p>7 Q. As far as you know, all invoices for</p> <p>8 your and AG's work in this case, have they been</p> <p>9 produced?</p> <p>10 A. Yes.</p> <p>11 Q. And I want to ask you a couple of</p> <p>12 questions here. Just look at that first page, for</p> <p>13 instance. Do you see there's a current billing</p> <p>14 section break-out?</p> <p>15 A. Yes.</p> <p>16 Q. It lists AG professional services at</p> <p>17 59,000 and change. Do you see that?</p> <p>18 A. Yes.</p> <p>19 Q. And it lists expert services at \$8,125;</p> <p>20 right?</p> <p>21 A. Yes.</p> <p>22 Q. Is it correct that expert services</p> <p>23 refers to the amounts billed for your time and AG</p> <p>24 professional services reflects the amounts billed</p> <p>25 for all of the other Analysis Group folks who</p>	<p>Page 335</p> <p>1 worked with you on the report?</p> <p>2 A. Yes. That's my understanding.</p> <p>3 Q. And why is Aurobindo Pharma, Ltd.'s</p> <p>4 share, 16.67 percent, broken out here in this</p> <p>5 invoice?</p> <p>6 MR. DORNER: Object to form. This was</p> <p>7 communicated in our document responses. And,</p> <p>8 furthermore, calls for speculation.</p> <p>9 THE WITNESS: I don't know the</p> <p>10 arrangement between the manufacturers, defense</p> <p>11 counsel in terms of payments. All I see is what</p> <p>12 the portion is listed on this invoice.</p> <p>13 BY MR. STANOCH:</p> <p>14 Q. Do you know why no other defendant is</p> <p>15 listed, broken out as Aurobindo is?</p> <p>16 MR. DORNER: Object to form. Again, I'd</p> <p>17 refer counsel to our document responses which</p> <p>18 explain this. Lacks foundation. Calls for</p> <p>19 speculation.</p> <p>20 MR. STANOCH: I'm trying to establish</p> <p>21 foundation, Mr. Dorner, with the witness.</p> <p>22 BY MR. STANOCH:</p> <p>23 Q. Please answer the question.</p> <p>24 A. It would be my expectation that each</p> <p>25 defendant would be invoiced separately based upon</p>	<p>Page 336</p> <p>1 whatever agreed upon share of the expenses were</p> <p>2 made.</p> <p>3 Q. Are there other invoices that break out</p> <p>4 other defendants' percentages out there?</p> <p>5 MR. DORNER: Object to form. This is</p> <p>6 summed up in our document responses, which are</p> <p>7 already available. Calls for speculation.</p> <p>8 THE WITNESS: I don't know. I don't see</p> <p>9 AG's invoices besides the one that have been</p> <p>10 produced and shown to me here.</p> <p>11 BY MR. STANOCH:</p> <p>12 Q. Did you see invoices before they're</p> <p>13 issued by AG to one or more defendants in this</p> <p>14 case?</p> <p>15 A. No.</p> <p>16 Q. Going back to AG professional services</p> <p>17 and expert services, would it be correct then that</p> <p>18 the total amount billed by you and AG reflected in</p> <p>19 this invoice would be the sum of the 59,000 and</p> <p>20 change and 8,125?</p> <p>21 A. Yes. That's my reading of this invoice.</p> <p>22 Q. Stand by. I'm going to mark the next</p> <p>23 exhibit, Exhibit 15.</p> <p>24 (Kosty Exhibit 15 was marked.)</p> <p>25</p>	<p>Page 337</p> <p>1 BY MR. STANOCH:</p> <p>2 Q. Mr. Kosty, can you see this?</p> <p>3 A. Yes.</p> <p>4 Q. And I quickly tried to put this</p> <p>5 together, and there is a typo for December there.</p> <p>6 But we took the amounts for the Analysis Group</p> <p>7 listed in the invoices, the amounts under expert</p> <p>8 services, and we put them here. Do you see that?</p> <p>9 A. Yes.</p> <p>10 Q. Again, so expert services means the</p> <p>11 amounts billed for your time and the amounts</p> <p>12 listed for Analysis Group is for everybody else;</p> <p>13 correct?</p> <p>14 A. Yes.</p> <p>15 Q. So it would be correct, would it not,</p> <p>16 that the total amounts billed for your work on a</p> <p>17 monthly basis then is the sum for each month on</p> <p>18 the invoices; right?</p> <p>19 A. Yes, based on the one we just looked at.</p> <p>20 Q. So the total amount that you and</p> <p>21 Analysis Group combined have billed through your</p> <p>22 work thus far in this case, assuming the numbers</p> <p>23 are transposed accurately from the invoices, is</p> <p>24 \$644,540.45?</p> <p>25 MR. DORNER: Just objection, "assuming</p>
--	---	--	---

<p style="text-align: right;">Page 338</p> <p>1 that."</p> <p>2 You can answer.</p> <p>3 THE WITNESS: Yes.</p> <p>4 BY MR. STANOCH:</p> <p>5 Q. Have you done any other work in this</p> <p>6 case that's been invoiced that's not reflected in</p> <p>7 the invoices produced or the chart that's in front</p> <p>8 of you?</p> <p>9 A. No, because February's invoice would not</p> <p>10 go out until march.</p> <p>11 Q. Approximately how much time do you think</p> <p>12 you've billed to this matter for the month of</p> <p>13 February thus far?</p> <p>14 A. I don't know. I'd have to run a report</p> <p>15 off of our time tracking system.</p> <p>16 Q. You don't know how much time you spent</p> <p>17 preparing for today's deposition?</p> <p>18 A. I didn't say that. I said I don't know</p> <p>19 the total hours spent this month on this case.</p> <p>20 Q. About how much time do you think you</p> <p>21 spent in total preparing for today's deposition?</p> <p>22 A. Well, this week I met with counsel and I</p> <p>23 reviewed my own report to go through in</p> <p>24 preparation for today. So probably 16 hours this</p> <p>25 week plus today's time.</p>	<p style="text-align: right;">Page 340</p> <p>1 Hold on. Hold on. We object to the constant back</p> <p>2 and forth from attorney to attorney, particularly</p> <p>3 going back to Mr. Honik when he's already had an</p> <p>4 opportunity to ask his questions. This is</p> <p>5 contrary to the court's directive of how inquiry</p> <p>6 should go. Two attorneys I think is fine, but</p> <p>7 going to back and forth like a tennis match is</p> <p>8 unacceptable. So note our objection to this</p> <p>9 practice.</p> <p>10 MR. HONIK: I have no idea what you're</p> <p>11 talking about. Mr. Goldberg who started the</p> <p>12 examination of Dr. Conti a full day later resumed.</p> <p>13 So your objection is ridiculous.</p> <p>14 BY MR. HONIK:</p> <p>15 Q. Mr. Kosty, there's a few more minutes</p> <p>16 that I need with you to cover one area that we had</p> <p>17 yet to cover. You're familiar with the American</p> <p>18 Society of Health System Pharmacists?</p> <p>19 A. Yes.</p> <p>20 Q. Have you ever been a member of that</p> <p>21 organization?</p> <p>22 A. No. Our consulting practice is more</p> <p>23 ambulatory focused and not hospital.</p> <p>24 Q. Nonetheless, you appreciate that they</p> <p>25 prepare guidelines that are relied upon</p>
<p style="text-align: right;">Page 339</p> <p>1 Q. How much time approximately do you think</p> <p>2 the Analysis Group has spent supporting you to</p> <p>3 this point in February?</p> <p>4 MR. DORNER: Object to form. Calls for</p> <p>5 speculation.</p> <p>6 THE WITNESS: I don't know. I don't</p> <p>7 have access to their time tracking system.</p> <p>8 BY MR. STANOCH:</p> <p>9 Q. How many times have you communicated</p> <p>10 with Analysis Group personnel in connection with</p> <p>11 this litigation in the month of February 2022?</p> <p>12 A. I don't know.</p> <p>13 Q. You don't know?</p> <p>14 A. I don't know, no.</p> <p>15 MR. STANOCH: I'm going to -- for the</p> <p>16 record, I'll correct the December typo and change</p> <p>17 the period ending to January 31, 2021 to 2022 in</p> <p>18 the copy of this, which is part of the record.</p> <p>19 I'll take care of this later.</p> <p>20 I believe I'm going to hand the mic.</p> <p>21 back to Mr. Honik at this point.</p> <p>22 RE-EXAMINATION</p> <p>23 BY MR. HONIK:</p> <p>24 Q. Mr. Kosty, we're in the home stretch.</p> <p>25 MR. DORNER: We object. We object.</p>	<p style="text-align: right;">Page 341</p> <p>1 professionally by P&T committees routinely?</p> <p>2 MR. DORNER: Object to form. Lacks</p> <p>3 foundation. Calls for speculation.</p> <p>4 THE WITNESS: Yeah, they're one of many</p> <p>5 organizations that provide guidelines to P&T</p> <p>6 committees.</p> <p>7 BY MR. STANOCH:</p> <p>8 Q. But my question you to is: Do you</p> <p>9 recognize them and their guidelines as</p> <p>10 authoritative and reliable?</p> <p>11 A. For the hospital market.</p> <p>12 Q. I'm sorry. Only for the hospital</p> <p>13 market?</p> <p>14 A. Right, because an ambulatory entity, a</p> <p>15 Medicare Part D plan is not looking at hospital or</p> <p>16 health system-based formularies or P&T committee</p> <p>17 recommendations.</p> <p>18 Q. Let me unpack that a little bit. Is it</p> <p>19 your testimony that some of their guidelines are</p> <p>20 authoritative and reliable and others are not?</p> <p>21 MR. DORNER: Object to the</p> <p>22 characterization.</p> <p>23 THE WITNESS: You mischaracterized my</p> <p>24 statement. My statement was the P&T committees in</p> <p>25 the ambulatory market, Med D, commercial ASHP</p>

<p style="text-align: right;">Page 342</p> <p>1 guidelines may be reviewed, but is not considered 2 authoritative. It's a guideline, as I mentioned. 3 I mentioned in my report AMCP, the 4 Academy of Managed Care Pharmacy, also has 5 guidelines that are more targeted to the 6 ambulatory market, the managed care market, that 7 have P&T committees that work with prescription 8 drug programs. 9 When I look at ASHP, my process is that 10 they're focused on the hospital market. 11 BY MR. HONIK: 12 Q. And do you know whether or not their 13 guidelines speak to health systems? 14 A. I haven't reviewed those guidelines for 15 this case. 16 Q. You haven't reviewed them? 17 A. Not for this, no. 18 Q. Is that right? 19 MR. HONIK: Can we bring up, Dave, the 20 ASHP guideline that I sent you. 21 MR. STANOCH: Stand by. 22 (Kosty Exhibit 16 was marked.) 23 BY MR. HONIK: 24 Q. Mr. Kosty, let me direct your attention 25 to what we're now going to mark Exhibit 16. As</p>	<p style="text-align: right;">Page 344</p> <p>1 important considerations and recommend processes 2 for formulary system management within the context 3 of a hospital or health system." 4 Did I read that right? 5 A. Yes. 6 Q. A little further down in that paragraph 7 it says, "These guidelines also provide assistance 8 to pharmacists in the organization and operation 9 of the pharmacy and therapeutics (P&T) committee 10 or equivalent body..." 11 Did I read that correct? 12 A. You did. 13 MR. DORNER: Objection. The whole 14 sentence wasn't read. I also object to asking 15 questions about a document -- Mr. Honik, please. 16 I also object to use of a document and asking 17 questions when the witness hadn't had a full 18 opportunity to review -- 19 MR. HONIK: Let me ask you a question. 20 Why do you object to the use of this document? 21 MR. DORNER: I didn't object to the use 22 of this document. I object to the use in asking 23 questions before Mr. Kosty has opportunity to 24 review it in full. He's just testified that he 25 may not have ever seen this before, and he's being</p>
<p style="text-align: right;">Page 343</p> <p>1 you can see, it's an ASHP report, and specifically 2 it's Guidelines on the P&T Committee and the 3 Formulary System. Do you see that? 4 A. Yes. 5 Q. Have you seen this before, or aren't you 6 sure? 7 A. I'm trying to increase the size of it. 8 Q. For the record, this is Volume 78, 9 Number 10, May 15, 2021. Do you see that? 10 MR. DORNER: I think the witness is 11 still trying to get the document on his system in 12 the public folder, Mr. Honik. 13 THE WITNESS: Now it came up. 14 BY MR. STANOCH: 15 Q. The question is: Have you seen this 16 before, or aren't you sure? 17 A. I'm not sure. If I have, I don't recall 18 right offhand. 19 Q. So sitting here today under oath, you're 20 not sure and you don't recall; right? 21 A. That's what I just said, yes. 22 Q. Okay. Do you see where it says Purpose, 23 the purpose of the guideline, lower left? 24 A. Yes. 25 Q. It reads, "These guidelines outline</p>	<p style="text-align: right;">Page 345</p> <p>1 presented with it at the end of a long day. 2 MR. HONIK: Uh-huh. His testimony is he 3 hasn't seen this, right? 4 BY MR. HONIK: 5 Q. Is that your testimony, Mr. Kosty? 6 A. That was not my testimony. 7 MR. DORNER: Objection. Asked and 8 answered. 9 THE WITNESS: I don't recall seeing 10 this. I may have. 11 BY MR. HONIK: 12 Q. Well, you agree that the portion that I 13 read to you quickly, because it is the end of the 14 day, which sets out the purpose of this guideline 15 includes not only hospitals, but health systems; 16 right? 17 A. Yes, within the context of a hospital or 18 health system. 19 Q. Or health system. So it refers to P&T 20 committees or their equivalent bodies; correct? 21 MR. DORNER: Object to the 22 characterization. 23 THE WITNESS: Within a hospital or 24 health system. 25</p>

<p>Page 346</p> <p>1 BY MR. HONIK:</p> <p>2 Q. It's not limited to hospitals, is it?</p> <p>3 A. That's what the context says. The</p> <p>4 purpose of the document, management within the</p> <p>5 context of a hospital or a health system. That's</p> <p>6 what it says.</p> <p>7 Q. Take a look at -- let's go ahead to page</p> <p>8 911 of this document, Exhibit 16. Do you see in</p> <p>9 the third column to the right it says Strategies</p> <p>10 For Managing Medication Use?</p> <p>11 A. Yes.</p> <p>12 Q. And it reads, "Common strategies for</p> <p>13 managing medication use via the formulary include</p> <p>14 use of generic drugs..." and then it lists some</p> <p>15 other items. Do you see that?</p> <p>16 A. Yes.</p> <p>17 Q. Then it says Generic drugs. Do you see</p> <p>18 that section?</p> <p>19 A. I do.</p> <p>20 Q. "Optimizing the number of medication</p> <p>21 entities and products available from the pharmacy</p> <p>22 can produce substantial patient care and financial</p> <p>23 benefits. These benefits are greatly increased</p> <p>24 through the use of generic equivalents (drugs</p> <p>25 considered bioequivalent by FDA [i.e., AB-rated</p>	<p>Page 348</p> <p>1 with generic equivalence ratings, is the name of</p> <p>2 that book like it says in footnote 42. So part of</p> <p>3 that compilation is whether these products are</p> <p>4 considered bioequivalent, i.e., AB-rated products.</p> <p>5 So yes.</p> <p>6 BY MR. HONIK:</p> <p>7 Q. And what it's doing as a guideline is</p> <p>8 encouraging reference to the Orange Books for the</p> <p>9 reasons that we've just gone over in this exhibit;</p> <p>10 correct?</p> <p>11 MR. DORNER: Object to form.</p> <p>12 Characterization. Lacks foundation.</p> <p>13 You can answer.</p> <p>14 THE WITNESS: Yeah, I don't know</p> <p>15 specifically because the Orange Book is produced,</p> <p>16 right. But that data is available in other drug</p> <p>17 compendia sources that includes the therapeutic</p> <p>18 equivalence rating, in this case AB.</p> <p>19 BY MR. HONIK:</p> <p>20 Q. Sir, I'm not sure what you're responding</p> <p>21 to. I'm simply asking you if it isn't true that</p> <p>22 this guideline from a society that you told me is</p> <p>23 reliable speaks to the use of the Orange Book to</p> <p>24 rely upon and receive assurance about the use of</p> <p>25 AB-rated generic drug products.</p>
<p>Page 347</p> <p>1 drug products.])" And there's a footnote number</p> <p>2 42.</p> <p>3 Do you see that, sir?</p> <p>4 A. I do see that.</p> <p>5 Q. And you know that relates to the Orange</p> <p>6 Book; does it not?</p> <p>7 MR. DORNER: Object to form. Lacks</p> <p>8 foundation.</p> <p>9 THE WITNESS: The AB rating does reflect</p> <p>10 the Orange Book, yes.</p> <p>11 BY MR. HONIK:</p> <p>12 Q. Do you have the ability to quickly look</p> <p>13 at footnote 42 to satisfy yourself that they are</p> <p>14 specifically referring to the Orange Book? We can</p> <p>15 look at it on the share screen.</p> <p>16 A. Yes. I see it.</p> <p>17 Q. So you agree that in this ASHP report</p> <p>18 and guideline, they're referring to the positive</p> <p>19 use of the Orange Book for P&T committees; right?</p> <p>20 MR. DORNER: Object to the</p> <p>21 characterization. Lacks foundation.</p> <p>22 You can answer.</p> <p>23 THE WITNESS: I think they're referring</p> <p>24 to the generic equivalent ratings in the Orange</p> <p>25 Book. The Orange Book is the approved products</p>	<p>Page 349</p> <p>1 MR. DORNER: Objection.</p> <p>2 Mischaracterization. Lacks foundation.</p> <p>3 You can answer.</p> <p>4 THE WITNESS: Yeah, this guideline</p> <p>5 refers to the Orange Book, at least in footnote</p> <p>6 42.</p> <p>7 BY MR. HONIK:</p> <p>8 Q. And it encourages P&T committees to</p> <p>9 refer to them to satisfy themselves that the drugs</p> <p>10 are considered bioequivalent by the FDA; correct?</p> <p>11 MR. DORNER: Objection.</p> <p>12 Mischaracterization. Lacks foundation.</p> <p>13 THE WITNESS: I'm just rereading that</p> <p>14 section to see exactly what it says. There's a</p> <p>15 number of reasons why they say you look at the</p> <p>16 Orange Book, yes.</p> <p>17 BY MR. HONIK:</p> <p>18 Q. That's right. There are. And one of</p> <p>19 them is that the drugs by reference to the Orange</p> <p>20 Book are those that are bioequivalent as</p> <p>21 considered by the FDA; correct?</p> <p>22 MR. DORNER: Object to form.</p> <p>23 Characterization.</p> <p>24 THE WITNESS: Yes.</p> <p>25</p>

<p style="text-align: right;">Page 350</p> <p>1 BY MR. HONIK:</p> <p>2 Q. And before we leave the document, it</p> <p>3 encourages, among others, P&T committees to make</p> <p>4 use of that reference; correct?</p> <p>5 MR. DORNER: Object to form.</p> <p>6 Mischaracterization. Lacks foundation.</p> <p>7 BY MR. HONIK:</p> <p>8 Q. That's what it says; right, sir?</p> <p>9 MR. DORNER: Same objections.</p> <p>10 THE WITNESS: Yes.</p> <p>11 BY MR. HONIK:</p> <p>12 Q. I'm sorry. Did you say "yes"?</p> <p>13 A. Yes.</p> <p>14 Q. Thank you. Take a look at your own</p> <p>15 report, sir. Do you have that in front of you?</p> <p>16 A. Yes.</p> <p>17 MR. DORNER: Are you going to direct him</p> <p>18 to a paragraph?</p> <p>19 BY MR. HONIK:</p> <p>20 Q. Take a look at page C-4. That's in your</p> <p>21 Appendix C. This is the beginning of your list of</p> <p>22 books and academic articles that you, yourself,</p> <p>23 relied upon; correct?</p> <p>24 A. Yes.</p> <p>25 Q. Did you say "yes"?</p>	<p style="text-align: right;">Page 352</p> <p>1 Mr. Kosty?</p> <p>2 A. Yes.</p> <p>3 Q. And if you turn to page 8 of her report,</p> <p>4 beginning at paragraph 47, this is where -- we're</p> <p>5 going to call this Exhibit 17, by the way.</p> <p>6 (Kosty Exhibit 17 was marked.)</p> <p>7 BY MR. HONIK:</p> <p>8 Q. She's got paragraph 47, "The 'AB' rating</p> <p>9 in the FDA Orange Book, based as it is on the</p> <p>10 generic drug manufacturer's ANDA, represents a</p> <p>11 manufacturer's warranty to TPPs and P&T committees</p> <p>12 for placement on a prescription drug formulary."</p> <p>13 And then she drops a footnote number 6.</p> <p>14 Do you see that?</p> <p>15 A. Yes.</p> <p>16 Q. Your criticism of her that she provided</p> <p>17 no support for that proposition is incorrect</p> <p>18 because she, herself, cited the very same</p> <p>19 guideline that you placed on your reliance list;</p> <p>20 isn't that right?</p> <p>21 MR. DORNER: Object to form.</p> <p>22 Mischaracterization. Argumentative.</p> <p>23 You can answer.</p> <p>24 THE WITNESS: No. That's not the case.</p> <p>25 My beef with Dr. Panagos is her use of the word</p>
<p style="text-align: right;">Page 351</p> <p>1 A. I did.</p> <p>2 Q. The very first book or academic article</p> <p>3 that you relied upon is Exhibit 16, isn't it?</p> <p>4 A. Yes.</p> <p>5 Q. Does that refresh your memory that you,</p> <p>6 yourself, placed reliance on this guideline?</p> <p>7 A. Yes.</p> <p>8 Q. Thank you. Now, you criticized</p> <p>9 Dr. Panagos for her reference to the Orange Book</p> <p>10 and the use of it by P&T committees, didn't you?</p> <p>11 A. Yes.</p> <p>12 Q. In fact, at paragraph 201 of your</p> <p>13 report, you call her out for providing no support</p> <p>14 for P&T committees' use of the Orange Book; right?</p> <p>15 A. Yes.</p> <p>16 Q. And, in fact, do you have Ms. Panagos'</p> <p>17 report?</p> <p>18 A. Not in front of me, no.</p> <p>19 MR. HONIK: Can we get that up as well,</p> <p>20 Dave.</p> <p>21 MR. STANOCH: Stand by.</p> <p>22 MR. HONIK: Thank you.</p> <p>23 BY MR. HONIK:</p> <p>24 Q. Obviously in order to criticize her, you</p> <p>25 had to read her entire report, didn't you,</p>	<p style="text-align: right;">Page 353</p> <p>1 warranty. Perhaps we can go back to the ASHP</p> <p>2 guidelines to see if the word warranty is there or</p> <p>3 not.</p> <p>4 BY MR. HONIK:</p> <p>5 Q. Sir, you're not a lawyer. I'm sorry.</p> <p>6 Did you finish?</p> <p>7 A. No, I did not finish. I also went to</p> <p>8 the Orange Book itself, Edition 41, and searched</p> <p>9 it for the word warranty. In the 1600-plus pages</p> <p>10 in the Orange Book, the word warranty is not found</p> <p>11 at all. It's not found once.</p> <p>12 So my beef with Dr. Panagos is her use</p> <p>13 of the word warranty, that the FDA Orange Book</p> <p>14 creates a warranty. That is the issue I have with</p> <p>15 her. And the FDA Orange Book doesn't even mention</p> <p>16 a warranty. So I don't know how she says it</p> <p>17 creates a warranty or represents a manufacturer</p> <p>18 warranty.</p> <p>19 Q. Mr. Kosty, do you remember hours ago</p> <p>20 telling me you're not a lawyer?</p> <p>21 A. Yes.</p> <p>22 Q. And you know Ms. Panagos is not a lawyer</p> <p>23 either; correct?</p> <p>24 A. That's my understanding.</p> <p>25 Q. Do you know how she used the term or</p>

<p style="text-align: right;">Page 354</p> <p>1 word warranty in her report?</p> <p>2 MR. DORNER: Object to form. Calls for</p> <p>3 speculation.</p> <p>4 THE WITNESS: I didn't know what her</p> <p>5 intent is, but the word warranty is more than</p> <p>6 it's just listed. It implies a legal obligation.</p> <p>7 And I don't see that in the Orange Book.</p> <p>8 What I do see in the Orange Book is a</p> <p>9 list of all of the approved drug products the FDA</p> <p>10 has done through either an NDA or an ANDA process.</p> <p>11 They also list BLAs and OTC products. So when I</p> <p>12 went to the Orange Book looking for the word</p> <p>13 warranty, I did not find it.</p> <p>14 BY MR. HONIK:</p> <p>15 Q. Did you read Ms. Panagos' testimony?</p> <p>16 A. No.</p> <p>17 Q. So you don't understand how she used the</p> <p>18 word warranty herself, do you?</p> <p>19 A. I did not read her testimony, no.</p> <p>20 Q. Do you know that the word warranty</p> <p>21 outside of the legal context refers to ability to</p> <p>22 rely upon or to receive assurance about?</p> <p>23 MR. DORNER: Object to form. Lacks</p> <p>24 foundation. Characterization. Calls for a legal</p> <p>25 conclusion.</p>	<p style="text-align: right;">Page 356</p> <p>1 A. Yes.</p> <p>2 Q. And don't you agree that if you've got</p> <p>3 an AB-rated drug that purports to be therapeutic</p> <p>4 equivalent, that that imparts certain specific</p> <p>5 criteria that one can rely upon?</p> <p>6 MR. DORNER: Object to form. Calls for</p> <p>7 a legal conclusion. Lacks foundation.</p> <p>8 THE WITNESS: There's requirements in</p> <p>9 the Orange Book under that therapeutic equivalence</p> <p>10 rating that specifies it, yes.</p> <p>11 BY MR. HONIK:</p> <p>12 Q. That's right. And when you look at the</p> <p>13 criteria set out in the Orange Book for that</p> <p>14 therapeutic equivalent, it connotes very specific</p> <p>15 criteria that the reader can rely upon in</p> <p>16 believing a drug which is AB rated; correct?</p> <p>17 MR. DORNER: Same objections as last</p> <p>18 time plus improper characterization.</p> <p>19 THE WITNESS: Yes. It explains the AB</p> <p>20 rating and the components behind it, yes.</p> <p>21 BY MR. HONIK:</p> <p>22 Q. And the reason one reads it and can rely</p> <p>23 upon it is because that criteria comes from the</p> <p>24 FDA; correct?</p> <p>25 MR. DORNER: Objection. Improper</p>
<p style="text-align: right;">Page 355</p> <p>1 THE WITNESS: Yeah, I don't know what</p> <p>2 her testimony was, but the warranty -- where I</p> <p>3 read this and my comments were I just explained.</p> <p>4 BY MR. HONIK:</p> <p>5 Q. Do you know that when somebody warrants</p> <p>6 something outside of the legal definition of</p> <p>7 warrant, that it could mean to rely upon or</p> <p>8 receive assurance about?</p> <p>9 MR. DORNER: Same objections as last</p> <p>10 time, plus asked and answered.</p> <p>11 THE WITNESS: Yeah, I think in a</p> <p>12 consumer perspective, when I look at a warranty,</p> <p>13 when I buy something, the manufacturer provides a</p> <p>14 warranty and it includes certain components that I</p> <p>15 as a consumer can expect.</p> <p>16 So it's a document that's given to me</p> <p>17 when I purchase, say, a technology item that</p> <p>18 indicates the warranty the manufacturer is</p> <p>19 standing behind. That is how I viewed her</p> <p>20 testimony in this report. And that's why I made</p> <p>21 the objection I did in my report.</p> <p>22 BY MR. HONIK:</p> <p>23 Q. Sir, did you actually look at the Orange</p> <p>24 Book and determine how they use the term</p> <p>25 therapeutic equivalent?</p>	<p style="text-align: right;">Page 357</p> <p>1 characterization. Lacks foundation. Calls for a</p> <p>2 legal conclusion. Mischaracterizes.</p> <p>3 You can answer.</p> <p>4 THE WITNESS: Yes. It's a compilation</p> <p>5 of in this case an ANDA approval process by the</p> <p>6 manufacturer.</p> <p>7 MR. HONIK: Dave, can we bring up the</p> <p>8 Orange Book Preface section that we have</p> <p>9 available.</p> <p>10 MR. STANOCH: Exhibit 18.</p> <p>11 (Kosty Exhibit 18 was marked.)</p> <p>12 BY MR. HONIK:</p> <p>13 Q. We have, Mr. Kosty, on page 1 here the</p> <p>14 Orange Book, Food and Drug Administration Center</p> <p>15 for Drug Evaluation and Research, Approved Drug</p> <p>16 Products for Therapeutic Equivalence Evaluations.</p> <p>17 Do you see that?</p> <p>18 A. Yes.</p> <p>19 Q. You're familiar with this preface to the</p> <p>20 42nd Edition?</p> <p>21 A. I'm familiar with the contents but not</p> <p>22 every specific item in here. But, yes, generally</p> <p>23 so.</p> <p>24 Q. You're certainly aware that Ms. Panagos</p> <p>25 was referring to this document; correct?</p>

<p style="text-align: right;">Page 358</p> <p>1 A. Yes.</p> <p>2 Q. It says, "The publication, Approved Drug</p> <p>3 Products for Therapeutic Equivalence Evaluations,</p> <p>4 (the List, commonly known as the Orange Book)</p> <p>5 identifies drug products approved on the basis of</p> <p>6 safety and effectiveness by the FDA under the</p> <p>7 Federal Food, Drug, and Cosmetic Act."</p> <p>8 Did I read that correctly?</p> <p>9 A. You did.</p> <p>10 Q. You know that those who use the Orange</p> <p>11 Book rely upon it; correct?</p> <p>12 MR. DORNER: Object to form. Vague.</p> <p>13 Lacks foundation. Mischaracterizes.</p> <p>14 THE WITNESS: When you say rely upon it,</p> <p>15 in what context?</p> <p>16 BY MR. HONIK:</p> <p>17 Q. In the following context.</p> <p>18 MR. HONIK: Turn to the page, Dave, that</p> <p>19 says Therapeutic Equivalence.</p> <p>20 BY MR. HONIK:</p> <p>21 Q. As Exhibit 16 suggested, P&T committees</p> <p>22 are encouraged within the guidelines to rely upon</p> <p>23 this for determining when a drug is</p> <p>24 therapeutically equivalent among other things;</p> <p>25 correct?</p>	<p style="text-align: right;">Page 360</p> <p>1 MR. DORNER: Objection. Outside the</p> <p>2 scope.</p> <p>3 BY MR. HONIK:</p> <p>4 Q. And you're familiar with the criteria</p> <p>5 that are enumerated here, aren't you, Mr. Kosty?</p> <p>6 MR. DORNER: Same objection.</p> <p>7 THE WITNESS: Yes.</p> <p>8 BY MR. HONIK:</p> <p>9 Q. And you know from your own experience as</p> <p>10 well as the guideline we looked at in Exhibit 16</p> <p>11 that P&T committees are encouraged to rely upon</p> <p>12 this criteria; correct?</p> <p>13 MR. DORNER: Object to form. Improper</p> <p>14 characterization of both the document and the</p> <p>15 testimony. Lacks foundation. Outside the scope.</p> <p>16 Speculative.</p> <p>17 You can answer.</p> <p>18 THE WITNESS: Yes, based on that ASHP</p> <p>19 guideline.</p> <p>20 BY MR. HONIK:</p> <p>21 Q. And that's exactly what Ms. Panagos</p> <p>22 relied upon in support of her statement that you</p> <p>23 criticized; correct?</p> <p>24 MR. DORNER: Object to form.</p> <p>25 Speculation. Characterization.</p>
<p style="text-align: right;">Page 359</p> <p>1 MR. DORNER: Object to form. Improper</p> <p>2 characterization. Misstates the testimony. Lacks</p> <p>3 foundation.</p> <p>4 You can answer.</p> <p>5 THE WITNESS: Yes.</p> <p>6 BY MR. HONIK:</p> <p>7 Q. Correct?</p> <p>8 A. Yes.</p> <p>9 Q. And it says, "Approved drug products are</p> <p>10 considered to be therapeutic equivalents if they</p> <p>11 are pharmaceutical equivalents for which</p> <p>12 bioequivalence has been demonstrated, and they can</p> <p>13 be expected to have the same clinical effect and</p> <p>14 safety profile when administered to patients under</p> <p>15 the conditions specified in the labeling."</p> <p>16 Did I read that correctly?</p> <p>17 A. Yes.</p> <p>18 MR. DORNER: And I'll object to outside</p> <p>19 the scope at this point.</p> <p>20 BY MR. HONIK:</p> <p>21 Q. It then says, "FDA classifies as</p> <p>22 therapeutically equivalent those drug products</p> <p>23 that meet the following general criteria."</p> <p>24 Do you see that?</p> <p>25 A. Yes.</p>	<p style="text-align: right;">Page 361</p> <p>1 THE WITNESS: Yeah, back to her use of</p> <p>2 the word warranty, that's what my objection was,</p> <p>3 and I previously stated why.</p> <p>4 BY MR. HONIK:</p> <p>5 Q. Well, if we understand her to use</p> <p>6 warranty as ability to rely upon or receive</p> <p>7 assurance about, you would agree with that</p> <p>8 statement; right?</p> <p>9 MR. DORNER: Object to form. Improper</p> <p>10 characterization. Calls for speculation. Lacks</p> <p>11 foundation.</p> <p>12 You can answer.</p> <p>13 THE WITNESS: Yes. If she had written</p> <p>14 that in her report, it would have been clear what</p> <p>15 she was getting to. She did not write that in the</p> <p>16 report.</p> <p>17 BY MR. HONIK:</p> <p>18 Q. Can you read to us what the fifth</p> <p>19 criteria is for the FDA classifying as</p> <p>20 therapeutically equivalent drugs that meet the</p> <p>21 criteria?</p> <p>22 MR. DORNER: Object to form. Outside</p> <p>23 the scope.</p> <p>24 THE WITNESS: What page are you on?</p> <p>25</p>

<p>Page 362</p> <p>1 BY MR. HONIK:</p> <p>2 Q. It's the one we're looking at presently.</p> <p>3 "FDA classifies as therapeutically equivalent</p> <p>4 those drug products that meet the following</p> <p>5 general criteria." And I've asked you to read</p> <p>6 into the record and for our benefit what the fifth</p> <p>7 criteria is.</p> <p>8 MR. DORNER: Object to form. Outside</p> <p>9 the scope.</p> <p>10 THE WITNESS: I'm not seeing it on the</p> <p>11 screen. That's my issue. I'm trying to ask you</p> <p>12 what page is this on in the document that I can go</p> <p>13 to in a different --</p> <p>14 BY MR. HONIK:</p> <p>15 Q. Mr. Stanoch just highlighted it for you</p> <p>16 on the screen share. You can read it that way.</p> <p>17 A. Can you make that bigger, please?</p> <p>18 Number five -- sorry to squint into the camera.</p> <p>19 "They are manufactured" --</p> <p>20 MR. DORNER: This is the wrong exhibit.</p> <p>21 THE WITNESS: "They are manufactured in</p> <p>22 compliance with current good manufacturing</p> <p>23 practice regulations."</p> <p>24 BY MR. HONIK:</p> <p>25 Q. So you acknowledge that that is one of</p>	<p>Page 363</p> <p>1 the FDA's criteria for achieving therapeutic</p> <p>2 equivalence; right?</p> <p>3 MR. DORNER: Objection. Misstates the</p> <p>4 testimony. Argumentative. Outside the scope of</p> <p>5 the report.</p> <p>6 THE WITNESS: Yes. That's what it reads</p> <p>7 here.</p> <p>8 BY MR. HONIK:</p> <p>9 Q. And you were aware of that when you</p> <p>10 authored your report; correct?</p> <p>11 MR. DORNER: Same objections.</p> <p>12 THE WITNESS: Yes.</p> <p>13 BY MR. HONIK:</p> <p>14 Q. And you're aware that Ms. Panagos relied</p> <p>15 upon the Orange Book for that reason among others;</p> <p>16 correct?</p> <p>17 MR. DORNER: Object to form.</p> <p>18 Speculation. Lacks foundation.</p> <p>19 THE WITNESS: Yeah, I don't know what</p> <p>20 she relied on in her report.</p> <p>21 BY MR. HONIK:</p> <p>22 Q. Well, you relied upon Exhibit 16, which</p> <p>23 is the guideline that makes reference to this; did</p> <p>24 you not?</p> <p>25 A. Yes.</p>	<p>Page 364</p> <p>1 Q. Did you cite that as a reliance material</p> <p>2 for some other reason or purpose, Mr. Kosty?</p> <p>3 A. No.</p> <p>4 Q. And you don't disagree that this</p> <p>5 criteria is FDA generated for therapeutic</p> <p>6 equivalence; right?</p> <p>7 MR. DORNER: Object to form. Outside</p> <p>8 the scope.</p> <p>9 Once again, you can answer.</p> <p>10 THE WITNESS: I don't disagree. That's</p> <p>11 what the FDA has as the regulation.</p> <p>12 BY MR. HONIK:</p> <p>13 Q. Mr. Kosty, those are all the questions</p> <p>14 that we have of you today. For our purposes, and</p> <p>15 certainly the defense may ask you questions</p> <p>16 presently, but for our purposes, we intend to keep</p> <p>17 this deposition open. And I will instruct you and</p> <p>18 counsel to retain and do nothing to disrupt or</p> <p>19 destroy any of your electronically or paper saved</p> <p>20 material regarding your contact with AG.</p> <p>21 Do you understand that instruction?</p> <p>22 A. Yes.</p> <p>23 MR. DORNER: We object. Sorry. Go</p> <p>24 ahead.</p> <p>25</p>	<p>Page 365</p> <p>1 BY MR. HONIK:</p> <p>2 Q. And any other materials that you may</p> <p>3 have that we asked for in our Notice of Deposition</p> <p>4 about which objections were raised.</p> <p>5 MR. HONIK: With that, I yield the</p> <p>6 floor. Anybody have questions of Mr. Kosty?</p> <p>7 MR. DORNER: Well, first of all, we</p> <p>8 object to keeping the deposition open, absolutely</p> <p>9 and completely. Second of all, we've set forth</p> <p>10 all the objections to any requests that you've</p> <p>11 made, and you can reference those and find the</p> <p>12 defense's position on that.</p> <p>13 There's no basis for this deposition to</p> <p>14 be kept open whatsoever. With that said, we can</p> <p>15 go off the record. We may have more to say off</p> <p>16 the record, but we'd like to take -- let's go to</p> <p>17 6:35 just to confer among us as to whether or not</p> <p>18 there are any further questions for Mr. Kosty.</p> <p>19 THE VIDEOGRAPHER: Off the record 6:21.</p> <p>20 (Recess from 6:21 p.m. to 6:36 p.m.)</p> <p>21 THE VIDEOGRAPHER: We are back on the</p> <p>22 record at 6:36.</p> <p>23 EXAMINATION</p> <p>24 BY MS. ANDRAS:</p> <p>25 Q. Hi, Mr. Kosty. As you know, I'm Tiffany</p>
--	---	---	---

Page 366

1 Andras, and I represent Teva Pharmaceuticals in
2 this case.
3 MR. HONIK: Tiffany, I can barely hear
4 you. Can you speak up?
5 MS. ANDRAS: Can we go off the record
6 for a second.
7 THE VIDEOGRAPHER: Off the record at
8 6:36.
9 (There was a pause in the proceedings.)
10 THE VIDEOGRAPHER: We are back on the
11 record at 6:36.
12 BY MS. ANDRAS:
13 Q. Mr. Kosty, earlier today Mr. Stanoch
14 asked some questions about the two examples of
15 business consolidations that you cite to in your
16 report in paragraphs 153 and 154.
17 Do you recall that?
18 A. Yes.
19 Q. Do you have experience working with
20 entities attempting to integrate and combine
21 disparate sets of claims data?
22 A. Yes, I do.
23 Q. Approximately how many times have you
24 been involved with projects with that task?
25 A. A dozen times or so.

Page 367

1 Q. And did those projects involve a
2 combination of two or more entities?
3 A. Yes.
4 Q. How many times did it involve a
5 combination with two entities?
6 A. Probably 95 percent of the time.
7 Q. Did you rely on those experiences to
8 inform your opinions in this case?
9 A. I did, yes.
10 Q. And how many of the projects that you
11 worked on that involved attempting to integrate
12 and combine disparate assets of claims data were
13 there data discrepancies that were discovered
14 during the testing and validation process?
15 A. Every time.
16 Q. Mr. Kosty, do you recall Mr. Honik
17 asking some hypothetical questions about the
18 supply curve?
19 A. Yes.
20 Q. Did consumers and TPPs actually purchase
21 the at-issue VCDs during the time period before
22 the recalls in this case?
23 A. Yes.
24 MR. HONIK: I'm sorry. I didn't catch
25 the question. Can I have it read back by Ann.

Page 368

1 (The following record was read back:
2 "Q Did consumers and TPPs actually
3 purchase the at-issue VCDs during the time
4 period before the recalls in this case?")
5 THE WITNESS: Yes.
6 BY MS. ANDRAS:
7 Q. So there was, in fact, a supply
8 available for purchases at the time those
9 purchases were made?
10 A. Yes.
11 Q. Was there, in fact, a supply curve?
12 A. Yes. They had the ability to buy
13 products that was supplied, yes.
14 Q. And was there a price?
15 A. Yes.
16 MS. ANDRAS: Nothing further.
17 MR. HONIK: Any other questions?
18 MS. ANDRAS: Nope.
19 RE-EXAMINATION (Continued)
20 BY MR. HONIK:
21 Q. Mr. Kosty, do you know what the
22 definition from an economics standpoint of a
23 supply curve is?
24 A. Yes.
25 Q. What is that?

Page 369

1 A. It's a supply of products for purchase
2 in the marketplace.
3 Q. Do you have any other definition or
4 understanding of it?
5 A. That's my definition of it, yes.
6 Q. Do you understand, have any
7 understanding that Dr. Conti used it and qualified
8 it with the word legitimate? Do you remember
9 that?
10 A. I do remember that, and that was the
11 first time I've ever seen that word as an
12 adjective for a supply curve.
13 Q. And is that right, you've never read or
14 heard in any academic publication or otherwise the
15 term legitimate supply curve?
16 MS. ANDRAS: Objection. Form.
17 Foundation.
18 THE WITNESS: I don't read academic
19 economic theory publications. That's not on my
20 reading list, no.
21 BY MR. HONIK:
22 Q. I gather that you don't. You do concede
23 that there has to be a meeting of the supply curve
24 or the demand curve for there to be an associated
25 price; correct?

Page 370	Page 372
<p>1 A. Yes. That happened in this case when 2 there was a supply of VCD products that was 3 purchased by wholesalers and retailers at a price 4 in the marketplace, yes. 5 Q. And what you're trying to convey is that 6 there was an actual supply of illegitimate 7 product; correct? 8 MS. ANDRAS: Objection. 9 Mischaracterizes prior testimony. Form. 10 THE WITNESS: I didn't say that. That 11 does mischaracterize it. I said there was a 12 supply of that product available for purchase in 13 the marketplace. 14 BY MR. HONIK: 15 Q. Sir, you don't argue that there was 16 contaminated VCDs in the marketplace during the 17 relevant class period; correct? 18 MS. ANDRAS: Objection. Form. 19 THE WITNESS: I've never used the word 20 contaminated. There were impurities identified in 21 those products, yes. 22 BY MR. HONIK: 23 Q. And you don't disagree that we 24 established today extensively with your help that 25 according to the FDA, it's a prohibited act to</p>	<p>1 yet you authored a nearly hundred page, more than 2 a hundred-page report criticizing Dr. Conti for 3 her methodology, didn't you? 4 A. The whole hundred pages didn't 5 criticize, but the total report was a hundred 6 pages, yes. 7 Q. Sir, the thrust of your criticism of 8 Dr. Conti is that she used an improper 9 methodology; right? 10 MS. ANDRAS: Ruben, I'm going to object. 11 This is outside the scope of my redirect. I don't 12 believe I even discussed Dr. Conti's methodology. 13 And you're just trying to rehash ground that you 14 already covered on direct. 15 MR. HONIK: Your objection is noted. 16 BY MR. HONIK: 17 Q. Can you answer my question, Mr. Kosty? 18 A. Could you repeat it please or read it 19 back? 20 Q. You criticized Dr. Conti extensively for 21 her methodology, that is, for I think you 22 described it as a fanciful world that doesn't 23 exist in the real world; isn't that right? 24 A. That's correct. 25 Q. And what you meant by that is that her</p>
Page 371	Page 373
<p>1 place into the stream of commerce a contaminated 2 or adulterated drug; correct? 3 MS. ANDRAS: Objection. Form. 4 Foundation. Misstate prior testimony. Calls for 5 a legal conclusion. And outside the scope. 6 THE WITNESS: My point was the product 7 was available for purchase and it was purchased. 8 BY MR. HONIK: 9 Q. Sir, of course, it was purchased. You 10 understand the entire reason for this lawsuit is 11 the allegation that it was improperly in the 12 marketplace and those that purchased it should 13 have their money back. Do you understand that? 14 A. Yes. 15 Q. And that what Dr. Conti did from an 16 econometric standpoint is to model what that would 17 look like if the manufacturers did not break the 18 law? 19 MS. ANDRAS: Objection. Argumentative. 20 Assumes facts not in evidence. Calls for 21 speculation. And outside the scope. 22 THE WITNESS: It's outside my scope, and 23 it calls for a legal conclusion. 24 BY MR. HONIK: 25 Q. Sir, you say it's outside the scope, and</p>	<p>1 methodology was wrong. She considered the wrong 2 universe in arriving at a damage calculation; 3 correct? 4 MS. ANDRAS: Objection. Form. 5 Foundation. Outside the scope of my redirect. 6 Outside the scope of his opinion. And 7 mischaracterizes testimony. 8 THE WITNESS: Yeah, mischaracterizes my 9 testimony. My testimony was Dr. Conti's model, 10 she creates this assumption that's infallible. 11 And I'm saying in the real world in the 12 pharmaceutical industry, these products were 13 available for purchase. They were purchased and 14 dispensed to patients. And once the impurities 15 were identified, they were taken off the market in 16 voluntarily recalls with the manufacturers. 17 That's what my problem is. It just 18 dismisses any of the things that actually happened 19 in the marketplace. When I say I'm an industry 20 expert, those are the industry things that had to 21 be dealt with because those products were 22 purchased. They were consumed. So we had to deal 23 with how it works in the real world. That's my 24 beef with her methodology. 25 She just assumes all that never happened</p>

<p>Page 374</p> <p>1 when, in fact, it did. I'm saying in the real 2 world, those things happened and they had to be 3 addressed. 4 BY MR. HONIK: 5 Q. Sir, it's been a long day, but you 6 understand that the metric or criteria for damage 7 assessment is going to be determined as a legal 8 matter? Do you accept that? 9 MS. ANDRAS: Ruben, this way outside the 10 scope of my direct examination now. If you don't 11 cut it out, we're going to pull the witness. This 12 is getting well outside the scope. I asked him 13 simple questions about the supply curve. I did 14 not mention Dr. Conti's name. And now you're 15 talking about measure of damages again. And we 16 did not ask him questions about that. 17 MR. HONIK: Your objection is noted. 18 MS. ANDRAS: We're going to pull the 19 witness, Ruben, if you continue this. You had 20 your chance for questions. 21 MR. HONIK: Your objection is noted. 22 BY MR. HONIK: 23 Q. Mr. Kosty, can you answer my question? 24 A. I testified earlier that's a legal 25 decision that I'm not qualified to make.</p> <p>Page 375</p> <p>1 Q. That's correct. And if a legal decision 2 is made that assumes, as Dr. Conti did, that the 3 drugs were under the FDA definition adulterated 4 and, therefore, should not have been in the 5 marketplace, you agree the measure of damages is 6 the purchase price; correct? 7 MS. ANDRAS: Objection. Outside the 8 scope of redirect. Outside the scope of his 9 opinion. Form. And calls for a legal conclusion. 10 BY MR. HONIK: 11 Q. Isn't that right? 12 A. I don't know. Like I said earlier, I'm 13 not a legal person to make those legal decisions. 14 That's up to the court. 15 Q. Sir, I asked you earlier today if you 16 are to assume that the benefit of the bargain was 17 not achieved here -- I showed you any number of 18 cases including language from the judge in charge 19 of this case -- you would agree that the measure 20 of damages, and I know you don't agree with it, 21 but under those circumstances, the measure of 22 damages is the actual price spent or purchased for 23 these drugs; correct? 24 MS. ANDRAS: Form. Objection. Form. 25 Foundation. Mischaracterizes prior testimony.</p>	<p>Page 376</p> <p>1 And requires a legal conclusion. And outside the 2 scope of both redirect and his opinion. And asked 3 and answered. 4 BY MR. HONIK: 5 Q. Right, Mr. Kosty? 6 A. In your narrowly defined hypothetical, I 7 would think that would be the case. 8 Q. Thank you. I appreciate that. 9 MR. HONIK: With that I have no further 10 questions. Are we done? 11 MS. ANDRAS: Done. 12 MR. HONIK: Subject to the statement I 13 placed on the record a little while ago and 14 certainly your objection, Drew, I think we're done 15 for the night. 16 MR. DORNER: We will read and sign. And 17 certainly to our objection, this is not going to 18 be kept open. 19 MR. HONIK: Thank you, Mr. Kosty. Thank 20 you, Ann, and Mr. Video. 21 THE VIDEOGRAPHER: Off the record at 22 6:46. 23 (Whereupon, at 6:46 p.m. the taking of 24 the instant deposition ceased.) 25</p> <p>Page 377</p> <p>1 COMMONWEALTH OF PENNSYLVANIA) 2 COUNTY OF ALLEGHENY) SS: 3 C E R T I F I C A T E 4 I, Ann Medis, RPR, CLR, CSR-WA and 5 Notary Public within and for the Commonwealth of 6 Pennsylvania, do hereby certify: 7 That TIMOTHY E. KOSTY, the witness whose 8 deposition is hereinbefore set forth, was duly 9 sworn by me and that such deposition is a true 10 record of the testimony given by such witness. 11 I further certify the inspection, 12 reading and signing of said deposition were not 13 waived by counsel for the respective parties and 14 by the witness. 15 I further certify that I am not related 16 to any of the parties to this action by blood or 17 marriage and that I am in no way interested in the 18 outcome of this matter. 19 IN WITNESS WHEREOF, I have hereunto set 20 my hand this 28th day of February, 2022. 21 22 23 _____ 24 Notary Public 25</p>
